The ASB is typically similar to a classroom. It provides workspace for collaborative projects and serves as a student store. ASB students, under the supervision of an Assistant Principal or teacher, stock and sell school apparel, year books, event tickets, snacks and miscellaneous items for the convenience of students. The ASB staff office receives, dispenses, and accounts for all ASB funds.

Location (desired proximities):

The ASB should be located near the student dining and lunch shelter areas, and convenient for students, faculty and deliveries.

Design Features:

- Size: 960 sq. ft.
 - Student store, work area, sales, office: 761 sq. ft.
 - Storage: 200 sq. ft.
- Tables or counters for layout space.
- Four exterior walk-up windows for sales.
- Data and power for point-of-sale machines

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- steel storage shelving
- lockable safe bolted to the floor for storing cash
- upright reach-in cooler for beverage sales
- tables and chairs for 25 students
- desk and task chair for Assistant Principal or teacher

4. Science Laboratories

General:

At both the middle and high school level, students develop an understanding of how science works through the observation and explanation of occurrences. They learn a multitude of methods that constitute "the scientific method", and experience traditional methods of research and investigation in different scientific areas. They learn how to collect evidence, apply logic, utilize arguments, and foster imagination in solving problems. The development of various investigative skills including observation, predicting, classifying, inferring, measuring, questioning, hypothesizing, experimenting, interpreting, constructing and explaining models requires an environment and learning spaces that facilitates physical movement and at the same time retains meeting space for small teams of collaborating students.

Science laboratories at the high school level take on a more sophisticated instructional program. The laboratory design incorporates features for complex experiments and testing. Advanced equipment is used in elaborate research. The chemicals used require security storage when not in use. Ventilation systems for the preparatory and laboratory station areas are imperative. Laboratories are equipped with fire extinguishers, eyewash and deluge showers, a first aid kit, and disconnect valves for gas. Chemical disposal systems are designed to meet current state and federal standards.

Location (desired proximities):

Laboratory spaces should be integrated with storage and staff office areas that allow for the storage and preparation of lab activity resources including chemicals, tools, recording devices, and safety equipment.

Design Features:

Size: 1260 – 1500 sq. ft.

Teaching station with sink.

Laboratory stations:

- Perimeter lab stations for 28 expandable to 36 (4-station peninsulas with the ability for two end seats as well) plus accessible stations.
- Individual stools for students to sit at countertop height while conducting experiments.
- Provide water, power and data for each station.
- Sinks shall be 9" deep except where required to not exceed 6.5" for access compliance
- Provide one deep sink and one accessible sink in each preparation room.
- Provide storage space for student equipment.

The laboratory environment should include adequate floor space, storage space, lighting, ventilation, marker board and bulletin boards.

The laboratory area also should contain exhaust fume hoods, eye washes, and deluge showers, fire extinguisher, first aid kit, master disconnect valve for gas, fire blanket for obvious safety applications. Provide one fume hood in each Chemistry classroom and Chemistry preparation room.

All other science classrooms and preparation rooms do not need a fume hood. Conceal all ductwork on fume hoods.

The classroom laboratory should include space for individual seating for whole-class instruction.

Offices and storage spaces should contain ample countertop space for materials prep and appropriate casework for the secure storage of materials, chemicals, and delicate instruments. Obtain a list of the current science chemicals from District Representative. Design shall accommodate storage of such chemicals (e.g. fire cabinet and acid cabinet). Submit the list to DSA if required.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Epoxy Resin with integral sinks

Furniture and Equipment:

- Same list as general classrooms plus:
- Lockable chemical storage cabinet in prep room.
- Lockable fire storage cabinet in prep room.
- Refrigerator/freezer in prep room.
- Eyewash and deluge shower in each laboratory.
- Wall cabinets to have sloped tops to prevent storage or display.

5. Visual and Performing Arts (VAPA) Classrooms

General:

The Visual and Performing arts programs will introduce, develop, and encourage students' skills and appreciation of the arts.

Visual arts instruction will offer students the opportunity to explore the arts, and experience how the arts interface with other areas of learning. This program will foster individual expression and an understanding of the contribution the arts make to the world. The areas of exploration will include 2-D and 3-D art forms, computer and graphic arts, photography, multimedia, and art history (HS).

Performing Arts, including instrumental and vocal music, drama, and dance, are design so that students will be able to use their knowledge of the arts, through instruction and rehearsal, in a performance setting. These program areas will contain the auditorium, drama, dance, instrumental rooms, vocal music rooms, and related auxiliary spaces.

These facilities and operations need to reflect recommendations from specialized consultants regarding design, flexibility, acoustics, and future technological concepts while providing a safe learning environment.

Location (desired proximities):

Music/Performing Arts: Periphery of campus with clearly identifiable and easily accessible main entrances that direct the public to the facility without the need to provide access to the remainder of the campus, adjacent to theater, with access to restrooms.

Visual Arts: Located near Library/Media Center

Storage: Adjacent to classrooms

Teacher Offices: adjacent to classrooms, with appropriate supervision capability

The dance studio may be part of the Gymnasium.

Design Features:

Each school will have need for space for the following programs. Classes are organized by discipline and include courses already offered at SUHSD. Sizes shown include storage.

- Visual Arts
 - 3D Art Lab/Classroom (960 sq. ft.)
 - 2D Art Lab/Classroom (960 sq. ft.)
 - Ceramics including Kiln Room (1,300 – 1,500 sq. ft.)
 - Graphic Arts/Digital Photography (960 sq. ft.)
- Music/Performing Arts
 - Auditorium/Theater
 - Mariachi Music Room (2,500 sq. ft.at HS; 1,500 sq. ft.at MS)
 - Instrumental Music Room (2,500 sq. ft.at HS; 1,500 sq. ft.at MS)

- Choral Room (2,000 sq. ft.at HS; 1,500 sq. ft.at MS)
- Dance Studio (2,000 sq. ft.at HS; 1,500 sq. ft.at MS)
- Black Box Theater/TV Studio (1,600 sq. ft.)
- Scene Shop (adjacent to Theater for HS only)
- Practice rooms (sound-proofed)

Provide high ceilings for music/performing arts rooms.

Provide heat and acid resistant countertops in 2D and 3D art rooms.

Provide instrument cleaning area with sink.

Provide storage for chairs, music stands, instruments, sheet music, and uniforms. Instrument storage is to be located in specialized lockers.

Provide an instructor's office.

High School Theaters (Performing Arts Centers):

- Provide a lobby with a ticket booth (4 windows minimum) and concession area (4 windows minimum).
- Provide theater seating (22" width) with removable front rows for flexibility.
- Provide public restrooms.
- Provide a backstage workshop and storage areas with large roll-up doors to exterior and to the stage.
- Provide enclosed control booth with lighting and sound controls. Also, provide alternate control location backstage.

Finishes and Features:

Classrooms (art and music rooms)	
Floor:	VCT (or polished concrete at art rooms)
Base:	Rubber or polished concrete
Ceiling:	Painted gypsum board and/or suspended ceiling; or open
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Epoxy resin in 2D and 3D art rooms. Plastic laminate elsewhere.

Dance Room	
Floor:	Floating wood sports floor
Base:	Rubber
Ceiling:	Gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space and acoustical treatment
Casework:	Plastic laminate
Countertop:	Plastic laminate

Auditoriums and Theaters	
Floor:	VCT or polished concrete. Carpeted aisles.
Base:	Rubber or polished concrete
Ceiling:	Painted gypsum board and/or suspended ceiling with acoustical treatment
Walls:	Painted gypsum board with acoustical treatment

Stage	
Floor:	Plywood (black)
Base:	Rubber
Ceiling:	open
Walls:	Painted gypsum board with acoustical treatment

Scene shop (back stage)	
Floor:	Polished concrete
Base:	Polished concrete
Ceiling:	open
Walls:	Painted gypsum board

Furniture and Equipment:

- The same equipment as general classrooms plus:
- Portable risers for mariachi, band and choral rooms.
- Wenger type lockers for musical instruments
- Stage rigging, front, back and side curtains.
- Theatrical lighting, audio visual and sound systems
- Projection screen in Theater.
- Television in classrooms and dance room.
- Theater seating in theaters. Verify whether fold-away writing tables are required. Include seat and row numbers.
- Kiln ventilation system is to be designed and specified as recommended by the kiln manufacturer.
- Coordinate equipment requirements per specialized programs, such as spinning wheel stations, lockable clay bins, adequate casework and open shelving for storage, trough sinks, minimum door clearance, etc.

6. Makerspaces and Shops

General:

Although learn-by-making may occur in every classroom (hands-on, project, problem or challenge based) there may be times where a specific area (classroom, room, library space, etc.) should be designated as a makerspace. A makerspace is a physical location where people can gather to share resources and knowledge, network, and build creative projects. Makerspaces are also known as Tinkerspaces, DIY, Creativity or Innovation labs.

Makerspaces are areas of hands-on, self-directed and guided learning that promote practical, creative, collaborative and multidisciplinary thinking and learning. A makerspace represents a powerful effort to infuse creativity, innovation, curiosity, motivation, technical expertise, open-mindedness, persistence, social responsibility, teamwork, and playfulness in a safe environment.

As opposed to traditional shops that were devoted as areas of specific activities such as wood, electrical, mechanical, welding, etc. makerspaces are more flexible and modular spaces. The tools and equipment vary between makerspaces; diverse electronics, sewing machines, 3D printers, laser cutters, CNC machines, hand tools, power tools, vinyl cutters, welding machines, computers, monitors, digital (software) tools, ceramic & pottery tools & supplies, etc.

Coordination with the VAPA program is required since there may be overlap with the visual arts.

Location (desired proximities):

Makerspaces may evolve overtime based on access to new technology, tools and equipment. It is recommended to designate physical spaces able to accommodate these changes. These areas need to provide increased ventilation and be readily accessible from other classrooms to encourage use. Adjacency to outside patios or balconies is needed to allow the flexibility to enlarge the space.

Design Features:

- Adequate power including spare capacity for future use
- Generally perimeter storage and movable tables in the center to allow flexible arrangements (modular furniture)
- Rollup "garage" doors to exterior patios
- Adequate ventilation mitigated for noise
- Storage for both supplies and finished projects

Finishes and Features:

General guideline – specific room requirements may vary	
Floor:	VCT or polished concrete
Base:	Rubber or polished concrete
Ceiling:	Painted gypsum board and/or suspended ceiling; or open
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Epoxy resin, plastic laminate or wood.

Furniture and Equipment:

General requirements that need to be customized for the intended use:

- Classroom F&E plus:
- Work tables instead of desks
- Stools or chairs

7. Special Education Classrooms (Moderate/Severe)

General:

The goal of the Special Education Program is to meet the needs of students with disabilities within the least-restrictive environment enabling them to become responsible, life-long learners.

To meet student needs, the Special Education Program staff offers a continuum of services ranging from self-contained programs to providing instruction within the general education environment through an inclusion process. Similarly, in consideration of the changing enrollment in the Special Education program, the rooms should be flexible to accommodate increases or decreases in the number of students served.

Areas include:

- Mild/Moderate and Moderate classrooms (960 sq. ft.)
- Moderate/Severe classrooms (800 sq. ft.)
- Restrooms
- Hygiene rooms with changing areas (with or without showers) (350 – 400 sq. ft.)
- "Cool down" rooms and/or sensory rooms (100 sq. ft.)
- Life skills area or room (teaching kitchen with washer and dryer) (250 – 300 sq. ft.)
- Administration and meeting rooms for academies
- Adaptive PE Rooms (see separate section)

Location (desired proximities):

The least-restrictive environment generally requires that special education classrooms be dispersed throughout the campus. Consult with the Special Services Department for the programming needs of the specific project.

Design Features:

Provide spaces that are free from distractions. Most if not all wiring, conduits, ducts, etc. shall be concealed or located in unobtrusive areas to provide a clean, orderly and non-distracting environment.

The surfaces of each classroom must be easily cleanable and hygienic.

Provide additional soundproofing between classrooms and other spaces.

Provide drinking fountains near the restrooms and near play fields, hard courts, courtyards, or eating areas.

Provide a hygiene toilet room adjacent to classrooms for students in the moderate/severe program. Include a changing area with an adult-sized table and an accessible roll-in shower with a fold down seat and ceiling mounted shower curtain (hospital type).

Provide hand-washing sinks in all classrooms.

For academies (such as East Hills Academy) provide discrete perimeter security and design the site with supervision in mind. Provide separate bus drop-off zones.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- The same equipment as general classrooms plus:
- Blackout shades.
- A refrigerator and freezer unit, washing machine, electric dryer, and combination residential, electric stove top, range, and oven. Coordinate floor drains and dryer vents for washer and dryer.
- Changing table
- Shower seat
- Shower curtain
- Access to a scanner and printer

8. Adaptive PE Rooms

General:

A special education support facility for both PE and occupational therapy.

Location (desired proximities):

On a comprehensive campus, locate near the gymnasium and locker rooms. At an academy, locate on the perimeter near fields, hard courts and restrooms.

Design Features:

Size: 1,500 sq ft.including storage.

Provide spaces that are free from distractions. Most if not all wiring, conduits, ducts, etc. shall be concealed or located in unobtrusive areas to provide a clean, orderly and non-distracting environment. Surfaces of must be easily cleanable and hygienic.

The room must accommodate up to 12 students and 11 staff for the moderate-severe program and up to 30 students and 4 staff for the non-severe program.

The room must accommodate large pieces of equipment such as treadmills, stationary bikes, small trampolines, and other equipment to support the loco-motor and non-loco-motor training activities.

Provide sufficient storage adjacent to the room for both indoor and outdoor equipment.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space and backing for wall mounted equipment
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Will be determined on a site-by-site basis.

9. Gymnasium Building

General:

The Gymnasium is one of the primary Physical Education (PE) facilities at each high school. The facility must not only accommodate PE needs but must be designed for school assemblies and other gatherings and events.

Location (desired proximities):

Locate on the periphery of campus near public parking, and fields. Locate adjacent to the locker room.

Design Features:

The gymnasium (15,000 sq. ft.), while primarily used for physical education instruction, is also used as a meeting space for students and community events. As such, adequate floor seating (500 persons) for large assemblies is required. Site-specific PE and athletic equipment will be identified and purchased based upon site instructional focus and needs.

Provide sport wood flooring system with manufactured vented metal base and painting of team logo in the main center court and school name on each baseline. Provide for District logo and conference label on court. For projects where the team logo has not been determined, provide an allowance.

Provide multi-sport colored striping to accommodate main basketball/volleyball court, perpendicular practice basketball/volleyball courts, and badminton courts.

All courts must conform to CIF requirements and court clearance requirements. Coordinate the retractable practice court backstops for required vertical clearance.

Provide sport wood flooring system with manufactured vented metal base at dance rooms.

Incorporate the use of natural day-lighting, but do not allow direct sunlight to hit the gym floor or to be visible to athletes using the facility.

Provide acoustical treatment.

Provide ticket booth with at least 4 windows.

Provide concession booth with at least 4 windows. Provide counters and power for refrigerator/freezer, microwave ovens, crockpots, etc.

Provide public and student restrooms.

Finishes and Features:

Floor:	Gym: Floating wood sport flooring system. Dance Rooms: Floating wood sport flooring system. Concession: VCT Ticket booth: VCT
--------	--

	Lobby: VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space (no tackable surface inside Gym). Walls in Gyms shall be durable and have mounting systems for pads, acoustical treatment, and pennants
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Interactive Multimedia System with projection capabilities, sound, LED display(s), computer/tablet interface
- Multi-sport scoreboard.
- Provide motor operated, telescoping bleachers that do not interfere with the regulation basketball court or four wrestling mats and required court clearances in fully opened position.
 - Coordinate with manufacturer representative for appropriate rise and row spacing.
 - Coordinate headroom clearance at top row of seating with basketball backstops of cross-courts.
- Provide retractable motorized basketball backstops for main court and practice courts.
- Bulletin boards
- Trophy display cabinets in Gym lobby.
- Retractable flag in Gym.

10. Locker Rooms, Team Rooms and PE Offices

General:

These facilities support the Physical Education (PE) program at each school. The facilities must be equitable between girls and boys. The facilities include the locker room, teachers (coaches) offices, team rooms, treatment areas, laundry room (high school) and storage.

Location (desired proximities):

Part of, or directly adjacent to the Gymnasium at high school or Multi-purpose room at middle school. The teachers' offices should be adjacent to and provide supervision of the locker room.

Design Features:

- The student locker room/shower/lavatory space needs to accommodate up to 400 students per instructional period for high school and 200 students for middle school. The space needs to allow for easy supervision of students, ease of cleaning, and sufficient space for safety and comfort.
- All lockers shall be anchored to concrete bases. 1500 basket-type lockers and 500 full-length lockers for high schools (verify based on design size of school).
- Separate varsity locker rooms and showers are desirable.
- Protective cages over all exposed clock and life-safety alarms.
- Drinking fountain.
- Teacher office space (100 sq. ft. per staff member) needs to be constructed adjacent to student locker room area with full view of all lockers for safety reasons. Teacher locker room, shower, and lavatory need lockable doors for privacy purposes (100 sq. ft.).
- Adequate storage rooms with limited access for security purposes. These spaces exist adjacent to teacher offices and multipurpose room with casework as appropriate for maintaining inventory of equipment of all sizes, clothing, etc.
- Separate restrooms for teachers.
- Laundry Room:
 - Provide one shared laundry room with adjacent access or secured access from both locker rooms.
 - Provide both gas and electric utilities for the dryer.
 - Include a sink and counter workspace.

Finishes and Features:

Locker Rooms and Team Rooms	
Floor:	Terrazzo or polished concrete (slip resistant finish)
Base:	Terrazzo or polished concrete
Ceiling:	Painted gypsum board suitable for high humidity.
Walls:	Painted gypsum board suitable for high humidity.
Casework:	Plastic laminate
Countertop:	Plastic laminate

Teachers Offices	
Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Whiteboards in team rooms and offices.
- Televisions in team rooms.
- Bulletin boards in locker rooms, team rooms and offices.
- Provide an ice machine in each locker room in comprehensive High School Gyms.
- In laundry room, provide a washer and dryer with a floor drain, dryer vent, and a high volume exhaust fan

11. Media Center (Library)

General:

Media Centers and Libraries are changing with technology and can serve different functions on a campus, including: research, group meetings, computer instruction, reading place for students' free time, social meeting area, as well as a repository for books. Meet with the District Representative and Library Services to determine the design and functions of the libraries at each campus prior to proceeding with the design.

Location (desired proximities):

Near perimeter of the site for access to public and access after-hours. Being near the administration center allows for secure entry and exit of the site.

Design Features:

Size: 4,000-4,500 sq. ft. at HS; 2,700-3,000 sq. ft. at MS) for the main room, stacks, reading area, computer area and circulation desk.

Provide an open design, easy to supervise from the circulation desk, no hidden corners or nooks with good lighting over stacks and reading areas. No direct sunlight on bookshelves to avoid fading. Provide day-lighting in the reading spaces.

Accommodate two full classes at a time. One class can use the computer lab while the other can access print resources. The computer lab area must accommodate at least 40 laptop, desktop or tablet computers.

Safe and efficient student and material logistics require that the library needs a flow through type of arrangement for textbook and/or device check-out and return. For example, during textbook check-out, our classes come through the back entrance, go into the textbook room, pull the book from the shelf, walk to the circulation desk to check it out and then exit out the front door. For returns, the process is reversed. They come in the front, check in the book at the circulation desk, walk into the textbook room, place the book on the shelf and exit out the back door. This method significantly decreases hand/arm/back and other stress injuries and provides for safe student movement.

The library technician station should be at the circulation desk, instead of a separate office. It is convenient for tech to be at circulation desk already whenever a patron needs assistance as opposed to getting up and walking out of office every time.

Provide a conference room at high schools (180-240 sq. ft.).

Provide a textbook processing and storage room (700-800 sq. ft. at HS; 400-500 sq. ft. at MS). It needs to be wide enough to accommodate the passage of a pallet of boxes. There should be room enough for a minimum of three pallets of boxes on the floor next to a large table which serves as the processing workspace. There needs to be access for a pallet jack on the sidewalks and a convenient area where they can be loaded off the truck. As we move away from textbooks to online resources, this may be used for electronic equipment and boxes of workbooks.

Provide a separate secured room (120 sq. ft.) for computer device storage (laptops, tablets, etc.). This storage room may be within the textbook storage room.

Provide a Librarian's office (120-180 sq. ft.)

A workroom (140-160 sq. ft.) with provisions for a book scanner, book repair area and storage and computer workstation. Provide a sink.

Consider the decreasing need for desktop computers and increased areas needed for independent study with electrical outlets for charging devices.

Provide acoustical treatment to maintain an environment conducive to study. Separate group meeting areas with sound barriers.

Consider large screen smart TV instead of digital projectors which require expensive bulb replacement.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Built-in circulation desk.
- Low height shelving so that step stools are not needed and to facilitate supervision. Center stacks shall be 4 feet high and perimeter wall stacks to be 6 feet high.
- Design the library shelving to accommodate 28 books per student with an average thickness of one-inch per book. Confirm the amount of book storage prior to the start of design and submit the linear footage provided in the conceptual design phase.
- Book security system at entry.
- Verify whether fixed storage shelves or space-saver rolling shelves are required for the textbook room. The move to electronic textbooks may reduce the need for storage.
- Display/signage areas indoor and out.
- Library catalog stations (data).
- Audible security alarm at exit doors other than the main entry.
- Book scanner

12. Multipurpose Room

General:

Depending on the site needs, the multi-purpose room may function as a Gymnasium, theater, eating area and/or meeting space. Refer to each section to determine the needs.

Do not use carpet if the space is to be used for dining.

Provide a drinking fountain and/or water station.

Provide average maintained 30-foot candles of lighting at table surface.

13. Administration/Lobby

General:

The administration center of the school is utilized by students, staff, and the public. It should include a public-friendly yet secure entrance, a centralized reception area with seating, and access to the administrative offices. The administrative offices (principal, assistant principal(s), and site security) should be located beyond the reception/entrance area. Other areas important to the administrative offices include medium and small conference rooms (at least one with teleconference capabilities--- one for the principal another specifically for small student group presentations re: credit recovery, college recruitment, etc.), shipping and receiving area, storage, teacher lounge and teacher workroom.

Spaces:

- Centralized reception area/entrance, public-friendly atmosphere with (comfortable) seating that can easily be secured (240 – 360 sq. ft.at HS; 180 – 240 sq. ft. at MS)
- Administration offices
 - Principal (120-180 sq. ft.)
 - Assistant Principal (100-120 sq. ft.)
- Medium and small conference rooms (at least one with teleconference capabilities; one specifically for the principal (180-240 sq. ft. for HS; 120-180 sq. ft. at MS); at least one for small student group presentations re: credit recovery, college recruitment, etc.
- 3 Offices for itinerant staff and School Resource Officer (100-120 sq. ft.)
- Parent center or room (600-740 sq. ft.)
- Shipping and receiving area
- Storage
- Student Support Services (counselors, speech therapist, psychologist, attendance clerk, registrar) – See separate section
- Nurse's office – See separate section
- Attendance office (80 sq. ft. per person)
- Staff break room – See separate section.
- Staff workroom – See separate section.

Location (desired proximities):

The integration of administrative offices, student services area (counseling, etc.), teacher lounge/workroom area, and shipping and receiving areas confirm to the casual eye that this is the hub of school activity. Any library or performance center should be near this building. Visitor parking should be available close to this building and/or close to the entrance of the school.

Design Features:

- Built-in reception desk and transaction counter with high-low counter. Include open space below the countertop to accommodate two-drawer lateral file cabinets.
- Distance between the reception desk counter height and transaction counter needs to be able to accommodate a binder (13 inches minimum between the two surfaces).

- Lobby door access control.
- Perimeters are controlled at a central location supporting automated processes for security (lockdown) procedures.
- Safe room in this location that could be a multi-use room. Needs equipment to convey messages to the campus locations and communicate with the off-campus law enforcement organizations/District office.
- Sufficient work stations/offices for current staff as well as ample room for projected additional staff with a margin for growth.
- Countertop space near sink and casework at the Nurse's office.
- All casework to include drawers and storage cabinets below the countertop and tall storage cabinets.
- Fire alarm annunciator must be in a planned and coordinated location.
- Provide space within the secure file room to accommodate a safe.
- Mailboxes to be 12 inches wide by 12 inches deep by 4 inches high.
- Provide 1 mailbox per 12 students based on the maximum capacity of the campus. For example: If the school's maximum capacity is 3,000 students, provide 250 faculty/staff mailboxes.
- A built-in lockable display case with tackable surface and an area for messages to be posted for parents/visitors to read.
- Non-skid floors in front office, corridors, heavy student used rooms and work areas. Walk off mats at exterior doors.
- Separate restroom facilities for staff and public are preferred.

Finishes and Features:

Floor:	VCT; Lobby may be terrazzo or polished concrete
Base:	Rubber; terrazzo or polished concrete
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space (except no tackable wall space in lobby; use locking bulletin boards)
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Comfortable, welcoming furniture in reception/lobby area for visitors.
- Desks and workstations
- A key cabinet within a secure room such as the secure file room.
- A wall-mounted, lockable metal storage box to store 11-inch by 17-inch plans of the school near the key cabinet.

14. Student Support Services

General:

The student support services area is utilized by students, staff, and the public. It should include a public-friendly yet secure entrance, a centralized reception area with seating (the entry and reception can be the main lobby if located within the administration building), and access to the offices. The offices (attendance clerk, registrar, speech therapist, psychologist and nurse's/health office) should be located beyond the reception/entrance area. In order to provide a sense of connectedness for students, this area should be conveniently accessible both from the public entrance of the school as well as from the main campus area. Include at least one medium conference rooms. Career center is heavily reliant on computers for research and on-line applications.

Spaces:

- Centralized reception area/entrance, public-friendly atmosphere with (comfortable) seating that can easily be secured. (220 sq. ft. if separate from the main lobby.)
- Attendance office. Exterior office space with walk-up windows for the attendance clerk (or space in the reception area if attendance is not in the administration center).
- Offices for:
 - Counselors: One (1) 100 sq. ft. office for approx. every 400 students with table for 3 visitors. Panic button near desk. Sidelight next to door for visibility. Good soundproofing.
 - Speech Therapist: One (1) 200 sq. ft. office with desk, table for up to 6 visitors, lateral file cabinets.
 - Psychologist: One (1) 100 sq. ft. office with seating for 2 visitors
 - Registrar: One (1) 100 sq. ft. office with seating for 2 visitors
- Medium conference room (space for conference table and 10-12 chairs) (180-240 sq. ft.)
- Storage: One (1) secure file room for student records adjacent to registrar's office (100-120 sq. ft. at HS; 80-100 sq. ft. at MS)
- Staff workroom with a work area for printer/copier/fax, worktable or counter, storage for supplies (225 sq. ft.)
- Career center at HS only (960 sq. ft.)

Location (desired proximities):

Integration with the administrative offices is preferred. Located at the perimeter of the campus with easy access from parent parking area.

Design Features:

- Built-in reception desk and transaction counter with high-low counter. Include open space below the countertop to accommodate two-drawer lateral file cabinets. Reception desk/workstation with seating for two (2): employee and student worker; panic button at reception desk; guest seating for 3-6; display space(s) for counseling materials.

- Attendance office: walk-up windows for the attendance clerk (or space in the reception area if attendance is not in the administration center).
- Career center: computer workstations. Display areas and storage.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space (except no tackable wall space in lobby; use locking bulletin boards)
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Comfortable, welcoming furniture in reception/lobby area for visitors.
- Desks and workstations
- Tables and chairs
- Lateral file cabinets

15. Nurse's Office

General:

Health Services includes intervention, attendance to sick or injured students, prevention, seminars, screening, and consultation. Health Service personnel are involved in extensive communication with building staff, students, parents, and health care providers. Increasingly, interest has been expressed to engage in greater collaboration with community health services for the screening and referral of students, parents, and community members. The plan for this area should be flexible and lend itself to future expansion.

Location (desired proximities):

The Health Services area should have access from reception/secretarial area as well as outside direct access. Adjacent to main office with door and/or window accessibility between the offices is ideal. Access to conference rooms.

Design Features:

Provide the following spaces:

- Office for the nurse (100-120 sq. ft.)
- Exam and first aid area (340-400 sq. ft.)
- Waiting area (120-160 sq. ft. at HS; 60-100 sq. ft. at MS)
- Storage
- One unisex restroom

The design must easy to keep sanitary.

Finishes and Features:

Floor:	VCT or sheet goods
Base:	Rubber or integral cove
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board; cleanable surface
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Furniture should be welcoming and comforting.
- Cot and curtain in exam and first aid area.
- Computer station(s).
- Refrigerator and locked cabinet for storage of temperature sensitive medications and supplies.
- Counter space should be a combination of high and low counters.
- Lockable cabinets.
- If records are not kept electronically, provide a secure location in this area.
- Sink and counter space for wound-dressing.
- Bulletin board.

16. Staff Break Rooms

General:

Staff break rooms are needed to provide staff with a place to take breaks as well as gather before or after school. They may be used for collaboration as well.

Location (desired proximities):

Distributed throughout the campus. Should be adjacent to staff workrooms but should be separated so that workroom noise does not interfere with breaks or collaboration sessions.

Design Features:

Provide an open countertop space near sink area with enough space to accommodate Owner-furnished (F&E) microwave oven and coffee maker.

Provide a location for a soap dispenser and paper towel dispenser at all sinks. Refer to Restroom Accessories for further dispenser requirements.

Provide CFCI under-counter dishwasher and refrigerator.

Provide casework that includes drawers and storage cabinets below countertops.

Provide space and electrical provisions to accommodate two Owner-furnished vending machines.

Storage area for tables and chairs.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable surface
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

1. Comfortable furniture for relaxation
2. Large tables and chairs for collaboration and dining

17. Staff Workrooms

General:

Staff workrooms provide an area to consolidate office equipment (printers, scanners, copiers, laminators, paper cutters, etc.) for efficiency.

Location (desired proximities):

Distributed throughout the campus. Should be adjacent to staff break rooms but should be separated so that workroom noise does not interfere with breaks or collaboration sessions.

Design Features:

Size of main workroom in administration center: 500-600 sq. ft. at HS; 400-500 sq. ft. at MS.

Provide open countertop space with casework. Casework to include storage cabinets above and below.

Provide space and electrical provisions to accommodate Owner-furnished printer/copier/scanner equipment and other equipment required for the project.

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable surface
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Storage cabinets.

18. Serving Kitchens

General:

The Serving Kitchen is an area where district staff receives food goods, stores goods (refrigerated, frozen and dry), prepares food, reheats pre-prepared meals and serves the food service court.

Location (desired proximities):

The Serving Kitchen should be connected to the Food Service Food Court. Centrally located on site with proximity to the periphery of campus for food deliveries. Garden sites near the kitchen would allow "Farm to School" integration.

Design Features:

Comply with all County Health Department requirements.

Designed to prepare student meals that will be served at multiple food stations (kiosks, food carts, and staff dining) for those seeking meals or snacks. Space in the Serving Kitchen should include reach-in refrigerators and freezers, walk-in refrigerators and freezers, ovens, other food service equipment, delivery, storage for dry goods, paper products, utensils, food carts, as well as an office for the Food Service Manager (with views that supervise deliveries, exit doors, and kitchen preparation area), employee lockers, restroom (one single unisex restroom unless code requires both men's and women's), custodian closet, areas for trash and recycling, and accommodations for use of washable service trays, including tray washing station and storage area.

Provide pass-thru service windows with security roll-down doors or grills. Provide large openings to allow fast service. Verify whether line-up areas outside the windows to be separated with galvanized railings.

Consider an area for demonstration cooking.

Finishes and Features:

Floor:	Quarry tile
Base:	Quarry tile
Ceiling:	Painted gypsum board suitable for high humidity and/or washable vinyl suspended ceiling.
Walls:	Painted gypsum board suitable for high humidity. Stainless steel panels to 8'-0" above finished floor (a.f.f.) behind sinks, stoves and ovens. Fiberglass reinforced panels (FRP) (smooth, white) to 8'-0" a.f.f. in all locations except where stainless steel is located.
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- It is anticipated that a Food Service Consultant will work with the district to develop the furniture and equipment specifications needed to provide meal, fast food, and snack preparation.
- Stainless steel counters.
- One locker for each staff member working in the kitchen at peak hours.
- Walk-in freezer accessible through the walk-in refrigerator with an adjoining door. Floors are to be quarry tile, freezer floors to be insulated. The walk-in units are to have separate condensing units. Multi-circuited condensers are not acceptable.

19. Food Service Areas

General:

The primary serving area for food services will be a Food Service Court attached to the Serving Kitchen. The Food Service Food Court will serve as an area where students, staff, and visitors can obtain a quick, nutritious, desirable, economical snack or meal. The facility (approx. 8,500 SF) will be both comfortable and cheerful, and centrally located on the site to serve as a hub of social interaction. A staff dining area should be part of the facility.

A main outdoor eating area designed for comfort and ease of supervision by site staff is also required. Satellite food service areas should be provided for distributed sales.

Location (desired proximities):

Centrally located on site with proximity to the periphery of campus for food deliveries.

Food Service Court: connected to the Serving Kitchen along with a staff dining room.

Main outdoor eating area: central and adjacent to Food Service Food Court

Satellite food service and eating areas: per site, as available space exists

Design Features:

Size for kitchen, service area, dry storage, cold storage, staff lockers, restroom and custodial closet: 4,500-5,000 sq. ft. at HS; 3,500-4,000 at MS.

Comply with all County Health Department requirements.

Satellite Areas: Provide infrastructure (power and data) for point-of-sale (POS) machines at remote exterior carts and kiosks.

Remote Serving: Provide infrastructure (power, data, water, sewer and natural gas) for remote exterior preparation and serving areas such as BBQs.

Incorporate the concept of Nutrition as key to the educational process. In this design food service areas would be located as a central hub as well as satellites where students congregate. Concepts to consider:

- Main Food Service Court located near admin offices (which tend to be designed as the site hub) or library.
- Seating provided inside and out which would allow for eating and socializing.
- Food court designs to allow for more sophisticated/upscale dining options.
- Strategic service points around campuses that are already plumbed for natural gas.
- Use of enclosures that can be utilized for multiple concepts i.e. Asian, Mexican, Italian menu features.
- Drinking fountain and water station, in or near all designated eating areas.

Teacher and Staff Dining Rooms (960-1,200 sq. ft. at HS; 800-960 sq. ft. at MS):

- Provide an open countertop space near sink area with enough space to accommodate Owner-furnished (F&E) microwave oven and coffee maker
- Provide a location for a soap dispenser and paper towel dispenser at all sinks.
- Provide CFCI under-counter dishwasher and refrigerator.
- Provide casework that includes drawers and storage cabinets below countertops.
- Provide space and electrical provisions to accommodate two Owner-furnished vending machines.
- Provide an adjacent private patio (400-600 sq. ft.at HS; 200-300 sq. ft. at MS)

Finishes and Features:

Floor:	VCT
Base:	Rubber
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board with tackable wall space
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Free standing and built-in dining facilities (booths, tables, chairs)
- It is anticipated that a Food Service Consultant will work with the district to develop the furniture and equipment specifications needed for the food court.
- Trash and recycling containers.

20. Restrooms

General:

Restrooms will be needed in accordance with codes. Public, staff and student restrooms will be required. Provide unisex restrooms distributed throughout the campus to meet transgendered requirements.

Location (desired proximities):

Staff and student restrooms should be distributed throughout the campus. Public restrooms should be provided at the administration center, performing arts centers, gymnasiums and fields.

Design Features:

Provide a cleanable facility with adequate floor drains.

At tile floors, use mortar setting bed on first level and provide a depressed slab on upper level floors to accommodate mortar setting. Floor tiles to be 2-inch by 2-inch, integral colored, non-slip with non-sanded, 1/8-inch dark colored epoxy grout joints.

Provide thin-set glazed ceramic tile at walls to approximately 8-foot high. Preference is for cutting of tile to not be necessary. Use cementitious backer board or fiber-glass faced gypsum board as tile backers over water resistant gypsum board. Wall tiles to be glazed, 4¼-inch by 4¼-inch, white field tile with accent colored tile patterns, with non-sanded, 1/8-inch light colored epoxy grout joints. Show patterns and accent trim on the Construction Documents.

Extend ceramic tile behind and above mirrors.

Provide code required accessible clearances, plus 2 inches for each horizontal clearance requirement, except at water closets and other code mandated hard-dimensioned items.

Slope floors away from doors and toward floor drains. Provide multiple floor drains as required to achieve a 1 percent slope to the drain.

Do not utilize urinal partition screens.

Design toilet rooms to prevent visibility into the toilet room with consideration given to the line-of-sight visibility of mirrors.

Use solid plastic toilet partitions (metal partitions are prohibited). Ceiling hung is preferred. Use deterrents on top of panels. Specify and detail overhead braced floor mounted vandal resistant stall dividers.

Design the Student restroom doors with the ability to padlock in an open position.

Restroom Accessories:

- Only accessories required by DSA for access compliance, toilet paper dispensers, soap dispensers and paper towel dispensers shall be specified in the project. Provide backing and

location templates for district vendor supplied accessories (hand soap, paper towel, toilet paper, seat covers, and feminine napkins).

- Provide backing for paper towel dispensers in staff and public toilet rooms for District provided rolled paper towel dispensers. Consult with District Representative for information from the current accessory vendor.
- Provide a location for District provided and installed protective seat covers only at staff restrooms, auditoriums, gyms, joint use, and other toilet rooms that the public will be using.
- Feminine Napkin Disposal, one per stall, all grade levels and staff toilet rooms.
- Mirrors in student toilet are to be stainless steel mirrors without shelves. Staff toilet rooms are to have float glass with stainless steel frame mirrors without shelves.
- Hand dryers at student and public restrooms shall be air only (no heat).
- Trash Receptacles will be provided by the District. Design entry doorways to allow a freestanding trash receptacle next to the door while maintaining proper clearances for accessibility.
- Accessible stalls:
 - a. Specify accessible standard sized multi-roll toilet paper dispenser.
 - b. Combined/recessed units are acceptable, as well as individual items, if space permits.

Finishes and Features:

Floor:	Ceramic tile, terrazzo or polished concrete.
Base:	Ceramic tile, terrazzo or polished concrete
Ceiling:	Painted gypsum board (water and mold resistant)
Walls:	Painted gypsum board; ceramic tile to 8'-0" above finished floor. Use of fiberglass reinforced panels must have approval of the District Representative
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- See list of toilet room accessories under Design Features.
- The District's sanitary supplies vendor will supply most accessories.

21. Custodial Rooms and Grounds

General:

Areas utilized by custodial, grounds keeping, and maintenance should be centrally sited and easily accessible to all other campus areas. The location of the Plant Operations Office and Main Storage should provide for immediate attention of site needs, ease of distribution of supplies, and serve as a backup location for site security and safety. Individual building custodial closets and storage locations should allow for ample supply storage, floor sinks, and safe storage of chemical cleaners. Grounds keeping equipment storage should be large enough to accommodate necessary tools and machinery, and support the needs of the site for storage of indoor and outdoor athletic equipment.

Location (desired proximities):

The Plant Operations Office and Main Storage should be located where external delivery access is convenient yet isolated from student/staff traffic. Loading docks, while not critical, are desirable based upon design criteria of other project spaces. These should be isolated from public traffic and view.

Custodial closets should be distributed throughout campus and within buildings to maximize efficiency and response time.

Grounds keeping equipment storage, however, should be located on the periphery of campus well away from areas in which learning may be adversely affected by the use of power tools and equipment traffic (e.g. tractors, lawnmowers, etc.).

Campus utility areas will be distributed to the campus area as determined by final mechanical and electrical design requirements.

Design Features:

Plant Operations Office and Main Storage (900-1000 sq. ft.at HS; 800-900 sq. ft. at MS): Open floor space for large items storage, shipping and receiving, tool bench, office work station, secured and open storage, wash basin, minimum 48" rollup door, custodial cart storage and power, backup security and life safety panels.

Custodian Closets:

- Floor-mounted mop sink, hot water, and mop rack. Design to accommodate Owner Furnished Owner Installed cleaning product dispensing system above mop sink with cold water hose bib at six feet above finish floor.
- Metal storage shelving and a locking metal storage cabinet.
- 180 degree door swing with hold open device
- Floor drain
- Fiber-reinforced plastic (FRP) wall panels around mop sink (or epoxy painted CMU blocks). Extend 12 inches beyond the mop sink and extent to 8 feet above finished floor.

- One microfiber washing machine and dryer in one custodial room per school. Coordinate floor drain and dryer vent for washer and dryer.
- Exhaust fan with wall louver. Avoid use of door louvers when possible.
- If water heater is in the room, provide sufficient space for access to storage and sinks. Include painted floor striping for areas adjacent to equipment that are required by code to be kept clear.
- Provide ¾-inch plywood sheathing to accommodate anchorage of racks, and hooks on all walls. When possible, expose and paint the plywood that extends to eight feet above the finished floor. When not possible due to fire rating requirements, provide ¾-inch plywood sheathing from floor to ceiling behind the gypsum board on all walls.

Grounds Keeping (800-900 sq. ft.): Tool bench, fuel and chemical storage, wash basin, rollup door.

Finishes and Features

Floor:	Sealed concrete
Base:	Sealed concrete
Ceiling:	Gypsum Board (water resistant)
Walls:	Painted Gypsum Board or CMU block
Doors:	Exterior Door - Gloss Enamel Security Door - Interior Door - Semi-Gloss
Windows:	N/A
Casework	Metal storage and shelving.

Furniture and Equipment:

Plant Operations Office and Main Storage:

- Desk
- Computer and Telephone
- Power hand tools
- Metal shelving
- Sink
- Storage (locked and secured) for items received until distributed
- Storage for cleaners, chemicals, paint
- Custodian electric cart

Custodian Closets:

- Custodian Carts
- Cleaner storage
- Metal shelving

Grounds Keeping:

- Tool storage
- Tool bench
- Gardening tools and machinery (hand tools, tractor, lawn equipment)
- Sink

22. Corridors

General:

Interior corridors not only provide a path of travel between other spaces, they are used as gathering areas and display areas.

Design Features:

Provide sufficient width for passing periods (this may exceed the code required exiting width).

At exterior locations (upper floor exterior corridors and balconies): Provide sealed concrete with integrated waterproof membrane under topping slab with top-cast finish.

Finishes and Features:

Floor:	VCT, terrazzo or polished concrete
Base:	Rubber, terrazzo or polished concrete
Ceiling:	Painted gypsum board
Walls:	Painted gypsum board
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Lockable bulletin boards
- Display cases
- Directional signage

23. Storage Rooms

General:

Provide storage rooms as required in other sections of these standards.

Location (desired proximities):

Adjacent to uses that require storage.

Design Features:

Provide sufficient area for shelving, counters, and work areas.

In custodial and gardening storage, chain link fence may be utilized as partitions.

Finishes and Features:

Floor:	VCT or polished concrete
Base:	Rubber or polished concrete
Ceiling:	Painted gypsum board and/or suspended ceiling
Walls:	Painted gypsum board
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- For heavy-duty metal shelving units, provide anchorage details.
- Where locking metal storage cabinets are required, provide as CFCI.

24. Mechanical and Electrical Rooms

General:

Provide mechanical and electrical rooms as needed to support the facility.

Location (desired proximities):

Entry doors should not be in prominent places such as immediately adjacent to the main entry or facing main courtyards. Sidewalk access of sufficient width to accommodate vehicles is required.

Design Features:

Access to utility rooms shall not be through classrooms.

Provide an electrical room to include, electrical panels, inverters, and other power related devices. The room must be ventilated. Only step-down transformers may be located inside buildings, at MDF and IDF rooms.

Mechanical Rooms. Provide mechanical rooms for furnaces or other air handling equipment. Do not combine mechanical rooms with other functions.

Include painted floor striping for areas adjacent to equipment that are required by code to be kept clear.

Do not combine with storage rooms.

Finishes and Features:

Floor:	Sealed concrete
Base:	Sealed polished concrete
Ceiling:	Painted gypsum board and/or open
Walls:	Painted gypsum board
Casework:	Plastic laminate
Countertop:	Plastic laminate

Furniture and Equipment:

- Fire extinguishers

25. Main Distribution Frames (MDF) or Head End Equipment Rooms

General:

One MDF is needed for each campus to be the connecting point between service providers and the campus data infrastructure.

Location (desired proximities):

Central 1st floor location to shorten runs to Intermediate Distribution Frames (IDFs).

Design Features:

Rectangular room; minimum of 10 feet by 15 feet clear inside dimensions.

Provide a 42-inch wide outward swinging door with no louvers or glass and locate in the middle of the wall.

Provide enough space to include all low voltage systems head end equipment. Maintain a minimum of 36-inch clearance in the front and rear of each rack. Include 5 racks: 2 fully enclosed server racks and 3 open four post racks (two for data, one spare for IT Department, one for intercom system, one for CATV).

Provide plywood backing wrapping walls 8 feet high by ¾-inch thick, with the "A" side facing out, painted off-white.

The room must have a dedicated air-conditioning system with gravity fed condensate lines. Ventilation only is not acceptable.

Do not run plumbing lines, rainwater leaders, or other utilities not serving the MDF in or above this room. Do not run condensate lines above this room.

Finishes and Features:

Floor:	Sealed concrete or VCT
Base:	Sealed concrete or rubber
Ceiling:	open
Walls:	Painted gypsum board with plywood backing panels

Furniture and Equipment:

- Racks

26. Intermediate Distribution Frames (IDF) Rooms

General:

The IDF is needed to provide a distribution facility for data and technology for each building. Trunk lines connect each IDF to the MDF.

Location (desired proximities):

One IDF per floor (stacked) in each building centrally located (if possible) to reduce distance to furthest classroom or data drop.

Design Features:

Provide a minimum of 10 feet by 10 feet clear inside dimension with a square plan.

Provide a 36" outward swinging door with no glazing or louvers.

Provide an IDF enough space to include, intermediate low voltage systems, 36 inches of clearance around the rack, and include a minimum of two racks. Provide 1 rack for every 150 drops. Teaching stations will require 1 drop for a wireless access point (WAP) (2 for large rooms) or one drop per 30 users, whichever is greater. Teaching stations also require a four-drop location for the teacher and four drop locations for future needs. Science labs require one drop at each peninsula.

Do not design with wall mounted IDF racks. Utilize 4 open post racks.

Provide plywood backing wrapping walls eight feet high by ¾-inch thick, with the "A" side facing out, painted off-white.

The room must have an air-conditioning system with gravity fed condensate lines. Ventilation only is not acceptable.

Do not run plumbing lines, rainwater leaders, or other utilities not serving the IDF in or above this room. Do not run condensate lines above this room.

Finishes and Features:

Floor:	VCT or sealed concrete
Base:	Rubber or sealed concrete
Ceiling:	Open
Walls:	Painted gypsum board with plywood backing

Furniture and Equipment:

- Equipment Racks

BUILDING COMPONENT DESIGN STANDARDS

1. Color Selection

- a) Propose color selections in the Design Development phase. All color selections are to be finalized prior to the completion of the construction documents.
- b) Limit paint scheme to two colors: one main body color and one accent color. Match existing exterior paint scheme when applicable. Design proposals exceeding two colors must have written approval from the District.

2. Exterior Finishes

- a) Finishes must be durable and low maintenance.
- b) Plaster shall be integrally colored and receive a paint finish.
- c) Finishes are to be paintable or if exposed masonry, treat with anti-graffiti coating. Planes above ten feet do not require graffiti coating, however, do not partially coat a plane, even if some portions exceed ten feet. If a break line such as a stucco screed exists above 10 feet, then that break may be used to terminate the anti-graffiti coating.
- d) Non-painted masonry is to be sealed in addition to the anti-graffiti coating.
- e) Exterior Insulated Finish System (EIFS) assemblies are not permitted.
- f) Exterior wood siding, wood doors, or wood trim are not acceptable.
- g) Metal siding shall not be located within reach of pedestrians.
- h) Styrofoam trim pieces are not permitted.

3. Roofs

- a) Roofing types:
 - i) Built-up roofing: minimum 30-year warranty.
 - ii) Sloped metal roofing: minimum 30-year warranty.
 - iii) Composition Shingle Roofs: minimum 20-year warranty.
 - (1) Composition shingle roofs are only allowed for replacement of existing roofs on the auditoriums at Chula Vista Middle School, National City Middle School and Southwest Middle School.
- b) Design flat roofs to have parapets of 42-inch guard height, minimum.
- c) Where the use of tie-offs is unavoidable, tie-offs shall comply with maintenance workers safety requirements per CAL OSHA.

- d) On sloped roofs (3 inches in 12 or greater) to receive a new roof, use standing seam metal roofing that meets the "Cool Roofing" and "Energy Star" roofing criteria.
- e) On low-sloped roofs (½ inch in 12 to 3 inches in 12) use modified bituminous roofing that meets the "Cool Roofing" and "Energy Star" roofing criteria. Do not allow the use of pitch pockets.
- f) Roof access is to be internal in a secure location. External roof ladders are permitted to provide access from one roof level to a higher level.
- g) Locate accessories 10 feet from roof edges without parapets and 12 inches from cant strips at parapets.
- h) Provide tie-offs and safety equipment for the servicing of sloped metal roofing.
- i) Provide walk pads from roof access to the service side of HVAC equipment.
- j) Design to discourage bird perching and nesting.
- k) Roof Drains, Gutters, Downspouts, and Rainwater Leaders:
 - i) Only external gutters and downspouts are permitted. Eaves to have gutters and downspouts, including lunch shelters and covered walkways. Internal gutters are permitted only with the written permission of the district.
 - ii) Provide external 18 gauge, fully welded, rain gutters. Gutters to have a minimum of 6-inch continuous flange to lap under roofing membrane and be secured with heavy duty gutter anchor straps at a minimum of six- feet on center.
 - iii) Size gutter profile per SMACNA design guidelines but minimum of 4-inch by 4-inch with ¾-inch turned edge at lip. Detail with outer edge ½-inch lower than roof edge to accommodate overflowing
 - iv) Do not use internal gutters.
 - v) Downspouts are to be constructed of schedule 40 galvanized steel pipes below ten feet (10').
 - vi) Specify indirect connection to storm drain system via drain inlet at downspout discharge.
- l) Provide four foot high building numbers painted in a contrasting color on each building. Roofs over 8,000 square feet shall have two numbers facing opposite directions and separated by at least 50 percent of the longest dimension of the building. Provide on modernization or HVAC projects if the numbers do not exist or are faded.

4. Interior Wall Finishes

- a) Specify and detail durable, low maintenance interior finishes.

- b) All gypsum board to be Type 'X' 5/8-inch.
- c) Interior corridors, locker rooms and other areas of high abuse are to have reinforced gypsum wallboard with vandal resistant corner guards.
- d) Specify impact resistant panels in sport facilities that do not have concrete or masonry walls.
- e) Do not specify plaster faced gypsum board.

5. Ceilings

- a) Do not use fire rated acoustical suspended ceilings.
- b) Exposed MEP is only allowed in Gyms, Utility rooms, Storage rooms, IDF rooms, MDF rooms, and Custodial rooms. Exposed piping, ducts and conduits are to be painted.
- c) No exposed insulation.
- d) Install non-sag gypsum board at ceilings and soffits.

6. Concrete Building Slabs

- a) Recommend assemblies, admixtures and/or sealers to control slab moisture and pH levels as required by the flooring manufacturer's requirements.
- b) Coordinate requirements for under slab vapor barrier with wood floor manufacturer.

7. Flooring

- a) VCT is preferred. Polished Concrete is acceptable for interior corridors. Unfinished smooth sealed concrete is acceptable in mechanical rooms.
- b) Design patterns may be proposed using one main body color and one accent color at corridors and other appropriate areas to create a sense of identification and design impact. Also, to mark where doors swing into corridors for safety.
- c) Carpet selection is limited to one color and pattern per school.
- d) Where sealed concrete curb and sealed concrete floor meet provide detail illustrating how the joint is finished.

8. Windows and Glazing

- a) Exterior windows to be Low-E, dual pane with thermal break and to be constructed of clear anodized extruded aluminum.
- b) Windows are not allowed on the latch side of doors. Provide a 12-inch wide by 30-inch tall vision window (minimum size) on the hinge side of classroom and office doors.

- c) Provide 8mil Mylar film on glazing in or adjacent to doors, at entries or other places that need security. Coordinate with the District's security manager.
- d) Specify heavy duty hardware with stainless steel hinges and handles on windows. Plastic hardware is not acceptable.
- e) Specify operable window sections in rooms to allow for cross ventilation. Do not include window screens except where required by Health Department.
- f) In classrooms with operable windows, specify single hung windows in the lower section and hopper windows at the top. Do not specify awning windows. Design windows so they do not protrude into path of travel when open. Design pole operated hopper windows to open to the interior to allow access for opening and closing.
- g) At food service windows, specify double hung windows with operable stainless steel screens in compliance with the Health Department requirements for maximum size opening.
- h) Design sun shading of windows. Screen from direct sunlight with overhangs or external sunshades.
- i) Use fire rated glazing only when other options are not available. Use wire glass or fire doors before using fire rated glazing. Consider eliminating windows that require fire rated glazing. Avoid need for fire sprinkler water curtains to protect openings.
- j) Dual pane glazing to be standardized in size for ease of replacement.
 - i) Panes cannot be larger than can be handled by one person, maximum five feet by five feet.
 - ii) Specify no more than five pane sizes per site.
- k) Glazing to be installed from inside the building when the top of the panes are over eight feet above grade.
- l) Provide a standard minimum sill height of 48 inches, except at windows for service and point-of-sale interaction.
- m) Curtain walls are to be avoided.
- n) No glazing below 16 inches.
- o) The use of insulated polycarbonate glazing systems and similar wall panel systems is prohibited.
- p) Provide motorized openers at high, inaccessible, windows.

9. Window Coverings

- a) Manual operated heavy-duty roller shades shall be provided at classrooms, offices, conference rooms, nurse's room, classrooms, and other areas where appropriate.
- b) Provide shades in existing building when modernizing or adding air conditioning. If only some windows have existing shades, provide new shades for all windows.
- c) Do not specify motorized shades unless absolutely necessary because of location.
- d) Specify black-out shades in the Chemistry and Physics labs.
- e) Limit color selection to one.

10. Ramps, Guards, and Handrails

- a) Whenever possible reduce the need for ramps through use of sloped walks.
- b) Do not design ramps to maximum allowed slope by code to accommodate construction tolerances. Ramps should be designed up to a maximum slope of 8 percent in order to stay within the absolute maximum 8.33 percent.
- c) Exterior railing to be hot-dipped galvanized steel. Do not paint.

11. Room Numbering, Naming, and Building Signage

- a) Building numbers shall be determined during schematic design.
- b) Room numbers shall be determined during design development (or schematic design) so that the room numbers on the construction documents will match the assigned room numbers.
- c) Room numbering shall be used for electrical panel labeling, phone assignments, data outlet assignments, energy management system, security alarm device addresses and fire alarm device addresses.
- d) Room numbers and building signage shall be mechanically fastened with vandal-resistant fasteners and reinforced with double-stick tape.
- e) Coordinate signage locations with other items that may be in conflict, such as windows adjacent to doors where room identification sign is required to be placed. Signage may not be affixed to windows.
- f) Room identification signage is not desired at non-occupied rooms such as utility and storage rooms.
- g) For new construction or major modernization, projects provide an allowance for a 12" x 18" bronze dedication plaque. Coordinate a location near the Administration building with

the District and provide backing in the wall to support the plaque as part of the construction contract. District will provide text and SUHSD Logo during construction.

- h) Refer to local jurisdictions for building and address signage required at entrances.
- i) Restroom signage:
 - i) Colors: International Blue and white should be used for accessible restrooms.
 - ii) Include Braille of all text as required by code.
 - iii) Multiple-occupant (gang) restrooms:
 - (1) Use circle and triangle symbols on doors: Signs "A" and "B" below.
 - (2) Use "BOYS", "GIRLS", "MEN" and "WOMEN" wall signs to distinguish restrooms.
 - (3) At accessible restrooms, add sign "C" below next to the wall sign or incorporate the accessibility symbol in the wall sign.
 - iv) Single-occupant restrooms:
 - (1) All restrooms: Use sign "D" below on the door and wall sign "E" for non-accessible restrooms.
 - (2) Accessible restrooms: Add sign "C" below next to the wall sign or incorporate the accessibility symbol in the wall sign.

Sign A

Sign B

Sign C

Sign D

Sign E – blue sign, white lettering

12. Doors

- a) Doors shall be hollow-metal doors. Do not use wood doors.
- b) Use hollow-metal door frames; do not use wood frames or knock-down (K-D) frames.
- c) Minimum sized door is 3-foot by 7-foot.

- d) Doors shall not exceed eight feet high or four feet wide.
- e) Doors sizes greater than 3-foot by 7-foot shall be increased by 2-inch increments.
- f) Door thickness shall be 1¾ inches, no exceptions.
- g) Doors shall not have vision lites or windows, except:
 - i) Doors to music practice rooms shall have half glass, insulate as appropriate for acoustic insulation.
 - ii) Storefront entry door systems (not permitted without specific written approval from the district).
- h) Hardware:
 - i) Submit completed finished hardware specification to the District Representative for review and acceptance with the District locksmith prior to including in bid documents.
 - ii) Keying:
 - (1) Keying to be tied into the District grand mastered keyway system.
 - (2) The District Locksmith will determine keying requirements.
 - (3) District locksmith will key cylinders to be installed after installation of hardware is complete and just prior to Owner occupancy.
 - (4) Contractor to have the supplier send zero bitted cores with specified keyway and key blanks directly to District locksmith. Materials must be received directly from the manufacturer six months prior to occupancy.
 - iii) Lever/Locksets:
 - (1) Lock/lever sets to be in accordance with DSA Bulletin 11-05 (AB 211) that allow doors to classrooms and any room with an occupancy of five or more persons to be locked from the inside. Doors that are always locked from the outside and student toilet room doors are exempt.
 - (2) Unless otherwise specified, exterior and interior locks shall be mortised type.
 - iv) Exit Devices:
 - (1) Exit devices shall be furnished with rim touch bar device.
 - (2) Specify with flush, cup style pull.
 - (3) Specify keyed removable mullions at paired doors.
 - (4) Specify with hex dogging where allowed by code.
 - v) Door Closers: Exterior and fire rated doors to have door closures.

- vi) Stops: Provide floor mounted door stops at doors with a minimum of two fasteners. Avoid the use of wall stops.
- vii) Door Louvers:
 - (1) Do not specify exterior door louvers.
 - (2) Interior door louvers to be heavy duty, vandal resistant, fixed blade louvers.
- i) Accessories:
 - i) Specify kick plates at the base of doors high abuse locations such as gym, locker rooms, toilet rooms, storage rooms, etc.

13. Architectural Woodwork and Casework

- a) Acceptable finishes are wood veneer, plastic laminate, and paint.
- b) Use common woods such as birch, fir, and maple. Do not use exotic or scarce woods.
- c) Use woods that are certified by the Forest Stewardship Council (FSC)
<http://www.fscus.org/> where practical and available. Check cost and availability before specifying.
- d) Bamboo or other rapidly renewable resource may be used with written permission of the district. Provide cost and availability before specifying.
- e) Provide plastic laminate countertops unless epoxy-resin is required for programmatic purposes. Provide backsplashes where countertops are susceptible to water damage such as art rooms and sink cabinets.

14. Acoustical Treatment

- a) Comply with CHPS acoustical prerequisite requirements. NC-30 or better for learning spaces
- b) Architectural acoustical treatment is required at all spaces. Acoustical ceilings are the minimum requirement. Carpet and sound absorbing wall panels may be used in lieu of acoustical ceilings.
- c) Specify acoustical metal decking when exposed in locations with acoustical requirements.
- d) Provide sound insulation in all walls at occupied locations. Fill wall cavities completely.
- e) Extend wall framing with sound insulation to room or underside of floor above at conference rooms and other areas where sound transition is a concern, but sound walls are not necessary.

- f) Provide staggered stud sound walls in areas where sound transmission is a concern such as occupied areas adjacent to auditoriums, band rooms, band practice rooms, and toilet rooms.
- g) Mitigate noise from mechanical equipment. Coordinate with mechanical equipment provisions for sound deadening.

15. Concrete Masonry Unit (CMU) Walls

- a) Provide furred out walls, when necessary, to accommodate switches, conduits, outlets, etc.
- b) At all non-rated walls provide a "block out" opening to run new, existing, and future conduit through.
- c) Detail connections of steel beams between CMU walls with field welded connection on at least one side to accommodate construction tolerances and work sequence.
- d) CMU is to be sealed in all cases on the side exposed to weather, or both sides where freestanding and exposed to weather.
- e) Limit color selection to two colors: one main body color and one accent color. Design proposals exceeding two colors must be approved by the district in writing.

16. Fire Extinguishers

- a) All required fire extinguishers are to be included in the construction contract and installed in semi-recessed fire extinguisher cabinets. Locate in appropriate wall types; wall-mounted cabinets are to be avoided due to accessibility clearance requirements.
- b) Provide painted steel cabinets with glazing in the door.

17. Vertical Circulation

- a) Building Stairs:
 - i) Stair risers must be solid.
 - ii) Detail a two-piece aluminum stair nosing.
- b) Elevators:
 - i) Coordinate any required devices in the elevator shaft, such as: smoke detectors, heat detectors, and fire sprinklers with the elevator manufacturer, California Building Code, and the State Elevator Inspector.
 - ii) Elevator cabs shall be sized to accommodate standard gurneys.
 - iii) Provide flooring for cab, include on finish schedule on the Drawings.
 - iv) Elevator equipment room and shaft to be rated per code requirements.

- v) Size rooms of sufficient size to accommodate the specified manufacturers.
- vi) Provide proximity fob addition to key operator to call elevator.
- vii) Do not run conduit, water lines, roof drains, or other utility not serving the elevator in these rooms.
- c) Accessibility Lifts:
 - i) Avoid the use of lifts whenever possible. Lifts are not allowed in new construction.
 - ii) Provide code required lighting levels for lifts.

MECHANICAL STANDARDS

1. General Requirements

- a) All interior spaces shall be air conditioned unless specifically excluded herein or in writing by the District.
- b) The HVAC system shall comply with the current California Code of Regulations, T-24, the standards of ASHRAE and NFPA as well as the requirements of local authorities having jurisdiction including but not limited to the county health department for kitchens, air quality management district for emissions and permitting related to boilers, City and County Pollution Control District and Fire Departments for Hazardous materials storage and distribution.
- c) Comply with the minimum requirements of Title 24 energy efficiency standards, however the District encourages the designs to improve on the minimum performance to the extend life cycle cost effective. Consult with San Diego Gas & Electric to determine the amount of any incentives for higher efficiency such as "Savings by Design".
- d) All projects shall be designed to meet CHPS certification requirements but certification is not required. For Sample CHPS score card see the Collaborative for High Performance Schools "Best Practices Manual" (available at <http://www.chps.net>).
- e) Assure maintenance and accessibility provisions for servicing and replacement. Provide adequate working space around equipment for servicing. See Roofs for walk pad requirements.
- f) Single-drop gas package roof-mounted equipment is preferred (Trane or Carrier). All other equipment types and locations must be approved by the District in writing.
 - i) Fixed ladders and roof hatches shall be incorporated in projects where regular access to the roof is required for servicing equipment. Comply with Cal OSHA requirements. In existing buildings provide ladders and roof hatches in existing custodial or utility rooms; if interior roof access is not possible, do not provide exterior ladders.
 - ii) Do not provide screening for roof-mounted equipment.
 - iii) Locate rooftop equipment, of any sort, such that guardrails are not required at roof edges.
 - iv) Locate rooftop equipment to maintain proper clearance for intake and exhaust separation.
 - v) All curbs must be 8" minimum.
- g) If components requiring regular service are located above ceiling, they shall be accessible from the floor via portable ladder through access doors or removable ceiling tiles of adequate size to accommodate requirements of servicing.

- h) Locate mechanical equipment in a manner to minimize noise transmission into occupied spaces. Use vibration isolation, concrete pads and insulated and flexible ducts.
- i) Filter sizes shall be standard sizes and shall be limited to the minimum number of different sizes as much as practical.

2. HVAC System Commissioning

- a) Coordinate project specific commissioning requirements with the District Representative and the District's commission consultant (if applicable).
- b) Provide the commissioning requirements needed before the District will accept the project as complete. This includes air balancing and submission of balance reports, acoustical measurements and submission of acoustical reports for noise sensitive areas, final calibration and set points for control systems and components, and training of the District's Maintenance and Operations staff for operating and maintaining the systems prior to occupancy. Also require re-balancing, review of equipment performance and submission of findings on a report to the District prior to expiration of two-year warranty.
- c) Require a review on site and re-training for maintenance department prior to the end of the warranty period.

3. HVAC System Design Criteria

- a) Review scope statement and propose additional scope that may be determined necessary with designated District representative prior to starting design.
- b) Review existing site specific HVAC and plumbing conditions with the Maintenance and Planning and Construction Departments to identify problems or issues at the site or within the district to avoid repeating problems being experienced at sites or past projects.
- c) Following the initial investigations and consultations with the District, present the proposed approach for HVAC to the District in a narrative form with catalogue cuts and any drawings or diagrams to amplify or explain approach. This should be done as early as practical, preferably in the schematic design phase. Design shall not proceed until the approach and concept design is reviewed and accepted by the District.
- d) Calculations and Load Criteria
 - i) Heating and cooling load calculations shall be performed using a computerized load calculation program that is ASHRAE-based and intended for calculating heating and cooling loads for HVAC design. In addition, a computerized energy simulation shall be performed to use in conjunction with life cycle cost analysis and as required by Title 24. A certified program shall be used for compliance, such as Energy Pro. Copies of calculations shall be submitted on request from the District. Equipment shall be sized and selected to handle the heating and cooling loads calculated, and per the requirements of Title 24 and meets requirements.

- ii) Utilize the appropriate outdoor design conditions as required by Title 24 and ASHRAE with appropriate adjustments to temperatures for site specific conditions such as coastal vs. inland.
- iii) Indoor design conditions (if not noted below) shall be as required by Title 24 and ASHRAE.
 - (1) For most occupied, fully conditioned spaces, design HVAC systems to be able to maintain the following conditions: Heating: 72 degrees F; Cooling: 74 degrees F. Thermostat set points however shall be as follows: Heating: 68 degrees F; Cooling: 74 degrees F during occupancy (M-F 7:00 am to 3:30 pm) and Heating : 40 degrees F; Cooling: 99 degrees F during unoccupied periods); does not apply in specialty areas such as music rooms or other spaces where the program requires something different.
 - (2) For electrical rooms, maximum temperatures shall be 85 or as otherwise required by the engineer for the equipment installed in the room. Provide with thermostatically controlled exhaust fan, unless above conditions cannot be maintained or lower temperatures are required by District or designer for equipment contained in the room.
 - (3) Heating only spaces such as locker rooms and gyms, corridors etc., shall be heated to 68 degrees.
 - (4) 'Traditional' shop spaces shall be heated to 68 degrees or provided with infrared heating for occupant comfort.
 - (5) Kitchens shall be designed for 70 heating and 78 cooling.
 - (6) IT/MDF/IDF spaces shall be conditioned to temperatures required for equipment contained in the space.
 - (7) Elevator equipment rooms shall be conditioned as required and shall meet all the requirements of the State Elevator Inspectors.
- iv) Internal loads such as lighting, equipment and number of occupants shall be based on industry practice but shall be validated by District to allow for any unique uses within the District.
- e) Systems shall be properly zoned according to exposure and occupancy/usage. No more than one classroom (including associated offices or practice rooms) per zone or more than 4 similar offices (administrative, counseling, etc.) on the same exposure on the same zone. If multiple counseling offices are on a single zone, ensure sound privacy between offices.

4. Ventilation Criteria

- a) Minimum outside air rates delivered to the occupied spaces shall be in accordance with Title 24 or ASHRAE Standard 62, whichever is more stringent.

- b) "Demand Control Ventilation" (CO2 control) of minimum outside air delivery rate shall be used on high occupancy spaces, including multipurpose rooms, cafeterias, gymnasiums, and theaters. Provide override for humidity control.

5. Exhaust Criteria

- a) Student toilet rooms shall be exhausted at a rate of 12 air changes per hour and be held at a negative pressure. Fans shall have a 15-minute time delay.
- b) Custodial closets shall be exhausted at a rate of 6 air changes per hour, be held at a negative pressure and be manually switched. Gas water heaters shall not be installed within custodial closets.
- c) Exhaust for specialty areas such as shops and other career technical educational (CTE) spaces shall be suitable for functions in the space. Rooms with noxious fumes that cannot be controlled with source capture systems shall be fully exhausted.

6. Acoustic Criteria

- a) Noise and vibration control are required for mechanical systems and are critical for the instructional environment. HVAC system must comply with the latest edition of ASHRAE Applications, Chapter 48, Noise and Vibration Control and additional measures required to meet CHPS criteria. It is recommended the designers consult with an acoustical specialist to validate that the mechanical systems are compliance with required noise criteria. For HVAC only projects, only duct and diffuser air flow velocities are required to meet the RC(NC) requirements.

<u>Area</u>	<u>RC (NC)</u>
General Office	30-40
Corridors	40-45
Public Spaces/Shops	40-45
Mechanical Areas	50
Dining/Common	40
Classrooms	30
Administration	30
Libraries/Performing Arts	25
Multipurpose/Gyms	45

- b) Internally line, with acoustic duct liner, supply and return ducts for a minimum of ten-feet from HVAC units and exhaust fans, except for moist airstreams such as evaporative cooling, shower exhaust, grease ducts, and the like, that are not suitable for internal

lining. On larger air handling systems, acoustical lining may be insufficient and sound traps, heavier gage sheet metal and other strategies may be necessary including vibration isolation of prime movers and distribution.

- c) Transfer ducts or grilles between adjacent classrooms, offices and noise sensitive spaces, shall have offsets and lining to control noise.
- d) Rooftop units shall be generally mounted on spring curbs unless 3-ton capacity or less on moderately stiff roofs. Comply with ASHRAE Acoustical and Vibration guidelines, which recommend spring deflection to be a minimum of 10 times maximum roof deflection at the support points of the HVAC units. Consideration shall be given to lining the inside of the curbs with layers of gypsum board. One piece curbs are preferred. Curb top shall be a minimum of 8 inches above the roof surface.
- e) Select diffusers to accommodate minimum/maximum flows without dumping or exceeding space noise criteria previously defined. Place grilles to provide adequate mixing in space and velocity in areas of the occupied zone (three feet to seven feet above finished floor) between 50 and 80 fpm.
- f) When equipment is mounted outdoors or is inside behind louvered surfaces and adjacent a property line, the potential exists to exceed the local noise ordinance. Caution must be taken to verify local requirements and design systems to be under the thresholds.

7. Indoor Air Quality

- a) Minimum outside air rates shall be in accordance with Title 24 or ASHRAE Standard 62, whichever is more stringent.
- b) Locate outside air intakes away from pollutant sources and plumbing vents.
- c) Design local exhaust at indoor pollutant sources.
- d) Specify low VOC duct materials and duct sealants, as defined in CALGreen.
- e) Specify a 72-hour pre-occupancy building purge at system start-up. Run heating cycle on full continuously for 72 hours with exhaust fans on.
- f) Design control systems to provide the Title 24 required daily pre-occupancy purge cycle.

8. HVAC System Selection Criteria

- a) HVAC systems shall be selected on the best combination of first cost, cost to operate and maintain, useful life, reliability, flexibility, ease of maintenance and comfort. When a choice exists between multiple system types that meet the criteria, a life cycle cost analysis shall be utilized based on a 20-year life cycle.
 - i) Comfort considerations shall include noise.

- ii) Cost to operate and maintain shall include considerations for vandalism, energy cost, replacement parts, environmental and permitting requirements.
- iii) Consideration shall also be given to the yearly load profile, so equipment can effectively and efficiently operate at all expected minimum and maximum loads.
- b) Design system to accommodate any of the major equipment manufacturers such as Carrier or Trane. Quality shall be commercial grade (no residential units allowed).
- c) Only decentralized HVAC systems shall be used. Decentralized systems consist of HVAC units which serve a single zone and are relatively 'stand-alone' except for the connection of utilities such as gas or electricity. These would include packaged rooftop air conditioners and split system air conditioners. Decentralized (non-heat pump) systems shall be used for 24-hour loads such as IT spaces.
 - i) Packaged, single-drop, outdoor rooftop systems are preferred.
 - ii) Split systems are permitted only with written approval of the District and can include, the following combinations: interior gas furnace units with DX cooling and built-up economizers (outdoor condensers located on grade in completely fenced enclosures including a fence "roof"); interior fan/coil units with heat pump condensing unit and built-up economizers; metal jacket insulation on all exposed lines.

9. HVAC System Application

- a) 'Passive' HVAC shall be utilized whenever life cycle cost effective and can meet all the thermal comfort, acoustical and air quality criteria. This includes natural ventilation for cooling and to meet minimum outdoor air requirements.
- b) General Classrooms: One zone per classroom. Minimum of two supply grilles and minimum one return per classroom. Consider incorporating thermal displacement style distribution with a minimum of two drops for a typical 960-square-foot classroom. Particular attention shall be taken in placing inlets and outlets for optimum distribution.
- c) Science Classroom: Same as general classrooms except supply air shall be 100% exhausted in biology or chemistry rooms. Return air shall be used where possible in non-odorous science classrooms. If room incorporates chemical hoods or utilizes hazardous materials, consideration shall be given to air flow patterns within room to avoid re-entrainment of hazardous fumes and or eddies near fume hoods. Hoods shall be incorporated with appropriate, end-of-run exhaust fans with suitable discharges.
- d) Arts and Crafts Classroom: Similar to science classrooms except where kilns are used, they shall be provided with special kiln ventilation systems as recommended by the kiln manufacturer.
- e) Kitchens shall be air conditioned to maintain comfort for the workers and provided with appropriate ventilation and make up for cooking range hoods and dishwashing areas.

Ideally, refrigeration condensers for walk-in coolers and walk-in freezers shall be located outside.

- f) Gyms, locker rooms and corridors shall be heated and ventilated only. Shower areas shall be exhausted.
- g) Career technical education spaces (CTE) such as shops for auto and wood shall be heated and ventilated only, with a preference toward radiant heating, or space heating that is switched to shut off when the roll-up door is opened. Source capture exhaust systems, appropriate for the use, shall be provided as required (e.g. sawdust collection). Provide electrostatic room filtration unit(s) for these spaces to reduce dust accumulation. The CTE spaces associated with culinary, engineering, health/medical and forensics shall generally be treated similar to classrooms, with specialty exhaust as required for the specific application.
- h) Toilet rooms, custodian closets shall be ventilated only; storage rooms shall be unventilated unless requested otherwise by the District.
- i) IT closets and other spaces with 24-hour loads shall be conditioned with independent systems.
- j) Provide building pressure relief in spaces that are pressurized due to minimum outside air introduction or due to economizer outside air introduction. Adequate relief shall be provided so that ADA Door Closure Requirements are met in all rooms. Gravity relief is preferred.

10. Air Distribution Criteria

- a) Coordinate locations of required access doors with architectural reflected ceiling plans and show accordingly.
- b) Avoid remote damper controls. If necessary, indicate and coordinate location with architectural.
- c) Duct systems shall be designed in accordance with ASHRAE and SMACNA standards, and per applicable codes. Duct systems shall be designed for quiet and efficient system operation.
- d) All ductwork is to be sealed after fabrication and until in service per CHPS requirements.
- e) Return air shall be ducted.
- f) Round ductwork is preferred, space permitting. Ductwork is preferred to be concealed, however exposed ducts may be used as long as they don't interfere with sightlines or lighting or fire sprinklers. Exposed ductwork shall be painted.
- g) Existing ductwork should be replaced to the greatest extent feasible on renovated systems. Any ductwork that is reused for new systems shall be cleaned and sealed to standards equivalent to new ductwork.

- h) Flexible ductwork may be used for the last 7-8 feet of a distribution run to connect ceiling inlets and outlets in suspended ceilings.
- i) Velocity of ductwork shall be limited to the recommendations of SMACNA and not to exceed California Mechanical Code to meet any acoustical criteria for the spaces served. Generally duct shall be sized via the equal friction method, for low-pressure, low-velocity applications (1,500 fpm maximum inside shafts and 1,000 fpm elsewhere except above noise sensitive spaces which may be lower). Avoidance of excessive friction in the distribution system is an important consideration for long term energy savings and thus careful consideration of the number and type of fitting and the duct velocity to minimize friction loss is expected.
- j) Low air velocity should be applied at acoustically sensitive rooms.

11. Equipment Section/Sizing Criteria

- a) Packaged and unitary HVAC units, indoor and outdoor, shall have an efficiency rating or at least 15 percent higher than that required by Title 24. When equipment is available with energy efficiency higher ratings, such equipment shall be specified, provided there are enough manufacturers who can meet the higher efficiency requirement to insure a non-proprietary competitive bid.
- b) All coils shall be corrosion resistant.
- c) High efficiency type motors shall be specified for HVAC equipment and exhaust fans.
- d) Air Handling Systems:
 - i) Size to accommodate peak calculated block load for spaces served and add 5% additional capacity for safety and 5% for leakage.
 - ii) Cooling Coils shall be sized for no more than 400 feet per minute face velocity and heating coils for 600 feet per minute.
 - iii) Maximum size for a single air handling unit is 30,000 cfm unless otherwise approved by the District.
 - iv) Plenum fans and airfoil or backward inclined wheels are preferred over forward curved. Select for maximum efficiency. Variable speed motor controllers shall be used when applied on variable air flow systems. Discharge dampers shall not be used.

12. HVAC Controls

- a) The building automation/energy management system shall be compatible with the existing District wide energy management system (Honeywell WEBs System).
- b) The temperature control system shall be comprised of a network of interoperable, stand-alone digital controllers communicating via LonMark/LonTalk communication protocols to a Network Area Controller.

- c) Control panels shall be stand-alone in memory, networking, and control operations. The design of the controls shall be in a modular format, permitting future expansion capabilities. The system shall monitor and control equipment according to the sequence of operation, as well as additional input and output points. The building control system shall operate to ensure operational safety, regulatory compliance and to satisfy process constraints as well as occupant comfort.
- d) HVAC unit operating schedules shall be controlled by an Energy Management System (EMS). Determine if campus already has an EMS system and if so, coordinate adding the new building(s) to the existing system. If no EMS system exists, then provide a new campus-wide control system and modem for remote communications to control both the exterior lighting and the HVAC systems. Coordinate with electrical engineer. For each campus, HVAC units shall be zoned as 1) Classrooms, 2) Administration, and 3) Multipurpose/Gymnasium. Coordinate with the School District to provide necessary telephone modem lines. Pneumatic control systems will not be acceptable. HVAC Units shall be provided with factory economizer controls.
- e) If embedded controls on equipment furnished under this contract are utilized as part of the control sequence, designers shall ensure compatibility between the District's EMS and site specific control system and the equipment.
- f) For each HVAC unit, provide a wall sensor connected to the EMS system. Wall sensor shall have local adjustment for +/- 2 degrees and an override button with 30 minute override increments up to 2 hours.
- g) Thermostats shall be used in lieu of wall sensors when EMS is not available, such as in portables. Thermostats shall be programmable with time control, deadband and set back features along with bypass switch. Program for operation from 6:00 a.m. to 5:00 p.m. Set points shall be 68 degrees heating and 72 degrees cooling with local adjustment for +/- 2 degrees. Provide override button with 30 minute override increments up to 2 hours. Provide suitable sub-base and locking cover with key lock. Confirm exact features with District's project manager.

13. Sequence of Operations for Air Conditioning Systems

- a) Provide a wiring diagram in the drawings indicating the required sequence of operations.

PLUMBING STANDARDS

1. General Requirements

- a) The Plumbing systems shall comply with the current California Code of Regulations, Title 24, Title 19 and Title 8 as well as the standards of ASPE and NFPA and the requirements of local authorities having jurisdiction including but not limited to the county health department for kitchens, city and county pollution control district and fire departments for hazardous materials storage and distribution.
- b) Plumbing System Components shall comply with California Assembly Bill 1953 (effective January 1, 2010), which limits the allowable lead content in certain potable water system components.
- c) Design systems to be durable, easy to service and energy efficient. Should the choice exist between multiple alternatives that all generally achieve the same goals of quality, duty and cost to operate and maintain, the decision shall be made on the basis of a 20-year life cycle cost analysis.
- d) Assure accessibility provisions for servicing and replacement.
 - i) Where practical, all equipment shall be housed within interior equipment spaces within buildings.
 - ii) Roof mounted equipment is discouraged unless no other alternatives are available and may only be done with the approval of the District. Fixed ladders and roof hatches shall be incorporated in projects where regular access to the roof is required for servicing equipment. Comply with Cal OSHA requirements.
 - iii) Provide adequate working space around equipment for servicing. Coordinate with architectural drawings for required clearance striping.
 - iv) If components requiring regular service are located above ceiling, they shall be accessible from the floor via portable ladder through access doors or removable ceiling tiles of adequate size to accommodate requirements of servicing.

2. Plumbing System Commissioning

- a) Coordinate project specific commissioning requirements with the District Representative and the District's commission consultant if required for CHPS requirements.

3. Design Coordination with District

- a) Prior to starting design, meet with the District's Maintenance Department and review existing site specific plumbing conditions, problems or issues if applicable as well as issues of general concern within the district to avoid repeating problems being experienced on other sites or past projects.

- b) Review scope statement and propose additional scope that may be determined necessary with the District representative and the Maintenance Department prior to starting design.
- c) Meet with District representative to help develop phasing schedule and coordinate system design for construction phasing requirements. The goal is to minimize impact to school operations and allow for functioning systems during construction.
- d) For renovations, review plumbing as-built drawings, conduct independent site investigations and evaluate existing conditions. Incorporate findings into the Field Report due at the end of the Schematic Design phase and update as necessary in subsequent submittals.
- e) Following the initial investigations and consultations with the District, the proposed approach for plumbing shall be presented to the District in a narrative form with catalogue cuts and any drawings or diagrams to amplify or explain approach. This should be done as early as practical, preferably in the concept stage. Design shall not proceed until the approach and concept design is reviewed and accepted by the District.

4. **Site Utilities**

- a) Contact utility providers to determine the site specific requirements, confirm availability of desired pressure and flow rates and make a recommendation to the District for the most cost effective service connection.
- b) Gas meters shall be enclosed in utility yard that meets the utility company's requirements. Locations shall be approved by both the District and the Utility Company. Specify a seismic gas shutoff valve on the consumer side of the gas meter with-in the secure utility yard.
- c) Site gas distribution piping shall be medium pressure (5 PSIG) where available, and regulated down to low pressure (12-inch W.C.) at each building. Specify code-required accessible gas shutoff valve outside each building served. Building shutoff valves and regulators shall be accessible for service but located to prevent vandalism.
- d) Size site utilities to allow for possible future campus expansions. Coordinate with master plan requirements.
- e) Coordinate fire hydrant locations with the local fire jurisdiction.
- f) Confirm the existence of utilities within the project area. At heavily congested locations, critical routing and/or points of connection, locating services may be desired in addition to pot-holing in strategic locations. Discuss recommendations of these additional measures with District if the potential exists for interferences that could cause major cost or disruption.
- g) Design site water system with isolation valves for major areas, at building entrances, or at mains on branch lines to buildings. Valves shall be accessible for maintenance and replacement. Exposed valves and back-flow preventers shall be protected with cages or fencing.

- h) Tracer wires shall be provided for all non-metallic underground piping systems.

5. Building Plumbing Systems

- a) The project shall be provided with complete interior plumbing systems, connected to site services complying with the requirements of the California Plumbing Code (CPC). This may include but is not limited to, domestic cold water, domestic hot water, sanitary soil, waste and vent, acid waste and vent, grease waste and grease vent, storm drain, condensate, fuel gas systems and compressed air as needed for the scope of the project.
- b) Water Distribution:
 - i) Each building shall have a shut-off valve for isolating that building.
 - ii) Provide water service to all fixtures and outlets that require supply. Design distribution to enable 25 psi to be maintained at furthest flush valve; provide booster systems as required.
 - iii) Size piping based on the number of fixture units and demand load curves in the CPC.
 - iv) Provide water hammer arrestors for portions of system that may be subject to water hammer, such as for quick closing valves.
 - v) Maximum water velocity shall be 5 feet per second for pipes 2 inches and smaller and 7 feet per second for piping 2½ inches and larger
 - vi) In noise sensitive spaces, the use of isolation at support points may be required; consult acoustical engineer.
 - vii) Minimum pipe size serving any flush valve shall be 1¼ inches. May be reduced in wall cavity to flush valve connection size, e.g. 1 inch, prior to penetrating wall.
 - viii) Design cold water system with shut off valves to enable isolation of distinct areas of the building, such as at each floor and each toilet room. Provide at each piece of equipment (e.g. water heater). Valves shall be accessible to maintenance and replacement.
- c) Waste and Vent
 - i) General:
 - (1) The use of low-flow fixtures affects the slope required for waste lines. Waste lines shall be designed with slopes to exceed code required minimums at low-flow fixtures whenever possible. Determine the slope necessary for complete flushing of the waste lines.
 - (2) Cleanouts shall be provided above all urinals, under sinks and elsewhere required by code. Exterior cleanouts shall be installed in yard boxes or in walkways, flush with surface. Interior cleanouts shall be located to avoid finished

public or student areas and if unavoidable, shall be fit with suitable top a located to be as unobtrusive as possible, yet functional for its intended use.

- (3) In addition to the chemical waste and grease waste below, other waste streams may be subject to regulatory oversight and may require pre-treatment such as auto shop drains, film processing drains and other applications using and potentially discharging regulated chemicals or substances.
- (4) Interceptors shall be located so they may be effectively inspected and cleaned. Interceptors shall be separately vented.

ii) Chemical Waste and Vent:

- (1) Consult with local department of public works relative to waste disposal requirements for chemical waste. Provide neutralization system if required and or sampling box. Confirm the requirements with the local jurisdiction.
- (2) Chemical waste and vent system shall be independent of other waste and vent systems.

iii) Grease Waste

- (1) Consult with local department of public works relative to waste disposal requirements for grease waste. Provide trap of size as required to meet demand and local requirements of jurisdiction. Health department approval may be required.

iv) Storm Drain

- (1) Storm drain systems shall be piped to underground. Provide roof drains and overflow drains as required by code, compatible with roof system.
- (2) Design for a minimum of 3 inches per hour rainfall.
- (3) Insulate rainwater leaders and bodies of roof drains in interior areas subject to condensation.

d) Natural Gas:

- i) Avoid lengthy horizontal roof mounted piping. Paint exterior piping.
- ii) Provide shut-off valve, union, flex connection and dirt leg on all gas connections to appliances.
- iii) Provide accessible shut off valves for each gas outlet or groups of outlets with a room (master shut-off valve for science classrooms, in secure location not accessible to students).
- iv) All valves shall be protected from public or student tampering.

- v) Regulators if required in addition to appliance regulators furnished with gas fired equipment, shall be located in secure locations and vented to exterior when located inside buildings.
- e) Compressed Air:
 - i) If required for curriculum or for staff use, verify demand and pressure requirements with users.
 - ii) Compressors shall be duplex, tank mounted and located within secure mechanical spaces whenever possible. Provide dryer and filters. Contractor shall be responsible for all operating permits.
 - iii) Piping shall be sloped to facilitate drainage and shall be provided with end use connectors needed for required function.
- f) Water Heating:
 - i) Hot or tempered water shall be provided in the following locations:
 - (1) Staff rooms with sinks or lavatories
 - (2) Science classroom sinks or as otherwise required for curriculum
 - (3) Special education classroom sinks
 - (4) Art classroom sinks
 - (5) Shop sinks
 - (6) Staff and public toilets
 - (7) Showers including emergency showers (tempered only)
 - (8) Custodial sinks
 - (9) Washrooms serving food service areas
 - (10) Kitchens
 - (11) Nurses offices
 - ii) Water heaters shall be located as close to the point of use as possible and set at temperatures to minimize bacterial growth. Provide tempering valves as required to limit discharge at student and public uses to 120 degrees maximum.
 - iii) Domestic hot water temperatures shall be 120 degrees F storage at the tank and 110 degrees F delivery from the fixture. Hot water for kitchens shall be 140 degrees F, and for commercial kitchen dishwashers shall be 160-180 degrees F, or as required by the dishwasher manufacturer. Delivery temperature of hot water will be controlled by mixing valve.

- iv) High efficiency water heaters including solar thermal and heat pump water heaters should be evaluated as part of the overall sustainable strategy and CHPS goals.
- v) Locker and shower room water heating system shall be of the separate water heater and storage tank type with hot water recirculation system and thermal expansion tank, and shall be dedicated for student shower areas. Coach's functions shall be served by separate dedicated water heater.
- vi) Tank type water heaters may be used in kitchens where instantaneous type cannot provide an adequate supply.
- vii) Water heater must be sized to fit through a three-foot doorway.
- viii) Gas fired water heating is preferred. Instantaneous shall only be used with approval from District.
- ix) Water heaters shall be certified by the California Energy Commission and meet the requirements of Title 24, and if gas fired, the requirements of the South Coast Air Quality Management District Rules 1121 and 1146.2.
- x) Provide a water temperature maintenance system or other strategy designed to eliminate wait times for hot water, which contributes to water conservation efforts. A recirculation system with pump and aquastat is required.

6. Fixtures

- a) Fixtures must comply with State water conservation guidelines and efficiency standards in effect.
- b) Comply with California and Federal accessibility standards and lead free standards.
- c) Water Closets:
 - i) Water closets shall be high efficiency (HET) type with compatible, manual flush valve. Floor mounted, vitreous china with siphon jet action elongated bowl with open front seat, in both ADA and non-ADA compliant configurations as applicable.
- d) Urinals:
 - i) Urinals shall be 0.5 gpm high efficiency (HEU) type with compatible manual flush valve. Wall mounted, vitreous china with top spud flush valve, in both accessible and non-accessible configurations.
 - ii) Use brass nipples for dirt arms.
- e) Lavatories:
 - i) General student restroom lavatories shall be wall mount vitreous china with push button metering faucet and floor supported concealed arm brackets.

- ii) Food Service restroom lavatories and hand wash sinks within food service spaces shall be provided where required to meet health department requirements.
- iii) Multiple-user Staff restroom lavatories shall be self-rimming vitreous china oval with lever handle mixing faucet.
- iv) Single-user Staff restroom lavatories shall be wall mount vitreous china with lever handle mixing faucet and floor supported concealed arm brackets.
- f) Sinks:
 - i) Countertop sinks (classrooms, staff rooms, etc.) shall be self-rimming stainless steel single bowl type unless noted otherwise. Minimum 18 gauge stainless steel..
 - ii) Sinks shall have lever handle, gooseneck faucets unless noted otherwise.
 - iii) Staff counter sinks shall be accessible, stainless steel, single bowl, with lever handle mixing faucet and swing spout or gooseneck faucet.
 - iv) Kitchen, Break Room or pantry sinks shall have a 3/4 horse-power garbage disposal.
 - v) Sinks used for special programs such as art and ceramics, agricultural and other uses that may involve large particulates, shall be equipped with solids interceptors. Hair traps shall be provided in sinks used for programs involving hair cutting or styling. Special purpose sinks may be stainless steel as they are available in more sizes and configurations.
 - vi) Science room sinks shall be under-counter, corrosion resistant resin type.
 - vii) Staff science room sinks shall be single bowl, with serrated hose nozzle gooseneck faucet and integral vacuum breaker.
 - (1) Student science room sinks shall be single bowl cold water, with serrated hose nozzle gooseneck faucet and integral vacuum breaker.
 - viii) Service Sinks (floor sinks) shall be corner floor mount enameled cast iron (acid resistant coated interior) or terrazzo type, with aluminum dome bottom strainer, 1/2" grate nickel bronze top, lever handle faucet with integral stops and vacuum breaker, pail hook, hose and vinyl rim guard.
- g) Emergency Fixtures:
 - i) Where required to meet the intent of the code (CCR, Title 8, Section 5162), and elsewhere as directed by the District, provide emergency combination drench showers and eyewash stations. Provide drainage as required to reduce water damage on accidental discharge and alarm actuated from flow switch to tie to EMS system or local alarm as directed by District. Prove tempering system as required to meet ANSI standards.

- ii) Emergency eyewash shall be made of ABS colored plastic and be countertop swing-away type.
- h) Floor Drains:
 - i) Floor drains shall be Duco coated cast-iron body with adjustable nickel bronze strainer.
 - ii) General purpose floor drains shall be square strainer type for tiled areas, round strainer type for poured surface areas, with trap seal primer connections.
 - iii) Shower floor drains shall be square strainer type for tiled areas, round strainer type for poured surface areas.
 - iv) Emergency drench shower or eyewash floor drains shall be square strainer type for tiled areas, round strainer type for poured surface areas, minimum 4-inch outlet size with trap seal primer connections.
 - v) Floor drains not receiving regular discharge from a plumbing fixture, or as otherwise required by code, shall be provided with an automatic trap priming system.
 - vi) Provide floor drains in all toilet rooms, custodial closets, mechanical rooms, shower rooms, laundry areas, and adjacent non-carpeted drying areas. Where more than more than 4 water closets or urinals are provided, two drains shall be used.
- i) Showers:
 - i) Showers shall be stainless steel showerhead (2.2 gpm) chrome plated shower arm, and chrome plated escutcheon. Provide pressure balanced thermostatic mixing valve and floor drain with chrome plated strainer.
 - ii) Provide showerhead on flexible hose and slide bar for special education facilities and other accessible showers.
- j) Drinking Fountains:
 - i) Wall mounted: shall be dual height 14 gauge stainless steel non-refrigerated type.
 - ii) Exterior: exposed aggregate reinforced concrete pedestal type. Do not locate where reclaimed irrigation water may spray the drinking fountain.
 - iii) Do not provide drinking fountains at Gymnasium floor areas.
 - iv) Provide water hammer arrestors at drinking fountains.

- k) Roof and Overflow Drains:
 - i) Roof Drains: Cast-iron drains with flashing collar and cast-iron dome. Furnish extension for insulated roofs. Use under-deck clamp for all but poured-in-place concrete installations. Provide flashing.
 - ii) Overflow Roof Drains: Cast-iron drains with flashing collar, cast-iron dome and 2" high water dam. The top of the dam shall be at least 2" above the adjacent finished roof surface. Furnish extension for insulated roofs. Use under-deck clamp for all but poured-in-place concrete installations. Provide flashing.
- l) Trap Primers
 - i) Cast bronze with shut-off valve and union before connection. Provide 14" x 14" access panel.
- m) Cleanouts
 - i) Floor cleanouts (concrete and tile floors) – Duco coated cast-iron with round adjustable scoriated secured nickel bronze top. Secure plate with countersunk head. Bronze plug and spigot outlet.
 - ii) Wall cleanouts – Cast iron branch cleanout tee with flanged bronze plug and polished stainless steel cover plate with center, countersunk head securing screws.
 - iii) Grade cleanouts –
 - (1) Finished concrete areas – Duco coated cast-iron with round adjustable scoriated secured nickel bronze top. Secure plate with countersunk head. Bronze plug and spigot outlet.
 - (2) Soil, grass, asphalt and other exterior areas - Duco coated cast-iron. Bronze plug and spigot outlet. Provide precast vault with heavy-duty cast-iron cover. Cover shall state "SEWER". The vault shall be large enough to allow tools to be used to remove the plug.
- n) Hose Bibs
 - i) Interior Hose Bibs shall be standard wall flange type with vacuum breaker and loose key operation. Install at 24" a.f.f. unless otherwise noted. Provide in the following locations:
 - (1) Multiple-user Restrooms: under lavatory, one per restroom. Chrome plated.
 - (2) Locker Rooms: accessible for use throughout entire locker area.
 - (3) Custodial Rooms: above service sink to accommodate cleaning product dispenser system.

- ii) Exterior hose bibs shall be recessed lockable box type with integral vacuum breaker. Hose bibs shall be located not more than 100 feet apart.
- iii) Exterior rooftop hose bibs shall be loose key free standing type with rough chrome finish and integral vacuum breaker. Provide adjacent to mechanical cooling equipment, not to exceed 50-foot radius.
- o) Miscellaneous Fixtures:
 - i) Provide IPS inlet angle stops (loose-key, lockshield) and one-piece, braided polymer supply tubing for water supplies to faucets.
 - ii) Water line nipples shall be brass. No galvanized or black steel.
 - iii) Gas turrets shall be provided adjacent to student and staff science sinks and shall have a check valve and vandal resistant anchor.
 - iv) Science room gas outlets shall be controlled via a remote solenoid valve located above ceiling at gas point of entry to classroom. A control station shall be provided at the teacher's demonstration table to allow emergency shut off and lockout of the remote solenoid valve. The control station is to remain visible and not hidden in demonstration table cabinets. The valve shall be normally closed.
 - v) Refrigerator icemaker locations shall be provided with wall mount recessed box type cold water supplies.
 - vi) Clothes washer locations shall be provided with wall mount recess box type supply and drain with integral water hammer arrestors.
 - vii) Coordinate dryer vents for dryer locations.
 - viii) P-traps shall be minimum 17 gauge chrome plated brass, adjustable with cleanout plug, installed with chrome plated escutcheon with set screw. Provide chrome plated slip nuts. No die-cast metal allowed.
 - (1) ADA trap and supply covers shall be provided where required.
 - (2) Incorporate water hammer arrestors where quick closing valves are incorporated such as flush valves.
 - ix) Water Pressure Reducing Valves:
 - (1) Provide a separate stainless steel strainer for each valve.
 - (2) Connections shall be threaded.
 - (3) Set pressure to 80 psi.
 - (4) Provide precast concrete yard box if valves are below grade.

- x) Water Hammer Arresters – Stainless steel completely sealed. Install on cold water lines in an upright position. Provide 14" x 14" access panel.

7. HVAC System Plumbing Connections

- a) Provide gas shut-off cock at each gas fed unit. Use galvanized pipe (no black iron) and include a dirt leg prior to the flexible connection line. Prime and paint to match existing surfaces; paint white on roofs.
- b) Condensate lines shall be copper and shall drain by gravity. Provide two unions and a threaded cleanout cap. Prime and paint red.
- c) Provide condensate trap at each mechanical cooling unit. Condensate piping shall discharge to a roof receptor, floor sink, or service sinks with an air gap termination (no indirect waste trap connections).
- d) Overflow condensate shall terminate through ceiling with a polished chrome escutcheon centered above a sink or other fixture such that an overflow condition will not cause damage to floors or other surfaces.
- e) Provide backflow preventer at each makeup water connection.
- f) Interior, RP backflow preventers shall be equipped with indirect drain piped to nearest floor drain or floor sink.
- g) All roof penetrations shall use lead roof jack flashing for a weatherproof installation.
- h) Durablocks must be used for all pipe supports.

FIRE PROTECTION STANDARDS

1. General:

- a) Fire sprinkler design must be included in the construction documents. DSA no longer accepts deferred approvals.
- b) Provide specialized fire suppression systems in kitchens (such as for grease hoods).

2. Sprinkler Heads:

- a) At exposed open ceilings provide upward or downward heads as best to accommodate requirements.
- b) At exterior locations use exterior-rated heads.
- c) Concealed heads with covers at finished ceilings may be considered for aesthetic reasons with approval from the District Representative.

ELECTRICAL STANDARDS

1. Campus Site Service

- a) Confirm whether the existing electrical service is adequate to service the proposed new or modernized building(s). Incorporate findings into the Field Report due at the end of the Schematic Design phase and update as necessary in subsequent submittals. If upgraded service is required, the following items apply:
 - i) Site primary service design and location must be coordinated with and approved by the local utility company. Obtain written approval from the utility provider, incorporate requirements into the bid documents, and confirm availability of design voltage and phase.
 - ii) Obtain approval of electrical service location from the District Representative prior to final system design. Service conductors shall be routed to avoid pathway and common areas.
 - iii) Locate switchgear and transformer away from classroom areas in a fully secure utility yard with concrete housekeeping pad. Coordinate the location with the existing service to minimize down-time at switch over. Obtain approval of proposed location prior to proceeding with construction documents.
 - iv) Specify a minimum of a 2,000-Amp service. Increase size of service if necessary to accommodate design loads plus future loads of master planned additions or for the addition of 12 portable classrooms if no additions are planned.
 - v) All primary feeds to have a red concrete slurry cap. Coordinate specific requirements with SDG&E.
- b) Confirm whether the existing phone, data, and cable service is adequate to service the proposed new building(s). Incorporate findings into the Field Report due at the end of the Schematic Design phase and update as necessary in subsequent submittals. If upgraded service is required, the following items apply:
 - i) Site primary service design and location must be coordinated with and approved by District Technology Representative. Coordinate with utility provider, walk the site with the utility provider and incorporate requirements of pathway from local feed to major point of entry at the MDF Room.
 - ii) Obtain a quote from the local utility provider for the cost of work associated with new utility service. Coordinate with District Technology Representative.
- c) Provide vandal resistant, locking lids at all underground electrical boxes.

2. Electrical Distribution

- a) Primary feeder underground electrical conduits shall be concrete encased to 3 inches above conduit. Backfill with native soil and provide red metallic warning tape 12 inches below grade.
- b) Electrical duct-banks shall be installed with spacer racks to provide 3-inch separation of conduits.
- c) Step-down transformers to be located at individual buildings for 480/277 volts or higher distribution systems. Recommend energy efficient transformers. Transformers and feeder conductors shall be located away from classroom areas.
- d) Include spare conduits with pull ropes in conduit duct banks. The number, size and termination points of the spare conduits need to be determined specifically for each campus layout; on existing campuses provide a minimum of two 2-inch spare conduits in new underground trenches. Meet with the District Representative prior to finalizing the DSA submittal set to determine the specifics.
- e) All spare conduit to be capped or plugged.
- f) Surface mounted raceway is not permitted without permission of the District. Conceal cable sleeves and pathway in wall whenever possible.
- g) Limit the use of flex conduit. If flex conduit must be used, limit the length to six feet in concealed spaces such as walls.
- h) Specify necessary conduits to service future campus additions.
- i) Locate panels in dedicated electrical closets. Specify surface-mounted panels with skirts. On modernization projects (or other projects that require additional power) exterior panels area acceptable if located away from areas of student congregation. An accessible path of travel is not required per DSA.
- j) Specify copper for transformers, switchboards and panel boards.
- k) Design electrical circuits to service no more than five, non-computer, duplex receptacles on one circuit. Circuits servicing computers shall be limited to no more than three duplex receptacles.
- l) Main Distribution Frames (MDFs) and Intermediate Distribution Frames (IDFs) require a dedicated 20 AMP circuit at each rack and wall mounted head end equipment enclosure. Where an Uninterruptible Power Supply (UPS) is required, provide an additional dedicated circuit for each UPS system sized per system (i.e.: 20 amp, 30 amp).
- m) Specify dedicated power to fire alarm system, telecommunication system, copiers, digital video surveillance system, and other specialty equipment.

3. Power Receptacles

- a) Floor mounted receptacles, of any sort, are not allowed except in specific circumstances such as under conference room tables, on stages, and gymnasiums. Obtain approval of the District Representative for locations.
- b) Computer receptacles are to be identified and to have isolated ground. No shared neutrals are permitted for computer receptacles.
- c) Shared neutrals are permitted for non-computer receptacles up to 60 percent of capacity.
- d) In toilet rooms, provide GFI service receptacle by the door at 24 inches above finish floor with locking cover and water seal to service cleaning equipment.
- e) In areas designated for vending machine, provide receptacle at six feet (6') above finished floor.
- f) Coordinate location and receptacle requirements for office equipment such as copiers, scanners, laminators, etc.
- g) Provide power receptacles adjacent to all data outlets.
- h) Provide an electrical receptacle below all light switches near main entry door.
- i) Provide power receptacles above all casework countertops, minimum one duplex receptacle per 36" of counter length. Provide power with GFCI receptacles at countertops with sinks.
- j) Provide an electrical receptacle for Maintenance to plug in their mobile trailer.
- k) Provide power with GFCI receptacles at each field and batting cage for pitching machines.
- l) At auditorium, lecture hall, or performing arts centers with fixed seating, provide power and data service package incorporated into seat if required.

4. Batteries

- a) The use of lead acid batteries should be minimized. In no case are lead acid batteries allowed in equipment storage rooms.
- b) Uninterrupted Power Supplies (UPS) must be in accessible locations allowing the UPS systems to be easily replaced.

5. Surge Protection

- a) Specify integrated TVSS in the main switchgear panel to protect system from external surges.

6. Grounding

- a) Specify separate ground conductors for equipment grounding in feeder and branch circuits including lighting circuits. Specify separate neutral conductor from electronic equipment. Specify grounding conductors in conduit or raceways. Use of raceway as ground is not permitted.
- b) Metallic objects on the Project site that enclose electrical conductors, or that are likely to be energized by electrical currents, shall be effectively grounded.
- c) Metal equipment parts, such as enclosures, raceways, and equipment grounding conductors, and earth grounding electrodes shall be solidly joined together into a continuous electrically conductive system.
- d) Metallic systems shall be effectively bonded to the main grounding electrode system.
- e) A separately derived AC source shall be grounded to the equipment grounding conductor, and to separate "made" electrode of building grounding electrode system.
- f) Electrical continuity to ground metal raceways and enclosures, isolated from equipment ground by installation of non-metallic conduit or fittings, shall be provided by a green insulated grounding conductor of required size within each raceway connected to isolated metallic raceways, or enclosures at each end. Building structural steel shall be part of the grounding electrode system.
- g) Cold water, or other utility piping systems, shall not be utilized as grounding electrodes due to the installation of insulating couplings and non-metallic pipe in such installations. In addition to bonding to cold water pipe provide at least one of the following made grounding electrodes:
 - i) A dedicated "made" electrode, fabricated of at least twenty-feet of galvanized ½-inch diameter rebar encased by at least 2 inches of concrete, and placed next to the bottom of a concrete foundation, or footing in direct contact with earth. A welded extended portion shall surface at the location of the common grounding electrode bus bar and be extended by a 3/0 CAD welded bare copper cable, or be CAD welded directly to the bus. The CAD weld shall be at least 4 inches above finished floor in a dry location. The main grounding electrode and associated grounding conductors shall be in an enclosure and in conduit.
 - ii) Grounding electrodes: Concrete enclosed electrode, fabricated of at least twenty-feet of No. 3/0 AWG, minimum size, bare copper conductor, encased by at least 2 inches of concrete, located within or near bottom of a concrete foundation, or footing, which is in direct contact with earth. Footing rebar shall be connected to copper wire with approved connectors. An external electrode, as specified hereafter or as required by the CEC, shall be installed and connected to foundation or footing rebar.
- h) Non-current carrying metal parts of high-voltage equipment enclosures, signal and power conduits, switchboard and panel board enclosures, motor frames, equipment cabinets, and

metal frames of buildings shall be permanently and effectively grounded. Provide a CEC sized grounding conductor in every raceway.

- i) Metallic or semi-conducting shields and lead sheaths of cables operating at high voltage shall be permanently and effectively grounded at each splice and termination.
- j) Neutral of service conductors shall be grounded as follows:
 - i) Neutral shall be grounded at only one point within the Project site for that particular service. Preferable location of grounding point shall be at the service switchboard, or main switch.
 - ii) Equipment and conduit grounding conductors shall be bonded to that grounding point.
 - iii) If other buildings or structures on the Project site are served from a switchboard or panel board in another building, power supply is classified as a feeder and not as a service.
 - iv) Equipment grounding conductor is installed from switchboard to each individual building. At building, grounding conductor is bonded with power equipment enclosures, metal frames of building, etcetera, to "made" electrode for that building.
 - v) Feeder neutrals shall be bonded at service entrance point only, neutrals of separately derived systems shall be bonded at the source only.
- k) If there is a distribution transformer at a building the secondary neutral conductor shall be grounded to "made" electrode serving the building.
- l) Within every building, the main switchboard or panel board shall be bonded to the cold water line. Metallic piping systems such as gas, fire sprinkler, or other systems shall be bonded to the cold water line.

7. Lighting

- a) Lighting shall exceed Title 24 requirements for energy efficiency based on watts per square foot. Comply with CHPS recommended guidelines.
- b) Provide District with copies of lighting calculations indicating anticipated lighting levels and watts per square foot. Coordinate colors of finishes with Architect for reflective values.
- c) Specify LED light fixtures for all applications. Submit proposed fixtures that meet the following general requirements:
 - i) Must bear UL label.
 - ii) Must be readily available from major local wholesale houses.
 - iii) Must have replaceable diode banks and easily accessible drivers.

- iv) Kelvin temperature to be 4,000K.
- v) 50,000-hour minimum lifetime.
- vi) Must have 10-year warranty.
- vii) Must be appropriately selected for intended application; custom or modified light fixtures are not acceptable.
- d) Where possible, design suspended fixtures to allow an unobstructed swing of 45 degrees in any direction to avoid the need for seismic bracing.
- e) Do not specify "tamper proof" fasteners for interior light fixtures.
- f) Light fixtures shall be located in a manner that accommodates ease of maintenance.
- g) Controls:
 - i) Submit proposed controls for LED fixtures that meet the following general requirements:
 - (1) Specify dual-sensing occupancy sensors.
 - (2) Photocell controlled.
 - (3) Dimmable for day light harvesting
 - (4) Do not specify any loose remote controls
 - ii) Locate all light switches near main entry door.
 - iii) Specify multi-level switching in spaces. In areas with day-lighting, specify separate, remote switch to control bank of lights adjacent to daylight source. In other areas switch lamps within fixtures individually to allow light level control. Review switch locations with designated District Representative prior to finalizing plans.
 - iv) Specify keyed switches in gyms, multi-purpose, cafeterias, hallways and auditoriums.
 - v) Provide keyed light switches with dual sensor motion detectors in student restrooms.
 - vi) Exterior lighting to be coordinated with and controlled by photocell input and linked to the EMS system. This includes site lighting as well as light fixtures attached to building exteriors. Coordinate exterior lighting control panel with EMS manufacturer's requirements.
 - vii) Specify lighting control panels with dimmers for theatrical and specialty event lighting in assembly areas.
- h) Exterior Lighting:
 - i) Exterior lighting shall be heavy-duty and vandal-resistant per District standard light fixture schedule.

- ii) Minimize use of pole lights where possible.
- iii) Provide general lighting of entire exterior of building compound, primary walkways and parking lots. Design exterior lighting system to achieve a minimum maintained 1.5-foot candle. Provide photometric study to show compliance.
- iv) Exterior lighting to be designed to minimize light pollution and avoid overspill to adjacent properties. Specify full cut-off fixture with the use of house side shields.
- v) Determine the CHPS points to be obtained through lighting.
- vi) Design is to be reviewed and approved prior to finalizing.
- i) Emergency Lighting:
 - i) Self-powered battery type with integral solid-state automatic charger and self-contained power pack.
 - ii) Sealed, maintenance-free, nickel-cadmium batteries.
 - iii) Provide wire guards in locker rooms, multi-purpose rooms, gyms and vandal-prone areas.
 - iv) Exit Signage: Coordinate faceplate color to match adjacent wall color. Secure with tamper-resistant fasteners.
 - v) Exit signs shall be LED type with vandal-resistant system with polycarbonate shields or wire guards.

8. HVAC System Electrical Connections

- a) Provide convenience outlets at each HVAC unit. Outlets integral to the unit are acceptable if powered by a separate circuit, adequately labeled as energized even when unit is off, and code compliant.
- b) Label all disconnects and convenience outlets with electrical panel, circuit number and room number(s).
- c) All disconnects should be mounted on the units.
- d) All electrical panels and feeders should not be loaded above 60%.
- e) Where underground feeders and conduits are installed, they install additional conduit for future use.
- f) Exterior flexible conduit connections must have enough slack to allow a drip loop.

9. General Technology and Low Voltage System Requirements

- a) Design a fully functioning system(s) according to the provided specifications.
- b) Technology equipment is to have dedicated power.
- c) Provide drawing submittals to the District Representative at each phase submittal indicating the required scope and proposed pathways for District review and comment. Proposed device layouts shall be indicated on drawings at the beginning of the Construction Document Phase.
- d) The Design Professionals are responsible for the coordination, finalization and incorporation of the design for the backbone/infrastructure pathway to accommodate the cabling and installation of devices/receptacles for telephone/voice, data, digital intercom/clock and bell, intrusion, video monitoring (CCTV), video distribution (CATV), classroom AV (including voice amplification), large assembly areas AV and any other systems required for the project.
- e) Attend coordination meetings with the designated District Representative and District's technology representative.
- f) At the beginning of the design phase the District will determine if the cabling and components associated with the Structured Cabling System and Data Communications Active Infrastructure will be specified under a separate E- Rate contract for installation only.
- g) Where vending machines are located provide duplex data outlets at 6-feet above finish floor. If located at exterior, provide weather proof duplex data outlets.
- h) All data outlets to be a minimum of duplex data outlet, unless noted otherwise.

10. Intrusion Detection System

- a) Do not specify any door contacts.
- b) Coordinate keypad locations with District Representative.
- c) Provide dual technology motion detectors.
- d) Head end equipment shall be located in the MDF.

11. Digital Video Surveillance System (CCTV)

- a) Camera locations must be confirmed with District Representative and Bosch Representative.
- b) It is not the intent to cover the entire campus only the areas of concern.

- c) Provide a storage array system at the headend; analog not acceptable.
- d) Provide headend equipment in the MDF room.
- e) Provide an auto shut down sequence.
- f) Drawings must have a camera schedule that indicates the following: camera model number, part number, mounting type, required accessories, power requirements, licensing and software options.

12. Cable Television System

- a) Provide two-inch conduit from TV distribution room to MDF.
- b) Headend equipment shall be located in the MDF room.
- c) Provide adequate space in MDF room for full size seven-foot rack.

13. Digital Intercom and Bell System

- a) Show all Remote Addressable Units (RAU) ("terminal cabinet"), clock and speak locations.
- b) RAUs shall be located in IDF room. RAUs shall have (1) 120V quad receptacle located inside of cabinet.
- c) Provide at least one panic call button ("lockdown button") and locate in the Administration. Coordinate exact location with District Representative.
- d) Provide interface with telephone system for All Call capabilities.
- e) Provide page interface with AV equipment.
- f) Head end equipment shall be located in the MDF room. Provide enough space for full size 7-foot rack.
- g) The Head end equipment shall have one (1) 120V dedicated quad receptacle.
- h) Provide at least one speaker unit in all spaces except the following:
 - i) Restrooms
 - ii) MDF/IDF Rooms
 - iii) Utility Rooms
 - iv) Storage Rooms
- i) Provide speakers in corridors and hallways.
- j) Speaker zoning:
 - i) Each classroom shall be considered one zone.

- ii) Each outside horn shall be considered one zone.
- iii) Each grade level shall be considered one zone.
- iv) Corridors may be on one zone.

14. Voice Communications System

- a) Voice Communication VoIP Phone systems shall use data cabling.
- b) Consult with the IT department if modernization projects will be affecting existing standard communication systems.be CAT6 cabling.

15. Audio Visual System

- a) All projectors, projection screens, etc., shall be Contractor Furnished Contractor Installed.
- b) Provide a minimum of two (2) recessed speakers per classroom.
- c) Provide quad power receptacle at ceiling adjacent to data outlets for projector.

16. Data Communications Active Infrastructure

- a) Use Cat 6a for all cabling unless fiber-optic cable is required.
- b) Provide HDMI connection on the teaching wall with power (At Standard Classrooms and Computer Labs) with a Capable Mount for a 70" Monitor/Display Panel.
- c) Standard Classroom wiring:
 - i) 8 drops for student/classroom use (1 quad on 2 walls),
 - ii) 4 drops (1 quad) at the teacher's station,
 - iii) 2 WAP drops on the ceiling,
 - iv) 2 drops on the teaching wall for connection to Screanbeam projection devices.
 - v) 1 Cat6 Telephone Drop/Plate at 48" by the exit door or next to the teaching wall (Whichever is most accessible).
- d) Computer lab wiring:
 - i) 40 drops (For computers)
 - ii) 4 drops (1 quad) at the teacher's station
 - iii) 2 WAP drops on the ceiling
 - iv) 2 drops on the teaching wall for connection to Screanbeam projection devices.

- v) 1 Cat6 Telephone Drop/Plate at 48" by the exit door or next to the teaching wall (Whichever is most accessible).
- e) Standard Science Lab wiring:
 - i) 12 drops for student/classroom use (1 quad on 3 walls with counters / Tackable Wet Surface areas), with power outlet(s) nearby
 - ii) 4 drops (1 quad) at the teacher's station,
 - iii) 2 WAP drops on the ceiling,
 - iv) 2 drops on the teaching wall for connection to Screenbeam projection devices.
 - v) 1 Cat6 Telephone Drop/Plate at 48" by the exit door or next to the teaching wall (Whichever is most accessible).
 - vi) Wall Capable Mounts for a 50" Monitor/Display Panels on the remaining 3 walls (In addition to the 70" Mount on the teaching wall).
- f) Provide data outlet for Wireless Access Points throughout the entire campus including, but not limited to, Library, MPR, Gym, Administration, exterior roll call area for PE, fields, stadiums, interior and exterior access for Point of Sale system, and all classrooms.
- g) In rooms with thirteen-foot ceiling heights or more, mount the WAP on the wall at ten feet above finish floor.
- h) Provide rack elevations, single line diagram, and switch port counts for the MDF and each IDF, for District review and approval. All quantities must be indicated in the rack elevations.
- i) IDF Configuration(s) will be:
 - i) CPI Freestanding 2 post racks
 - ii) Cat6 24 & 48 port patch panels
 - iii) Minimum 12 strand Single-mode fiber optic cable (Terminated on Fiber Patch Panel) "Home-Run" to the site's MDF
 - iv) Minimum 25 pair copper multi strand cable "Home Run" to the site's MDF (For existing telephone system , alarms, faxes) and terminated on a separate 48 port patch panel
 - v) 100% port count patch cables to be included (Fiber optic single-mode & Cat6).
 - vi) 100% port count provision network hardware-Cisco Switch(es) to be included.
- j) Provide UPS system at each IDF/MDF. Each UPS must be remotely monitored.
- k) Provide redundant power supplies at each IDF/MDF.

- l) Provide rack mounted KVM (keyboard video monitor).

17. Assistive Listening System

- a) Provide connection to room speakers.
- b) Coordinate antenna frequency with Autonomous Sound System / AV System in Multi-Purpose Room / Lecture Hall / Auditorium.

18. Book Theft – Protection Equipment System

- a) Provide a book detection system at all Media Centers/Libraries.
- b) The Media Center book drop is not part of the book detection system.
- c) Provide buried cable system in lieu of surface mounted cable between detection isles.
- d) Provide minimum 1¼-inch non-metallic conduit connection from first aisle to second aisle, then stub down and up to second aisle.
- e) Indicate location of surface mounted control box on drawings. Surface mounted control box must have the following:
 - i) Location that is serviceable and accessible.
 - ii) Box cover with louvers for ventilation
 - iii) An electrical convenience receptacle on wall adjacent to control box for connecting system power supply box.
- f) Provide audio and visual alarm.
- g) Maintain a proper distance between the Detection system and large metal objects. The minimum distances from a Detection System Panel to a wall using metal studs and metal windows, doors, walls, cabinets, shelves, pipes, counter edges, display cases wastebaskets, and furniture is 18 inches.
- h) Locate the electronic enclosure within 10 feet of a power receptacle.
- i) The allowable distance between the electronics enclosure and a detection panel is 4 feet minimum; 21 feet maximum.
- j) Maintain a minimum of 7 feet from the Detection System to a CRT (computer) display.
- k) Avoid positioning the Detection System within 5 feet of power panels, data cables, and large conduits.
- l) Provide a 4-foot clear space between the system panels and any door.
- m) Locate the system to allow good observation/supervision of the system by the circulation desk staff.

- n) Books and other secured items must be stored at least 3 feet from the Detection System.
- o) Power requirements for the entire system are computer based devices that require high quality, sure and noise free electrical power for optimum performance.
- p) Single phase power is required. The system is supplied with a 16 gauge, 3- wire, S-rating 10-foot long NEMA 5-15 plug.
- q) Provide in-counter book demagnetization system flush with casework.
- r) Maintain clearances from structural steel that could interfere with the detection system.

19. Specific Room Requirements

- a) Multi-Purpose / Lecture Hall / Auditorium:
 - i) Provide an AV System with projection and an electric projection screen.
 - i) Provide a fully enclosed lockable IDF cabinet, adjacent to AV rack, and at or near the stage area.
 - ii) Provide data outlets for each register Point of Sale (POS) system at ticket booths.
 - iii) If the MPR is utilized for food services, provide data outlets for each register Point of Sale (POS) system; one homerun data to kitchen office POS system and one homerun data to nearest IDF.
 - iv) If there are ticket sale booths or snack bars, provide data outlets for each register POS system.
- b) Gymnasium:
 - i) Provide multi-sport scoreboard with remote controllers. Provide two shot clocks for basketball. Provide two score boards for high school. Provide one for middle school unless a single score board is not visible from all portions of the gym.
 - ii) Provide autonomous multi-media sound system to accommodate athletic events with wireless microphones. This system is separate from the school wide intercom, clock, and bell system. No video, no projectors.
 - (1) Provide quad power receptacle at ceiling for speaker array.
 - (2) Aim autonomous sound speakers to cover all bleachers when fully extended.
 - iii) Provide minimum of two (one on either side of the main court) 10-inch by 12-inch by 4-inch floor boxes with microphone, data, scoreboard controls, speaker connections, and power.
 - iv) Provide one clock and speaker combo near the main entrance in the gym and one in the lobby. Provide additional speakers as necessary. Provide protective guard for clock.

- v) Provide data outlet for each register POS system at the snack bar.
- vi) Lighting Levels:
 - (1) Sporting Events: Average maintained 80-foot candles at the horizontal playing surface.
 - (2) Social Events: Average maintained 25-foot candles at the horizontal surface.
 - (3) Lockers: Minimum maintained 10-foot candles at the horizontal surface(s).
- c) Conference Rooms:
 - i) Audio Visual Systems
 - (1) Provide an AV System with ceiling mounted projection and a wall or ceiling mounted manual projection screen.
 - (2) Provide infrared voice amplification receiver in ceiling.
 - (a) If ceilings are thirteen feet or more provide a Radio Frequency (RF) voice amplification system in lieu of the infrared voice amplification system.
 - (3) Provide a three gang back box with double gang reducing ring for the AV controller with volume control on face plate, (1¼-inch conduit) adjacent to the light switch.
 - ii) Provide at least one duplex data outlet on a wall.
 - iii) Provide a double gang floor box with quad power receptacle, duplex data outlet, VGA, and 3.5 mm jack below center of conference table.
 - iv) Lighting Level: Average maintained 50-foot candles at the horizontal work surface, with a minimum of 30-foot candles at any location.
- d) Classroom:
 - i) At the Teacher's Desk provide:
 - (1) Provide double gang box for phone, data, VGA, and 3.5 millimeter audio jack (1¼-inch conduit).
 - (2) Provide quad power receptacle adjacent to double gang box above.
 - (3) Provide three gang with double gang reducing ring for Media Link Controller (MLC) with volume control on face plate, (1¼-inch conduit) all located in same stud bay.
 - ii) In addition to the Teacher's desk power and data requirements, provide a minimum of one duplex data outlet on the same wall.

- iii) Locate combination clock and speaker unit opposite teaching wall at the back of the classroom.
- iv) Lighting Levels:
 - (1) Minimum maintained 5-foot candles at the vertical surface(s), including white boards.
 - (2) Average maintained 35- to 50-foot candles at the horizontal work surface, with a minimum of 25-foot candles at any point more than 3-feet from any wall.
- e) Computer Lab:
 - i) Provide duplex data outlets and duplex power receptacles on the back wall for large printers.
 - ii) Locate combination clock and speaker unit opposite teaching wall at the back of the classroom.
 - iii) Provide quad power receptacle and six data outlets at every computer bank location (maximum six computers per computer bank).
 - iv) Provide minimum of 9 circuits per computer classroom – one at each computer bank, one at printer area, one at teacher's desk, one for housekeeping purposes.
- f) Media Center (Library):
 - i) Provide one clock and speaker combo. Provide additional recessed ceiling mounted speakers as necessary.
 - ii) Provide data and power at the end of the stacks for catalog look up stations. Confirm number of locations with architectural.
 - iii) Provide data and power for the Online Public Access Catalog research stations. Confirm number and location with architectural.
 - iv) Walls with appropriate finishes may also be incorporated into the design in lieu of providing projection screens.
 - v) Provide infrared voice amplification receiver in ceiling.
 - vi) If ceilings are thirteen feet high or more provide a Radio Frequency (RF) voice amplification system in lieu of the infrared voice amplification system.
 - vii) Lighting Level: Average maintained 50-foot candles at the horizontal work surface, with a minimum of 30-foot candles at any location.
- g) 7. Administration/Reception/Lobby:
 - i) Provide wireless access (data and power at ceiling).

- ii) Provide surface mounted clock/speaker in all offices.
 - iii) Provide analog fax line, telephone line, and 911 phone line.
 - iv) Coordinate electrical receptacles and power requirements for copiers and printers.
 - v) Coordinate with architectural program and furniture layout to provide adequate power receptacles and data outlets at open administrative office areas. Provide a minimum of one duplex receptacle and one data outlet at each workstation.
 - vi) Lighting Level for Offices: Average maintained 50-foot candles at the horizontal work surface, with a minimum of 30-foot candles at any location.
- h) Textbook Storage Rooms:
- i) Provide duplex data outlet.
- i) Minimum Point of Entry (MPOE):
- i) MPOE must be located in the MDF room. b. MPOE shall include:
 - (1) CATV cabling.
 - (2) Telephone/Cable company copper and fiber.
- j) Main Distribution Frame (MDF) and Intermediate Distribution Frame (IDF) Rooms:
- i) The MDF and IDF rooms are dedicated only for Data, Fiber, CATV, Clock and Speaker, Telephone, Security and UPS backup.
 - ii) MDF Rooms:
 - (1) Place on the first floor and adjacent to the main electrical room.
 - (2) Provide a minimum of four open data full-racks with 3-foot clearance at the front and back of the rack and enough space for at least one additional future rack.
 - (3) Three data drops: two data at 18 inches above finish floor and one phone wall mounted at 48 inches above finish floor all located next to the door.
 - (4) Provide correct electrical receptacle for Uninterrupted Power Supply (UPS). The Trip Lite SU3000 and higher models require a 220-volt circuit.
 - (5) Provide a 20-Amp receptacle at 42 inches above finish floor for CATV, EMS, FACP, and Security.
 - iii) MDF and IDF Rooms:
 - (1) Wrap the room in ladder rack with access to the top of the racks at both north-south and east-west creating a cross ladder rack. Attach to top of data rack.
 - (2) Provide dual technology motion sensors for lights and two Emergency Lights.

- (3) Provide a quad power receptacle at 18 inches above finish floor centrally located on each wall.
- (4) Run conduit along bottom of ladder racking to top of each rack and mount quad 20 Amp dedicated box. Provide one ladder rack mounted quad receptacle above each cabinet and future cabinet.
- (5) Provide split system air conditioning with remote control, with condensate line with gravity feed. Mount unit above the door, to operate 24 hours a day.
- (6) Overhead service conduits are preferred. If underground conduits are utilized, conduits shall be in a single row and flush against the wall.
- (7) Provide a minimum of ten percent spare conduits.
- (8) Avoid sharing any walls of an MDF or IDF room with restrooms or where water is present.
- (9) Lighting Levels: Provide 40- to 50-foot candles at 12 inches above finish floor at front and back of rack.
- iv) IDF Rooms:
 - (1) Each building shall have at least one IDF and IDF's cannot be wall mounted cabinets.
 - (2) Stack IDF rooms if multi-level building and provide at least one IDF per floor.
 - (3) Two data racks with 3-foot clearance at the front and back of rack and enough spacing for at least one additional future rack.
 - (4) Provide a 20-Amp dedicated receptacle at 42 inches above finish floor for CATV.
- k) Kitchens:
 - i) Provide an additional data outlet in the Kitchen Manager's Office to connect with the Point Of Sale system.
 - ii) Lighting Levels:
 - (1) Kitchen/Food Preparation: Average maintained 70-foot candles at the horizontal surface(s).
 - (2) Dining: Average maintained 30-foot candles at the horizontal surface(s).
- l) Elevator:
 - i) Provide dedicated analog phone line to elevator cab.
- m) Restrooms:
 - i) Lighting Level: Minimum maintained 20-foot candles at the horizontal surface(s).

- n) Corridors:
 - i) Lighting Level: Minimum maintained 10-foot candles at the horizontal surface(s).

20. Fire Alarm System

- a) The District's preferred location for all horns and strobes is on the wall, in lieu of in the ceiling, opposite of the door.
- b) Do not size the fire alarm control panel for more than 15 percent over a school's total proposed fire alarm device capacity.
- c) Provide fire alarm control panels with a dedicated analog telephone line and an alternate transmission method per NFPA 72 code requirements.

INTERIM HOUSING STANDARDS

1. General Requirements

- a) Provide for interim housing for modernization projects that affect classrooms and other student use spaces that will displace teachers and students.
- b) The preferred solution for interim facilities is to use existing campus spaces. Coordinate with the District Representative, site principal (or designee) and the Planning and Construction Department.
- c) Develop phased interim housing plans for projects that require phased construction.
- d) Confirm with the District that the site does not have summer school or special summer functions.
- e) Interim housing shall include ramps, building/room signage, fire extinguisher, and white boards on front and rear walls.
- f) Coordinate moving F&E with the site.
- g) The general contractor shall perform any work excluded by the interim housing building supplier.
- h) Review site for any existing easements that may limit location of portables.

2. Interim Housing Building Installation

- a) Where no other accommodations are available, prepare plans for the installation of relocatable buildings.
- b) Relocatable buildings may be available from other school sites, confirm with the District. Verify that relocatable buildings taken from different sites have been closed with certification by DSA.
- c) Interim housing does not have to be located over asphalt.
- d) Provide that all utilities underground conduits, conductors, and vaults are to remain for potential future use.
- e) Provide restroom relocatable buildings when the existing restrooms will be modernized.

3. Interim Housing Removal

- a) Include requirements for removal of buildings at the end of construction.
- b) Require removal of fencing, gates, drywells, ramp extensions and utility lines. Utility lines shall be capped within utility boxes for future connections.

- c) Require restoration of the conditions that existed prior to the installation of interim housing including but not limited to:
 - i) Repair paving.
 - ii) Restore landscaping.
 - iii) Restore the irrigation system to its original extent.
 - iv) Restripe and repaint any affected parking lots or hardcourts.

4. Agency Approvals

- a) Request the DSA pre-approved, relocatable drawings for incorporation into the DSA site approval plans. The District will only use relocatable buildings with a current PC (DSA pre-approval) number.
- b) Submit interim housing for DSA review and approval.
- c) Coordinate the scope of work with the building mover and site contractor clearly indicating on the bid documents the scope of work and coordination requirements.
- d) Relocatable buildings are Type V-N buildings and must comply with the CBC requirements for this type of construction. The maximum number of 24-foot by 40-foot relocatable buildings less than twenty-feet apart is nine. Twenty-foot separation is required on all sides of the unit group.
- e) Obtain local fire jurisdiction acceptance of the proposed site plan prior to finalizing the construction documents. Local fire will require water flows at the fire hydrants. Request the fire flows, from the local water company, well in advance of submitting to the local fire jurisdiction.

SHADE SHELTERS AND PREFABRICATED UNIT STANDARDS

1. General Information

- a) The District will consider the use of pre-fabricated structures (e.g. shade structures, ticket booths, athletic equipment storage buildings, bleachers) with specific approval. Provide a cost analysis to the District Representative that show the pre-fabricated unit is more cost effective than a custom built unit for consideration.
- b) The structures must compliment the site and the design of the campus.
- c) Prepare a site plan showing the structure's locations. Site the structure using the site design standards.
 - i) Insure that the structure does not block drainage patterns on the site, and that primary drainage swales do not run through the structure.
 - ii) Insure that the structure has a path of travel to the primary access point of the campus and is fully accessible.
 - iii) Structures of any type must comply with the CBC for separation between building, exiting, access, and fire resistance. Provide a code analysis with each structure.
- d) Use metal roofed units or other roof types. Fabric roofs are not acceptable except for shade structures.
- e) Determine if the District will need water, lighting, power, data or other utilities at the structure.
- f) Coordinate the scope of work with the manufacturer and site contractor clearly indicating on the bid documents the scope of work and coordination requirements.

2. Shade Structures

- a) Provide a $\frac{3}{4}$ -inch water line and keyed hose bib at each shelter. Strap hose bib supply line to shelter column.
- b) Provide 4-inch thick concrete slabs below open shelters with control joints between each column. Drain slab to existing site drainage features.

3. Marquees

- a) The display board is to be double-sided (when viewable from two sides), full-color, and electronic. Single-sided marquees are acceptable if located appropriately. Wall-mounted displays are acceptable in new construction projects as part of the project construction contract.
- b) Locate the marquee front of the school viewable by students, staff, parents and passing traffic.

- c) The bottom of the display board must be at ten feet above grade.
- d) Overall size of the display board, not including the fixed sign cabinet, shall be a minimum of eight feet wide by three feet high.
- e) Provide column supports and reduce the surface area of the marquee base.
- f) Sign must not obstruct views of pedestrians or traffic on the streets, sidewalks, or driveways.
- g) Sign must be located for easy access by maintenance and repair crews.
- h) Divert irrigation spray away from the signage.
- i) Coordinate the colors of the marquee and its supports with building's colors or school colors and architectural style.
- j) City Approvals: Comply with the requirements of the city's (in which the sign is located) sign ordinances. However, a permit or city review is not required.
- k) Include the sign mounting system, structural calculations, electrical and low voltage requirements.
- l) Signs must be approved by DSA, unless the total height of a free-standing sign is below eight-feet tall. Where possible, utilize PC-approved marquee designs, however marquees should be incorporated with overall project scopes of work for new construction and major, campus-wide modernizations.

4. **Agency Approvals**

- a) Only use structures with a current PC (DSA pre-approval Plan Check) number. Submit complete construction documents, including calculations to DSA for the structure. The drawings should contain the DSA pre-approval number.
- b) DSA requires the structure's drawings for approval, and asks that they be listed in the set's index. Request the drawings from the manufacturer selected by the District.
- c) The manufacturer's drawings are required for approval. In most cases, the drawings offer options, typically regarding sizes and footing types. Using "X" lines, mark-out the options that are not used. Do not alter the manufacturer's drawings in any other way.
- d) Sign the manufacturer's drawings per the requirements of DSA IR A-18.
- e) Obtain local fire jurisdiction acceptance of the proposed site plan prior to finalizing the construction documents. Local fire may require water flows at the fire hydrants. Request the fire flows, from the local water company, well in advance of submitting to the local fire jurisdiction.

DESIGN AND CONSTRUCTION PROCESSES

1. Document Submittals

- a) Except for small projects, the Design Professional will submit documents for review at the following stages:
 - i) Schematic Design
 - ii) Design Development
 - iii) 50% Construction Documents
 - iv) 95% Construction Documents (DSA Submittal)
 - v) 100% Construction Documents (Bid documents)
- b) The drawings shall have a review signature block (see Appendix A for a sample)
- c) After completion of the project, the Design Professional or Contractor shall submit the following as-built drawings (record drawings):
 - i) One electronic (.pdf) file with all sheets.
 - ii) One set of electronic (.pdf) versions of each individual drawing sheet.
 - iii) One set of drawings in CAD format.

2. Temporary Construction Facilities

- a) Project Sign: For projects on a single site over \$1,000,000, provide a project sign during construction. Smaller or multiple site projects may require a project sign as directed by the Planning and Construction Department. See Appendix B.
- b) Construction Offices:
 - i) The typical construction office is a trailer with two offices (project inspector and contractor), conference room and single-occupant restroom.
 - ii) On modernization projects, offices for the project inspector and contractor may be in existing facilities if space is available.
 - iii) On small projects or multi-site projects, the project inspector may not require an office. In this case the contractor is responsible for providing their own field office.
- c) Sound Attenuation: On modernization projects, provide sound batting or other sound attenuation where construction noise is anticipated to impact classrooms.

ACRONYMS

ADA	Americans with Disabilities Act
AEIC	Association of Edison Illuminating Companies
AFCI	Arc-Fault Circuit Interrupter
A.F.F.	Above finished floor
AGM	Absorbed Glass Mat
ANSI	American National Standards Institute
ARI	Air-Conditioning and Refrigeration Institute,
ASHRAE	American Society of Heating Refrigerating and Air-Conditioning Engineers
ASTM	American Society for Testing and Materials
AV	Audio Video
AWG	American Wire Gauge
AWI	Architectural Woodwork Institute

THWN	Thermoplastic Heat and Water Resistant Nylon
TVSS	Transient Voltage Surge Suppressor
UL	Underwriters Laboratory
UPS	Uninterrupted Power Supply
VAV	Variable Air Volume
VCR	Video Cassette Recorder
VOC	Volatile Organic Compound
WAN	Wide Area Network
WAP	Wireless access point
WDMA	Window and Door Manufacturer's Association
WPA	Wetlands Preservation Act

GLOSSARY

1. Americans with Disabilities Act: A federal law that gives civil rights protections to individuals with disabilities similar to those provided to individuals on the basis of race, color, sex, national origin, age, and religion. It guarantees equal opportunity for individuals with disabilities in public accommodations, employment, transportation, state and local government services, and telecommunications. Website: <http://www.ada.gov>
2. Architectural Woodwork Institute: The Architectural Woodwork Institute (AWI) is a nonprofit trade association founded in 1953. Today, AWI represents nearly 4000 members consisting of architectural woodworkers, suppliers, design professionals and students from around the world. Website: <http://www.awinet.org>
3. California Building Standards Commission: The state government entity to oversee the development of building standards and to publish the California Building Standards Code in Title 24 of the California Code of Regulations. The California Building Standards Commission operates under the authority established by Health and Safety Code, Division 13, Part 2.5, 3 known as the California Building Standards Law. The abbreviation CBSC or BSC is often used to identify the California Building Standards Commission. Website: <http://www.bsc.ca.gov>
4. California Department of Education: The department oversees funding and testing, and holds local educational agencies accountable for student achievement. Its stated mission is to provide leadership, assistance, oversight, and resources (via teaching and teaching material) so that every Californian has access to a good education. Website: <http://www.cde.ca.gov>
5. California Department of Water Resources: Manage the water resources of California in cooperation with other agencies, to benefit the State's people, and to protect, restore, and enhance the natural and human environments. Website: <http://www.water.ca.gov>
6. California Green Building Code: The document is the 11th of 12 parts of the official compilation and publication of the adoptions, amendments and repeal of regulations to California Code of Regulations, Title 24, also referred to as the California Building Standards Code. The Part that is known as the California Green Building Standards Code and it is intended that it shall also be known as the CALGreen Code. The California Building Standards Code is published in its entirety every three years by order of the California Legislature. The California Legislature delegated authority to various State agencies, boards, commissions and departments to create building regulations to implement the State's statutes. These building regulations or standards have the same force of law, and take effect 180 days after their publication unless otherwise stipulated. The California Building Standards Code applies to all occupancies in the State of California as annotated. Website: <http://codes.iccsafe.org/app/book/toc/2016/California/Green/index.html>
7. California Plumbing Code: Part 5, Title 24, California Code of Regulations. Website: <http://www.iapmo.org/Pages/2013CaliforniaPlumbingCode.aspx>

8. Collaborative for High Performance Schools Best Practice Manual: CHPS has developed technical resources for schools, districts and practitioners on the design, construction, maintenance and operations of high performance schools. Website: <http://www.chps.net>
9. Color Rendering Index: A quantitative measure of the ability of a light source to reproduce the colors of various objects faithfully in comparison with an ideal or natural light source.
10. Construction Documents: The documents, consisting of Drawings and Specifications, and other documents as defined in the Agreements, to be prepared and/or assembled by Architect to define the Work to be constructed as part of the Project.
11. Cool Roof Rating Council: An independent, non-profit organization that maintains a third-party rating system for radiative properties of roof surfacing materials. Website: <http://www.coolroofs.org>
12. Crime Prevention through Environmental Design: Crime Prevention Through Environmental Design (CPTED) theories contend that law enforcement officers, architects, city planners, landscape and interior designers, and resident volunteers can create a climate of safety in a community right from the start. CPTED's goal is to prevent crime by designing a physical environment that positively influences human behavior. The theory is based on four principles: natural access control, natural surveillance, territoriality, and maintenance. NCPC's course helps participants put the theories behind CPTED into action in their communities by designing a hands-on, interactive, two- or three- day basic or advanced training specifically tailored to their community's needs. Website: <http://www.cptedsecurity.com/index.htm>
13. Department of Toxic Substance Control: Is to protect California's people and environment from harmful effects of toxic substances by restoring contaminated properties, identifying and promoting safer ingredients in consumer products, and ensuring stewardship through enforcement, regulation and pollution prevention. Website: <http://www.dtsc.ca.gov>
14. Design Professional: A term to refer to architects; civil, structural, mechanical, electrical, plumbing, and heating, ventilating, and air conditioning engineers; interior designers; landscape architects; and others whose professional services require licensing or registration by the state, or otherwise require the knowledge and application of design principles appropriate to the problem at hand.
15. District Consultants: Those consultants retained by the District who will assist the District in carrying out the Project.
16. Division of the State Architect (DSA): "Division of the State Architect" is the California State agency responsible for checking construction documents for compliance with Title 24, California Code of Regulations, and monitoring compliance on the construction site. The Division of the State Architect also approves inspectors on all public school projects. Website: <http://www.dgs.ca.gov>

17. DSA Inspectors: Inspectors-of-record (IORs) are registered as Class I through Class IV. The projects which may be inspected by each type of inspector are on the DSA web page.
18. DSA Pre-Approval Number (DSA Pre-Check (PC) Approval Process): DSA PROCEDURE #07-01
The goal of the PC Approval Process is to streamline DSA plan review by providing a procedure for approving the design of commonly used structures prior to the submittal of plans to DSA for construction projects. The PC Approval Process allows designers to incorporate designs for structures that have already been “pre checked” by DSA into their plans for actual site specific construction projects. PC approval is one prerequisite for “Over-the-Counter” (OTC) review; see Policy PL 07-02 for additional OTC requirements. The purpose of this procedure is to describe the DSA requirements for the submission of the design of a building or structure for pre-check (PC) review and the procedures DSA uses to approve such PC designs.
19. Energy Management System: The control system that monitors the environment and energy usage in a building and alters equipment operation to conserve energy while providing occupant comfort.
20. Interim Housing: The intermediate period of housing assistance that covers the gap between sheltering and the return of disaster victims to permanent housing.
21. Office of Public School Construction: “Office of Public School Construction” is the California State agency responsible for apportionment, disbursement and monitoring of state provided school district capital improvement funds. Website: <http://www.dgs.opsc.gov>
22. Ogren Plant Allergy Scale: A scale that measures the allergy potential of all garden and landscape plants. The new trademarked scale is called OPALSTM, or Ogren Plant Allergy Scale. The scale uses a simple, easy-to-use 1 to 10 ranking system. The safest, least allergenic plants rank at 1, and the worst, most allergenic at 10.
23. Photovoltaic System: A system that uses one or more solar panels to convert sunlight into electricity. It consists of multiple components, including the photovoltaic modules, mechanical and electrical connections and mountings and means of regulating and/or modifying the electrical output.
24. Savings by Design from San Diego Gas & Electric: Savings by Design (SBD) is California’s nonresidential new construction energy efficiency program, administered statewide and funded by Utility customers through the Public Purpose Programs surcharge applied to gas and electric services. Website: <http://www.savingsbydesign.com/>
25. Site Committee: A group of site staff and other stakeholders, assembled by the District, to determine the needs of their individual campus.
26. San Diego Gas & Electric: Provides electric service to San Diego county. Website: <http://www.sdge.com/>

27. State AB1881: The Water Conservation in Landscaping Act of 2006 (Laird). This act requires, among other actions, that the California Department of Water Resources (DWR) report to the Legislature on the status of water efficient landscape ordinances adopted by local agencies.
28. Storm Water Prevention Pollution Plan (SWPPP): Is a fundamental requirement of storm water permits. A SWPPP identifies all potential sources of pollution, which may reasonably be expected to affect the quality of storm water discharges from the construction site; describes practices to be used to reduce pollutants in storm water discharges from the construction site; and helps assure compliance with the terms and conditions of the permit (when the plan is designed for the individual site, and is fully implemented)
29. The California Environmental Quality Act: CEQA, or the California Environmental Quality Act, is a statute that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible. Website:
<http://ceres.ca.gov/ceqa/>
30. Title 24: The 24th title within the California Code of Regulations. Title 24 is reserved for state regulations that are building standards published by the California Building Standards Commission. Title 24 is given the name of California Building Standards Code by Health and Safety Code Section 18902. It is sometimes referred to as the State Building Standards Code.

APPENDIX A – SIGNATURE BLOCKS

The schematic design and design development drawings shall have a signature block to indicate review of the drawings by the site design committee (if applicable).

All sets of drawings shall have the following signature block:

DISTRICT STANDARDS

**WORKING
DRAFT**

6/21/2017

Volume 2 – Technical Specifications

Design Standards for use by Design Professionals
for new construction and modernization for
Sweetwater Union High School District Schools.

Office of the District Architect

619.796.7729

District Standards

VOLUME 2 – TECHNICAL SPECIFICATIONS

PREFACE

This Technical Specifications portion of the Design Standards are a work in process. One goal of updating the standards is to convert the specifications from the 5-digit 2004 Masterformat® numbering system produced by the Construction Specifications Institute to the new 6-digit numbering system in use since 2004. The numbering is based on the current 2016 Masterformat® numbers and titles.

This document is a snapshot of the work in process. Not all technical sections have yet been converted (see Conversion Tables) and as sections are completed they are being reviewed by the Maintenance Department. This document is also being reviewed by the Planning and Construction Department.

The specifications sections will be continually updated for code compliance and product and construction method improvements.

Comments and suggestions should be forwarded to Paul Woods, District Architect at paul.woods@sweetwaterschools.org.

District Standards

VOLUME 2 – TECHNICAL SPECIFICATIONS

PURPOSE

The Sweetwater Union High School District (SUHSD) is committed to creating equitable learning environments. These Design Standards were developed to provide direction to Design Professionals to enable the creation of quality facilities and spaces and to create uniformity with respect to quality and type of materials and systems to be incorporated into the various designs.

COMPLIANCE WITH STANDARDS

All Design Professionals (architects, engineers, etc.) shall follow the requirements and standards in this document for the planning and design of new construction (including additions), modernization or alterations to school buildings and sites. These standards are not intended to dictate the scope of work or to restrict creativity or innovation. It is the Design Professional's responsibility to develop scope within the budget established as the project progresses through the design phases.

The District welcomes suggestions to improve these standards; however, deviations from these standards need to be specifically approved, in writing, by the District's designated representative. Any deviation requests should be submitted as early in the design phase as possible. It is the objective that continued input from the Design Professionals, District staff, and other stakeholders will result in continuous improvement of these Design Standards.

These Design Standards do not address all items required for all projects. The intent is to address the District concerns and those items that require standardization. Specialty products unique to an individual project that are not addressed in these Standards still need to be reviewed and approved by the Designated District Representative prior to completion of Construction Documents.

TECHNICAL SPECIFICATIONS PRINCIPLES

The following specifications represent the District's requirements. There is a combination of both outline specifications and master specifications for the various sections that may apply to your specific project. The master specification sections are provided in Word format for editing by the Design Professionals to make it project specific and are to be incorporated into the project manual. All edits shall be made with "Track Changes" on so that the District may review the edits. Only after District review may the changes be accepted.

The outline specification sections include requirements that are to be integrated into the master specifications of the Design Professional's choice and edited as appropriate to meet the specific project requirements. It is not the intent to address all items required for all projects. Materials, products, and items not listed are to be recommended by the Design Professional and reviewed by the designated District Representative.

CONVERSION TABLES

The following tables show the conversion from the 2004 5-digit Construction Specifications Institute (CSI) numbering system to the current 6-digit CSI Masterformat® 2016 numbering system.

<u>CURRENT SPECIFICATIONS</u>	<u>NEW CSI</u>	<u>NEW TITLE</u>
<u>DIVISION 1 - GENERAL REQUIREMENTS</u>		
01410 - REGULATORY REQUIREMENTS	01 41 10	Regulatory Requirements
01450 - QUALITY CONTROL	01 45 00	Quality Control
01465 - CUTTING AND PATCHING	01 73 29	Cutting and Patching
01600 - PRODUCT REQUIREMENTS	01 60 00	Product Requirements
01744 - RENOVATION CLEANING PROCEDURES	01 35 16	Alteration Project Procedures
<u>DIVISION 2 - SITE WORK</u>		
02222 - SELECTIVE DEMOLITION	02 41 00	Demolition
02225 - REMOVALS AND RELOCATIONS	01 35 18	Removals and Relocations
02230 - SITE CLEARING	31 10 00	Site Clearing

16010 - GENERAL ELECTRICAL REQUIREMENTS	26 05 00	General Electrical Requirements
16060 - ELECTRICAL DEMOLITION	26 05 05	Selective Demolition for Electrical
	26 51 00	Lighting Fixtures
	26 55 61	Theatrical Lighting and Stage Dimming System
16600 - INTEGRATED COMMUNICATION SYSTEM	27 51 23	Intercommunications and Program Systems
16660 - TELEVISION DISTRIBUTION SYSTEM	27 41 36	Television Distribution Systems
16721 - FIRE ALARM SYSTEM	28 46 00	Fire Detection and Alarm

DIVISION 00 – PROCUREMENT AND CONTRACTING

The “front-end” inclusive of bid form, bid instructions, General Conditions, insurance and contractual requirements are provided by the District and edited for specific project requirements. The Design Professional is to coordinate with the designated District Representative to obtain copies.

The Design Professional must assist the District in the preparation of the front end documents by submitting:

1. List of Alternates, deductive and additive
2. List of Allowances
3. Suggested duration of construction
4. Brief description of the work, including phasing requirements
5. Construction Cost Estimate

DIVISION 01 – GENERAL REQUIREMENTS

The Design Professional must coordinate the technical specifications with the District’s Division 1 requirements.

Warranty: A general two-year warranty from the General Contractor on the entire project is required. The warranty shall commence upon issuance of the Notice of Completion as determined by the District. In addition, provide the specific manufacturer warranty requirements that are beyond the one year. The Design Professional shall prepare a spreadsheet with itemized materials, equipment and systems that have specific warranties. Include manufacturer, contact, length of warranty, and start date of the warranty.

Extra Stock: The Design Professional must coordinate with the District which specifications shall include extra stock items. This is to be determined on a project by project basis.

01 35 16 – ALTERATION PROJECT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Building cleaning procedures performed in conjunction with alteration or renovation Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturers: Hillyard, Inc., St. Joseph, MO (800/365-1555). Or equal
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

2.2 CLEANING MATERIALS

- A. Cleaning Materials: Suitable for finishes being cleaned, not causing damage, discoloration or deterioration of finish.
 - 1. Use only cleaning materials and methods recommended by cleaning material manufacturer for cleaning substrate finish of soiling, marring and contamination on surface.
 - 2. Do not use cleaning materials that will create hazards to health or property, or that will damage surfaces.
 - 3. Use of wire brushes, steel wool or abrasive cleaning ("sandblasting") for cleaning purposes will not be acceptable.
 - 4. Cleaning materials and systems shall be in accordance with products and manufacturer submittals reviewed and accepted by Architect.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protection:
 - 1. Provide necessary wrappings and other necessary coverings to comply with the protection requirements of this Section.

2. Take measures to protect foundation plantings and lawn areas from permanent damage.
3. Wood, glass, and painted surfaces shall be carefully protected against damage from mechanical, acid, alkali, and pressure rinsing operations.
4. Workers using chemicals shall wear goggles, face shields, gloves, and other protective clothing in compliance with governing Federal and state safety codes, regulations and rules.
5. Provide safeguards to protect persons from injury by erecting barriers well outside limits of wind drifting water, detergents, acids, and other cleaning substances, however mild they may be.

3.2 SITE CLEANING

A. Site Cleaning:

1. Broom clean exterior paved surfaces. Rake clean other surfaces of the grounds.
2. Hose down and scrub where necessary concrete and walks soiled as a result of the construction work. Thoroughly remove mortar and paint droppings from walks and pavements.
3. Remove from Work area all construction waste, unused materials, excess soil and debris resulting from the Work.
4. Legally dispose of off-site, rubbish and debris occasioned by final cleaning.

B. Inspection: Prior to final completion or Owner occupancy, conduct an examination of sight-exposed exterior surfaces, and all work areas, to verify that entire work is clean.

3.3 BUILDING CLEANING

A. Building Cleaning, General: Clean all existing surfaces and finishes not subject to new construction activities. Requirements for cleaning of new construction are specified in individual product Specifications Sections.

1. Clean surfaces to remove dust, dirt, misplaced plaster, drywall compound, texturing, paint, and other finishes and stains. Remove grease, mastic, adhesives, fingerprints, labels, and other foreign materials from all visible interior and exterior surfaces.
 - a. Clean all sills, ledges, horizontal projections, steps, rails and other surfaces subject to accumulation of soiling.
 - b. Clean tops of casework, fixtures and equipment not subject to view.
2. Coordinate with painting and other renovation Work, including but not limited to joint sealing, installation of new doors and windows, glass and glazing, masonry repair, exterior and interior plastering, interior wall and ceilings, anti-graffiti coatings, casework, signage, specialties and equipment.
3. Clean floor surfaces, including but not limited to exposed concrete, resilient flooring, carpet, wood flooring and specialty surfaces. Coordinate cleaning methods and applied finishes with Owner's maintenance practices. Comply with Owner's directions.

4. Clean and vacuum all existing carpet and carpet tile to remain. Perform cleaning in compliance with carpet manufacturer's instructions and recommendations. Perform vacuuming with vacuum cleaner with HEPA rated filter.
5. Clean entire building exterior wall and soffit surfaces of accumulated soiling. Use cleaners and methods suitable for substrate finishes and kinds of soiling.
6. Clean and polish glass, mirrors, ceramic tile, hardware, toilet accessories and natural metals. Use appropriate cleaners to remove watermarks.
7. Clean all plumbing and electrical fixtures. Clean HVAC grilles and diffusers.
8. Clean all vertical, horizontal and sloped surfaces of dust and debris from construction activities.
9. Cleaning process shall not affect the density, porosity or the color of surface.
10. Surfaces shall be evenly cleaned with no evidence of streaking or bleaching.

B. Heating, Ventilating and Air Conditioning Systems:

1. Clean permanent filters and replace disposable filters if units were operated during construction.
2. Clean ducts, blowers, and coils if units were operated without filters during construction.

C. Final Cleaning: Prior to Substantial Completion review or Owner occupancy, conduct examination of sight-exposed interior surfaces and all Work areas to verify that entire facility is clean. Refer also to **Section 01740** - Cleaning Requirements for cleaning activities for Substantial Completion review and Contract closeout.

3.4 FLOOR CLEANING

A. Floor Cleaning, General: Products and procedures are based those of specified manufacturer, Hillyard, Inc. Prior to any wet cleaning task please place appropriate wet floor signs in the work area.

B. Carpet and Carpet Tile Cleaning:

1. Spot Removal: Refer to the Hillyard Carpet Solutions Spotting Chart for proper product selection. Apply product directly to the spot. Agitate spot from the outside edge to the center using a bone scraper or other smooth edged instrument, such as a spoon. Blot and rinse after applying each cleaning product.
2. Interim Cleaning: Bonnet Cleaning: Use Hillyard DEEP ACTION and dilute with water at 1:10 (12 oz. per gallon) Or equal. Apply uniform mist with shoulder sprayer. Clean carpet with DEEP ACTION Bonnet under single brush floor machine. Change and clean bonnets as they become dirty.
3. Light Extraction: Mix Hillyard CARPET PRE-SPRAY & EXTRACTION at 1:64 (2 oz. per gallon) Or equal in a pump up sprayer. Pre spray approximately 200 sq. ft. of carpet. Extract with clean hot water not to exceed 150 degrees. Allow carpet to dry thoroughly before opening to traffic.
4. Deep Cleaning:
 - a. Extraction: Mix CARPET PRE-SPRAY & EXTRACTION at 1:20 (6 oz. per gallon) in a pump up sprayer. Apply to approximately 400 sq. ft. of carpet. ADD Hillyard

EXTRACTION pH RINSE to the hot water Or equal (not to exceed 150 degrees) in solution tank of extractor and extract carpet. The dilution rate is 2 oz. per gallon for EXTRACTION pH RINSE. Allow carpet to dry thoroughly before opening to traffic.

5. Protection and static control on a clean carpet and carpet sanitizer option:
 - a. Protection: To help prevent soil and stains from penetrating carpets and to make vacuuming easier, apply Hillyard SOIL-STOP following label directions. Or equal
 - b. Static Control: To control static electricity, apply Hillyard CARPET ANTI-STAT with pump-up sprayer following label directions.
 - c. Sanitizing: To control malodors and sanitize areas, apply Hillyard CARPET SANITIZER following label directions.

C. Concrete Floor Cleaning:

1. Preparation:
 - a. Scrub floor with solution of RENOVATOR using a single brush floor machine.
 - b. For floors coated with wax, polish, single pot epoxies, curing compounds or oil-modified urethanes, use a black stripping pad.
 - c. For floors coated with moisture cure urethane or sodium silicates, use 100 grit discs.
 - d. For rough or broom swept concrete, use an abrasive scrubbing brush.
 - e. Pick up cleaning solution with wet vac or auto scrubber.
 - f. Neutralize by scrubbing with a 4 oz. per gallon solution of NUTRA-RINSE. Or equal
 - g. Pick up scrubbing solution, flood rinse and damp mop. Allow floor to dry completely.
 - h. Note: If floor is coated with single pot epoxy, oil-modified, or moisture cure urethane and is peeling, remove with paint and varnish remover or mechanical abrasion.
2. Sealing and Finishing:
 - a. Non-Bufferable Program: When floor is clean and dry, apply two to three coats of TERRAZINE following label directions. If desired, topcoat seal with Hillyard SEAL 341.

D. Ceramic and Quarry Tile Flooring:

1. Non-Glazed Surfaces:
 - a. Preparation: After the grout has cured for 30 days, scrub the floor with solution of Hillyard RENOVATOR following label directions.
 - b. Sealing/Finishing: When floor is clean and dry, apply two to three coats of Hillyard SEAL 341 following label directions. Hillyard TERRAZINE may be used for very porous paver brick and stone. Follow label directions and topcoat with Hillyard SEAL 341.

2. Glazed/Polished Tile: For glazed or polished tile, porcelain tile or floors where a seal is not recommended or desired, simply maintain with Hillyard SUPER SHINE-ALL neutral cleaner. Or equal
- E. Resilient Flooring: Including rubber, vinyl, vinyl composition and linoleum products: Please CONTACT Hillyard for special instructions prior to using any floor stripper on rubber or linoleum floors as it may be necessary to utilize Hillyard's GREEN SELECT STRIPPER or to avoid using a floor stripper.
 1. Preparation: Select Hillyard POWER STRIP, ASSAULT, or DEVASTATOR depending on the Hillyard TRILOGY SYSTEM being utilized. Or equal Scrub floor using selected stripper at appropriate dilution rate with black stripping pads. Pick up stripping solution with wet vac and neutralize floor with Hillyard NUTRA-RINSE. Pick up solution and finish by damp mop rinsing the floor twice with clean water. Allow floor to dry at least one hour before applying finish.
 2. Sealing/Finishing: When floor is clean and dry apply one or two even coats of HIL-TEX+ or SEAL 341 using a clean synthetic mop with a minimum of 30 minutes between coats. If staining is a problem, STRONG GUARD stain-resistant seal should be considered.
 - a. Trilogy System I: Apply TOP SHAPE or EXPLORER following label directions.
 - b. Trilogy System II: Apply ENDEAVOR or NORTH STAR following label directions.
 - c. Trilogy System III: Apply RESILIENCE following label directions.
 3. Buffable Program: When buffing the floor polish to obtain higher gloss it will be necessary to utilize HIL-GLO according to label instructions. HIL-GLO may be used with buffing machines ranging between 175 rpm's and 1500 rpm's. Or equal
- F. Special Applications:
 1. Conductive Floors: After installation, thoroughly clean floor with solution of QT disinfectant/detergent. Clean thereafter as required. Avoid any further treatment which might leave grease, wax, dust, soap film or other insulating substances on the floor.
 2. Shower and Locker Room Walls and Floor Tile: Renovate old shower room and locker room wall and floor tile with EXTRA STRENGTH C.S.P. CLEANER. Or equal
 3. Terrazzo:
 - a. Portland Cement Terrazzo: Scrub thoroughly with Hillyard SUPER SHINE-ALL Solution. Rinse and let dry. Or equal
 - b. Non-Buffable Program: When floor is clean and dry, apply three to four coats of Hillyard SEAL 341 following label directions. Hillyard TERRAZZINE may be used for extremely porous terrazzo as a sealing option, following label directions.
 - c. Vertical Surfaces: Scrub thoroughly with Hillyard SUPER SHINE-ALL. Rinse and let dry. Seal with one or two coats of Hillyard SEAL 341 following label directions.
 4. Resinous, Magnesite or Oxychloride: Scrub with a solution of Hillyard SUPER SHINE-ALL. Rinse thoroughly and let dry at least one hour. Apply three to four coats of Hillyard 341 according to manufacturer's label directions. Hillyard Terrazzine may be used for extremely porous resinous, magnesite, or oxychloride.
- G. Wood Floors: Water-based seal on floors previously sealed with a wood seal:

1. Preparation: To remove buildup of wax or polish, scrub floor with solution of POWER-STRIP (16 ounces POWER-STRIP per gallon of water) Or equal using single brush floor machine and strip pad. Pick up stripping solution, rinse with NUTRA-RINSE solution, pick up NUTRA-RINSE solution and follow with several damp mop rinses. Allow the floor to dry at least one hour.
2. Note: Do not use POWER STRIP on parquet flooring installed using water based mastic for total renovation of an old floor, strip with a paint and varnish remover, following label directions. Comply with state hazardous waste disposal authorities or the hazardous waste representative at the nearest U.S. EPA Regional Office for disposal requirements.

H. Wood Gym Floors:

1. Note: If working on a newly installed gym floor or a sanded gym floor please call Hillyard to obtain step by step instructions.
2. Scrub floor with 3M Surface Preparation Pads under single brush floor machine and solution of SUPER SHINE-ALL (1 cup per 3 gallons water) Or equal. Use each pad at 500 sq. feet per side. Pick up scrubbing solution with wet vac, damp mop rinse and allow to completely dry. Touch up game lines using Hillyard Recommended paint. The touched up game lines need to dry overnight, then abrade with 3M Surface Preparation Pads the following day. Tack rag with Tack -It and let dry 30 minutes.
3. Contender System: Apply one coat of CONTENDER FINISH over entire floor. For best results use a Hillyard Multi Flo to apply the finish and use lightweight t-bars to feather the edges. Contender Finish should be applied at 500 square feet per gallon. Apply a second coat of Contender over entire floor after waiting 12 to 24 hours. If the drying time has exceeded 24 hours it becomes necessary to abrade with 3M Surface preparation pads (500 sq. feet per side).
4. Synthetic Gym Floors: If floor warranty has expired and a maintenance coating is needed or desired, scrub floor with SALVATION according to label directions. Rinse thoroughly and allow to dry at least one hour. Apply three coats of PROTECTIVE COATING or SEAL 341 following label directions.

3.5 PAINT REMOVAL PROCEDURES

A. Paint Removal Procedures, General: Paint removal procedures include:

1. Exposing the natural beauty of the substrate.
2. Not causing physical or chemical damage to the substrate.
3. Revealing areas requiring replacement or repair.
4. Leaving the surface physically and chemically compatible for the application of new paint.

B. Testing: Test each painted surface subject to removal in accordance with manufacturer's recommendations. Testing shall include both solvent base removers and alkaline base removers.

C. Protection:

1. Protect surrounding areas, including adjacent surfaces and structures; private property including automobiles, outdoor furniture, etc: animal life and their dwellings;

vegetation and plant life; and other surfaces which would be adversely affected if placed in contact with the cleaning chemicals.

2. Protective screens, deflectors, tarpaulins, and other protective measures shall be employed in order to confine the work and properly drain wastewater.

D. Paint Removal Procedures:

1. Select the type of paint removal material and method best suited to paint removal based upon the type, age, and number of paint layers and anticipated temperature conditions. Procedures shall be variably employed as needed at the contractor's discretion, subject to conformance with other parts of these specifications.
2. Depending on the type of paint on each layer, the project may require one or the other or both types of removers.
3. Exterior paint removal methods shall include a chemical treatment combined with a high-pressure water spray.
4. Water rinsing shall be confined to the work area by controlling the drift of water and spray.
5. All rinse water shall be clean, potable, and free of materials injurious to substrate.
6. A viscous paint removal compound shall be applied by brush, spray, or roller.
7. After standing on the surface for 30 minutes to 8 hours depending on the type of remover and the manufacturer, the effluent can be rinsed using 1500 psi and 4 to 5 gpm.
 - a. Rinsing effectiveness can be increased by the use of hot water.
 - b. Pressure nozzle shall be held at a distance and angle from the substrate to prevent damaging the surface.
8. Paint removal shall commence at the bottom and shall continually progress up the face of the wall.
9. Special care shall be taken during the paint removal operation in areas where the details may have deteriorated underneath the paint.
10. Should any paint removal operation cause the slightest injury or reveal extensive areas of deteriorated substrate, stop work immediately and notify Architect.
11. Rinse surfaces with clean water to remove residue.
 - a. Avoid water spray into large open cracks or open joints.
 - b. The substrate shall be rinsed until the rinse water is neutral (pH 7).
 - c. With some strong alkaline removers, it rinse as necessary with mild acid to achieve substrate neutralization.
12. Repeat procedures until required level of paint removal is attained.

END OF SECTION

01 35 18 – REMOVALS AND RELOCATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Removal of existing products, components and assemblies indicated on the Drawings or specified herein.
- B. Relocation and reinstallation of removed products, components and assemblies to locations indicated on the Drawings or specified herein.

PART 2 - PRODUCTS

2.1 PRODUCTS TO BE REMOVED AND RELOCATED

- A. Products to be Removed for Relocation: As indicated on the Drawings.
- B. Products to be Salvaged: After removal, deliver products indicated on the Drawings to Owner at location as directed, obtaining receipt for delivery.
- C. Accessory Products: Provide products, including anchors, fasteners, adapters, fillers, joint sealers, refinishing materials and other accessory products, as necessary to complete removal, patching and reinstallation, as appropriate. Products shall match existing components and shall be as selected by the Contractor, subject to review for acceptability by the Architect.

PART 3 - EXECUTION

3.1 REMOVALS

- A. Removals, General: Removals shall be performed without damage to products removed and to adjacent construction to remain.
 - 1. As applicable, comply with original manufacturer's installation instructions and recommendations for disassembly, disconnection and removal.
 - 2. Procedures and methods used shall preserve the functional and visual qualities of removed products, such as preservation of anchoring devices, serving water, power and other utility connections, and all covers, safety devices, disconnects and controls.
 - 3. Products damaged shall be restored to functional condition, with operating and visual qualities to match original condition, at no change in Contract Sum or Contract Time.

3.2 RELOCATION AND REINSTALLATION

- A. Relocation and Reinstallation: Relocate products indicated on the Drawings to be relocated. Reinstall in a manner matching original installation, except if otherwise indicated on the Drawings.
 - 1. Provide new anchors and fasteners.
 - 2. Relocated products shall be firmly secured to substrate in a manner to resist loads imposed by use.
- B. Utility and Service Connections: Where applicable, comply with the following and applicable Code requirements.
 - 1. Plumbing connections: Provide water, gas, sanitary sewer and other utility services to suit relocated products, to make such products fully functional, in compliance with requirements specified in applicable Sections in Division 15 - Mechanical.
 - 2. Power and signal connections: Provide power and signal services to suit relocated products, to make such products fully functional, in compliance with requirements specified in applicable Sections in Division 16 - Electrical.

3.3 PATCHING AND RESTORATION

- A. Patching: Where removals leave holes and damaged surfaces that will be exposed in the completed construction, such holes and damaged surfaces shall be patched and restored to match adjacent finished surfaces, in compliance with requirements specified in Section 01465 - Cutting and Patching.
 - 1. Where new finish construction is applied over existing holes and damaged surfaces, patching and restoration shall be performed to the extent to make the substrate suitable for the provision of new finish construction.
 - 2. Surfaces of patched and restored areas shall be flush with the adjacent existing surfaces and shall closely match existing adjacent surfaces in texture and finish.
- B. Restoration of Building Finishes: Touch up scratched finishes as recommended by manufacturer of original finish. If touch-up cannot achieve acceptable finish, according to Architect, prepare and refinish metal components using suitable methods to restore appearance to like-new condition.
- C. Restoration of Site Finishes:
 - 1. Concrete paving: Where it is necessary to excavate a trench across make a cut in concrete paved areas, first score concrete paving with a concrete cutting saw, in neat straight lines, to a depth of not less than 2 inches, prior to removing concrete.
 - 2. Bituminous paving: Where it is necessary to excavate a trench across make a cut in bituminous paved areas, either first score paving with a concrete cutting saw, in neat straight lines, prior to removing paving or make straight cuts with pneumatic spade.
 - 3. Restoration of paving: Restore all paved areas to their original condition using material of like type and quality as the removed paving. Paving in public ways shall conform to applicable requirements of authorities having jurisdiction. Repaired surfaces shall match existing adjacent paving.

4. Restoration of landscape planting: Restore soil and plant materials to match original condition, including additional topsoil, topsoil grading and preparation, new plant materials and plant maintenance during establishment period.

3.4 DEBRIS AND DEBRIS CONTROL

- A. Debris Removal and Disposal: Debris shall be placed in approved Contractor furnished containers to prevent the spread and accumulation of dust and dirt. Debris shall be removed from the area of work as often as necessary, but not less than at least once at the end of each work day.
 1. Conveyances: Utilize buggies or other conveyances on roofs and within building to transport removed debris. Limit size and weight to prevent marring and damaged to surfacings and to suit available accessways.
 2. Chutes: At all locations where debris is to be transferred vertically for a distance of 10 feet or more, provide an enclosed chute for debris transport.
 - a. Chutes shall not extend in an unbroken line for more than 20 feet, but shall be provided with substantial breaks at intervals not greater than 20 feet to prevent descending materials or debris from attaining dangerous speeds.
 - b. Debris shall not spill from the bottom of the chute directly onto the ground. The bottom of each chute shall be equipped with a gate or stop with suitable provisions for closing off or regulating the flow of debris.
 - c. Final drop of debris shall be into either a suitable collection hopper or truck.
 - d. Provide hose with nozzle, connected to an adequate water supply, near bottom of each chute and wet down debris to reduce and control dust.
- B. Dust Control: Control dust resulting from removals and disposal of debris to prevent its spread to portions of building and site to remain occupied or in use, and to avoid creation of a nuisance in surrounding areas.
 1. Provide temporary dust-tight barriers as necessary. Refer to general requirements specified in Section 01500 - Temporary Facilities and Controls. Include dust seals on doors and access panels.
 2. Removed materials shall not be thrown freely from the building, including roof if applicable, but shall be transported to suitable containers in wheeled carts or through a enclosed chutes, in order to minimize spread of dust and debris.
 3. Completely seal return air grilles within the areas enclosed by dust barriers, in order to prevent entrance of particles into the heating/ventilating/air conditioning (HVAC) system.
 4. Vent areas enclosed by dust barriers to the outside of the building. Provide approved filters on these vents.
 5. Prior to removing the dust barrier, thoroughly clean area enclosed by the barrier and both sides of the barrier itself, to be completely cleaned of all dust and debris.

3.5 CLEANING AND PROTECTION

- A. Cleaning: Clean products and surrounding finishes to remove dust, marring and soiling. Ensure that all identifying devices are legible, including operating instructions, warning notices, fire rating labels and manufacturer's identifying labels.
 - 1. Clean products to be salvaged and delivered to Owner.
 - 2. Clean relocated products prior to reinstallation.
- B. Protection: Comply with general requirements specified in Section 01500 - Temporary Facilities and Controls and comply with the following:
 - 1. Provide weather barriers to protect existing construction and construction Work in progress, including, as applicable, temporary roof coverings and temporary door and window closures. Weather barriers shall prevent damage from moisture, wind, heat and cold.
 - 2. Protect pathways to maintain clear access and exit ways.
 - 3. Protect site and building elements with barriers, barricades and warning devices, to prevent damage during removal and relocation activities and to protect reinstalled products.
 - 4. Prevent damage due to overloading of building structure due to storage and movement of materials. Do not store materials on floors and roofs in excess of design loads of these components. Material stored on roof shall be uniformly distributed so that load shall not exceed 20 psf.
 - 5. As applicable, protect roofing, roof flashing and sheet metal flashing and trim, utilizing plywood sheets and other protective devices, to prevent physical damage due to abrasion and to distribute loads to prevent crushing of roof insulation and overloading of roof structure.

END OF SECTION

00 41 10 – REGULATORY REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Codes, ordinances, laws and regulations applicable to the Work under the Contract.

1.3 AUTHORITY AND PRECEDENCE OF CODES, ORDINANCES AND STANDARDS

- A. Authority: All codes, ordinances and standards referenced in the Drawings and Specifications shall have the full force and effect as though printed in their entirety in the Specifications.
- B. Precedence:
 - 1. Where specified requirements differ from the requirements of applicable codes, ordinances and standards, the more stringent requirements shall take precedence.
 - 2. Where the Drawings or Specifications require or describe products or execution of better quality, higher standard or greater size than required by applicable codes, ordinances and standards, the Drawings and Specifications shall take precedence so long as such increase is legal.
 - 3. Where no requirements are identified in the Drawings or Specifications, comply with all requirements of applicable codes, ordinances and standards of authorities having jurisdiction.

1.4 APPLICABLE CODES, LAWS AND ORDINANCES

- A. Building Codes:
 - 1. Performance of the Work shall meet or exceed the minimum requirements of California Code of Regulations (CCR), Title 24, including the following:
 - a. CCR Title 24, Part 1: 2013 California Building Standards Administrative Code.
 - b. CCR Title 24, Part 2: 2013 California Building Code (CBC)
 - c. CCR Title 24, Part 3: 2013 California Electrical Code (CEC)
 - d. CCR Title 24, Part 4: 2013 California Mechanical Code (CMC)
 - e. CCR Title 24, Part 5: 2013 California Plumbing Code (CPC)
 - f. CCR Title 24, Part 6: 2013 California Energy Code
 - g. CCR Title 24, Part 9: 2013 California Fire Code (CFC)
 - h. CCR Title 24, Part 10: 2013 California Existing Building Code
 - i. CCR Title 24, Part 11: 2013 California Green Buildings Standards Code

- j. CCR Title 24, Part 12: 2013 California Reference Standards Code
 - 2. Performance of the Work shall also comply with applicable requirements of California Code of Regulations (CCR) as follows:
 - a. Title 19 - Public Safety
 - b. Title 22 - Social Security
 - 3. References on the Drawings or in the Specifications to "code", "Code" or "building code" similar terms, not otherwise identified, shall mean the codes specified above, together with all additions, amendments, changes, and interpretations adopted by code authorities of the jurisdiction having authority over the Project.
 - 4. The applicable edition of all codes shall be that adopted at the time of issuance of permits by the authority having jurisdiction and shall include all modifications and additions adopted by that authority. The applicable date of laws and ordinances shall be that of the date of performance of the Work.
- B. Other Applicable Laws, Ordinances and Regulations:
- 1. Work shall be accomplished in conformance with all applicable laws, ordinances, rules and regulations of Federal, State, County, City and special district agencies and jurisdictions having authority over the Project.
 - 2. Performance of the Work shall be accomplished in conformance with all rules and regulations of public utilities, utility districts and other agencies serving the facility.
 - 3. Where such laws, ordinances, rules and regulations require more care or greater time to accomplish Work, or require better quality, higher standards or greater size of products, Work shall be accomplished in conformance to such requirements with no change to the Contract Time and Contract Sum, except where changes in laws, ordinances, rules and regulations occur subsequent to the execution date of the Agreement.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION– NOT USED

END OF SECTION

01 45 00 – QUALITY CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Regulatory requirements for testing and inspection.
- B. Quality of the Work.
- C. Contractor's quality control.
- D. Inspections and tests, including those by authorities having jurisdiction, independent testing and inspection agency or agencies, DSA-certified and DSA-approved independent testing laboratory, serving utilities and product manufacturers.
- E. Contractor's responsibilities for observations, inspections and tests.

1.3 REGULATORY REQUIREMENTS FOR TESTING AND INSPECTION

- A. Regulatory Requirements for Testing and Inspection: Inspections, testing and approvals required by the Division of the State Architect (DSA). Refer also to Section 01 41 10 - Regulatory Requirements.
 - 1. Part 2, Title 24, California Code of Regulations (CCR) – 2013 California Building Standards Code
 - 2. Part 1, Title 24, Section 4-335, California Code of Regulations (CCR): Testing and inspection required by the Division of the State Architect (DSA).
 - 3. Part 1, Title 24, Section 4-333, California Code of Regulations (CCR): Observation and Inspections of Construction.

1.4 QUALITY OF THE WORK

- A. Quality of Products: Unless otherwise indicated or specified, all products shall be new, free of defects and fit for the intended use.
- B. Quality of Installation: All Work shall be produced plumb, level, square and true, or true to indicated angle, and with proper alignment and relationship between the various elements.
- C. Protection of Existing and Completed Work: Contractor shall take all measures necessary to preserve and protect existing and completed Work free from damage, deterioration, soiling and staining, until acceptance of the Work by Owner.
- D. Standards and Code Compliance and Manufacturer's Instructions and Recommendations: Unless more stringent requirements are indicated or specified, comply with manufacturer's instructions and recommendations, reference standards and building code research report requirements in preparing, fabricating, erecting, installing, applying, connecting and finishing Work.

- E. Deviations from Standards and Code Compliance and Manufacturer's Instructions and Recommendations: Document and explain all deviations from reference standards and building code research report requirements and manufacturer's product installation instructions and recommendations, including acknowledgement by the manufacturer that such deviations are acceptable and appropriate for the Project.

1.5 CONTRACTOR'S QUALITY CONTROL

- A. Contractor's Qualifications: Contractor and all subcontractors shall be licensed by State of California, Contractors License Board, to perform Work required by the Contract Documents. In addition, current specialty certifications, approvals and licenses of building product manufacturers shall be held by those performing the Work, as applicable.
 - 1. Contractor shall employ highly skilled and trained craftpersons together with such other employees as required by applicable laws, rules and ordinances.
 - 2. Each craft shall be under constant supervision by qualified foreman or other designated supervisor to ensure that Work performed is of highest quality.
- B. Contractor's Quality Control: Contractor shall ensure that products, services, workmanship and site conditions comply with requirements of the Drawings and Specifications by coordinating, supervising, testing and inspecting the Work and by utilizing only suitably qualified personnel.
- C. Quality Requirements:
 - 1. Work shall be accomplished in accordance with quality requirements of the Contract Drawings and Contract Specifications, including, by reference, all Codes, laws, rules, regulations and standards.
 - 2. When no quality basis is prescribed, the quality shall be in accordance with the best accepted practices of the construction industry for the locale of the Project, for similar projects and in compliance with applicable Codes, laws, rules and regulations of authorities having jurisdiction.
- D. Quality Control Personnel: Contractor shall employ and assign knowledgeable and skilled personnel as necessary to perform quality control functions to ensure that the Work is provided as required.
- E. Coordination of Field Quality Control: Contractor shall coordinate and schedule field quality control activities of District's independent testing and inspection agency and inspectors from authorities having jurisdiction.
- F. Verification of Quality: Work shall be subject to verification of quality by Owner, Architect, other responsible design professionals, authorities having jurisdiction, serving utilities and product manufacturers, in accordance with provisions of the Conditions of the Contract and requirements of product manufacturers.
 - 1. Contractor shall cooperate by making Work available for observation, inspection and testing by designated representatives of Owner, Architect, authorities having jurisdiction, serving utilities and product manufacturers.
 - 2. Such verification may include observation, inspection and testing at mill, plant, shop or project site locations where products for the Work are manufactured, fabricated or assembled.

3. Contractor shall provide access and facilities for verification of quality by Owner, Architect, authorities having jurisdiction, serving utilities and product manufacturers. See additional requirements specified herein in Article titled "CONTRACTOR'S RESPONSIBILITIES FOR OBSERVATIONS, INSPECTIONS AND TESTS."
4. Contractor shall provide all information and assistance necessary for verification of quality, including that by and from subcontractors, fabricators, materials suppliers, manufacturers, installers, applicators and others performing Work.
5. Contract modifications, if any, resulting from such verification activities shall be governed by applicable provisions in the Conditions of the Contract.
6. Contractor shall notify Owner in writing through Architect within 10 days of completion of work installed by Owner under separate contract of any defects or discrepancies that will cause delay or cost to the Contract. Failure to notify the Owner in writing shall constitute acceptance of the work as complying with the Contract and coordinated with Contractor's interface and work to be completed.
7. Prior to expiration of guaranty period provided under the Contract, District may exercise its right to reinspection.
 - a. If a determination is made to hold such an inspection, District will schedule inspection in conjunction with Contractor.
 - b. At a minimum, Contractor's authorized representative and District Representative shall participate in reinspection.
 - c. Discrepancies noted during reinspection, except normal wear and tear, normal weathering and abuse shall be corrected by Contractor at no cost to District. Such repairs shall be made promptly and to satisfaction of District Representative.

G. Observations by Owner, Architect and Architect's Consultants:

1. Periodic and occasional observations of Work in progress will be made by Owner, Architect and Architect's consultants as deemed necessary to review progress of Work and general conformance with design intent.
2. Continuous inspection will be made by the Owner's Project Inspector, in accordance with Title 24, Part 1, Article 4-333.

H. Limitations on Inspection, Test and Observations: Employment of independent Testing Laboratory, including Project Inspector, and observations by Owner, Architect and Architect's consultants shall in no way relieve Contractor of duties and responsibilities to perform Work in full conformance to all requirements of Contract Documents and applicable Building Code and other regulatory requirements.

I. Non-Conforming Work:

1. Correction of Non-Conforming Work: Non-conforming Work shall be modified, replaced, repaired or redone by the Contractor at no change in Contract Sum or Contract Time.
2. Rejection of Non-Conforming Work: Owner reserves the right to reject all Work not in conformance to the requirements of the Drawings and Specifications.
3. Acceptance of Non-Conforming Work: Acceptance of non-conforming Work, without specific written acknowledgement and approval of the Owner and, as applicable,

authorities having jurisdiction, shall not relieve the Contractor of the obligation to correct such Work.

4. **Contract Adjustment for Non-conforming Work:** Should Architect or Owner determine that it is not feasible or in Owner's interest to require non-conforming Work to be repaired or replaced, and should non-conforming Work not be in conflict with the requirements of authorities having jurisdiction, an equitable reduction in Contract Sum shall be made by agreement between Owner and Contractor. If equitable amount cannot be agreed upon, a Construction Change Directive will be issued and the amount in dispute resolved in accordance with applicable provisions of the Conditions of the Contract.
5. **Non-Responsibility for Non-Conforming Work:** Architect and Architect's consultants disclaim any and all responsibility for Work not produced in full conformance with the Contract Documents and the requirements of authorities having jurisdiction.

1.6 INSPECTIONS AND TESTS BY AUTHORITIES HAVING JURISDICTION

- A. **Contractor's Assistance:** Contractor shall assist in all tests and inspections required by authorities having jurisdiction over the Work under this Contract, including those required by Division of the State Architect (DSA), Public Works Department, Fire Department, Health Department and similar authorities having jurisdiction. Such assistance shall include notification of the Project Inspector when the Work is ready for inspection or re-inspection.
- B. **DSA Field Supervision:** Division of the State Architect (DSA), Office of Regulation Services, will provide field supervision in accordance with Section 4-334, Part 1, Title 24, CCR. Contractor shall verify with the General Inspector that DSA has been notified prior to start of construction, in compliance with Section 4-331, Part 1, Title 24, CCR.

1.7 INSPECTIONS BY OWNER

- A. **Access to the Work:** Owner, through Owner's representatives and agents, shall have access at all times for the purpose of inspection of the Work, including access to offsite shops and other fabrication and mixing facilities where the Work is in preparation. Contractor shall at all times maintain proper facilities and provide safe access for such inspection.
 1. Should it be considered necessary or advisable by the Owner, at any time before final acceptance of the entire Work, to make an examination of the Work already completed, by removing or tearing out the same, the Contractor shall on request promptly furnish all necessary facilities, labor and materials.
 2. If such Work is found to be defective, in any respect, due to the fault of the Contractor or his subcontractor, he shall defray all expenses of such examinations and of satisfactory reconstruction. If, however, such Work is found to meet the requirements of the Contract, the additional cost of labor and material necessarily involved in the examination and replacement shall be allowed the Contractor.
- B. **Rejection of Work by Owner:** Owner shall have the right to reject materials and workmanship which are defective or to require their correction.
 1. Rejected workmanship shall be satisfactorily corrected and rejected materials shall be removed from the premises without charge to the Owner.

2. If the Contractor does not correct such rejected Work within a reasonable time, fixed by written notice, the Owner may correct same and charge the expense to the Contractor.

1.8 INSPECTIONS BY OWNER'S PROJECT INSPECTOR

- A. Inspections by Owner's Project Inspector: Owner will employ and assign to inspect the Work a Project Inspector in accordance with the requirements of California Code of Regulations (CCR), Title 24, Part 1, Section 4-333. The duties of the Project Inspector will be as defined in Title 24, Part 1, Section 4-342. Project Inspector shall be certified and approved by the Division of the State Architect (DSA).
 1. The Work of construction in all stages of progress shall be subject to the personal, continuous observation of the Project Inspector. Contractor shall provide free and safe access to any and all parts of the Work at all times.
 2. Contractor shall furnish to the Project Inspector reasonable facilities for obtaining such information as may be necessary to keep the Project Inspector fully informed respecting progress and manner of the Work and the character of the materials.
 3. Inspection of the Work by the Project Inspector shall not relieve the Contractor of any obligation to fulfill the Contract.
- B. Excessive Costs for Project Inspector: Costs of the Project Inspector beyond the ordinary shall be charged to the Contractor as provided in Paragraph 1.12.B., in this Section.

1.9 INSPECTIONS BY DSA-CERTIFIED AND APPROVED INDEPENDENT TESTING LABORATORY

- A. Inspections by DSA-Certified and -Approved Independent Testing Laboratory:
 1. Owner will select, employ and pay for an independent Testing Laboratory, licensed, certified, and approved by State of California, Division of the State Architect (DSA). Testing Laboratory will conduct tests and inspections as indicated on Drawings, in Specifications and as required by authorities having jurisdiction.
 2. Testing Laboratory shall be licensed to conduct testing and inspection operations and services in the State of California. Testing Laboratory services for this project shall be supervised by Civil Engineer licensed to practice in the State of California, who shall certify and sign all reports.
 3. Employment of Testing Laboratory shall be in compliance with California Code of Regulations (CCR), Title 24, Part 1, Section 4-335.
- B. Responsibilities of DSA-Certified and -Approved Independent Agency (Testing Laboratory):
 1. Testing Laboratory shall provide qualified personnel at the project site and other locations where Work of the Contract is performed.
 2. Testing Laboratory shall cooperate with Owner, Architect and Contractor when performing testing and inspection services.
 3. Testing Laboratory shall perform observations, inspections, sampling and testing of products in compliance with requirements of the Contract Documents and authorities having jurisdiction, including Division of the State Architect (DSA).
 4. Duties of the Testing Laboratory shall be as described and required by the following:
 - a. California Code of Regulations (CCR), Title 24, Part 1, Section 4-335.

- b. California Education Code Section 39151.
 - c. California Education Code Section 39153.
 5. Testing Laboratory shall determine whether materials, mixes, products, application and installation procedures, characteristics of completed Work comply with requirements of the Contract Documents.
 6. Contractor shall pay for the following:
 - a. Mileage and travel time for quality control services by Testing Laboratory when travel of more than 50 miles from the project site is required.
 - b. Overtime pay for personnel of Testing Laboratory when observations, inspections or tests are required after normal, established working hours.
 - c. All costs for repeated observations, reinspection or retesting by Testing Laboratory due to non-conforming Work.
 - d. Owner will deduct such costs from the final payment (or funds due and payable) under the Contract. Contract Sum will be adjusted accordingly by Change Order.
 7. Contractor shall make the Work in all stages of progress available for personal and continuous observation by the Testing Laboratory.
 - a. Testing Laboratory shall have free access to any and all parts of the Work at all times.
 - b. Contractor shall provide the Testing Laboratory with reasonable facilities for Testing Laboratory to obtain such information as Testing Laboratory determines is necessary for Testing Laboratory to be kept fully informed of the progress and manner of performance of the Work and character of products, according to Testing Laboratory's duties and responsibilities.
 - c. Observation and inspection of the Work by Testing Laboratory shall not relieve Contractor from any obligation to fulfill the requirements of the Contract.
- C. Required Tests and Inspections: Tests and inspections of the following are required.
1. Excavations, Foundations and Retaining Walls: California Building Code (CBC), Chapter 33 and Appendix Chapter 33.

<u>Test or Inspection</u>	<u>Reference</u>
---------------------------	------------------
 2. Concrete: California Building Code (CBC), Chapter 19A.

<u>Test or Inspection</u>	<u>Reference</u>

| 1) | Reinforced masonry | 2105A.7 |
| 2) | Reinforcing bar welding inspection | 1929A.12 |

4. Cold-Formed Light Gauge Steel: California Building Code (CBC), Chapter 20A.

<u>Test or Inspection</u>	<u>Reference</u>
a. Materials	
1) Alloys	2001A.2
2) Identification	2001A.4 and 2203.3
3) Cold-formed steel	2202A.2 and 2213A.1
b. Quality	
1) Cold-formed steel	2231A.1
c. Inspection	
1) Welding	2004A.8

5. Structural Steel: California Building Code (CBC), Chapter 22A.

<u>Test or Inspection</u>	<u>Reference</u>
a. Materials	
1) Structural steel, cold-formed steel	2202A.1 and 2213A.1
2) Material identification	2203A.2
b. Quality	
1) Tests of Structural and Cold-formed Steel	2231A.1
2) Tests of high-strength bolts, nuts and washers	2231A.2
3) Tests of end-welded studs	2231A.3
4) Non-destructive weld testing	1703A (Special Inspection)
c. Inspection	
1) Shop fabrication	2231A.1
2) Welding	2231A.5
3) End-welded studs (Nelson studs)	2231A.5
4) High-strength bolt installation	2231A.6

6. Wood: California Building Code (CBC), Chapter 23A.

<u>Test or Inspection</u>	<u>Reference</u>
a. Materials	
1) Lumber and plywood grading	2303A.1 and 2304A
2) Glued-laminated members	2316A.2 and 2306A.2(28)
b. Wood inspection	
1) Glue-laminated fabrication	2337A.1
2) Timber connectors	2337A.2

3) Manufactured trusses

2337A.3

- D. Inspection and Test Reports: After each inspection and test, Testing Laboratory will promptly prepare and issue verified reports, in compliance with California Code of Regulations (CCR), Part 1, Title 24, Sections 4-336 and 4-343.
1. Reports shall clearly identify the following:
 - a. Date issued.
 - b. Project title (name), DSA Application and File numbers and identifying numbers of Owner and Architect.
 - c. Name of inspector.
 - d. Date and time of observation, inspection, testing or sampling.
 - e. Identification of product by Specifications Section number and title, and paragraph reference(s).
 - f. Location in Project where observation, inspection or sampling was conducted.
 - g. Type of observation, inspection or test.
 - h. Ambient conditions when observation, inspection, testing or sampling occurred.
 - i. Results of observation, inspection, testing or sampling.
 - j. Statement that observation, inspection, testing or sampling was conducted in compliance with Parts 1 and 2, Title 24, California Code of Regulations (CCR).
 - k. Indication of specified or required values and statement whether test results indicate compliance with Contract requirements.
 - l. Comments or professional opinion concerning conformance with Contract Documents and other requirements. Include recommendation for re-testing, if applicable.
 - m. Signature of Registered Professional Engineer, licensed in California, affirming the information provided in the report.
 2. Samples taken but not tested shall be reported.
 3. When requested by Architect, Testing Laboratory will provide interpretations of inspection and test results.
 4. Verification reports shall be prepared and submitted, stating that all inspections and tests specified or otherwise required by the Contract Documents and applicable requirements of authorities having jurisdiction for the Project, have been completed and that material and workmanship comply with the Contract Documents.
 - a. Such verification reports shall be submitted at intervals not exceeding 6 months, at Substantial Completion of the Project, and at all times when Work of Project is suspended.
 - b. Submit verification reports to parties as specified for reports of inspections and tests.

- E. Submission of Reports: Testing Laboratory will promptly submit one copy of each report of observations, inspections, sampling and testing to the following:
 - 1. Owner.
 - 2. Contractor.
 - 3. Project Inspector.
 - 4. Architect.
 - 5. Architect's consultant (design professional of record), as appropriate to the Work: Structural engineer, mechanical engineer and electrical engineer.
 - 6. Division of the State Architect (DSA).
- 1.10 INSPECTIONS AND TESTS BY SERVING UTILITIES
 - A. Inspections and Tests by Serving Utilities:
 - 1. Contractor shall cause all tests and inspections required by serving utilities to be made for Work under this Contract.
 - 2. Except as specifically noted, scheduling, coordinating, conducting and paying for such inspections shall be solely the Contractor's responsibility.
 - 3. Unless otherwise specified, inspections and tests by authorities having jurisdiction shall be included in Contract Time and Contract Sum.
- 1.11 INSPECTIONS AND TESTS BY PRODUCT MANUFACTURERS
 - A. Inspections and Tests by Product Manufacturers:
 - 1. Contractor shall cause all tests and inspections specified or required to be conducted by product manufacturers or authorized representatives of product manufacturers to be made.
 - 2. Additionally, Contractor shall cause all tests and inspections required by product manufacturers or installer/applicator as conditions of guarantee, warranty or certification of Work to be made, the cost of which shall be included in the Contract Sum. Provide reports in format and with content comparable to that specified under Article titled "INSPECTIONS BY DSA-CERTIFIED AND -APPROVED INDEPENDENT TESTING LABORATORY."
 - B. Reports of Inspections and Tests by Product Manufacturers: Contractor shall provide reports in format and with content comparable to that specified under Article titled "INSPECTIONS BY DSA-CERTIFIED AND APPROVED INDEPENDENT TESTING LABORATORY."
- 1.12 CONTRACTOR'S RESPONSIBILITIES FOR OBSERVATIONS, INSPECTIONS AND TESTS
 - A. Contractor's Responsibilities for Observations, Inspections and Tests:
 - 1. Contractor shall notify Testing Laboratory, Project Inspector, and product manufacturer, as applicable, 24 hours in advance of expected time for operations requiring inspection and testing services.

2. Contractor shall deliver to Testing Laboratory or designated location, adequate samples of materials proposed to be used which require advance testing, together with proposed mix designs.
 3. Contractor shall cooperate with Owner, Architect, and Architect's consultants, as applicable, Testing Laboratory, Project Inspector and product manufacturer in the conduct of inspections and tests. Contractor shall provide access to Work areas and off-site fabrication and assembly locations, including during weekends and after normal work hours.
 4. Contractor shall provide incidental labor and facilities as necessary to ensure safe access to Work to be tested and inspected, to obtain and handle samples at the Project site or at source of products to be tested, and to store and cure test samples.
 5. Contractor shall provide, at least 15 days in advance of first test or inspection of each type, a schedule of tests or inspections indicating types of tests or inspections and their scheduled dates.
- B. Additional Tests: Costs for additional tests, inspections and related services, due to the following, shall be reimbursed to Owner by Contractor and no change in Contract Time shall result.
1. Failure to properly schedule or notify Testing Laboratory, Project Inspector or other responsible testing and inspection agency, manufacturer and authorities having jurisdiction.
 2. Changes in sources, lots or suppliers of products after original tests or inspections.
 3. Changes in means, methods, techniques, sequences and procedures of construction which necessitate additional observation, inspection, testing, sampling and related services.
 4. Changes in mix designs, such as those for concrete, mortar and plaster, after review and acceptance of submitted mix design.
 5. Re-testing caused by a failed test or inspection.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION – NOT USED

END OF SECTION

01 60 00 – PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. General characteristics of products.
- B. Product options.
- C. Substitutions.
- D. System completeness.
- E. Transportation and handling requirements.
- F. Storage and protection of products.
- G. Installation of products.

PART 2 - PRODUCTS

2.1 GENERAL PRODUCT REQUIREMENTS

- A. Products, General: Items purchased for incorporation in the Work, whether purchased for the Project or taken from previously purchased stock, and include materials, equipment, assemblies, fabrications and systems.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model designations indicated in the manufacturer's published product data.
 - 2. Materials: Products that are shaped, cut, worked, mixed, finished, refined or otherwise fabricated, processed or installed to form a part of the Work.
 - 3. Equipment: A product with operating parts, whether motorized or manually operated, that requires connections such as wiring or piping.
- B. Specific Product Requirements: Refer to requirements of Section 01 45 00 - Quality Control and individual product Specifications Sections in Divisions 2 through 16 for specific requirements for products.
- C. Minimum Requirements: Specified requirements for products are minimum requirements. Refer to general requirements for quality of the Work specified in Section 01 45 00 - Quality Control and elsewhere herein.
- D. Product Selection: Provide products that fully comply with the Contract Documents, are undamaged and unused at installation. Comply with additional requirements specified herein in Article titled "PRODUCT OPTIONS".

- E. Standard Products: Where specific products are not specified, provide standard products of types and kinds that are suitable for the intended purposes and that are usually and customarily used on similar projects under similar conditions. Products shall be as selected by Contractor and subject to review and acceptance by Architect.
- F. Product Completeness: Provide products complete with all accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect. Comply with additional requirements specified herein in Article titled "SYSTEM COMPLETENESS".
- G. Code Compliance: All products, other than commodity products prescribed by Code, shall have a current ICBO Evaluation Service (ICBO ES) Research Report or CABO National Evaluation Report (NER). Refer to additional requirements specified in Section 01 41 10 - Regulatory Requirements.
- H. Interchangeability: To the fullest extent possible, provide products of the same kind from a single source. Products required to be supplied in quantity shall be the same product and interchangeable throughout the Work. When options are specified for the selection of any of two or more products, the product selected shall be compatible with products previously selected.
- I. Product Nameplates and Instructions:
 - 1. Except for required Code-compliance labels and operating and safety instructions, locate nameplates on inconspicuous, accessible surfaces. Do not attach manufacturer's identifying nameplates or trademarks on surfaces exposed to view in occupied spaces or to the exterior.
 - 2. Provide a permanent nameplate on each item of service-connected or power-operated equipment. Nameplates shall contain identifying information and essential operating data such as the following example:
 - a. Name of manufacturer
 - b. Name of product
 - c. Model and serial number
 - d. Capacity
 - e. Operating and Power Characteristics
 - f. Labels of Tested Compliance with Codes and Standards
 - 3. Refer to additional requirements specified in Division 15 - Mechanical.
 - 4. For each item of service-connected or power-operated equipment, provide operating and safety instructions, permanently affixed and of durable construction, with legible machine lettering. Comply with all applicable requirements of authorities having jurisdiction and listing agencies.
- J. Mechanical Product Requirements: Comply with requirements specified Division 23 - Mechanical.
- K. Electrical Product Requirements: Comply with requirements specified in Division 26 - Electrical.

2.2 PRODUCT OPTIONS

- A. Products Specified by Description: Where Specifications describe a product, listing characteristics required, with or without use of a brand name, provide a product that has the specified attributes and otherwise complies with specified requirements.
- B. Products Specified by Performance Requirements: Where Specifications require compliance with performance requirements, provide product(s) that comply and are recommended by the manufacturer for the intended application. Verification of manufacturer's recommendations may be by product literature or by certification of performance from manufacturer.
- C. Products Specified by Reference to Standards: Where Specifications require compliance with a standard, provided product shall fully comply with the standard specified.
- D. Products Specified by Identification of Manufacturer and Product Name or Number:
 - 1. "Specified Manufacturer": Provide the specified product(s) of the specified manufacturer.
 - a. If only one manufacturer is specified, without "acceptable manufacturers" being identified, provide only the specified product(s) of the specified manufacturer.
 - b. If the phrase "or equal" is stated or reference is made to the "or equal provision," products of other manufacturers may be provided if such products are equivalent to the specified product(s) of the specified manufacturer. Equivalence shall be demonstrated by submission of information in compliance with requirements specified herein under the Article titled "SUBSTITUTIONS."
 - 2. "Acceptable Manufacturers": Product(s) of the named manufacturers, if equivalent to the specified product(s) of the specified manufacturer, will be acceptable in accordance with the requirements specified herein in the Article titled "SUBSTITUTIONS", except considerations regarding changes in Contract Time and Contract Sum will be waived if no increase in Contract Time or Contract Sum results from use of such equivalent products.
 - 3. Unnamed manufacturers: Products of unnamed manufacturers will be acceptable only as follows:
 - a. Unless specifically stated that substitutions will not be accepted or considered, the phrase "or equal" shall be assumed to be included in the description of specified product(s). Equivalent products of unnamed manufacturers will be accepted in accordance with the "or equal" provision specified herein, below.
 - b. If provided, products of unnamed manufacturers shall be subject to the requirements specified herein in the Article titled "SUBSTITUTIONS."
 - 4. Quality basis: Specified product(s) of the specified manufacturer shall serve as the basis by which products by named acceptable manufacturers and products of unnamed manufacturers will be evaluated. Where characteristics of the specified product are described, where performance characteristics are identified or where reference is made to industry standards, such characteristics are specified to facilitate evaluation of products by identifying the most significant attributes of the specified product(s).
- E. Products Specified by Combination of Methods: Where products are specified by a combination of attributes, including manufacturer's name, product brand name, product catalog or identification number, industry reference standard, or description of product characteristics, provide products conforming to all specified attributes.

- F. "Or Equal" Provision: Where the phrase "or equal" or the phrase "or approved equal" is included, product(s) of unnamed manufacturer(s) may be provided as specified above in subparagraph titled "Unnamed manufacturers."
1. The requirements specified herein in the Article titled "SUBSTITUTIONS" shall apply to products provided under the "or equal" provision except, if the proposed product(s) are determined to be equivalent to the specified product(s) of the specified manufacturer, the requirement specified for substitutions to result in a net reduction in Contract Time or Contract Sum will be waived.
 2. Use of product(s) under the "or equal" provision shall not result in any delay in completion of the Work, including completion of portions of the Work for use by Owner or for work under separate contract by Owner.
 3. Use of product(s) under the "or equal" provision shall not result in change in Contract Sum and Contract Time. Should additional costs be incurred, including costs for re-design and for fees for plancheck review and permit, costs shall be paid by Contractor with no change in Contract Sum and Contract Time.
 4. Use of product(s) under the "or equal" provision shall not require substantial change in the intent of the design, in the opinion of the Architect. The intent of the design shall include functional performance and aesthetic qualities.
 - a. Should changes in dimensions, configurations, locations and interfaces between products be necessary due to use of other than the specified products of the specified manufacturer, such changes shall be made by the Contractor, subject to review by the Architect and, if applicable, approval by the Division of the State Architect (DSA), at no change in Contract Sum and Contract Time.
 5. The determination of equivalence will be made by the Architect and such determination shall be final.
- G. Visual Matching: Where Specifications require matching a sample, the decision by the Architect on whether a proposed product matches shall be final. Where no product visually matches but the product complies with other requirements, comply with provisions for substitutions for selection of a matching product in another category.
- H. Selection of Products: Where requirements include the phrase "as selected from manufacturer's standard colors, patterns and textures", or a similar phrase, selections of products will be made by indicated party or, if not indicated, by the Architect. The Architect will select color, pattern and texture from the product line of submitted manufacturer, if all other specified provisions are met.

2.3 SUBSTITUTIONS

- A. Substitutions: Requests by Contractor to deviate from specified requirements for products, materials, equipment, and methods, or to provide products other than those specified, shall be shall be considered requests for substitutions except under the following conditions:
1. Substitutions are requested during the bidding period, and accepted prior to execution of the Contract. Acceptance shall be in the form of written Addendum to the Bidding documents or revision to the Drawings or Specifications for use as Construction Contract Documents.
 2. Changes in products, materials, equipment, and methods of construction are directed by the Owner or Architect.

3. Contractor options for provision of products and construction methods are specifically stated in the Contract Documents.
 4. Change in products, materials, equipment, and methods of construction are required for compliance with Codes, ordinances, regulations, orders and standards of authorities having jurisdiction.
- B. Substitution Provisions: Refer to substitution provisions of the Bidding and Contract Requirements, in addition to the requirements specified herein. Provisions for consideration and acceptance of substitutions shall be as follows:
1. Documentation: Substitutions will not be considered if they are indicated or implied on shop drawing, product data or sample submittals. All requests for substitution shall be by separate written request from Contractor. Contractor shall utilize Substitution Request form provided by Owner.
 2. Cost and Time Considerations: Substitutions will not be considered unless a net reduction in Contract Sum or Contract Time results to the Owner's benefit, including redesign costs, life cycle costs, plancheck and permit fees, changes in related Work and overall performance of building systems.
 3. Design Revision: Substitutions will not be considered if acceptance will require substantial revision of the Contract Documents or will substantially change the intent of the design, in the opinion of the Architect. The intent of the design shall include functional performance and aesthetic qualities.
 4. Data: It shall be the responsibility of the Contractor to provide adequate data demonstrating the merits of the proposed substitution, including cost data and information regarding changes in related Work.
 5. Determination by Architect: Architect will determine the acceptability of proposed substitutions and will notify Contractor, in writing within a reasonable time, of acceptance or rejection. The determination by the Architect regarding functional performance and aesthetic quality shall be final.
 6. Non-Acceptance: If a proposed substitution is not accepted, Contractor shall immediately provide the specified product.
 7. Substitution Limitation: Only one request for substitution will be considered for each product.
- C. Request for Substitution Process:
1. Contractor shall prepare a request for substitution and submit the request to the Architect for review and acceptance. Submit a minimum of 4 copies. Form and other administrative requirements shall be as directed by the Architect.
 2. Substitution requests shall include complete product data, including drawings and descriptions of products, fabrication details and installation procedures. Include samples where applicable or requested.
 3. Substitution requests shall include appropriate product data for the specified product(s) of the specified manufacturer, suitable for use in comparison of characteristics of products.
 - a. Include a written, point-by-point comparison of characteristics of the proposed substitute product with those of the specified product.

- b. Include a detailed description, in written or graphic form as appropriate, indicating all changes or modifications needed to other elements of the Work and to construction to be performed by the Owner and by others under separate contracts with Owner, that will be necessary if the proposed substitution is accepted.
- 4. Substitution requests shall include a statement indicating the substitution's effect on the Construction Schedule. Indicate the effect of the proposed substitution on overall Contract Time and, as applicable, on completion of portions of the Work for use by Owner or for work under separate contracts by Owner.
- 5. Except as otherwise specified, substitution requests shall include detailed cost data, including a proposal for the net change, if any, in the Contract Sum.
- 6. Substitution requests shall include signed certification that the Contractor has reviewed the proposed substitution and has determined that the substitution is equivalent or superior in every respect to product requirements indicated or specified in the Contract Documents, and that the substitution is suited for and can perform the purpose or application of the specified product indicated or specified in the Contract Documents.
- 7. Substitution requests shall include a signed waiver by the Contractor for change in the Contract Time or Contract Sum because of the following:
 - a. Substitution failed to perform adequately.
 - b. Substitution required changes in on other elements of the Work.
 - c. Substitution caused problems in interfacing with other elements of the Work.
 - d. Substitution was determined to be unacceptable by authorities having jurisdiction.
- 8. If, in the opinion of the Architect, the substitution request is incomplete or has insufficient data to enable a full and thorough review of the intended substitution, the substitution may be summarily refused and determined to be unacceptable.

D. Contract Document Revisions:

- 1. Should a Contractor-proposed substitution or alternative sequence or method of construction require revision of the Contract Drawings or Specifications, including revisions for the purposes of determining feasibility, scope or cost, or revisions for the purpose of obtaining review and approval by authorities having jurisdiction, revisions will be made by Architect or other consultant of Owner who is the responsible design professional, as approved in advance by Owner.
- 2. Services of Architect or other responsible design professional for researching and reporting on proposed substitutions or alternative sequence and method of construction shall be paid by Contractor when such activities are considered additional services to the design services contracts of the Owner with Architect or other responsible design professional.
- 3. Costs of services by Architect or other responsible design professional of the Owner shall be paid on a time and materials basis, based on current hourly fee schedules, with reproduction, long distance telephone and shipping costs reimbursable at cost plus usual and customary mark-up for handling and billing.

4. Such fees shall be paid whether or not the proposed substitution or alternative sequence or method of construction is ultimately accepted by Owner and a Change Order is executed.
5. Such fees shall be paid from Contractor's portion of savings, if a net reduction in Contract Sum results. If fees exceed Contractor's portion of net reduction, Contractor shall pay all remaining fees unless otherwise agreed in advance by Owner.
6. Such fees owed shall be deducted from the amount owed Contractor on the Application for Payment next made following completion of revised Contract Drawings and Specifications or completion of research and other services. Owner will then pay Architect or other consultant of the Owner.

2.4 SYSTEM COMPLETENESS

A. System Completeness:

1. The Contract Drawings and Specifications are not intended to be comprehensive directions on how to produce the Work. Rather, the Drawings and Specifications are instruments of service prepared to describe the design intent for the completed Work.
2. It is intended that all equipment, systems and assemblies be complete and fully functional even though not fully described. Provide all products and operations necessary to achieve the design intent described in the Contract Documents.
3. Refer to related general requirements specified in Section 01 41 10 - Regulatory Requirements regarding compliance with minimum requirements of applicable codes, ordinances and standards.

B. Omissions and Misdescriptions: Contractor shall report to Architect immediately when elements essential to proper execution of the Work are discovered to be missing or misdescribed in the Drawings and Specifications or if the design intent is unclear.

1. Should an essential element be discovered as missing or misdescribed prior to receipt of Bids, an Addendum will be issued so that all costs may be accounted for in the Contract Sum.
2. Should an obvious omission or misdescription of a necessary element be discovered and reported after execution of the Agreement, Contractor shall provide the element as though fully and correctly described, and a no-cost Change Order shall be executed.

2.5 TRANSPORTATION, DELIVERY AND HANDLING

A. Transportation, Delivery and Handling, General: Comply with manufacturer's instructions and recommendations for transportation, delivery and handling, in addition to the following.

B. Transportation: Transport products by methods to avoid product damage.

C. Delivery:

1. Schedule delivery to minimize long-term storage and prevent overcrowding construction spaces. Coordinate with installation to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft and other losses.

2. Deliver products in undamaged condition in manufacturer's original sealed container or packaging system, complete with labels and instructions for handling, storing, unpacking, protecting and installing.

D. Handling:

1. Provide equipment and personnel to handle products by methods to prevent soiling, marring or other damage.
2. Promptly inspect products on delivery to ensure that products comply with contract documents, quantities are correct, and to ensure that products are undamaged and properly protected.

2.6 STORAGE AND PROTECTION

A. Storage and Protection, General: Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible.

1. Periodically inspect to ensure products are undamaged, and are maintained under required conditions.
2. Products damaged by improper storage or protection shall be removed and replaced with new products at no change in Contract Sum or Contract Time.
3. Store sensitive products in weathertight enclosures.

B. Inspection Provisions: Arrange storage to provide access for inspection and measurement of quantity or counting of units.

C. Structural Considerations: Store heavy materials away from the structure in a manner that will not endanger supporting construction.

D. Weather-Resistant Storage:

1. Store moisture-sensitive products above ground, under cover in a weathertight enclosure or covered with an impervious sheet covering. Provide adequate ventilation to avoid condensation.
2. Maintain storage within temperature and humidity ranges required by manufacturer's instructions.
3. For exterior storage of fabricated products, place products on raised blocks, pallets or other supports, above ground and in a manner to not create ponding or misdirection of runoff. place on sloped supports above ground.
4. Store loose granular materials on solid surfaces in a well-drained area. Prevent mixing with foreign matter.

E. Protection of Completed Work:

1. Provide barriers, substantial coverings and notices to protect installed Work from traffic and subsequent construction operations.
2. Remove protective measures when no longer required and prior to Substantial Completion review of the Work.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRODUCTS

A. Installation of Products:

1. Comply with manufacturer's instructions and recommendations for installation of products, except where more stringent requirements are specified, are necessary due to Project conditions or are required by authorities having jurisdiction.
2. Anchor each product securely in place, accurately located and aligned with other Work.
3. Clean exposed surfaces and provide protection to ensure freedom from damage and deterioration at time of Substantial Completion review.

END OF SECTION

01 73 29 – CUTTING AND PATCHING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 Section includes:

- A. Requirements and limitations for cutting and patching of Work.

PART 2 - PRODUCTS

- 2.1 Patching Materials, General: As required for original installation and to match surrounding construction.
- 2.2 Product Substitution: For each proposed change in materials, submit request for substitution under provisions of Section 01 60 00 - Product Requirements.

PART 3 - EXECUTION

- 3.1 Paving: At portland cement concrete paving, use concrete mix with maximum 3/8-inch aggregate and minimum 3000 psi 28-day compressive strength. Provide dowels to existing paving and reinforce new paving with minimum No. 3 reinforcing steel bars at 16 inches on center each way. Welded wire fabric reinforcement will not be acceptable.
- 3.2 Lawns and grasses: Restore areas trenched, disturbed or damaged. Provide sod or seeded planting mix, to match existing lawn or grass area.
- 3.3 Irrigation system: Restore by repair and replacement, as necessary, irrigation system affected by Work under the Contract.
- 3.4 Building finish materials: Match existing products and finishes. Confirm colors, patterns and textures with Architect. Custom cut new materials to fit and to match joint patterns with existing materials.
- 3.5 Ceramic tile and acoustical panels: Custom cut new materials to size to match existing construction.

END OF SECTION

DIVISION 02 – EXISTING CONDITIONS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

02 41 00 – DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Demolition and removal of portions of existing building, as indicated on Drawings.
- B. Demolition and removal of site improvements such as pavement (including walkways), landscaping, electrical, etc.
- C. Removal of building utility services, such as power and signal circuits and including capping and identification.
- D. Removal of designated building equipment and fixtures.
- E. Removal of designated walls, partitions and components, including cutting of new openings in existing construction for new doors, plumbing HVAC and electrical components.
- F. Handling and disposal of removed materials.
- G. Temporary partitions to allow continued building occupancy.
- H. Removal and protection of existing fixtures, materials, and equipment items indicated as "salvage."

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with specific requirements of California Building Code (CBC) and requirements of serving utilities.
 - 1. Notify affected utility companies before starting demolition Work and comply with their requirements.
 - 2. Notify Architect and Inspector of Record before starting demolition Work and comply with Owner's directions through Architect for barriers, noise abatement and dust control.
 - 3. Do not close or obstruct walkways, passageways, roadways and fire hydrants without permits.
 - 4. Conform to applicable regulatory procedures should hazardous or contaminated materials be encountered.
- B. Pre-Construction Conference:
 - 1. Convene a conference at the Project site 7 days prior to starting demolition to review the Drawings and Specifications, requirements of authorities having jurisdiction, instructions and requirements of serving utilities, sequencing and interface considerations and project conditions.

2. Conference shall be attended by supervisory and quality control personnel of Contractor and all subcontractors performing this and directly-related Work.
3. Submit minutes of meeting to Owner and Architect for Project record purposes.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.1 PREPARATION

A. Preparation for Demolition:

1. Erect and maintain weatherproof closures for exterior openings.
2. Erect and maintain temporary partitions or barriers to prevent spread of dust, fumes, noise, and smoke to provide for continued occupancy of facility by Owner.
3. Protect existing construction which is not indicated to be altered.

B. Protection: Protect existing construction and adjacent areas with temporary barriers and security devices.

1. Review location and type of construction of temporary barriers with Owner's Representative and public safety authorities having jurisdiction.
2. Barriers shall control dust, debris and provide protection for building occupants in adjacent spaces from construction activities.
3. Maintain protected egress and access at all times, in compliance with requirements of authorities having jurisdiction.

3.2 CONTINUED OPERATION

A. Contractor shall maintain access to parking lots and buildings that are not closed and not part of the project.

B. Contractor shall provide protective barriers and tunnels as necessary to protect occupants of buildings and paths of travel.

3.3 DEMOLITION

A. Selective Demolition of Building Elements:

1. Use techniques acceptable to Owner's Representative and authorities having jurisdiction, and which will achieve intended results and provide protection of surrounding features to remain.
2. Some items may have been demolished prior to Work of this Contract. Verify existing conditions prior to start of demolition. If items are in the process of demolition or have been demolished by others, notify Owner's Representative for directions.
3. Some items may require postponement of demolition until late in Contract Time period.
4. Phase demolition as necessary to provide adequate interfacing of related Work.

5. Demolish in an orderly and careful manner. Protect existing foundation supporting structural members, utility structures and finish materials to remain.
6. Remove, store, and protect equipment and materials to be re-installed in manner to prevent damage from soiling, moisture, marring, denting, scratching, distortion and impacts.
7. Protect materials and equipment to remain in place.

B. Building Services and Utilities Demolition:

1. Disconnect, remove, and cap designated building services and utilities within Project area. Minimize effect on portions of services and utilities to remain.
2. Mark location of disconnected building services and utilities. Identify and indicate capping locations on project record drawings.
3. Coordinate cutting and capping sequences and procedures to minimize disruption of activities in adjacent spaces.

C. Cutting and Patching:

1. Refer to requirements specified in Section 01 73 29 - Cutting and Patching.

3.4 SALVAGED MATERIALS

A. Ownership: Unless otherwise indicated, all materials demolished and removed shall become property of Contractor.

B. Disposal of Materials: Contractor shall haul and dispose of all demolished and removed materials to offsite disposal sites in a legal manner.

1. Except where noted otherwise, immediately remove demolished materials from site.
2. Promptly remove from the site and properly dispose of all contaminated, vermin infested, or dangerous materials encountered.

C. Salvage:

1. Contractor shall take care when removing salvageable material to avoid damaging the material itself and building components that are to remain.
2. Items of salvable value to the Contractor shall be removed from the site by the Contractor as the Work progresses and transported from the site as they are removed. Storage or sale of salvaged items on the site by the Contractor will not be permitted.

END OF SECTION

DIVISION 03 – CONCRETE

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

03 10 00 – CONCRETE FORMING AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Formwork for cast in place concrete, with shoring, bracing and anchorage.
- B. Forming of openings in concrete for Work specified in other Sections.
- C. Form accessories.
- D. Placement in forms of inserts and embedded products furnished under other Sections.

PART 2 - PRODUCTS

2.1 FORMING MATERIALS

- A. Forming Materials, General: Conform to ACI 301. Provide materials for contact with concrete which will impart suitable surface quality to completed concrete, including the following.
 - 1. Forms for Exposed Finish Concrete: Plywood, metal, metal-framed plywood faced, or other acceptable panel-type materials to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on drawings.
 - 2. Forms for Unexposed Finish Concrete: Plywood, lumber, metal, or another acceptable material. Provide lumber dressed on at least two edges and one side for tight fit. When unexposed concrete is intended to receive waterproofing, provide form as for exposed finish concrete.
- B. Plywood for Form Surfaces:
 - 1. Plywood for Concealed Surfaces: PS 1, undamaged face, minimum APA C-C Plugged EXT or APA Structural I Sheathing.
 - 2. Plywood, for Exposed Surfaces: PS 1, smooth-faced, undamaged, APA A-C or B-B High Density Overlaid Concrete Form, Class I, if forms are intended to be re-used, or PS 1, smooth-faced, undamaged, APA B-B Plyform, Class I. Plywood for exposed surfaces shall be minimum 5/8-inch thick.
- C. Hardboard: For curved surfaces, tempered hardboard, Masonite Corp., or equal.
- D. Lumber: Douglas fir or douglas fir-larch, grade appropriate for intended use, sound and undamaged straight edges, solid knots.
- E. Fillets for Chamfered Corners: Wood molding at plywood or lumber forms; rigid plastic at steel, fiberglass and plastic forms.

- F. Embedded Nailers: Clear all heart redwood or pressure preservative-treated (PPT) douglas fir, edges reverse beveled to key into concrete.
 - G. Tube Forms for Cylindrical Columns and Supports: Sonoco Products Co., Hartsville, SC (803/383-7000), Sonotube Plus Fibre Form, or equal, spirally wound, laminated fiber forms with special liner to eliminate spiral seam marks on finished concrete, Provide units with sufficient wall thickness to resist wet concrete loads without deformation. Or equal
- 2.2 FORMWORK MATERIALS
- A. Formwork Materials, General: Conform to ACI 301. Provide materials to construct formwork to support forming materials in contact with concrete, of sufficient capacity to withstand pressures of concrete placement and to support concrete in place until cured, without distortion.
- 2.3 FORMWORK ACCESSORIES
- A. Form Ties: Factory-fabricated, adjustable-length, removable or snap-off metal form ties designed to prevent form deflection and to prevent spalling of concrete upon removal.
 - 1. Provide units that will leave no metal closer than 1-1/2 inches to the plane of the exposed concrete surface.
 - 2. Provide units that will leave no hole larger than 1 inch diameter.
 - B. Form Release Agent: Commercial formulation form release agent, colorless product with the following characteristics:
 - 1. Will not bond with, stain concrete, absorb moisture or adversely affect concrete surfaces.
 - 2. Will not impair subsequent treatments of concrete surfaces or bond of applied coatings.
 - 3. Complies with applicable air quality regulations for volatile organic compounds (VOCs).

PART 3 - EXECUTION - NOT USED

END OF SECTION

03 20 00 – CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Reinforcing steel bars and wire fabric.
- B. Reinforcement accessories.

1.3 SUBMITTALS

- A. Identified Stock: One tensile and one bend test for each 10 tons or fraction thereof for each size of stock identified as to heat number, provided mill analysis accompanies report.
- B. Unidentified Stock: One tensile and one bend test for each 2-1/2 tons of unidentified stock. Cost of tests for unidentified stock shall be reimbursed to Owner by Contractor.

PART 2 - PRODUCTS

2.1 REINFORCEMENT

- A. Reinforcing Steel Bars: Deformed steel, ASTM A 615, grade as indicated in Structural Drawings.
- B. Stirrup Bars: Deformed steel, ASTM A 615, grade as indicated on Structural Drawings.
- C. Reinforcing Steel Bars to be Welded: ASTM A 706, grade as indicated on Structural Drawings.
- D. Welded Steel Wire Fabric: Welded steel wire fabric, Type as indicated in Notes on Structural Drawings, flat sheets, plain finish.

2.2 REINFORCEMENT ACCESSORY MATERIALS

- A. Tie Wire: Minimum 16 gauge annealed type, black or galvanized finish.
- B. Chairs, Bolsters, Bar Supports and Spacers: Wire-bar-type devices, complying with CRSI Manual of Standard Practice, for spacing, supporting and fastening reinforcing in place. Provide size and shape as required for strength and support of reinforcement during reinforcement installation and concrete placement.
 - 1. Supports at Slab on Grade: Provide devices with load-bearing pads or horizontal runners where base material will not support chair legs, to prevent puncture of vapor retarder or provide precast concrete block bar supports of equal or greater strength to specified concrete.

2. Corrosion Resistance:
 - a. Provide plastic coated, plastic-tipped (CRSI, Class 1) or stainless steel types at exposed-to-view concrete surfaces.
 - b. Provide only stainless steel (CRSI Class 2) at exterior exposed surfaces to be painted.

PART 3 - EXECUTION

3.1 REINFORCEMENT FABRICATION

- A. Reinforcement Fabrication, General: Conform to CRSI Manual of Practice, providing required concrete cover as shown on the Structural Drawings.
- B. Splices: See Structural Drawings.
 1. Do not splice bars unless specifically shown on the Structural Drawings.
 2. Where splices are not indicated on Drawings, locate splices at point of minimum stress and review locations with Architect (Structural Engineer) before fabrication and placement. Submit mechanical splice data to Architect (Structural Engineer) for review prior to use.
 3. Splices shall be staggered so that not more than one-third of the reinforcing bars are spliced at any one location.

END OF SECTION

03 30 00 – CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Cast in place reinforced concrete footings, foundations and foundation walls.
- B. Slab on grade interior floors.
- C. Exterior slabs on grade not part of portland cement concrete paving.
- D. Unreinforced cast in place concrete for underground utilities.

1.3 SUBMITTALS

- A. Submit concrete mix design(s) for review.
- B. Submit proposed skateboard deterrents for review.

PART 2 - PRODUCTS

2.1 BASE AND OTHER UNDERSLAB MATERIALS

- A. Granular Base: Crushed aggregate base, evenly graded mixture of fine and coarse aggregates to provide, when compacted, a smooth and even surface below slabs on grade, complying with recommendations of geotechnical (soils) report.
- B. Sand Base: Clean, manufactured or natural sand complying with ANSI/ASTM C 136.

2.2 CONCRETE MATERIALS

- A. Concrete Materials, General: Acquire cement and aggregates from single source for all cast in place concrete.
- B. Portland Cement: ASTM C150, Type I or Type II, gray color. Provide sulfate-resistant type if determined unnecessary by sulfate content tests of soil. Refer to geotechnical report.
- C. Aggregates for Regular Weight Concrete: Fine and coarse aggregates, conforming to ASTM C33, California Building Code (CBC) Section 1903.3, and as follows.
 - 1. Structural Concrete: Maximum size not larger than 1/4 of narrowest dimension between forms, 1/3 depth of slab nor 3/4 of minimum clear spacing between individual reinforcing bars. Maximum aggregate size shall be 1-1/2-inch.
 - 2. Other than Structural Concrete: Conform to requirements for structural concrete except maximum aggregate for mass concrete shall be 1 inch.

- D. Water: Clean, fresh and drinkable, free of amounts of acids, alkalis and organic materials detrimental to concrete production.

2.3 ADMIXTURES

- A. Chemical Admixtures, General: Admixtures which result in more than 0.1 percent of soluble chloride ions by weight of cement are prohibited. Use no admixtures not included in mix design. The following admixtures may be used only with the written acceptance of the Architect (Structural Engineer) and only if they comply with referenced standards all other requirements of the Contract Documents. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 – Product Requirements.
 - 1. Water-Reducing Admixture: ASTM C 494, Type A. Design is based on use of Kel-Crete Admixture, manufactured by Kel-Crete Industries (ICBO ER 5005). Equivalent products will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Provide water-reducing admixture which enhances the characteristics of concrete to extent no less beneficial than the following:
 - a. Water reduction: Not less than 5 percent.
 - b. Increase in compressive strength: Not less than 10 percent at age 28 days.
 - c. Dry shrinkage: At age 21 days, less than concrete without water-reducing admixture.
 - 2. Accelerating or Retarding Admixtures: Conform to ASTM C 494 for Type C or Type B.
 - 3. Air-Entraining Admixture: Conform to ASTM C 260. Admixture shall be certified by manufacturer for compatibility with other mix components. Design is based on use of one of the following:
 - a. Kel-Crete Admixture, manufactured by Kel-Crete Industries.
 - b. Nox-Aire, manufactured by Nox-Crete.
 - 4. Waterproofing: Design is based on use of one of the following:
 - a. Kel-Crete Admixture, manufactured by Kel-Crete Industries.
 - b. Red Label, manufactured by Sika Chemical Corporation.
 - c. Super-Mix, manufactured by Concrete Surface Materials Company.
 - 5. Plasticizer: Conform to ASTM C 494, Type F. Design is based on use of Kel-Crete Admixture, manufactured by Kel-Crete Industries.
 - 6. Superplasticizers:
 - a. Dynatron, as manufactured by Chem-Masters Corporation. Or equal
 - b. Sikament 10 ESL, as manufactured by Chem-Masters Corporation. Or equal
 - c. Plastiflow N, as manufactured by Chem-Masters Corporation. Or equal
 - 7. Pozzolanic (Fly Ash) Materials: Not permitted.

2.4 BONDING COMPOUNDS

- A. Bonding Compounds, General: Products of the following manufacturers are specified and will be acceptable provided they comply with requirements of the Contract Documents. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00:
1. The Burke Co., Buffalo, NY (716/832-5959; local representative, Fountain Valley, CA, 714/556-4510).
 2. Dayton Superior Corporation, Chemical Operations, Oregon, IL (815/732-3136 or 800/745-3707; local office, Santa Fe Springs, CA, 310/946-5504 or 800/745-3701).
 3. Euclid Chemical Co., Cleveland, OH (216/531-9222 or 800/321-7628).
 4. Tamms Industries Co. (A.C. Horn), Mentor, OH (216/974-2399 or 800/218-2667; local representative, Los Angeles, CA, 213/269-1846).
 5. L&M Construction Chemicals, Inc., Omaha, NE (402/453-6600 or 800/362-3331). Or equal
 6. Larsen Products Corp., Rockville, MD (301/770-5200 or 800/633-6668).
 7. Master Builders Technology, Inc., Cleveland, OH, (216/831-5500; local representative, Rancho Cucamonga, CA, 909/466-6267).
 8. W.R. Meadows, Inc., Elgin, IL (700/683-4500; local representative Walnut, CA, 909/469-2606 or 800/342-5976).
 9. Sonneborn Building Products, Division of ChemRex, Inc., Minneapolis, MN (612/835-3434 or 800/433-9517).
 10. Stonhard, Inc., USA, Maple Shade, NJ (800/736-9300).
 11. Thoro System Products, Miami, FL (800/327-1570).
 12. Symons Corporation, Des Plaines, IL (708/298-3200; local representative, Industry, CA, 818/330-6855).
- B. Bonding Compound: Polyvinyl acetate, acrylic or styrene butadiene base. Provide polyvinyl acetate compound at interior locations only. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00.
1. Polyvinyl Acetate (Interior Only):
 - a. Superior Concrete Bonder by Dayton Superior Corp.
 - b. Euco Weld by Euclid Chemical Co.
 - c. Weld-Crete by Larsen Products Corp.
 - d. Everweld by L&M Construction Chemicals, Inc.
 - e. Ready Bond by Symons Corp.
 2. Acrylic or Styrene Butadiene:
 - a. Acrylic Bondcrete by The Burke Co.
 - b. Day-Chem Ad Bond by Dayton Superior Corp.
 - c. SBR Latex by Euclid Chemical Co.

- d. Hornweld by Tamms Industries Co. (A.C. Horn).
- e. Everbond by L&M Construction Chemicals, Inc.
- f. Acryl-Set by Master Builders Inc.
- g. Intralok by W.R. Meadows, Inc.
- h. Sonocrete by Sonneborn.
- i. Stonlock LB2 by Stonhard, Inc.
- j. Strong Bond by Symons Corp.

2.5 CURING, HARDENING AND SEALING MATERIALS

- A. Specified Manufacturer: Sonneborn Building Products, Division of ChemRex, Inc., Minneapolis, MN (612/835-3434 or 800/433-9517).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. The Burke Co., Buffalo, NY (716/832-5959; local representative, Fountain Valley, CA, 714/556-4510).
 - 2. Dayton Superior Corporation, Chemical Operations, Oregon, IL (815/732-3136 or 800/745-3707; local office, Santa Fe Springs, CA, 310/946-5504 or 800/745-3701).
 - 3. Euclid Chemical Co., Cleveland, OH (216/531-9222 or 800/321-7628).
 - 4. Fortifiber Corp., Los Angeles, CA (213/268-6783 or 800/443-4079).
 - 5. L&M Construction Chemicals, Inc., Omaha, NE (402/453-6600 or 800/362-3331).
 - 6. Larsen Products Corp., Rockville, MD (301/770-5200 or 800/633-6668).
 - 7. Master Builders Technology, Inc., Cleveland, OH, (216/831-5500; local representative, Rancho Cucamonga, CA, 909/466-6267).
 - 8. W.R. Meadows, Inc., Elgin, IL (700/683-4500; local representative Walnut, CA, 909/469-2606 or 800/342-5976).
 - 9. Sonneborn Building Products, Division of ChemRex, Inc., Minneapolis, MN (612/835-3434 or 800/433-9517).
 - 10. Stonhard, Inc., USA, Maple Shade, NJ (800/736-9300).
 - 11. Tamms Industries Co. Div. of LaPorte Construction Chemicals of North America, Inc., Kirkland, IL (815/522-3394 or 800/218-2667).
 - 12. Thoro System Products, Miami, FL (800/327-1570).
 - 13. Symons Corporation, Des Plaines, IL (708/298-3200; local representative, Industry, CA, 818/330-6855).
- C. Curing, Hardening and Sealing Materials, General: Provide materials suitable for concrete finish and not detrimental to materials to be applied to concrete. Materials shall be compatible with concrete admixtures, shall be recommended by manufacturer for intended

use and shall comply with applicable air quality requirements of authorities having jurisdiction.

- D. Concrete Curing Compounds: None specified. Concrete curing shall be by moist curing using moisture-retaining cover method only and not by using curing compounds.
 - E. Moisture-Retaining Cover: One of the following, complying with ASTM C 171, for moist curing of concrete. Add water-absorbing blanket-type curing material such as carpet, for placement on top of sheeting to ensure moisture retention under severe sun exposure and high heat.
 - 1. Waterproof paper: ASTM C 171, non-staining reinforced type, Sisalkraft Orange Label by Fortifiber Corp., or equal.
 - 2. Polyethylene film: 6 mil clear polyethylene sheet.
 - 3. White burlap-polyethylene sheeting: White burlap-polyethylene sheeting, Burlene brand or equal, complying with ASTM C 171, for contact with concrete surface.
 - F. Concrete Hardening and Sealing Compound, Natural Color Concrete: For exposed, natural color floor slabs in service areas, where indicated on the Drawings as "Sealed", Sonneborn Lapidolith concrete hardening compound, chemically-active solution which interacts with free lime in concrete to form dense, impervious wearing surface.
- 2.6 JOINT DEVICES, FILLER MATERIALS AND OTHER ACCESSORY PRODUCTS
- A. Cold (Construction) Joints: Keyed Kold by The Burke Group, Inc., or approved equivalent, formed 24 gauge galvanized steel joint form, with Keyed Kold stakes.
 - B. Control (Contraction) Joints: Preformed joint materials are not required. Sawcut joints after concrete placement and finishing.
- 2.7 SKATEBOARD DETERRENTS
- A. All retaining walls, benches, or any other features of 48" in height or less must have an architectural dentil block or notch every 36 inches maximum to interrupt the continuous edge. Each block or notch must be a minimum of 1.5 inches wide with square corners and protrude or indent a minimum of .75 inches. Add-on deterrents are acceptable if incorporated into the scope and construction, and approved in writing by the district in advance.

PART 3 - EXECUTION

3.1 CONCRETE MIX DESIGN

- A. Concrete Mix Design: Comply with California Building Code (CBC) Sections 1905A.2, 1905A.3 and 1905A.4.
 - 1. Concrete supplier shall determine mix designs and shall provide test results for each proposed mix design to establish the following:
 - a. Gross weight and yield per cubic yard of trial mixes.
 - b. Measured slump.
 - c. Measured air content.

- d. Compressive strength developed at 7 days and 28 days, from not less than 3 test cylinders cast for each 7-day and 28-day test, and for each design mix.
- 2. Provide concrete for the following characteristics:
 - a. 7-day compressive strength shall be at least 60 percent of required 28-day strength.
 - b. 28-day compressive strength for structural concrete shall have a minimum compressive strength of 3,000 psi. For slabs on grade concrete, mix shall have minimum of 5-1/2 sacks of portland cement per cubic yard.
 - c. 28-day compressive strength for non-structural concrete shall be as follows:
 - 1) Equipment pads, site appurtenances, exterior concrete slabs on grade and utility structures: Not less than 3,000 psi.
 - 2) Pipe and conduit encasement: Not less than 2,000 psi.
 - d. Water-cement ratio shall not exceed 0.6 for all concrete, except interior slabs on grade shall not exceed 0.42. Comply with California Building Code (CBC) Section 1904A, Table 19A-A-2 and Table 19A-A-4.
 - e. Chloride content of the entire mix shall not exceed 0.06 percent by volume.
- B. Selection of Proportions:
 - 1. The proportioning of ingredients shall be such that the concrete can be readily worked into forms and around reinforcement under conditions of placement to be employed, without segregation or excessive bleeding.
 - 2. The acceptability of the mix proportions shall be determined by either laboratory trial batch or field experience methods, as specified in California Building Code (CBC) Section 1905A.3.
 - 3. Proportioning by weight of loose, dry material, 94 pounds of cement shall be considered 1 cubic foot.
 - 4. Fine aggregate volume shall be at least 35 percent, with a maximum of 50 percent, of the sum of the separate fine and coarse aggregate volumes.
 - 5. Weighing equipment shall be accurate within 1 pound and be adjustable for varying aggregate moisture content.
 - 6. A beam auxiliary shall register any part of the last 100 pounds of each aggregate. The aggregate hopper shall have a volume adjustment.

END OF SECTION

03 54 13 – GYPSUM CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Self-leveling underlayment concrete for topping existing floor surfaces.
- B. Underlayment concrete for leveling and filling existing floor surfaces.
- C. Concrete patching compound for crack and joint filling, and small area filling.
- D. Related primers and additives.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Ardex, Inc., Coraopolis, PA (412/264-4240; West Coast office, Garden Grove, CA 714/894-2424). Or Equal
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Sonneborn Building Products, Minneapolis, MN (612/835-3434 or 800/243-6739).
 - 2. Dayton Superior Corp., Miamisburg, OH (513/866-0711 or 800/745-3700).
 - 3. Symons Corp., Des Plaines, IL (708/298-3200 or 800/800-7966).

2.2 SELF-LEVELING UNDERLAYMENT

- A. Self-Leveling Underlayment: Ardex K-15 Self-Leveling Underlayment, self-leveling, cementitious floor underlayment to level concrete, ceramic tile and adhesive-contaminated subfloors, from featheredge to 1 inch thickness in one placement.
- B. Compressive Strength: ASTM C349, 4100 psi in 28 days.
- C. Flexural Strength: ASTM C348, 1000 psi at 28 days.
- D. Flammability: ASTM E84 test method.
 - 1. Flame Spread: 0
 - 2. Fuel Contribution: 0
 - 3. Smoke Development: 0

2.3 UNDERLAYMENT CONCRETE

- A. Underlayment Concrete: Ardex K-55 Fast Setting Underlayment, or equal, trowelable, non-shrink cementitious floor underlayment to patch concrete and ceramic tile floors, from feather edge to 1 inch thickness in one application.

2.4 CONCRETE PATCHING COMPOUND

- A. Concrete Patching Compound: Ardex M-4 Quickset Concrete Patch. Or equal

2.5 PRIMERS AND ADDITIVES

- A. Primer, Porous and Normally Absorbent Concrete: Ardex P-51. Or equal
- B. Primer, Non-Porous Surfaces: Ardex P-82 Ultra-Prime, for ceramic tile, terrazzo, sealed concrete, steel decking, cut-back and adhesive residues, and for wood substrates.
- C. Resilient Emulsion: Ardex K-15 Resilient Emulsion, or equal, to increase flexibility and resilience of underlayment.
- D. Bonding Additive: Ardex E-100 Additive, or equal, to increase bond and cohesiveness of trowel grade underlayment products.

2.6 MISCELLANEOUS MATERIALS

- A. Sealer: Clear sealer to eliminate surface dusting, as produced or recommended by concrete topping manufacturer.
- B. Water: Clear, fresh, potable and free of mineral or organic matter which can affect underlayment, priming and patching products.
- C. Aggregate: ASTM C33, 1/8-inch to 1/4-inch fine gravel and 1/4-inch to 1/2-inch pea gravel.

PART 3 - EXECUTION - NOT USED

END OF SECTION

03 60 00 – GROUTING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Shrinkage-resistant grout and grouting of structural framing baseplates, equipment anchors and miscellaneous metal fabrications.

PART 2 - PRODUCTS

2.1 GROUTING COMPOUNDS

- A. Specified Manufacturers: Products of the following manufacturers are specified and will be acceptable provided they comply with referenced standards all other requirements of the Contract Documents. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 – Product Requirements:
 - 1. Dayton Superior Corporation, Chemical Operations, Oregon, IL (815/732-3136 or 800/745-3707; local office, Santa Fe Springs, CA, 310/946-5504 or 800/745-3701).
 - 2. Euclid Chemical Co., Cleveland, OH (216/531-9222 or 800/321-7628).
 - 3. L&M Construction Chemicals, Inc., Omaha, NE (402/453-6600 or 800/362-3331).
 - 4. Master Builders Technology, Inc., Cleveland, OH, (216/831-5500; local representative, Rancho Cucamonga, CA, 909/466-6267).
 - 5. W.R. Meadows, Inc., Elgin, IL (700/683-4500; local representative Walnut, CA, 909/469-2606 or 800/342-5976).
 - 6. The Rawl Plug, Inc., New Rochelle, NY (914/235-6300).
 - 7. Sika Corporation, Lyndhurst, NJ (201/933-8800; local representative, Santa Fe Springs, CA, 310/941-0231).
 - 8. Sonneborn Building Products, Division of ChemRex, Inc., Minneapolis, MN (612/835-3434 or 800/433-9517).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. The Burke Co., Buffalo, NY (716/832-5959; local representative, Fountain Valley, CA, 714/556-4510).
 - 2. Larsen Products Corp., Rockville, MD (301/770-5200 or 800/633-6668).

3. Tamms Industries Co. (A.C. Horn), Mentor, OH (216/974-2399 or 800/218-2667; local representative, Los Angeles, CA, 213/269-1846).
4. Thoro System Products, Miami, FL (800/327-1570).
5. Stonhard, Inc., USA, Maple Shade, NJ (800/736-9300).
6. Symons Corporation, Des Plaines, IL (708/298-3200; local representative, Industry, CA, 818/330-6855).

2.2 METALLIC SHRINKAGE-RESISTANT GROUT:

- A. For filling under equipment and interior miscellaneous metal fabrications; pre-mixed factory-packaged compound, metallic aggregate, minimum 5000 psi 28-day compressive strength. Confirm product selection with manufacturer's recommendations for intended use. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 – Product Requirements.
 1. Firmix by Euclid Chemical Co.
 2. Ferrogout by L&M Construction Chemicals, Inc.
 3. Embeco 636 or Embeco 885 by Master Builders Technology, Inc.
 4. Kemox G by Sika Corporation.
 5. Ferrolith G by Sonneborn.

2.3 NON-METALLIC SHRINKAGE-RESISTANT GROUT:

- A. For filling around anchors for exterior miscellaneous metal fabrications; pre-mixed, non-metallic, non-corrosive, non-staining product containing selected silica sands, portland cement, shrinkage compensating agents, plasticizing and water-reducing agents, complying with CE-CRD-C621, minimum 5000 psi 28-day compressive strength. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 – Product Requirements.
 1. Sure Grip Grout by Dayton Superior.
 2. Euco N.S. by Euclid Chemical Co.
 3. Crystex by L&M Construction Chemicals, Inc.
 4. Masterflow 713 or Masterflow 928 by Master Builders Technology, Inc.
 5. Sealtight 588 Grout by W.R. Meadows.

2.4 SHRINKAGE-RESISTANT SETTING GROUT:

- A. For setting railing posts and similar components in sleeves or blockouts in concrete; pre-mixed, natural aggregate, minimum 5000 psi 28-day compressive strength, Master Builders Technology, Inc., Set Grout.

2.5 NON-SHRINK POLYMER (EPOXY) GROUT (For setting anchor bolts in concrete):

- A. For anchor bolts for structural members: Foil Fast Injection Gel Anchor System by The Rawl Plug, Inc., New Rochelle, NY (914/235-6300), or approved equal.
- B. For anchor bolts for non-structural components: Polymer (epoxy) grout, Brutem MP or AB by Master Builders Technology, Inc., as recommended by manufacturer for intended use.

PART 3 - EXECUTION - NOT USED

END OF SECTION

DIVISION 04 – MASONRY

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

04 22 00 – CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Concrete unit masonry.
- B. Mortar and grout.
- C. Reinforcement for masonry.
- D. Deterrent.

1.3 SUBMITTALS

- A. Submit one sample of each concrete masonry unit for each face design and color.

PART 2 - PRODUCTS

2.1 CONCRETE MASONRY UNITS

- A. Hollow Load Bearing Units: UBC Standard 21-4, two core type, modular sized to 6x8x16, unless otherwise indicated on Drawings.
 - 1. Grade and Type: Grade N, Type I, moisture-controlled units, open end bond-beam design, except provide closed ends at corner and wall end conditions. Provide bond-beam units at all locations with horizontal reinforcing steel bars, to provide minimum vertical opening at all cross webs 3 inches high by 3 inches wide.
 - 2. Weight Classification: Medium weight.
 - 3. Strength: 1900 psi.
 - 4. Face design and color: Precision blocks, smooth faces, color to match existing concrete unit masonry or, if matching is not applicable, provide natural gray concrete color.
- B. Special Shapes: Provide end, corner, pilaster and cap units as necessary.

2.2 REINFORCEMENT AND ANCHORAGES

- A. Reinforcing Steel: ASTM A 615, yield grade as indicated on Drawings; deformed billet steel bars; plain finish. Comply with requirements specified in Section 03 20 00 – Concrete Reinforcing.

2.3 MORTAR AND GROUT MATERIALS

- A. Mortar and Grout Materials, General: Comply with California Building Code (CBC), Section 2102A.
- B. Portland Cement: ASTM C 150, Type as indicated on Structural Drawings, gray color, from one manufacturer only.
- C. Mortar Materials:
 - 1. Mortar Aggregate: ASTM C 144, standard masonry type, clean, dry, protected against dampness, freezing, and foreign matter.
 - 2. Hydrated Lime: ASTM C 207, Type S.
 - 3. Quicklime: ASTM C 5, non-hydraulic type.
 - 4. Plasticizer: Water-reducing type which reduces porosity and absorption to increase bond strength; if used, only as reviewed and approved by Architect and DSA.
- D. Grout Materials:
 - 1. Grout Aggregate, General: Comply with ASTM C 404 - Aggregates for Masonry Grout, except when other gradations are specifically approved by Architect (Structural Engineer) and DSA.
 - 2. Grout Course Aggregate: Maximum 3/8-inch size; 200 percent by volume.
 - 3. Grout Fine Aggregate: Washed river sand; 225 percent by volume.
 - 4. Admixture: Type that reduces early water loss to masonry units and produces expansive action in plastic grout sufficient to offset initial shrinkage and promote bonding of grout to all interior surfaces of the masonry units. Obtain approval of Architect (Structural Engineer) and DSA for use of specific admixture. Use admixture shall be in accordance with manufacturer's instructions and recommendations.
- E. Water: Clean, fresh, potable and free of mineral or organic matter detrimental to mortar and grout.

PART 3 - EXECUTION

3.1 MORTAR AND GROUT MIXES

- A. Mortar and Grout Mixes, General: Comply with California Building Code (CBC) requirements and ASTM C 476. Shovel measures shall not be allowed. Lime shall be last material added to mixes. Admixtures shall be acceptable on if included in reviewed mix designs. Admixtures shall be approved by DSA.
- B. Mortar Mix: Comply with requirements of California Building Code (CBC), Section 2103A.3, with the following additional requirements:
 - 1. Place approximately half of the required water and sand into the mixer while running.
 - 2. Add cement and the remainder of the sand and water into the mixer in that order and mix for a period of at least two minutes.
 - 3. Add lime and continue mixing as long as needed to secure a uniform mass.
 - 4. The total mixing time may not be less than ten minutes.
- C. Grout Mix:

1. Grout shall be high-slump workable mix, preferably placed by pumping to permit continuous pouring.
2. Grout shall be worked into all voids. Mechanical vibrators shall be used for consolidation. Where job conditions preclude such use, other methods may be employed if approved in advance, by DSA.
3. Because of high water/cement ratio used in this type of grout, it is essential that grout be reconsolidated after it has taken on plastic consistency but prior to taking initial set. Reconsolidate grout to overcome settlement shrinkage, separation from reinforcing steel and promote bond to concrete masonry unit walls.
4. Sufficient water may be added to make workable mix that will flow into all voids of masonry without separation or segregation. When grout is placed in masonry units with typical rates of absorption, slump of grout shall be approximately nine to ten inches (9 inches to 10 inches) depending on temperature and humidity conditions.
5. Where least lateral dimension of cells to be filled exceeds five inches, coarser aggregate may be used in grout fill if mix is designed in accordance with California Building Code (CBC), Section 1905A. The maximum size of aggregate shall not exceed one inch. Water per sack of cement may be greater than is shown in California Building Code (CBC), Table 19A-A-8 to allow for absorption by masonry units and with sufficient workability to meet requirements stated in paragraph above.
6. Incorporate admixture in grout mixes in accordance with manufacturer's instructions and recommendations.

D. Design Strengths: Include admixtures in mix designs.

1. Combined Compressive Strength, Masonry Unit and Mortar Assembly: F'm of 1500 psi. Strength shall be verified by masonry prism tests in compliance with California Building Code (CBC), Chapter 21A.
2. Mortar Compressive Strength: 1800 psi minimum at 28 days.
3. Grout Compressive Strength: 2000 psi minimum at 28 days.

3.2 SKATEBOARD DETERRENTS

- A. All retaining walls, benches, or any other features of 48" in height or less must have an architectural dentil block or notch every 36 inches maximum to interrupt the continuous edge. Each block or notch must be a minimum of 1.5 inches wide with square corners and protrude or indent a minimum of 0.75 inches.

END OF SECTION

DIVISION 05 – METALS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

05 05 13 – SHOP APPLIED COATINGS FOR METAL

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Hot-dip galvanized finish on iron and steel products, applied after manufacture or fabrication.
 - 1. Products to receive galvanized finish shall be those subject to weather exposure and those located in moist and high-humidity conditions.
 - 2. Products include but are not limited to:
 - a. Ornamental steel fencing.
 - b. Structural steel members, including shade structures, exposed outside of building enclosure.
 - c. Steel decking (factory-galvanized with finish touch-up as specified in this Section).
 - d. Steel fabrications, including bollards, fixed metal ladders (roof access ladders) and trash enclosure gates.
 - e. Steel forgings and iron castings.
 - 3. Iron and steel pipe.
 - 4. Fasteners and miscellaneous hardware.

1.3 ACCEPTABLE COATING APPLICATORS

- A. Coating Applicator: Members of American Galvanizers Association. List of members is available from American Galvanizers Association (AGA).

1.4 SOURCE QUALITY CONTROL

- A. Inspection and Testing: Comply with requirements specified in Section 01 45 00 - Quality Control.
 - 1. Inspection and testing of hot-dip galvanized coatings shall be performed according to guidelines provided in AGA - Inspection of Products Hot-Dip Galvanized After Fabrication.
 - 2. Include visual examination and tests in accordance with ASTM A 123, A 767 or A 153 as applicable to determine the thickness of the zinc coating on the metal surface.

3. Furnish Notarized Certificate of Compliance with ASTM Standards and Specifications herein listed.
 - a. Certificate shall be signed by galvanizer and contain detailed description of material processed.
 - b. Certificate shall include information as to the ASTM standard used for the coating.

PART 2 - PRODUCTS

2.1 STEEL MATERIALS

- A. Steel Materials, General: Material for galvanizing shall be geometrically suitable for galvanizing as described in ASTM A 384 and A 385. Steel materials suitable for galvanizing include structural shapes, pipe, sheet, fabrications and assemblies.
 1. Material shall be chemically suitable for galvanizing. Comply with AGA criteria and recommendations for determining suitability of steel for galvanizing.
 2. Advise galvanizer of chemical properties of steel in advance so that determination can be made whether material is galvanizable and whether or not special processing techniques shall be performed.

- B. Steel Materials for Hot Dip Galvanizing: Recommended steel materials for hot-dip galvanizing include but are not limited to:

1. Structural shapes and plates: ASTM A 36, A 242 type 2, A 283, A 441, A 500, A 501, A 529, A 572 and A 588.
2. Steel for fasteners:

	General Category	Bolt Material	Nut Material
a.	Carbon Steel High Strength	A 307 Gr A or B A 325 Type 1	A 563 Gr A A 563 Gr DH
b.	Tower Bolts	A 394	A 563 Gr A
c.	Quenched & Tempered Carbon Steel Bolts	A 449	A 563 Gr C
d.	Quenched & Tempered Alloy Steel Bolts	A 354 Gr BC	A 563 Gr DH

3. Steel for sheet metal articles: ASTM A 569 or A 570.
4. Steel for pipe or tubing: ASTM A 53, A 120 or A 595 Gr A or B.
5. CAUTION: Avoid use of steel with an ultimate tensile strength greater than 150 ksi because these steels have been shown to have a potential for hydrogen embrittlement due to pickling prior to galvanizing.

2.2 GALVANIZING REPAIR PRODUCTS

- A. Zinc Repair Solder: For hot zinc galvanizing repair.
 - 1. Specified manufacturer: Teck Cominco Metals, Ltd., Mississauga, Ontario, Canada (905/822-2022). Or equal
 - 2. Acceptable manufacturer: None identified. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 3. Zinc repair solder: Galva-Guard as manufactured by Teck Cominco Metals, Ltd. Or equal, 3/16-inch diameter wire in coil or stick form. Product characteristics:
 - a. Nominal composition: 50 percent Zn, 49 percent Sn, 1 percent Cu.
 - b. Working temperature range: 390 to 480 degrees F.
 - c. Corrosion resistant.
 - d. High-abrasion resistance.
 - e. Good adhesion to steel substrate.
 - f. Readily-controlled coating thickness.
 - g. Surface appearance matches hot-dipped galvanized.
 - h. Non-toxic.
- B. Cold-Galvanizing Compound: High zinc dust content paint for repair of galvanized finish on steel, with dry film containing not less than 94 percent zinc dust by weight and complying with SSPC-Paint 20.
 - 1. Specified manufacturer: Brite Products, Detroit, MI (313/865-4380). Or equal
 - 2. Acceptable manufacturer: None identified. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 3. Cold-Galvanizing Compound: Organic zinc-rich coating matching the aesthetic appearance of hot-dip galvanizing, containing at least 65 percent metallic zinc by weight in the dry film, complying with performance requirements of ASTM A 780 (Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings), DOD-P-21035B (Paint, High Zinc Dust Content, Galvanizing Repair) and SSPC (Society for Protective Coatings) PS-12, PS-12.01, PS-20, PS-22, PS-29 and PS-30.

PART 3 - EXECUTION

3.1 FABRICATION REQUIREMENTS

- A. Product Fabrication, General: Fabricate products to be galvanized in accordance with Recommended Details for Galvanized Structures by American Hot Dip Galvanizers Association, Inc.
 - 1. Comply with applicable portions of ASTM A 143, ASTM A 384 and ASTM A 385, except as otherwise specified herein. Avoid techniques which could cause distortion or embrittlement of steel.

2. Notify Architect before and during submittals review and before fabrication proceeds, of potential warpage problems which may require design modification.

B. Structural Steel Fabrication: Fabricate structural steel in accordance with Class I, II, III guidelines as described in AGA - Recommended Details for Galvanized Structures.

1. Fabrication practices for Products shall be in accordance with the applicable portions of ASTM A 143, A 384, and A 385, except as specified herein. Avoid fabrication techniques that could cause distortion or embrittlement of the steel.
2. Fabricator shall consult with Architect and responsible engineer and hot-dip galvanizer regarding potential problems or potential handling problems during the galvanizing process that may require modification of design before fabrication proceeds.

C. Joints: Whenever possible, bolted connections and slip joints shall be used to minimize field welding of material.

3.2 PRODUCT PREPARATION FOR GALVANIZING

A. Preparation, General:

1. Remove all welding slag, splatter, anti-splatter compounds and burrs prior to delivery for galvanizing.
2. Provide holes and lifting lugs as necessary for handling during galvanizing process and only at positions approved by Architect.
3. Remove grease, oil, paint and other deleterious materials.
4. Do not use unsuitable marking paints on steel prior to galvanizing. Consult with the galvanizer about removal of grease, oil paint and other deleterious material prior to fabrication.
5. Use blast cleaning or other method as necessary if surface contaminants and coatings cannot be removed by normal chemical cleaning process.

B. Surface Preparation:

1. Pre-clean using caustic bath, acid pickle and flux.
2. Alternatively, pre-clean by blast cleaning and fluxing.
3. Conform to ASTM A 123 and ASTM A 386, as applicable, for steel members, fabrications and assemblies.
4. Conform to ASTM A 153 for bolts, nuts and washers, and steel hardware components.
5. Conform to ASTM A 143 for protection against embrittlement.

3.3 GALVANIZING

A. Galvanizing, General:

1. Ferrous metal fabrications shall be galvanized only as specified or noted on the Drawings.
2. Where galvanized finish is specified or noted, ferrous fabrications shall be galvanized in accordance with applicable referenced ASTM standards, after fabrication.
3. Galvanizing shall be by hot dip method only, unless otherwise specified.

4. Galvanize steel members, fabrications and assemblies after fabrication by the hot-dip process in accordance with ASTM A 123.
 5. Galvanize bolts, nuts and washers and iron and steel hardware components in accordance with ASTM A 153.
 6. Safeguard products against steel embrittlement in conformance with ASTM A 143.
 7. Galvanize reinforcing steel in accordance with ASTM A 767.
- B. Portions Not to Receive Galvanizing: Protect portions of parts to be embedded in concrete from galvanizing, except galvanize anchors and sleeves built into concrete and masonry.
- C. Galvanizing Bath: Use not less than 98.0 percent zinc.
- D. Coating Weight: conform with paragraph 5.1 of ASTM A 123, Table 1 of A 767, or Table 1 of ASTM A 153, as appropriate.
- E. Coating Surface Finish: Wipe down surfaces after dip to remove pin holes, scale, drips, runs and points. Finish shall be continuous, adherent, smooth and evenly distributed, free from defects detrimental to intended end use and finishing of coated product.
- F. Coating Adhesion: Withstand normal handling consistent with the nature and thickness of the coating and normal use of the article.

END OF SECTION

05 05 23 – METAL FASTENINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Anchors and fasteners for connection to concrete and steel construction.
- B. General requirements for welding of steel products.

PART 2 - PRODUCTS

2.1 ANCHORS, FASTENERS AND ACCESSORY MATERIALS

- A. Anchors and Fasteners, General: Same material, color and finish as the metal to which applied, unless otherwise indicated.
- B. Exterior Exposure: Provide stainless steel.
- C. Type, Size and Spacing: Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate.
- D. Screw Head, Typical: Unless otherwise noted, exposed screws shall be phillips oval or flat head, countersunk.
- E. Standard Bolts and Nuts, Steel: ASTM A307, Grade A, hexagonal head.
- F. Lag Screws and Bolts, Steel: ANSI B18.2.1, type and grade best suited for the purpose, hexagonal or square head.
- G. Plain Steel Screws: FS FF-S-85, FS FF-S-92 and FS FF-S-111; type and grade best suited for the purpose.
- H. Stainless Steel Screws: AISI 300 Series.
- I. Self-Drilling Metal Fasteners: TEKS by Buildex Division, Illinois Tool works, Inc.
- J. Plain Steel Washers: FS FF-W-92, round, carbon steel.
- K. Lock Washers: FS FF-W-84, helical spring, carbon steel.
- L. Toggle Bolts: Not permitted. Depending upon substrate, use expansion anchor or use screw into appropriate backing material.
- M. Concrete Anchors, Epoxy Adhesive Type: Manufacturer, product, type and size as identified on Structural Drawings. If products are not indicated on Drawings, then provide anchors as directed by the Architect (Structural Engineer) and approved by Division of the State Architect (DSA). Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product

Requirements, if approved by DSA. Comply with DSA Interpretation of Regulations Document IR 19-1.

- N. Concrete and Masonry Anchors, Wedge-Type: Manufacturer, product, type and size as identified on Structural Drawings. If products are not indicated on Drawings, then provide anchors as directed by the Architect (Structural Engineer) and approved by Division of the State Architect (DSA). Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements, if approved by DSA. Comply with DSA Interpretation of Regulations Document IR 19-1.
- O. Concrete and Masonry Anchors, Self-Threading: Manufacturer, product, type and size as identified on Structural Drawings. If products are not indicated on Drawings, then provide anchors as directed by the Architect (Structural Engineer) and approved by Division of the State Architect (DSA). Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements, if approved by DSA. Comply with DSA Interpretation of Regulations Document IR 19-1.
- P. Fiber Plugs and Screws: Not permitted.
- Q. Lead Expansion Shields: Not Permitted.
- R. Powder-Actuated Driven Fasteners: Comply with notes on Drawings and the following.
 - 1. Use only if acceptable to Architect (Structural Engineer), generally not permitted where not specifically indicated or in load-bearing installations; Fed Spec FF-P-395 or Fed Spec GGG-D-777; as produced by ITW Ramset/Red Head, Wood Dale, IL (708/350-0370; regional representative, City of Commerce, CA, (California) 800/368-9724 or (National) 800/227-1823) in compliance with ICBO Evaluation Service, Inc. Evaluation Report ER-1147.
 - 2. Equivalent products by Hilti Corporation, Tulsa, OK (918/627-9711 or 800/879-8000), will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- S. Welding Rods and Bare Electrodes: As indicated on (Structural) Drawings for welding of structural (load-bearing) members. If not indicated, select rods and electrodes in accordance with AWS D1.1 - Code for Welding in Building Construction, applicable to metal alloy to be welded.

PART 3 - EXECUTION - NOT USED

END OF SECTION

05 05 63 – WELDING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Requirements for field and shop welding.
- B. Weld testing and inspection.

PART 2 - PRODUCTS

2.1 ELECTRODES

- A. Filler metals shall conform to the requirements of the latest edition of ANSI/AWS Specifications for Electrodes as listed herein and shall meet a Charpy V-Notch Impact Energy of 20 Ft-Lbs at -20 degrees F.
 - 1. SMAW A5.1 or A5.5 E70XX Low Hydrogen
 - 2. SAW A5.17 or A5.23 E7X-EXXX
 - 3. GMAW A5.18 or A5.28 E70S-X
 - 4. FCAW A5.20 or A5.29 E71T-8, except -8KG

PART 3 - EXECUTION

3.1 WELDING PROCESSES

- A. Prequalified Welding Processes: Prequalified Welding Procedure status will be acceptable only for the SMAW process.
- B. Other Welding Processes:
 - 1. Weld procedure tests shall include Charpy V-Notch (CVN) testing of the weld metal and Heat Affected Zone (HAZ).
 - 2. The CVN test temperature shall be at least 30 degrees F colder than the Lowest Service Metal Temperature (LSMT) but not warmer than 0 degrees F.
 - 3. The minimum required energy absorption is 20 Ft-Lbs. average.
 - 4. One specimen may be less than the minimum average, but not less than 15 Ft-Lbs.
 - 5. The tests shall be conducted in accordance with AWS D1.1, Appendix III. In addition, the FCAW self-shielded method shall have each heat lot of electrode Charpy V-Notch tested in the HAZ before using in the work.

6. Weld test plates shall be a minimum thickness to meet a "Plate Thickness Qualified Range" of 0.5t to 1.50t but need not exceed 3 inches.
7. All other processes shall be tested in accordance with AWD D1.1, Section 4.

END OF SECTION

05 12 00 – STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Structural steel framing members and structural steel support members, with required bracing, welds, and fasteners.

1.3 SOURCE QUALITY CONTROL

- A. Testing and Inspection, General: Refer to Section 01 45 00 - Quality Control for general requirements for testing and inspection, including responsibility and cost of testing and inspection services.
- B. Steel Material Testing: Determine mechanical properties in conformance with ASTM A 370 of the following materials:
 - 1. Structural steel shapes and tubing.
 - 2. Anchor bolts.
 - 3. Filler metals for welding.
 - 4. High-strength threaded fasteners.
- C. Bolted Connections Inspection: Inspect shop-assembled high-strength bolted connections and shop welds as described in PART 3.

PART 2 - PRODUCTS

2.1 STEEL SHAPES:

- A. Typical wide flange members: ASTM A 572 for Grade 50.
- B. Other steel shapes, bars and plates: ASTM A 36.

2.2 STRUCTURAL STEEL PIPE: ASTM A53, Grade B, Type E or S.

2.3 STRUCTURAL STEEL TUBING: ASTM A500, Grade B, $F_y = 46$ ksi.

2.4 CAST STEEL: ASTM A27.

2.5 ANCHOR BOLTS: Conform to ASTM A 307, Grade C. Provide non-headed type, bent, with ASTM A 563 Grade A hexagonal nuts, unless indicated on the Contract Drawings.

2.6 STANDARD THREADED FASTENERS:

- A. Standard bolts: ASTM A 307, Grade A.
- B. Plain washers: ASTM F 844 plain (flat) unhardened steel washers.
- C. Nuts: ASTM A 563, Heavy Hex, Grade B, plain (non-zinc coated).

2.7 HIGH-STRENGTH THREADED FASTENERS:

- A. Heavy hex structural bolts: ASTM A 325, Type 1, Supplementary Requirements S.1, with threads included in shear plane and marked "A 325 T," unless otherwise noted on Contract Drawings.
 - 1. Conform to the provisions of California Building Code (CBC), Chapter 22A, Division IV.
 - 2. Manufacture with identifying mark placed on top of the head.
- B. Option: At Contractor's option the following bolts may be used with standard washers instead of direct tension load indicating type, where required:
 - 1. Load Indicator Bolts, manufactured by Bethlehem Steel Corporation.
 - 2. Tension Steel Bolts, manufactured by Bristol Machine Company.
 - 3. Tension Control Bolts, manufactured by Lejeune Bolt Company.
- C. Washers:
 - 1. Hardened Type: ASTM F 436, Type 1, style as required.
 - 2. Direct Tension Load Indicating Type: ASTM F 959 Type 325 or Type 490.
- D. Nuts: ASTM A 563, Heavy Hex, Grade C, plain (non-zinc coated).

2.8 WELDING MATERIALS: AWS D1.1, type as required for materials being welded. Provide electrodes as indicated on Structural Drawings.

2.9 SHOP PRIMER: SSPC Paint 13, gray color. Refer to Section 09 90 00 – Painting and Coating for primers required for steel at exposed exterior structure.

2.10 GROUT: Non-shrink type, 7000 psi minimum compressive strength, as specified in Section 05 05 23 – Metal Fastenings.

PART 3 - EXECUTION

3.1 FABRICATION

- A. Shop Fabrication and Assembly, General: Fabricate structural steel in accordance with the AISC Specification and California Building Code (CBC) Chapter 22A, Division IX, Section 2251, Chapter M. Do not start fabrication until mill test reports for identified stock have been accepted by Architect and Shop Drawings have been reviewed.
 - 1. Special inspection of structural steel fabrication is required unless an approved fabricator, as described in California Building Code (CBC) Chapter 17A, Section 1701A.7, is employed.

2. Furnish column bases shop-attached to columns.
 3. Shop connections shall be welded.
 4. Field connections shall be bolted, except where welded connections are indicated on the Contract Drawings.
- B. Architecturally Exposed Structural Steel: Comply with fabrication requirements, including tolerance limits, of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for structural steel identified as architecturally exposed structural steel. All structural exposed in finish construction shall be considered architecturally exposed structural steel.
1. Fabricate with exposed surfaces smooth, square, and free of surface blemishes including pitting, rust, scale, seam marks, roller marks, rolled trade names and roughness.
 2. Remove blemishes by filling or grinding or by welding and grinding, before cleaning, treating, and shop priming.
- C. Holes: Provide holes required for securing other Work to structural steel framing and for passage of other Work through steel framing members, as shown on Shop Drawings.
1. Cut, drill, or punch holes perpendicular to metal surfaces. Do not flame-cut holes or enlarge holes by burning. Drill holes in bearing plates.
 2. Weld threaded nuts to framing and other specialty items as indicated to receive Work specified in other Sections.
- D. Shop Connections: Make shop connections by welding unless specifically noted on Structural Contract Drawings. Assemble and weld built-up sections by methods that will maintain true alignment of axes without warp.
1. General connections: Make welded connections by shielded-arc method in accordance with AWS D1.1.
 - a. Welding shall be done in the shop unless otherwise shown or specified.
 - b. Prior to welding, preheat members in accordance with AISC Section J2.7.
 - c. Welds exposed in the finished work shall be ground and dressed smooth to preserve the shape and profile of the welded item.
 - d. All welds not otherwise identified shall be continuous fillet welds, with size based on AISC standards for thicker part being joined.
 2. Welding at exposed structural steel: Verify that weld sizes, fabrication sequence, and equipment used for architecturally exposed structural steel will limit distortions to allowable tolerances.
 - a. Prevent surface bleeding of back-side welding on exposed steel surfaces.
 - b. Grind and dress smooth all welds exposed in finished Work to preserve shape and profile of structural framing member.
 - c. Grind smooth exposed fillet welds 1/2-inch and larger.
 - d. Grind flush butt welds.
 3. Inspection: All shop welding shall be continuously inspected by certified inspector, except welding performed in shop of fabricator approved by the Division of the State Architect (DSA).

- E. Field Connections: Provide bolted connections, except where welded connections are indicated on Structural Contract Drawings.
 - F. Column Bases: Provide base plates shop welded to columns.
- 3.2 SHOP PAINTING
- A. Preparation: Clean surfaces of mill scale, grease, dirt, and foreign matter in accordance with SSPC SP-3, except where members will be exposed to long term exterior exposure, in accordance with SSPC SP-6.
 - B. Shop Painting, General:
 - 1. Interior steel: Apply one coat of shop primer in accordance with SSPC Paint System PS 7.01, having a minimum of 1-1/2 mils dry thickness. Where structural steel is exposed in finished construction, coordinate primer with requirements for field finishes specified in Section 09 90 00 – Painting and Coating.
 - 2. Exterior steel: For steel to be exposed at exterior locations, comply with primer requirements specified in Section 09 90 00 – Painting and Coating.
 - 3. Inaccessible Surfaces: Shop paint steel surfaces not in contact, but inaccessible for painting after erection, with two coats of specified primer having a minimum of 3 mils total dry thickness.
 - C. Primer Application: Shop paint surfaces of structural steel members with specified primer, except as follows:
 - 1. Structural steel members, or portions of members, to be field welded.
 - 2. Structural steel members, or portions of members, to be embedded in concrete specified in Section 03 30 00 – Cast-in-Place Concrete.
 - 3. Surfaces in contact with high strength bolts.
 - 4. Bearing surfaces and surfaces supporting steel decking specified in Section 05 31 00 - Steel Decking.
 - 5. Structural steel that will be concealed by interior finishes.

END OF SECTION

05 31 00 – STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Steel roof decking.
- B. Acoustical steel roof decking.
- C. Perforated steel decking for exterior sunshades.
- D. Related sheet steel shapes, fasteners and accessories.

PART 2 - PRODUCTS

2.1 SHEET METAL:

- A. Galvanized sheet steel: Zinc-coated (galvanized) steel sheet, ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), G60 (Z180) zinc coating; structural quality.
- B. Galvalume sheet steel: Hot-dip aluminum-zinc-coated steel sheet (Galvalume) as manufactured by Bethlehem Steel Corporation, Bethlehem, PA (800/352-5700), complying with ASTM A 792 with class AZ-50 coating; Grade 40 or to suit manufacturer's standards, "Satin Finish". Or equal

2.2 MISCELLANEOUS STEEL SHAPES: ASTM A 36. Refer also to Section 05 12 00 - Structural Steel Framing and Section 05 50 00 - Metal Fabrications.

2.3 WELDING RODS: AWS D1.1 and AWS D1.3, type as indicated on the Drawings.

2.4 GALVANIZING REPAIR: Where galvanized surfaces are damaged, prepare surfaces and repair in accordance with procedures specified in ASTM A 780. Use cold galvanizing compound field touch-up, ZRC Zinc Rich Coating or equivalent.

2.5 STEEL ROOF DECKING

- A. Specified Manufacturer: As indicated on Structural Drawings.
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Basic Product Requirements.
 - 1. AEP-SPAN, Dallas, TX (214/827-1740 or 800/527-2503).

2. BHP Steel Building Products USA, Inc., West Sacramento, CA (916/372-6851 or 800/726-2727).
 3. Verco Manufacturing Company, Phoenix, AZ (602/272-1347).
 - C. Steel Roof Decking at Canopies: Corrugated steel deck, fabricated from hot-dip aluminum-zinc-coated steel sheet (Galvalume) sheet steel, manufacturer, product, gauge, depth and width as indicated on Structural Drawings. Comply with applicable ICBO Evaluation Service, Inc. Evaluation Report, current edition.
 - D. Minimum Structural Properties: As indicated on the Drawings.
- 2.6 PERFORATED METAL PANELS
- A. Specified Manufacturer: Myers Group, (800/729-3325).
 - B. Acceptable Manufacturers: Equivalent products of Diamond Perforated Metals, Inc., Visalia, CA (800/642-4334) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- 2.7 ACOUSTICAL STEEL ROOF DECKING
- A. Specified Manufacturer: Epic Metals Corporation, Rankin, PA (412/351-3913).
 - B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

PART 3 - EXECUTION

- 3.1 STEEL ROOF DECKING
- A. Steel Roof Decking at Canopies: Corrugated steel deck, fabricated from hot-dip aluminum-zinc-coated steel sheet (Galvalume) sheet steel. Comply with applicable ICBO Evaluation Service, Inc. Evaluation Report, current edition.
 1. End laps: Flush.
 2. Side laps: Interlocking, unless otherwise indicated.
 3. Configuration: As indicated on Drawings and in compliance with SDI Basic Design Specifications and SDI - Specifications and Commentary for Steel Roof Deck.
 - B. Decking Finish: Unfinished aluminum-zinc coating.
- 3.2 PERFORATED METAL PANELS
- A. Perforated Metal Decking: 20 gauge formed and perforated 32-inch wide, 1-3/4-inch by 5-1/3-inch V-beam decking, hot-dip aluminum-zinc-coated steel sheet (Galvalume) steel sheet with 1/8-inch diameter holes at 5/16-inch on center in staggered pattern with 12 holes per square inch.
 1. Provide decking depth and rib spacing as indicated on the Drawings.

2. Provide edges formed as indicated on the Drawings.

B. Decking Finish: Unfinished aluminum-zinc coating.

3.3 ACOUSTICAL STEEL ROOF DECKING

A. Acoustical Steel Roof Decking: For locations indicated on Drawings to receive acoustical decking.

B. Acoustical Roof Decking: Epicore ER2RA Roof Deck Ceiling Systems, complying with ICBO Evaluation Service, Inc. ER 3784 and Factory Mutual Research Approval Report No. 3004106, decking depth, gauge and section properties as indicated on Drawings, perforated bottom, with integral acoustical batt insulation.

1. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip glass fiber or mineral fiber. Factory install sound-absorbing insulation into cells of cellular deck according to manufacturer's written instructions.

2. Acoustical Performance: NRC 0.70, tested according to ASTM C 423.

C. Finish: Factory prime bottom surfaces of decking units.

1. Before painting, galvanized steel shall receive chemical cleaning and acid wash pretreatment.

2. Apply thermosetting prime coat, color to suit field applied finish paint specified in Section 09 90 00 – Painting and Coating.

3.4 STEEL DECKING ACCESSORIES

A. Steel Decking Accessories, General: Provide decking manufacturer's standard type accessories for purposes indicated. Accessories shall be same material as decking units and not lighter than 20 gauge, unless otherwise indicated.

B. Adjusting Plates: As practicable, use adjusting plates of same gauge and configuration as decking units. Plates of predetermined size shall be factory-cut.

C. End Closures: Provide sheet metal closures, minimum 20-gauge.

D. Closures Above Walls and Partitions: Provide galvanized sheet steel closures, minimum 20 gauge, produced by decking manufacturer, to close space above all partitions abutting decking. Provide firestopping and smokestopping as specified in Section 07 84 00 - Firestopping, to fill between closures to maintain fire resistance rating of walls and partitions.

E. Cover Plates: Provide cover plates or under-lapping sleeves for end-buttressed floor deck units to cover gaps not otherwise covered by deck units and to cover welding access holes.

1. Fabricate cover plates of sheet steel of same type and not less than same thickness as decking.

2. Form cover plates approximately 6 inches wide and match contour of deck units.

3. Polyethylene-coated self-adhesive, 2-inch wide joint tape may be provided, instead of cover plates, on flat-surfaced decking.

F. Metal Closure Strips: Fabricate metal closure strips, for openings between decking and other construction, of not less than 0.045-inch minimum (18 gauge) sheet steel. Form metal to provide tight-fitting closures at open ends of cells or flutes and sides of decking.

- G. Miscellaneous Accessories: Provide all accessories necessary for a finished installation. Provide cant strips, ridge and valley plates and various types of plates and closures as indicated or as necessary to complete work. Provide all accessories required for a finished installation.

END OF SECTION

05 40 00 – COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Cold-formed, light gauge steel framing for load-bearing conditions at exterior walls and roofs.
- B. Cold-formed, light gauge steel framing where indicated at load-bearing interior locations.

1.3 REFERENCE STANDARD: All cold-formed structural metal framing shall be designed in accordance with American Iron and Steel Institute (AISI) - Specification For the Design of Cold Formed Steel Structural Members.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS: Products of the manufacturers listed below will be acceptable. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

- A. Alabama Metal Industries Corp., Birmingham, AL (205/787-2611 or 800/366-2642).
- B. California Expanded Metal Products Co. (CEMCO), City of Industry, CA (818/369-3564 or 714/990-6581).
- C. Dale Industries, Inc., Dearborn, MI (313/846-9400 or 800/882-7883).
- D. Unimast Inc., Franklin Park, IL (708/451-1410 or 800/323-0746).
- E. Western Metal Framing Systems, La Mirada, CA (213/944-6117 or 714/523-2160).

PART 3 - EXECUTION

3.1 COLD-FORMED STRUCTURAL METAL FRAMING

- A. Cold-Formed Structural Metal Framing: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges. Refer to metal stud notes on Structural Drawings.
 - 1. Standards: As indicated on Drawings.
 - 2. Gauge: As indicated on Drawings.
 - 3. Minimum yield strength: As indicated on Drawings.
 - 4. Minimum stud properties: As indicated on Drawings.

5. Painted finish: Manufacturer's standard rust-inhibitive paint. Provide either painted finish or hot-dipped galvanized finish, except as specified below.
 6. Galvanized finish: Hot-dipped galvanized. Provide studs with galvanized finish at locations where interior spaces are subject to high humidity, such as shower rooms and food service preparation and cleaning spaces.
 7. Flanges: Screw-type, 2-inch face.
 8. Web: Punched web unless otherwise indicated.
- B. Tracks, Sills and Headers: Manufacturer's standard U-shaped steel track, unpunched, with straight flanges, gauge same as studs unless otherwise noted. Provide extended leg tracks at ceiling tracks under structural framing members.
- C. Bridging: Type as required by manufacturer.
- 3.2 ACCESSORIES
- A. Screws: Self-drilling, self-tapping screws, as recommended by cold-formed metal framing manufacturer for conditions of framing, or as indicated on Drawings.
 - B. Bolts and nuts: ASTM A307.
 - C. Welding electrodes: As permitted by AWS Code.
 - D. Standard Structural Steel Shapes and Plates: ASTM A36.
 - E. Miscellaneous Steel Items: ASTM A283, grade optional.
 - F. Flat-Rolled Carbon Steel Sheets: ASTM A611.
 - G. Cold-Rolled Carbon Steel Sheets: ASTM A366.
 - H. Fastenings: Provide bolts, nuts, screws, clips, washers and other fasteners as necessary for proper erection of items specified herein.
 - I. Welding Electrodes: AWS Code D1.3, E60XX or E70XX electrodes.
 - J. Galvanizing Touch-Up Finish: Cold galvanizing compound, for field touch-up of galvanized coating, ZRC Zinc Rich Coating, or equal.
- 3.3 INCIDENTAL STEEL SHAPES AND FRAMING
- A. Incidental Steel Shapes and Framing: Provide specified, indicated and necessary clips, plates, bent plates, angles, channels, and similar components to secure materials, equipment and items of Work specified in other Sections. This Section is not intended to specify each item of cold-formed structural metal framing individually.

END OF SECTION

05 50 00 – METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Light structural steel framing members and structural steel support members, with required bracing, welding and fasteners.
- B. Steel and aluminum, materials for miscellaneous metal fabrications specified in this Section and required but not specified in other Sections.
- C. Characteristics, including fabrication and finish requirements for metal fabrications not otherwise specified in other Sections.
- D. Galvanizing of steel products.
- E. Shop priming and painting of steel fabrications.
- F. Miscellaneous metal fabrications, such as:
 - 1. Loose bearing and leveling plates.
 - 2. Steel angle nosings and thresholds.
 - 3. Rough hardware.
 - 4. Sleeves for penetrations through structural members and stud partitions.

PART 2 - PRODUCTS

2.1 FERROUS METALS

- A. Steel Shapes: Steel plates, bars, angles, channels, and H-sections: ASTM A36.
- B. Steel Tube:
 - 1. Hot-rolled: ASTM A501.
 - 2. Cold-formed: ASTM A500.
- C. Steel Pipe: ASTM A53 (black steel and hot-dip galvanized).
- D. Steel Sheet:
 - 1. For structural uses: Hot-rolled, ASTM A570; cold-rolled, ASTM A611.
 - 2. For nonstructural uses: Cold-rolled, ASTM A366; hot-rolled, ASTM A569.

- E. Steel for Galvanized Products:
 - 1. Structural shapes, plates and bars: From fully killed or semi-killed steel, ASTM A36 or A572, except silicon content in the range 0 to 0.4 percent or 0.15 to 0.25 percent, as applicable, only.
 - 2. Steel fasteners: ASTM 307, Grade A or B for bolts; ASTM A563, Grade A for nuts.
 - 3. Sheet steel: ASTM A526, with ASTM A525, Coating Designation G90, for precoated sheet; ASTM A569 or A570 for sheet used in fabrications.
 - 4. Steel for pipe and tubing: ASTM A53, A120 or A595 Grade A or B.
 - 5. Galvanizing: See requirements specified below.
- 2.2 CORROSION-RESISTANT (STAINLESS) STEEL
 - A. Bars, Shapes and Forgings: ASTM A276, Type 302 or 304 as best suited for intended purpose.
 - B. Plates, Sheets and Strips: ASTM A167 or ASTM A176, Type 302 or 304 as best suited for intended purpose.
 - C. Finish: Brushed, No. 4 finish, unless otherwise indicated.
- 2.3 ALUMINUM MATERIALS
 - A. Aluminum Bars, Rod and Wire and Non-Structural Tubes: ASTM B211 for rolled or cold-finished; ASTM B221 for extruded. Provide alloy and temper best suited for purpose.
 - B. Aluminum Sheet and Plate: ASTM B209, temper best suited for purpose.
 - C. Cast Aluminum: ASTM B103, alloy and temper best suited for purpose.
 - D. Finishes:
 - 1. Unexposed sheet and plate: Mill finish.
 - 2. Castings: Sandblast finish, medium, equal to NAAMM Metal Finishing Manual, Designation AA-M43.
 - 3. Anodizing: When indicated, AA Class I, except Class II for products in corrosive atmosphere, coating thickness in conformance to AA Designation System for Aluminum Finishes, polished satin finish on aluminum before coating, with clear lacquer overcoating.
- 2.4 ANCHORS, FASTENERS AND ACCESSORY MATERIALS
 - A. Anchors and Fasteners, General: Comply with general requirements specified in Section 05 05 23 - Metal Fastenings. Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate. Provide stainless steel fasteners at stainless elements and other elements at exterior locations.
 - B. Grouting Compounds: Comply with requirements specified in Section 03 60 00 – Grouting.

C. Shop Primer Paint:

1. Shop primer, general: Coordinate primer with finish paint and coating, as applicable, to provide sound foundation for field-applied topcoats despite prolonged exposure during construction. Refer to Section 09 90 00 Painting and Coating.
2. Shop primer for ferrous metal at exposed exterior locations: Tnemec Series 90-97 Tneme-Zinc Two-part Catalyzed Epoxy Coating.
3. Shop primer for ferrous metal at concealed exterior locations and for interior locations: Tnemec Series 10, modified alkyd rust-inhibitive primer, or manufacturer's or fabricator's standard, fast-curing, lead-free, universal modified alkyd primer, complying with performance requirements of SSPC - Paint 13.
4. Shop primer for galvanized steel, for exposed exterior locations: Tnemec Series 66 Epoxyline Two-Part Catalyzed Epoxy Coating, or approved equivalent compatible with finish coating.

D. Field Primer and Finish Paints: As specified in Section 09 90 00 Painting and Coating.

E. Bituminous Coating: High-build mineral-filled coal tar pitch coating, Tnemec 46-450 Heavy Tnemecol, or equal; or a cold-applied asphalt mastic complying with SSPC - Paint 12, except containing no asbestos fibers.

PART 3 - EXECUTION

3.1 METAL FABRICATIONS, GENERAL

A. Metal Fabrications, General: Provide metal fabrications of shapes and sizes indicated for profiles shown.

1. Where specific sizes are not indicated, provide materials of sufficient size, thickness and type to provide necessary strength and durability.
2. Thickness of metal, details of metal, details of assembly and support shall give ample strength and stiffness for the intended purpose.
3. Provide brackets, flanges and anchors of cast or formed metal of the same type material and finish fabricated product, unless otherwise indicated.
4. For exterior fabrications, allow for thermal movement in the design, fabrication, and installation of metal fabrications, to prevent buckling, opening up of joints, and overstressing of welds and fasteners. Accommodate temperature range of 100 degrees F.

B. Ferrous Metal Surfaces, General: For metal fabrications exposed to view upon completion of the Work, provide ferrous metals materials selected for their surface flatness, smoothness, and freedom from surface blemishes. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, rolled trade names, roughness, and, for steel sheet, variations in flatness exceeding those permitted by reference standards for stretcher-leveled sheet.

C. Preparation Before Fabrication: Remove loose mill scale and rust and remove twists and bends in manners not injurious to materials and finishes.

- D. Shop drawings.
 - 1. Contractor shall verify measurements before fabrication.
 - 2. Hot-dip galvanize fabricated ferrous items after fabrication. Field connections shall be bolted or screwed where possible. Avoid field cutting and welding which damage galvanized coating.
 - 3. Fabricate and shop-assemble in largest practical sections for delivery to site.
 - 4. Prepare and reinforce fabrications as required to receive applied items.
- E. Cutting and Fitting: Fabricate with accurate angles and surfaces, true to the required lines and levels and as required to suit installation conditions.
 - 1. Fabricate items with joints tightly fitted and secured.
 - 2. Make exposed joints tight, flush, and hairline.
 - 3. Punch, drill and ream in manner to leave clean, true lines and surfaces.
 - a. Oversize hole 1/16-inch by punching, when material thickness is equal to or less than bolt diameter plus 1/8-inch.
 - b. Sub-punch 1/16-inch smaller than bolt and drill or ream to oversize by 1/16-inch, when material thickness is thicker than bolt diameter plus 1/8-inch.
 - 4. Gas cutting of steel will be acceptable where stress will not be transmitted through flame-cut surfaces.
 - a. Make cuts clean and to contour.
 - b. Deduct 1/8-inch from effective width of members cut by torch.
 - 5. Cut, reinforce, drill and tap metal fabrications as necessary to receive finish hardware, screws, and similar items.
 - 6. Provide cutouts, fittings, and anchorage provisions as required for coordination of assembly and installation with other Work.
- F. Edges: Ease exposed edges to a radius of approximately 1/32-inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work. Remove sharp or rough areas on exposed traffic surfaces.
- G. Welding: Weld corners and seams continuously to comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.
- H. Coordination: Make provisions to connect metal fabrications with or to receive work specified in other Sections.

- I. Connections, General: Component parts of built-up members shall be well-pinned with closely-fitted contact. Conceal connections where possible. Otherwise, make countersinks for concealment after fabrication, except where noted.
- J. Joints, General: Fit or miter to hairline tolerances. Provide lugs, clips, anchors and miscellaneous fastenings necessary for complete assembly and installation. Component parts of built-up members shall be well-pinned with closely fitted contact.
 - 1. Joints on finished surfaces: Provide welds ground smooth and filled.
 - 2. Joints exposed to weather or water: Fabricate to keep water out, or provide adequate drainage of water that penetrates.
- K. Steel Tubing and Piping Fabrication: Unless otherwise indicated, close ends with plate stock so no exposed ends of tubing and piping. Grind all edges.
- L. Mechanical Finishes: Complete finishing prior to fabrication wherever possible.
 - 1. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match finish.
 - 2. Protect finish on exposed surfaces by using temporary protective covering.
- M. Sheet Metal Joints: Hem exposed edges.
- N. Embedded Fabrications: For embedment in concrete, provide weld-on lugs or anchors as detailed or necessary.
- O. Bolted and Screwed Connections:
 - 1. Provide holes and connections for Work specified in other Sections.
 - 2. Use bolts for field connections only.
 - 3. Draw all nuts tight and nick threads of permanent connections.
 - 4. Use beveled washers where bearing is on sloped surfaces. Where screws must be used for permanent connections in ferrous metal, use flat head type, countersunk, with screw slots filled and finished smooth and flush.
- P. Brazing: Brazing shall be of adequate strength and durability with joints tight and flush, smooth and clean. All exposed surfaces shall be ground and finished flush, free of brazing discoloration and other marks. Brazing on finished surfaces shall be indistinguishable from parent metal.
- Q. Welding: Conform to AWS D1.1. Do not field weld galvanized components to remain unfinished. Grind welds smooth and flush with base material. Re-weld to fill holes. Putties and fillers will not be accepted.
- R. Light Structural Steel Framing Fabrications: Unless otherwise indicated, fabricate units from structural steel shapes, plates, and steel bars, with continuously welded joints and smooth exposed edges.
 - 1. General: Design of fabrications shall be by licensed Professional Engineer, registered in the State of California. Fabricate structural steel members in accordance with AISC Specification for the Design, Fabrication and Erection of Structural Steel for Buildings and in compliance with Uniform Building Code (CBC), Chapter 22A.

2. Shop Connections: Make welded connections by shielded-arc method in accordance with AWS D1.1.
 - a. For load-bearing fabrications, comply with requirements specified in Section 05 12 00 - Structural Steel Framing.
 - b. Welding shall be done in the shop unless otherwise shown or specified.
 - c. Prior to welding, preheat members in accordance with AISC Section J2.7.
 - d. All welds not otherwise identified shall be continuous fillet welds, with size based on AISC standards for thicker part being joined.
 - e. Grind and dress smooth all welds exposed in finished Work to preserve shape and profile of welded item.
 3. Welding Inspection: For load-bearing fabrications, shop welding shall be continuously inspected by certified inspector, except welding performed by an approved fabricator, as described in California Building Code (CBC) Chapter 17A, Section 1701A.7.
 4. Field Connections: Provide bolted connections, except where welded connections are indicated.
 5. Shop Painting: Shop prime all light structural steel fabrications, except fabrications to be encased in concrete. Apply one-coat shop primer paint system in accordance with SSPC Paint System PS 7.01.
- S. Steel Tubing and Piping Fabrications: Close ends with plate stock, no exposed ends; grind edges.
- T. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly.
1. Disassemble units only as necessary for shipping and handling limitations.
 2. Use connections that maintain structural value of joined pieces.
 3. Clearly mark units for reassembly and coordinated installation.
- 3.2 GALVANIZING
- A. Galvanizing, General:
1. Ferrous metal fabrications shall be galvanized only as specified or noted on the Drawings.
 2. Where galvanized finish is specified or noted, ferrous fabrications shall galvanized in accordance with applicable referenced ASTM standards, after fabrication.
 3. Galvanizing shall be by hot dip method only, unless otherwise specified.
- B. Product Fabrication, General: Fabricate products to be galvanized in accordance with Recommended Details for Galvanized Structures by American Hot Dip Galvanizers Association, Inc.
1. Comply with applicable portions of ASTM A143, A384 and A385, except as otherwise specified herein. Avoid techniques which could cause distortion or embrittlement of steel.
 2. Notify Architect before and during submittals review and before fabrication proceeds, of potential warpage problems which may require design modification.

- C. Product Preparation for Galvanizing:
 - 1. Remove welding slag and burrs.
 - 2. Provide holes and lifting lugs as necessary for handling during galvanizing process and only at positions approved by Architect.
 - 3. Remove grease, oil, paint and other deleterious materials.
 - 4. Do not use unsuitable marking paints on steel prior to galvanizing.
 - 5. Use blast cleaning or other method as necessary if surface contaminants and coatings cannot be removed by normal chemical cleaning process.
 - D. Surface Preparation:
 - 1. Pre-clean using caustic bath, acid pickle and flux.
 - 2. Alternatively, pre-clean by blast cleaning and fluxing.
 - 3. Conform to ASTM A123 and A386, as applicable, for steel members, fabrications and assemblies.
 - 4. Conform to ASTM A153 for bolts, nuts and washers, and steel hardware components.
 - 5. Conform to ASTM A143 for protection against embrittlement.
 - E. Galvanizing Bath: Use not less than 98.0 percent zinc.
 - F. Zinc Coating Weight: Conform to Paragraph 6.1 of ASTM A123, Table 1 of ASTM A153 and Table 1 of ASTM A386, as applicable.
 - G. Zinc Coating Surface Finish: Wipe down surfaces after dip to remove pin holes, scale, drips, runs and points. Finish shall be continuous, adherent, smooth and evenly distributed, free from defects detrimental to intended end use and finishing of coated product.
 - H. Zinc Coating Adhesion: Adhesion shall be sufficient to withstand normal handling during transport and erection.
 - I. Cold Galvanizing Compound: High zinc dust content paint for regalvanizing welds in galvanized steel, with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035 or SSPC-Paint-20; ZRC Zinc Rich Coating, or equal.
 - J. Portions Not to Receive Galvanizing: Protect portions of parts to be embedded in concrete from galvanizing, except galvanize anchors and sleeves built into concrete and masonry.
- 3.3 SHOP PAINTING
- A. Shop Priming and Painting, General: Conform to SSPC Painting Manual.
 - B. Products to be Primed: Shop primer paint after fabrication all metal fabrications, except as follows.
 - 1. Do not prime stainless steel, plated steel and anodized aluminum fabrications, unless specifically noted.
 - 2. Do not prime mill finish aluminum fabrications intended to remain unfinished.
 - 3. Do not shop prime galvanized fabrications, unless specifically noted.
 - 4. Do not shop prime fabrications embedded in concrete or mortar.

5. Do not shop prime fabrications for which an entirely field-applied coating system is indicated.
 - C. Preparation for Priming: Prepare all surfaces to be coated, as follows.
 1. Solvent-clean in accordance with SSPC-SP 1.
 2. Exterior fabrications: Clean in accordance with SSPC-SP 5, SSPC-SP 6, SSPC-SP 8, or SSPC-SP 10.
 3. Interior fabrications: Clean in accordance with SSPC-SP 3, SSPC-SP 5, SSPC-SP 6, SSPC-SP 8, or SSPC-SP 10.
 - D. Shop Priming: Comply with SSPC-PA 1. Coordinate with requirements specified in Section 09 90 00 Painting and Coating.
 1. Apply primer immediately following surface preparation.
 2. Do not prime surfaces to be welded.
 3. Do not prime surfaces in direct contact bond with concrete or mortar.
 4. Spray apply shop prime without holidays, drips, runs.
 5. Provide two coats where product will not be finish painted or will be concealed in completed work.
 6. Apply an additional coat to corners, welds, edges, and fasteners.
 - E. Drying: Allow paint to dry before handling.
 - F. Steel Embedded in Concrete: Coat concealed faces with bituminous coating.
 - G. Galvanizing Pre-Treatment: Where zinc-coated surfaces are specified to be shop primed, chemically treat surfaces to provide bond for paint before applying primer.
 - H. Shop-Applied Finish Painting: Apply thermosetting enamel paint, gloss or semi-gloss, of a type and color as selected and approved by Architect, if not otherwise specified.
 1. Shop applied finish paint shall be baked to set and cure.
 2. Allow finish paint to thoroughly dry and cure before handling.
- 3.4 ROUGH HARDWARE
- A. Rough Hardware, General: Provide bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as indicated on Drawings.
 - B. Rough Hardware Fabrication: Fabricate items to sizes, shapes, and dimensions required. Provide malleable-iron washers for heads and nuts which bear on wood structural connections; elsewhere, furnish steel washers.
- 3.5 SLEEVES
- A. Sleeves: Fabricated from steel pipe as indicated on Drawings and specified for plumbing, mechanical and electrical Work.
 - B. Diameter: See Structural Drawings for additional requirements. Diameter shall be such that sleeve provides required clearance for components passing through it, including thermal insulation and firestopping materials.

- C. Sleeves Through Concrete and Masonry: Fabricate sleeve from standard weight steel pipe, galvanized after fabrication where below grade or exposed to weather or wet or damp conditions.
- 3.6 LOOSE BEARING AND LEVELING PLATES
 - A. Loose Bearing and Leveling Plates: Provide loose bearing and leveling plates for steel items bearing on concrete and masonry construction, made flat, free from warps or twists, and of required thickness and bearing area. Drill plates to receive anchor bolts and for grouting as required. Galvanize fabrications after fabrication.
- 3.7 STEEL ANGLE NOSINGS AND THRESHOLDS
 - A. Steel Angle Nosings and Thresholds: Steel angle shapes, size and weight as indicated on Drawings, hot-dip galvanized after fabrication, with steel bolts or bent steel strip welded to underside to anchor in place.
- 3.8 PIPE BOLLARDS
 - A. Steel Pipe Bollards: As detailed on Drawings. Provide for padlocks at removable bollards, as detailed on Drawings.
 - B. Material: Standard weight, galvanized steel pipe, size as indicated on Drawings.
 - C. Cap: Formed steel, where indicated on Drawings.
 - D. Sleeves for Removable Bollards: Fabricate from steel pipe, sized as indicated on Drawings.
 - E. Grout: Where fill inside of steel pipe is indicated, portland cement and sand mixture, dome shaped at top as indicated on Drawings.
- 3.9 OTHER FABRICATIONS
 - A. Other Fabrications: Provide fabrications not specifically described but required for a complete and proper installation, as selected by the Contractor, subject to review by Architect.

END OF SECTION

05 52 00 – METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Railings at exterior stairs and ramps.

1.3 SUBMITTALS

- A. Submit shop drawings of all metal railing installations.

PART 2 - PRODUCTS

2.1 STEEL MATERIALS

- A. Steel Bars and Bar Sized Shapes: ASTM A306 Grade 65 or ASTM A36.
- B. Steel Pipe: ASTM A53 Grade A, Schedule 40 seamless or welded.
- C. Cast Iron: ASTM A48, Class 30 or higher, soft gray iron.
- D. Malleable Iron Casting: ASTM A47, Grade 32510.
- E. Steel Tubing, Hot-formed, Welded or Seamless: ASTM A501.
- F. Welding Rods: ASTM A233 Series E60 or E70, conforming to AWS D1.1.

2.2 GROUTING COMPOUNDS

- A. Specified Manufacturer: Master Builders Technology, Inc., Cleveland, OH, (216/831-5500; local representative, Rancho Cucamonga, CA, 909/466-6267).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Euclid Chemical Co., Cleveland, OH (216/531-9222 or 800/321-7628).
 - 2. L&M Construction Chemicals, Inc., Omaha, NE (402/453-6600 or 800/362-3331).
 - 3. Sika Corporation, Lyndhurst, NJ (201/933-8800; local representative, Santa Fe Springs, CA, 310/941-0231).
- C. Shrinkage-Resistant Setting Grout: For setting railing posts and similar components in sleeves or blockouts in concrete; pre-mixed, natural aggregate, minimum 5000 psi 28-day compressive strength, Master Builders Technology, Inc., Set Grout.

2.3 ACCESSORY MATERIALS

- A. Primer Coating: For shop application at time steel products are fabricated.
 - 1. Specified Manufacturer: Tnemec Company, Inc., Kansas City, MO (local representative, TPC Consultants, Inc., Manhattan Beach, CA, 310/643-5191).
 - 2. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - a. Ameron Protective Coatings, Brea, CA (714/529-1951 or 800/344-0025).
 - b. Carboline Company, St. Louis, MO (800/848-4645).
 - c. Primer coating for plain steel: Tnemec Series 90-97 Tneme-Zinc, two-component catalyzed epoxy coating.
 - d. Primer coating for galvanized steel: Tnemec Series 66 Epoxoline, two-component catalyzed epoxy coating.
- B. Expansion Anchors: Wedge-type anchors. Provide manufacturer, product, type and size as identified on Structural Drawings. If products are not indicated on Drawings, then provide anchors as directed by the Architect (Structural Engineer) and approved by Division of the State Architect (DSA). Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements, if approved by DSA. Comply with California Building Code (CBC) Section 1923A.3 and Division of the State Architect (DSA) - Interpretation of Regulations Document IR 19-1. Powder-actuated driven fasteners will not be acceptable.

PART 3 - EXECUTION

3.1 STEEL PIPE HANDRAILS AND GUARDRAILS

- A. Steel Pipe Handrails and Guardrails, General: Fabricate railings in accordance with NAAMM Pipe Railing Manual and as required for specified design requirements. Provide stock pipe and tubing and manufactured components sized and arranged as indicated on Drawings and specified herein.
- B. Round Railings: Standard weight steel pipe or tubing, unless otherwise noted.
- C. Internal Stiffeners: Cast iron, malleable iron, pipe or tube. Fit snugly.
- D. Dimensions, Spacing and Configuration: As shown on Drawings and as specified herein.
 - 1. Handrails: For stairs and ramps, size as indicated on the Drawings, minimum 1-1/4 inches net outside diameter to maximum 1-1/2 inches net outside diameter, configured for 1-1/2 inches clear from side walls.
 - 2. Top Rails: Run continuously over posts, level and not less than minimum height indicated on the Drawings and required by California Building Code (CBC).
 - 3. Vertical Members: Lay out as shown, evenly spacing verticals in each run. Where two runs are adjacent to each other, align verticals on each side. Set posts as required for design requirements and a maximum of 60 inches on center. Fabricate verticals for plumb and true installation.

4. Bottom Railing: Parallel to top rail and with floor surface or stair stringer, as applicable.
5. Alignment: Centerline of members within each railing run shall be in same vertical plane.

E. Cutting and Fitting:

1. Power cut throughout; gas cutting not permitted at joint.
2. Cope to fit intersecting members. Bevel ends to receive full fillet weld.
3. Provide corners neatly mitered, coped, welded and ground smooth.
4. Provide connections with fittings or, at Contractor's option, neatly coped, welded and ground.

F. Fabrication:

1. Fabricate railings in largest practicable sections to minimize field joints.
2. Fabricate rails in true, straight alignment.
3. Provide for field-welded joints. Fabricate to hairline tolerances before welding.
4. Grind projections, terminations and edges smooth.
5. Provide closures on exposed ends.
6. Do not use exposed fastening plates except as specifically detailed. Use concealed plug or direct welding as applicable.

- G. Welding: Provide backup or stiffeners at joints to hold joint in perfect alignment during welding. Weld all around joint. Grind all welds smooth and dressed.

3.2 SLEEVES AND POST HOLES

- A. Sleeves for Removable Railing Sections: Steel pipe sleeve, oversized to provide minimum of 1/8-inch difference between inside diameter of sleeve and outside diameter of removable post or bollard.

3.3 SHOP PAINTING

- A. Shop Painting, General: Conform to SSPC Painting Manual.
- B. Products to be Primed: Prime paint all parts after fabrication.
- C. Preparation for Priming: Thoroughly prepare by removing all oil, grease, weld slag and other deleterious substances.
- D. Steel Embedded in Concrete: Coat concealed faces with bituminous coating.
- E. Priming: Spray apply shop prime Provide two coats where product will not be finish painted or will be concealed in completed Work. Sand and re-prime areas where coverage is incomplete or where runs occur.
- F. Primer Paint Application:
1. Spray apply primer paint, to minimum thickness recommended by primer manufacturer, without holidays, drips, runs.
 2. Apply one coat typically and two coats where coated product will not be finish painted.

- 3. Do not prime surfaces to be in contact with concrete.
- 4. Sand and re-prime areas where coverage is incomplete or where runs occur.
- G. Drying: Allow paint to thoroughly dry before handling.

END OF SECTION

05 59 23 – TRENCH AND ACCESS COVERS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Trench covers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Balco, Inc., Wichita, KS (316/945-9328 or 800/767-0082).
- B. Acceptable Manufacturers: Equivalent products by Wooster Products, Inc., Wooster, OH (800/321-4936) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 MATERIALS

- A. Aluminum Plate: ASTM B 209, alloy 6061-T651.
- B. Aluminum Extrusions: ASTM B221, alloy 6063-T5.
- C. Accessories: Fasteners, accessories, and other materials required for complete installation to manufacturer's instructions. Refer to Section 05 05 23 – Metal Fastenings for requirements for anchors and fasteners to building substrates.

PART 3 - EXECUTION

3.1 TRENCH COVERS

- A. Trench Covers: Type TST Trench Cover by Balco, Inc., dimensions and specific catalog number(s) as indicated on the Drawings.
- B. Cover Plate: 1/8-inch recessed surface, suitable for flush installation of resilient flooring, metal thickness as necessary to support design loads.
- C. Fabrication: Fabricate trench cover assemblies as detailed. Provide splice covers and closures as necessary for complete installation.
 - 1. Provide trench covers of length and width as indicated on the Drawings.

2. Fabricate splices, special transitions, corner units, corner fittings, intersections, and end closures as required.
3. Joints shall be factory mitered and welded.
4. Provide necessary and related parts, devices, anchors, and other items required for complete installation to suit Project conditions, including floor coverings around and on trench covers.

D. Exposed Aluminum:

1. Exposed aluminum surfaces shall be clear anodized.
2. Aluminum surfaces in contact with concrete shall be prime painted. Refer to Section 05 50 00 - Metal Fabrications for bituminous coating to protect aluminum from effects of contact with concrete.

END OF SECTION

05 59 33 – EXPANSION JOINT ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Prefabricated seismic separation joint covers for exterior walls, roofs, interior walls and ceilings.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Metals:
 - 1. Aluminum: ASTM B221, alloy 6063-T5 for extrusions; ASTM B209, alloy 6061-T6, sheet and plate.
 - 2. Stainless Steel: ASTM A167, Type 304 with 2B finish, unless indicated otherwise, for plates, sheet, and strips.
- B. Non-Metal Products:
 - 1. Extruded Preformed Seals: Single- or multi-layered rubber extrusions as classified under ASTM D2000, designed with or without continuous, longitudinal, internal baffles and formed to fit compatible frames, in color indicated, or, if not indicated, as selected by Architect from manufacturer's standard colors.
 - 2. Seismic Seals: Typically two single layered rubber extrusions, one interior and one exterior, as classified under ASTM D2000, retained in a set of compatible frames, in color indicated, or, if not indicated, as selected by Architect from manufacturer's standard colors.
- C. Accessories: Manufacturer's standard anchors, fasteners, set screws, spacers, flexible vapor seals and filler materials, drain tubes, adhesive, and other accessories compatible with material in contact, as indicated or required for complete installations.
- D. Metal Finishes, General: Comply with NAAMM - Metal Finishes Manual, for finish designations and application recommendations, except as otherwise indicated. Apply finishes in factory after products are fabricated. Protect finishes on exposed surfaces with protective covering before shipment.
- E. Aluminum Finishes:
 - 1. Concealed aluminum components: AA-M10 (unspecified mill finish).
 - 2. Exposed aluminum components, exterior locations: Fluoropolymer, thermosetting paint (Ausimont Hylar 5000 resin or ELF Atochem Kynar 500 resin) conforming to AAMA 605.2, custom color as directed.

3. Exposed aluminum components, interior locations: Satin anodized, AA-C22A41; medium matte etched finish with 0.7-mil minimum thick anodic coating.
4. Factory-primed concealed surfaces: Protect concealed metal surfaces that will be in contact with concrete and masonry surfaces when installed by applying a shop coat of manufacturer' standard primer to contact surfaces. Provide minimum dry film thickness of 2.0 mils.

2.2 PRE-FABRICATED SEPARATION JOINT COVERS

- A. Specified Manufacturer: Conspec Systems, Inc. (C/S Group), Muncy, PA (717/546-5169; Southern California sales office 714/860-5000).
- B. Acceptable Manufacturers: Equivalent products of manufacturers listed below will be considered in accordance with the "or equal" provisions of the Contract.
 1. MM Systems Corporation, Tucker, GA (404/938-7570 or 800/241-3460; local representative, Specialty Building Components, Whittier, CA, 310/945-8951).
 2. Metalines, Inc., Oklahoma City, OK, 800/654-6778 (local representative, M.H. Powell & Co., Inc., Los Angeles, CA, (213/263-9696).
 3. Balco, Inc., Wichita, KS (316/945-9328 or 800/767-0082).
 4. Watson Bowman Acme Corp., Amherst, NY (716/691-7566).
- C. Expansion Joint Covers, General: Joint cover systems shall provide movement in all directions, for suitability as seismic joint covers.
 1. Design: Provide expansion joint cover assemblies of design, basic profile, materials, and operation indicated on Drawings and specified herein.
 2. Specified assemblies: Select units comparable to those indicated or required to accommodate joint size, variations in adjacent surfaces, and structural movement.
 3. Joint widths: As indicated on Drawings.
- D. Expansion Joint Covers: C/S series are indicated. Provide appropriate catalog number to suit joint width. Provide factory-fabricated transition pieces to suit products and field conditions.
 1. Roof to exterior wall: C/S SRJW-400, 4-inch joint width, weather-tight.
 2. Exterior walls: C/S SF-400, flush front seal, 4-inch joint width.
 3. Interior flat wall/ceiling: C/S FWF-400.
 4. Interior corner wall/ceiling: C/S FWFC-400.

2.3 FINISHES

- A. Exposed Plastic Components: Color as indicated; where not indicated, color shall be as selected by Architect from manufacturer's full product selection.
- B. Exposed Resilient Filler: Color as selected by Architect.
- C. Exposed Aluminum Components: Mill finish aluminum at exterior, for field finish painting, and satin anodized aluminum at interior.

D. Concealed Steel Components:

1. Steel embedded in masonry or concrete: Hot-dipped galvanized after fabrication.
2. Steel concealed in frame construction: One coat of manufacturer's standard rust-inhibiting primer paint, applied after fabrication.

2.4 ACCESSORY MATERIALS

- A. Anchors, General: Comply with requirements specified in Section 05 05 23 - Metal Fastenings for anchoring to building substrates.
- B. Fasteners for Expansion Joint Covers, General: Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate.
 1. Concealed locations: Steel with cadmium-plating or other rust-inhibitive coating, except at aluminum materials provide stainless steel only.
 2. Exterior exposure, exposed in damp location or where built into exterior walls: Zinc-coated (galvanized) or stainless steel.
 3. Exposed anchors and fasteners: Same material, color and finish as the metal to which applied, except use only stainless steel at aluminum materials and cadmium plated at interior prepainted steel products.
- C. Screw Heads, Typical: Unless otherwise noted, exposed screws shall be phillips oval or flat head, countersunk.
- D. Bituminous Coating: Tnemec 46-465 H.B. Tnemecol, or equal, high-build coal tar pitch coating, or a cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers

PART 3 - EXECUTION

3.1 EXPANSION JOINT COVER FABRICATION:

- A. Furnish units in longest practicable lengths to minimize number of end joints. Minimize site splicing.
- B. Provide hairline mitered corners where joint changes directions or abuts other materials.
- C. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint cover assemblies.
- D. Back paint components in contact with cementitious materials to prevent electrolysis.
- E. Shop assemble components and package with anchors and fittings.

END OF SECTION

DIVISION 06 – WOOD, PLASTICS AND COMPOSITES

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

06 11 00 – WOOD FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Rough carpentry for the following structural purposes:
 - 1. Framing with lumber for walls and roofs.
 - 2. Sheathing with plywood or other wood panel products.
- B. Rough carpentry for non-load bearing wood stud partitions and ceiling joists.
- C. Related framing anchors and connectors.

PART 2 - PRODUCTS

2.1 DIMENSIONED LUMBER

- A. Dimensioned Lumber: Provide lumber manufactured in compliance with PS 20 - American Softwood Lumber Standard and with applicable grading rules of inspection agencies certified by American Lumber Standards Committee's (ALSC) Board of Review.
- B. Lumber Species and Grades: Wood species and stress grades as noted on the (Structural) Drawings. Regrade large members when cut or ripped.
- C. Lumber Markings:
 - 1. Provide lumber with each piece factory-marked with grade stamp of inspection agency, evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.
 - 2. For exposed lumber furnish pieces with grade stamps applied to ends or back of each piece; or omit grade stamps entirely and provide certificates of grade compliance issued by inspection agency.
- D. Lumber Sizes: Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.
- E. Lumber for Load-Bearing Members: Species as indicated on the Structural Drawings, conforming to WCLIB or WWPA grading standards as applicable.
- F. Surfacing: Provide dressed lumber, S4S, unless otherwise indicated.

- G. Moisture Content: All lumber shall be kiln-dried to percent specified below. Air season in place, protected from rain and high humidity conditions, no less than 15 days before applying finish materials.
 - 1. Concealed lumber: 19 percent maximum moisture content at time of dressing and shipment, unless otherwise indicated.
 - 2. Exposed lumber and timber: 15 percent at time of delivery, unless otherwise indicated.
 - H. Sill Plates: Pressure preservative treated, No. 1 or Better, douglas fir.
 - I. Exposed Framing: Provide material complying with the following requirements:
 - 1. Definition: Exposed framing refers to dimension lumber that is not concealed by other construction and is indicated to receive a stained or natural finish.
 - 2. Grading: Material hand-selected at factory from lumber of species and grade indicated below that complies with Appearance grade requirements of ALSC National Grading Rule; issue inspection certificate of inspection agency for selected material.
 - 3. Species: Provide same species and grade as indicated for structural framing.
 - J. Non-load Bearing and Furring: Douglas fir, No. 1 and Better grade, unless otherwise indicated on Drawings.
 - K. Miscellaneous Framing: For site structures and other exposed conditions, provide No. 1 grade douglas fir-larch or better, selected for appearance. At site structures, provide light sandblast finish on exposed wood framing.
 - L. Wane: Limit wane to 5 percent of members in accordance with WWPA standards. Do not locate members with wane at plywood sheathing joints, at solid blocking or at double plates.
- 2.2 STRUCTURAL PANELS
- A. Plywood Materials, General: APA Performance-Rated Panels, Group 1 Series, PS 1-95, species and thickness as indicated on Drawings and as specified herein.
 - B. Plywood Panels for Roof Sheathing: Douglas fir, Structural I, APA RATED SHEATHING.
 - 1. Exposure Durability Classification: EXTERIOR with exterior glue.
 - 2. Thickness: As indicated on the Drawings.
 - 3. Edge detail, low slope roofs: Square if all edges supported on framing or tongue-and-groove (T&G) if edges are unsupported. Plyclips will not be acceptable.
 - C. Plywood Panels for Wall Sheathing: Douglas fir, Structural I, APA RATED SHEATHING.
 - 1. Exposure Durability Classification: EXTERIOR.
 - 2. Thickness: As indicated on the Drawings.
 - 3. Edge detail: Square.

2.3 PRESERVATIVE TREATED WOOD PRODUCTS

- A. Wood Treatments, General: Where used for exposed locations, treatment materials shall be types guaranteed to not adversely affect durability and appearance of applied finishes.
 - 1. Treatment materials having a highly persistent, noticeable residual odor will not be permitted.
 - 2. After treatment, kiln or air dry lumber and plywood to a moisture content of 19 percent or less.
- B. Preservative Treatment, Members Intended for Finishing: Water-borne salt preservatives for painted, stained, or exposed natural wood product, AWPB LP-2, above ground application and AWPB LP-22, ground contact application.
- C. Preservative Treatment, Members Not Intended for Finishing: Oil-borne preservatives for any construction except when in contact with salt water, AWPB LP-33, ground contact application, light petroleum solvent.

2.4 CONNECTORS

- A. Framing Connectors:
 - 1. Specified Manufacturer: Simpson Strong-Tie Co., Pleasanton, CA (510/460-9912 or 800/999-5099; local representatives, Brea, CA (714/871-8373 or 800/999-5099). Or equal
 - 2. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements. Substitutions shall have equivalent values according to current ICBO Research Report and shall be used only with prior approval of Architect, based on review by Structural Engineer, and shall be approved by Division of the State Architect (DSA).
 - 3. Light framing connectors: Simpson Strong-Tie Connectors, formed of sheet steel, catalog numbers as indicated on the Drawings or, if not indicated, to suit Project conditions and approved by Architect and Division of the State Architect (DSA).
 - 4. Heavy framing connectors: Simpson Strong-Tie Connectors, formed of steel plate or heavy gauge steel sheet, catalog number as indicated on the Drawings and to suit Project conditions. Provide custom or special-order framing connectors as indicated on the Drawings or, if not indicated, as necessary to suit Project conditions and approved by Architect and Division of the State Architect (DSA).
 - a. Stock framing connectors: Simpson - Strong Tie Connectors, catalog numbers as indicated on the Drawings or, if not indicated, to suit Project conditions as approved by Architect and DSA.
 - b. Custom framing connectors and connectors for decorative purposes: Fabricated as indicated on Drawings and as specified in Section 05 50 00 - Metal Fabrications.
 - 5. Finishes:
 - a. Light framing connectors: Provide manufacturer's standard galvanized finish.
 - b. Heavy framing connectors, exterior: Hot-dipped galvanized, equivalent to ASTM A525, Coating Designation G90.

- c. Heavy framing connectors, interior: Plain steel with shop primer paint finish, as specified in Section 05 50 00 - Metal Fabrications.
- d. Custom framing connectors: Fabricated as specified in Section 05 50 00 - Metal Fabrications. At interior and concealed locations, provide plain steel with shop primer paint finish. At exterior locations, provide hot-dipped galvanized finish.

2.5 FASTENERS AND ANCHORS

- A. Fasteners, General: Size and type as required by California Building Code (CBC) requirements and as indicated on Drawings. Provide electro-galvanized finish at interior high humidity locations and exterior locations not directly exposed to weather. Provide hot-dipped galvanized at exterior locations directly exposed to weather. Plain finish may be provided elsewhere.
- B. Anchor Bolts: ASTM A307 or as indicated on Drawings, galvanized steel at exterior locations.
 - 1. Do not upset threads on bolts.
 - 2. Anchor bolts for hold-downs shall be headed.
- C. Machine Bolts: ASTM A307, hex head and nut, full bearing on unthreaded shank, length for maximum 1-1/2-inch beyond nut, with steel washer under head and nut. Provide hot-dipped galvanized finish at exterior locations.
- D. Nails, Typical: Common wire, sizes as indicated on Drawings and as required by California Building Code (CBC) Chapter 23A, Table No. 23A-II-B-1 and applicable reference standard.
 - 1. No box nails shall be used.
 - 2. Machine applied nailing will be subject to approval as specified on the Drawings and as approved by Division of the State Architect (DSA).
- E. Roofing Nails: As noted on (Structural) Drawings.
- F. Expansion Anchors: As specified in Section 05 05 23 – Metal Fastenings.
- G. Powder-Driven Fasteners: Provide powder-driven fasteners only if approved by Architect. Generally, powder-driven fasteners will not be permitted at load-bearing conditions. See Section 05 05 23 – Metal Fastenings for fasteners. If permitted, provide fasteners of type and size as indicated and as recommended by manufacturer for Project conditions.
- H. Construction Adhesive: APA Spec. AFG-01.
- I. Grout for Sill Plates: Type S mortar cement grout in accordance with California Building Code (CBC) Table 21A-A.
- J. Lag Bolts and Screws: Fed Spec FF-S-588, size as indicated on Drawings and as specified in Section 05 05 23 – Metal Fastenings. Provide hot-dipped galvanized finish at exterior locations.
- K. Screws: Fed Spec FF-S-85, Fed Spec FF-S-92 and Fed Spec FF-S-111, type and grade best suited for the purpose, size as indicated on Drawings and as specified in Section 05 05 23 – Metal Fastenings.
- L. Cast Iron Washers and Spacers: Alhambra Foundry Co., Ltd., Alhambra, CA (818/289-4294), black iron as shown on Drawings.

- M. Bevel and Angle Washers: Alhambra Foundry Co., Ltd., Alhambra, CA (818/289-4294), as shown on Drawings.
- N. Cast Iron Spool: Alhambra Foundry Co., Ltd., Alhambra, CA (818/289-4294), as shown on Drawings.

PART 3 - EXECUTION

3.1 WOOD PRESERVATIVE TREATMENTS

- A. Wood Preservative Treatments, General: Where lumber or plywood is indicated as preservative-treated or is specified to be treated, comply with applicable requirements of AWPA C2 (Lumber) and AWPA C9 (Plywood).
 - 1. Mark each treated item with the Quality Mark Requirements of an inspection agency approved by American Lumber Standards Committee (ALSC) Board of Review.
 - 2. Comply with California Building Code (CBC), Section 2303A.1.3, Section 2317A and Section 2326A.6.
- B. Wood Members Located Above Ground: Pressure-treat above ground items with water-borne preservatives to a minimum retention of 0.25 pcf. After treatment, kiln dry lumber and plywood to a maximum moisture content of, respectively, 19 percent and 15 percent. Treat indicated items and the following:
 - 1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping and similar members related to roofing, flashing, vapor barriers and waterproofing.
 - 2. Wood sills, sleepers, blocking, furring, stripping and similar concealed members in contact with masonry or concrete.
 - 3. Wood floor plates installed over concrete slabs directly in contact with ground.
- C. Wood Members Located in Contact with Ground: Pressure-treat wood members in contact with ground or fresh water with water-borne preservatives to a minimum retention of 0.40 pcf.
- D. Coordination with Fabrication: Complete fabrication of treated items prior to treatment, where possible. If cut after treatment, coat cut surfaces in compliance with AWPA M4. Inspect each piece of lumber or plywood after drying and discard damaged or defective pieces.

END OF SECTION

06 11 11 – WOOD BACKING, BLOCKING AND CURBING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Blocking for wall and roof openings.
- B. Roof curbs and cants.
- C. Wood furring and grounds.
- D. Construction panels for non-structural deck and wall sheathing and backing.
- E. Related framing anchors and connectors.

PART 2 - PRODUCTS

2.1 DIMENSION LUMBER AND BOARDS

- A. Dimension Lumber and Boards, General: Provide douglas fir or douglas fir/larch, grade as appropriate for intended use. Blocking stock shall be solid and without defects detrimental for use to secure attached products.
- B. Lumber Standards: Furnish lumber manufactured to comply with PS 20 - American Softwood Lumber Standard, and with applicable WCLIB Grading Rules or WWPA Grading Rules.
 - 1. Provide lumber with each piece factory-marked with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.
 - 2. Inspection agencies and the abbreviations used to reference them with lumber grades and species include the following:
 - a. WCLIB - West Coast Lumber Inspection Bureau.
 - b. WWPA - Western Wood Products Association.
- C. Lumber Sizes: Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.
- D. Surfacing: Provide dressed lumber, S4S, unless otherwise indicated.
- E. Moisture Content: All lumber shall be kiln-dried to percent specified below. Air season in place, protected from rain and high humidity conditions, no less than 15 days before applying finish materials.
 - 1. Concealed lumber: 19 percent maximum moisture content at time of dressing and shipment, unless otherwise indicated.

2. Exposed lumber and timber: 15 percent at time of delivery, unless otherwise indicated.

- F. Wane: Limited to a minimum of 5 percent of members in accordance with WWPA rules. Do not locate members with wane at plywood sheathed joints, at solid blocking, or at double plates.

2.2 CONSTRUCTION PANELS

- A. Construction Panels, General: APA Performance-Rated Panels, species and thickness as indicated on Drawings and as specified herein.
 1. Comply with PS 1-95 Series for plywood (cross-laminated wood veneer) panels.
 2. Comply with PS 2-92 for composite (veneer faces bonded to wood strand core) and oriented strand board (OSB) panels.
- B. Roof Crickets and Curbs: Provide construction panels for roof crickets and sheathing at curbs.
 1. Provide panel thickness and span rating to suit framing spacing but not less than 1/2-inch thick.
 2. Coordinate thickness with requirements for roofing fire and wind uplift ratings.

2.3 CONNECTORS AND ANCHORS

- A. Framing Connectors: As specified in Section 06 11 00 - Wood Framing.
- B. Fasteners, General: Size and type as required by California Building Code (CBC) requirements and as indicated on Drawings. Provide electro-galvanized finish at interior high humidity locations and exterior locations not directly exposed to weather. Provide hot-dipped galvanized at exterior locations directly exposed to weather. Plain finish may be provided elsewhere.
- C. Anchor Bolts: ASTM A307 or as indicated on Drawings, galvanized steel at exterior locations.
- D. Nails, Typical: Common wire, size as indicated on Drawings and as required by California Building Code (CBC), Chapter 23A, Table No. 23A-II-B-1.
- E. Roofing Nails: 10d by 3 inches long, common wire nails at gable and hip roofs and ring shank plywood nails at flat roofs.
- F. Machine Bolts: ASTM A307, hex head and nut, full bearing on unthreaded shank, length for maximum 1-1/2-inch thread beyond nut. Provide iron washer under head and nut. Length for maximum 1-1/2-inch beyond nut, with steel washer under head and nut.
- G. Lag Bolts and Screws: Fed Spec FF-S-588, size as indicated on Drawings.
- H. Screws: Fed Spec FF-S-85, Fed Spec FF-S-92 and Fed Spec FF-S-111, type and grade best suited for the purpose.
- I. Powder-Actuated Fasteners: As specified in Section 05 05 23 - Metal Fastenings. Use only if approved by Architect, generally not permitted where not specifically indicated or in load-bearing installations.
- J. Construction Adhesive: APA Spec. AFG-01.

2.4 WOOD TREATMENTS

- A. Wood Treatments, General: Where used for exposed locations, treatment materials shall be types guaranteed to not adversely affect durability and appearance of applied finishes.
 - 1. Treatment materials having a highly persistent, noticeable residual odor will not be permitted.
 - 2. After treatment, kiln or air dry lumber and plywood to a moisture content of 19 percent or less.
 - 3. Type A (Surface Applied Preservative): Apply to pretreated lumber and plywood members after cutting, shaping, and bolting.
 - 4. Type B (Pressure Treated Preservative): Provide pressure preservative treated lumber and plywood at all locations where wood members have contact with concrete, masonry or grout.
- B. Surface-Applied Wood Preservative (Type A): For field application.
 - 1. Non-aqueous solution containing not less than five percent pentachlorophenol, commercially prepared and formulated to repel water and inhibit decay.
 - 2. Suitable for application by either brush or dip methods.
 - 3. Integral coloring to allow visual inspection of treated members.
- C. Pressure-Treated Wood Preservative (Type B): For factory application.
 - 1. Required for lumber and plywood where indicated or specified and not otherwise required to be fire-retardant pressure treated.
 - 2. Concealed Locations: Any process acceptable in accordance with UBC Standard 25-12 and meeting specified requirements.
 - 3. Exposed Locations: Treated members shall be milled smooth within limits permitted by process manufacturer.

PART 3 - EXECUTION - NOT USED

END OF SECTION

06 20 00 – FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Interior wood trim.
- B. Applied nailers and cleats.
- C. Closet and utility shelving, field fabricated and installed.
- D. Wood panels for backboards at electrical, telephone and other communications equipment and terminals.
- E. Oriented strand board (OSB) panels for ceilings.
- F. Related hardware and attachment accessories.

PART 2 - PRODUCTS

2.1 LUMBER MATERIALS

- A. Sizes:
 - 1. Nominal Sizes: All sizes listed where specific inch dimensions are not noted shall be nominal sizes. Example: 2x4 equals 2-inch nominal by 4-inch nominal stock. Actual dimensions shall be according to dimensions published by referenced agency or association, within manufacturing tolerances allowed by referenced standard.
 - 2. Net Sizes: All sizes listed with actual inch dimensions noted shall be net sizes. Example: 2-1/4-inch x 5/8-inch equals 2-1/4-inch net by 5/8-inch net stock lumber or molding.
 - 3. Yard and board lumber: Sizes in accordance with PS 20.
- B. Wood Grain and Color: Select exposed woods indicated to receive transparent or semi-transparent finish for uniformity in graining and color.

- C. Softwood Lumber and Moldings, Paint Finished: Provide species and grades selected from the following:

Species	Grading Rules - Grade
Douglas Fir - Larch Douglas Fir - South Hem-Fir Idaho White Pine Lodgepole Pine Ponderosa Pine White Woods Western Woods	All species: WWPB Grading Rules, C-Select except Choice for Idaho Pine

- D. Stain, Natural, Transparent or Semi-Transparent Finished Softwood, General: Provide species as listed above, except one grade higher or highest grade.
- E. Softwood Backing, Blocking and Nailers: See Section 06 11 11 - Wood Backing, Blocking and Curbing.
- F. Stain, Natural or Transparent Finished Hardwood: Species as indicated on the Drawings or, if not indicated, assume white oak. Refer to Drawings for finish stain colors.

2.2 CONSTRUCTION PANELS

- A. Plywood Materials, General: APA Performance-Rated Panels, species and thickness as indicated on Drawings and as specified herein. Comply with PS 1-95 Series for plywood (cross-laminated wood veneer) panels.
1. Softwood plywood for shelving: APA A-B where indicated for transparent finish and B-C (Plugged) where indicated as unfinished or for opaque finish; Exposure 2; douglas fir, minimum 3/4-inch thick.
 2. Softwood Plywood for Backboards for Telephone and Electrical Components: As required by serving utility, minimum APA C-D PLUGGED.
 - a. Exposure Durability Classification: EXPOSURE 1.
 - b. Thickness: As indicated on the Drawings, or, if not otherwise indicated, not less than 15/32-inch.
 - c. Treatment: Provide fire-retardant treated plywood if required by authorities having jurisdiction or serving utility; comply with California Building Code (CBC) requirements for flamespread class II (26-75).
 3. Fire-retardant treated plywood: Pyro-Guard by Hoover Treated Wood Products, Thomson, GA (706/595-5058), APA C-D, pressure impregnated with a Type A (third generation) interior fire-retardant in compliance with AWWPA Standard C27; each piece shall bear UL Classification Mark indicating compliance with UL 273. Or equal
- B. Oriented Strand Board (OSB): DOC PS 2, Exposure 1 sheathing, combination subfloor-underlayment. Comply with "Code Plus" provisions in APA Form No. E30K, "APA Design/Construction Guide: Residential & Commercial." Factory mark panels according to indicated standard.

1. Span Rating: Not less than 20 o.c.
 2. Thickness: As needed to comply with requirements specified but not less than thickness indicated on the Drawings.
 3. Edges: Tongue and groove.
 4. Surface Finish: Fully sanded face.
- C. Wood Fiber Board (Particleboard): Medium density fiberboard (MDF), ANSI 208.1, Grades 2-M-2 and 2-M-3, composed of wood chips matrix bound with formaldehyde-free, high-moisture resistant, polyurea resin binders, passing ASTM D1037 - Six Cycle Accelerated Aging Test.
- D. Hardboard: ANSI A135.4; pressed wood fiber with resin binder; tempered grade.
- 2.3 ADHESIVES
- A. Contact Adhesives: PS 51, Type II Water-Resistant, water base type, formaldehyde free, water base type.
- B. Wall Adhesive: Solvent release, cartridge type, compatible with wall substrate, capable of achieving durable bond.
- 2.4 HARDWARE AND ATTACHMENT ACCESSORIES
- A. Nails: Provide size and type to suit application, plain finish at interior, hot-dipped galvanized at exterior.
- B. Bolts, Nuts, Washers, Blind Fasteners, Lags, and Screws: Size and type to suit application; plain finish at interior, hot-dipped galvanized at exterior.
- C. Plastic Edge Trim: Extruded convex shaped; smooth finish; self-locking serrated tongue; of width to match particleboard shelving thickness; color as selected by Architect.
- D. Aluminum Edge Trim: Extruded convex shape; ridged surface finish; self-locking serrated tongue; of width to match particleboard thickness; clear anodized finish.

PART 3 - EXECUTION

3.1 MILLWORK FABRICATION

- A. Shop Fabrication: Provide sizes, materials and designs as shown on Drawings, reviewed shop drawings and as specified herein. Wherever practicable, shop assemble and finish items of built-up millwork.
- B. Fabrication Standard: Comply with WIC - Manual of Millwork, Section 9, Interior Trim, Jambs and Millwork.
1. Classrooms and Public spaces: WIC Custom Grade.
 2. Service and utility spaces: WIC Economy Grade.
- C. Shop/Factory Finishing: Shop finish work in accordance with WIC Manual for indicated grade.
1. Provide clear oil finish typically at hardwood.

2. Provide clear transparent varnish finish typically at softwood.

END OF SECTION

06 41 00 – ARCHITECTURAL WOOD CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Custom-fabricated casework units, covered with high-pressure plastic laminate.
- B. Plastic laminate-covered countertops.

1.3 FIRE CHARACTERISTICS OF PLASTIC LAMINATE-CLAD CASEWORK AND COUNTERTOPS

- A. Fire Characteristics of Plastic Laminate-Clad Casework: Comply with California Building Code (CBC), Table 8-B, Class III, Flame Spread 200 or less and Smoke Density not exceeding 450, when tested in accordance with ASTM E84 by a testing agency acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 LUMBER MATERIALS

- A. Softwood Lumber: Graded in accordance with WIC Manual of Millwork, maximum moisture content of 6 percent, any species and grade as allowed for Grade specified for woodwork product, unless otherwise indicated.
- B. Hardwood Lumber: Graded in accordance with WIC Manual of Millwork, for concealed locations in plastic laminate casework, alder, birch or maple.

2.2 PANEL MATERIALS

- A. Plywood Base for Plastic Laminate: Close-grained hardwood plywood, ANSI/AHA 135.4, all hardwood plies, non-telegraphing faces, formaldehyde-free and complying with requirements for referenced WIC grade.
 - 1. Provide minimum thickness according to WIC quality standards, as detailed on Drawings and as specified herein.
 - 2. Provide exterior grade product with waterproof glue (marine grade plywood) at countertop locations with plumbing fixtures.
- B. Wood Fiber Board: Medium density fiberboard (MDF), ANSI 208.1, Grades 2-M-2 and 2-M-3, composed of wood chips matrix bound with formaldehyde-free, high-moisture resistant, polyurea resin binders, passing ASTM D1037 - Six Cycle Accelerated Aging Test.
 - 1. Specified Manufacturer: Medite Corporation, Medford, OR (800/676-3339).

2. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
3. Casework panels and countertop substrate without plumbing fixtures: Medite II, medium density fiberboard, nominal 48 pcf for 3/4-inch and less thickness, and nominal 46 pcf for 13/16-inch and greater thickness.
4. Countertop substrate with plumbing fixtures: Do not use wood fiber board. Provide exterior grade product with waterproof glue (marine grade plywood) at countertop locations with plumbing fixtures.

C. Particleboard: Not permitted.

D. Hardboard: ANSI/AHA 135.4, interfelted lignocellulosic fibers consolidated under heat and pressure, tempered treated, smooth one side. Provide thickness indicated or, if not indicated, 1/8-inch thick when used as a laminate and 1/4-inch thick (minimum) when used as drawer bottom, cabinet back or dust panel.

2.3 PLASTIC LAMINATE MATERIALS

A. Specified Manufacturer: As indicated on the Drawings. If not indicated, laminate shall be as selected by Architect from the full selections of the following manufacturers or approved equal:

1. Formica: Formica Corporation, Cincinnati, OH (513/786-3400 or 800/367-6422; local representative, Brea, CA, 714/993-0393).
2. Laminart: Laminart, Elk Grove Village, IL (708/860-4300 or 800/323-7624).
3. Nevamar: Nevamar Corp., Odenton, MD (410/551-5000).
4. Pionite: Pioneer Plastics Corp., Auburn, ME (207/784-9111 or 800/777-9113).
5. WilsonArt: WilsonArt International, Temple, TX (817/778-2711 or 800/433-3222; local distributor, Santa Fe Springs, CA, 213/771-8141, 310/921-7426 or 714/523-1200).

B. Plastic Laminate Finish, Typical: NEMA LD 3 and ANSI A161.2.

1. Horizontal applications at countertops, not post-formed: NEMA Type GP50 (0.050-inch nominal thickness).
2. Horizontal applications at countertops, post-formed: NEMA Type PF42 (0.039-inch nominal thickness) horizontal post-forming grade.
3. Horizontal applications, other than countertops, and mill option for vertical applications: NEMA Type PF42 (0.039-inch nominal thickness).
4. Vertical applications: NEMA Type GP28 (0.028-inch nominal thickness) or NEMA Type PF42 (0.039-inch nominal thickness).

C. Chemical-Resistant, High-Pressure Decorative Laminate: NEMA LD 3, Grade HGP, and as follows:

1. Laminate has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.9.5:
 - a. Nitric Acid (30 Percent): Moderate effect.
 - b. Sulfuric Acid (77 Percent): Moderate effect.

- c. Hydrochloric Acid (37 Percent): Moderate effect.
- d. Phosphoric Acid (75 Percent): No effect.
- e. Acetic Acid (98 Percent): No effect.
- f. Carbon Tetrachloride: No effect.
- g. Formaldehyde: No effect.
- h. Ethyl Acetate: No effect.
- i. Ethyl Ether: No effect.
- j. Phenol (85 Percent): Moderate effect.
- k. Benzene: No effect.
- l. Xylene: No effect.
- m. Butyl Alcohol: No effect.
- n. Furfural: No effect.
- o. Methyl Ethyl Ketone: No effect.
- p. Sodium Hydroxide (25 Percent): No effect.
- q. Sodium Sulfide (15 Percent): No effect.
- r. Ammonium Hydroxide (28 Percent): No effect.
- s. Zinc Chloride: No effect.
- t. Gentian Violet: No effect.
- u. Methyl Red: No effect.
- 2. Acceptable Products and Manufacturers: Products of the following manufacturers or approved equal will be acceptable.
 - a. Lab Grade 840 Black; Formica Corporation.
 - b. Pionite Chemguard; Pioneer Plastics Corp.
 - c. Chemsurf; Wilsonart International, Div. of Premark International, Inc.
- 3. Colors and patterns: As indicated on Architectural Drawings. If not indicated, then as selected by Architect from manufacturer's full selection of matte finish solid colors.
- D. Cabinet Liner: High-pressure cabinet liner laminate (HPL), 0.020-inch thick. Provide white color, unless otherwise directed.
- E. Plastic Laminate Backing: NEMA LD-3, BK 20, high pressure paper base laminate without a decorative finish; Style ND, Type IV, 0.020-inch thick, smooth surface finish, for backing at countertops and other concealed locations.
- F. Panel Edging:
 - 1. For doors and drawers, 3 mm thick PVC T-molding. Provide color as indicated on the Drawings or, if not indicated, as selected by Architect.
 - 2. For cabinet body: High-pressure plastic laminate to match exposed face of panel.

2.4 ANCHORS, FASTENERS AND ACCESSORIES

- A. Anchor Type, Sizing and Spacing: Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate. Refer to special seismic anchoring requirements noted on Drawings.
- B. Anchors and Fasteners: Select material, type, size, and finish required by each substrate for secure anchorage. Provide non-ferrous metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Refer to general anchor requirements specified in Section 05 05 23 - Metal Fastenings for anchoring into building substrates.
 - 1. Screws: For use at wood or metal stud walls, minimum #14 x 3", Phillips truss head, type 17 hard, zinc plated, self-tapping, full head screws. Select material, type, size, and finish required for each use. Comply with applicable requirements of FS FF-S-111. For attachment to metal framing supports, provide screws as indicated on Drawings.
 - 2. Countertop segment anchors: Tite Joint Fasteners.
- C. Exposed Anchors and Fasteners: Same material, color and finish as the metal to which applied, except use only stainless steel at aluminum materials and use cadmium plated at interior pre-painted steel products.
- D. Contact Adhesives: Formaldehyde-free, Type II Water-Resistant typically and Type I Fully Waterproof at damp locations and countertops.
- E. Wall Adhesive: Solvent release, cartridge type, compatible with wall substrate, capable of achieving durable bond.
- F. Countertop Segment Adhesive: Rigid (urea, resorcinol) adhesive, complying with requirements for WIC Type II Water-Resistant adhesive.

2.5 HARDWARE

- A. Specified Manufacturers: Where manufacturer is not specified, provide hardware according to current WIC Approved Hardware Listing and as selected by Contractor as suitable for Project conditions, subject to review and acceptance by Architect. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00
 - 1. Accuride: Accuride International, Inc., Santa Fe Springs, CA (562/903-0200; local representative, Ladera Ranch, CA, 949/481-9086).
 - 2. Blum: Julius Blum, Inc., Stanley, NC (704/827-1345; local supplier, E.B. Bradley Co., Los Angeles, CA, 213/585-9201).
 - 3. 3/4 drawer guides and hinges to be Accuride or Blum only.
 - 4. K & V: Knappe & Vogt Manufacturing Co. Grand Rapids, MI (616-459-3311 or 800/253-1561). Shelf track only.
- B. Finish Hardware for Casework: Provide hardware as indicated on Architectural Drawings and as follows. If not indicated, provide hardware conforming to WIC Manual of Millwork, WIC Approved Hardware Listing.
 - 1. Shelf standards: Hettich International, catalog no. 1005-767, Sekura 1 or approved equivalent, 0.5 mm hole diameter with seismic (earthquake) pin, 50 lbs per clip working load rating.

2. Door hinges: Grade 1, wrap-around butt hinges, according to WIC Manual of Millwork, WIC-Approved Hardware Listing, to provide minimum 170 degrees opening. Concealed ("European") style hinges will not be acceptable.
3. Drawer slides:
 - a. Typical drawers, full extension, 90-100 lb. capacity: Accuride 3832.
 - b. Heavy drawers, overtravel design, 150 lb. capacity: Accuride 4034 Series.
 - c. Shallow drawers, full extension, low profile, 65 lb. capacity: Accuride 2632.
 - d. File drawers, 1 inch overtravel, 200 lb. capacity, three-section slide, 0.63-inch slide space: Accuride 4437.
4. Retracting door hardware: Accuride 1332 Anti-Rak Flipper Door Slides with Anti-Rak cable, vertical retracting slide with hinge carrier strip and extra hinge; one hinge per foot of door height.
5. Door and drawer pulls: U-shaped wire rod type, satin chrome plated steel, 4-inch centers, Stanley SH4484, or approved equivalent.
6. Drawer stops: Provide stops to prevent drawer fronts from hitting face of cabinet body.
7. Keyboard supports: Synchronicity by ERGO, Little Twist series, retracting keyboard support surface with attached twist-out mouse platform.
8. Sliding door slides: Blum.
9. Sliding door pulls: Grant 428.
10. File folder supports: As suitable for Pendaflex file folders, chrome plated.
11. Cabinet drawer/door locks: National, to match existing cabinet locks, re-keyable and capable of being masterkeyed.
 - a. Provide locks at all drawers, single doors and on active leaf of paired doors.
 - b. Provide 2 keys for each lock.
 - c. Coordinate locks and latches specified below. At pairs of doors, active leaf shall have lock and inactive leaf shall have elbow catch.
 - d. Keying: Assist Owner with developing a key schedule for drawer locks when shop drawings are reviewed. Integrate cabinet drawer and door locks with existing masterkey system.
12. Elbow catches: Ives IV2AM, aluminum. Coordinate locks and latches specified below. At pairs of doors, active leaf shall have lock and inactive leaf shall have elbow catch.
13. Magnetic catches: Provide magnetic catches at all doors with locks and all doors without elbow catches, Amerock (National) No. 61-570, Stanley No. 41 or approved equivalent.
14. Closet poles: 1-1/16-inch diameter chrome plated steel, 14 gauge minimum, with chrome plated steel pole sockets.
15. Grommets: Mockett MM Series, cap and liner, solid brass, matte black finish, size as indicated on Drawings or, if not indicated, provide nominal 2-1/2-inch grommet cap size.

- C. Casework Hardware Finish: ANSI/BHMA A156.18.
 - 1. Exposed hardware: Chrome plated or stainless steel, brushed finish, as follows:
 - a. Chrome, satin brushed finish, plated on steel: BHMA 652 (US26D).
 - b. Chrome, satin brushed finish, plated on brass or bronze: BHMA 626 (US26D).
 - c. Stainless steel, brushed: BHMA 630 (US32D).
 - 2. Concealed hardware: Polished or satin chrome or brushed stainless steel.

PART 3 - EXECUTION

3.1 PLASTIC-COVERED CASEWORK FABRICATION

- A. Casework Fabrication, General: Shop fabricate casework in compliance with WIC Manual of Millwork for grade specified.
- B. Plastic Laminate-Covered Casework Fabrication: Shop fabricate casework and countertops for delivery to site in units easily handled and to permit passage through building openings. See Drawings for special casework fabrication details and notes. Provide high-pressure plastic laminate covered casework complying with WIC Manual of Millwork, Section 15 - Plastic-Covered Casework, as follows.
 - 1. Grade: Custom.
 - 2. Construction Style: Style A, frameless.
 - 3. Construction Type: WIC Type I, multiple self-supporting units, rigidly joined together. Comply with construction requirements of Division of the State Architect (DSA).
 - 4. Door and Drawer Front Style: WIC Flush Overlay.
- C. Construction Details: Comply with referenced WIC standard, with details and notes indicated on the Drawings, and the following:
 - 1. Cabinet cases: 3/4-inch thick medium-density fiberboard core, with high-pressure plastic laminate at exposed faces and edges and high-pressure cabinet liner at semi-exposed faces.
 - 2. Doors: 3/4-inch thick medium-density fiberboard core, with high-pressure plastic laminate at exposed faces and either high-pressure decorative plastic laminate or high-pressure cabinet liner at semi-exposed faces. Provide PVC edge banding at all edges. Edge banding shall be eased, to eliminate sharp edges.
 - 3. Drawer fronts: 3/4-inch thick medium-density fiberboard core with high-pressure decorative plastic laminate on exposed face and either high-pressure decorative plastic laminate or high-pressure cabinet liner on semi-exposed face. Provide PVC edge banding at all edges. Edge banding shall be eased, to eliminate sharp edges.
 - 4. Drawer sides, backs and sub-fronts: 1/2-inch thick hardwood with clear lacquer finish; or 1/2-inch baltic birch plywood with clear lacquer finish.
 - 5. Drawer bottoms: 1/4-inch thick hardboard or plywood, except provide 3/8-inch thick bottoms at drawers 30 inches and wider. File drawer bottoms shall be 3/4-inch thick hardwood plywood, routed to receive file followers. Top surface of drawer bottoms shall be covered with 0.020-inch high-pressure cabinet liner.

6. Shelves: Medium-density fiberboard or plywood, as suitable for shelf size, faced on all surfaces with high-pressure cabinet liner. Comply with WIC Technical Bulletin 435 for core material options for 50 psf shelf loading. Support shelves on metal shelf rests in vertical rows of cleanly bored holes in cabinet sides, not exceeding 2 inches on center.
 - a. Locate rows between 1-1/2 and 2 inches from front and back faces of cabinet body.
 - b. Row size, spacing and location shall be identical throughout Project.
7. Dust panels: 1/4-inch thick plywood or hardboard, above compartments and drawers except where located directly under tops, to vertically secure spaces at locked cabinets.
8. Lumber components: As follows except if otherwise indicated on the Drawings.
 - a. Backing cleats: 3/4-inch by nominal 4 inches.
 - b. Web rails: 3/4-inch by nominal 4 inches.
 - c. Base and sleepers: 3/4-inch by net 4 inches.
9. Closures: Minimum 1 inch and maximum 3 inches wide, scribed to wall. Close all gaps at face, bottom and top of cabinets. Provide closure at all cabinet sides abutting walls, to ensure clearance for door to swing open fully.
- D. Laminate Cladding: Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Make corners and joints hairline. Slightly bevel edges.
- E. Field Cutting and Fitting Provisions: When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide trim for scribing and site cutting.
- F. Base or Full-Height Cabinets Fabrication:
 1. Mounting strips: Minimum 1/2-inch by 2-1/2-inch, at top and bottom of case. Provide intermediate mounting strip at middle of casework 60 inches and taller, including book cases.
 2. Back: 1/4-inch thick tempered hardboard, dadoed into top rail, sides and bottom of cabinet.
 3. Base cabinet depth: 24 inches, excluding door and drawer front thicknesses, unless otherwise indicated on the Drawings.
 4. Base cabinet height: 34 inches to top of countertop work surface, unless otherwise indicated on the Drawings.
 5. Full-height cabinet depth: As indicated on the Drawings, excluding door and drawer front thicknesses.
 6. Full-height cabinet height: As indicated on the Drawings.
 7. Cabinet width: Align wall cabinet end panels with base cabinet end panels and not countertop edge.
 8. Toe kicks: Separate from or integral with base unit casework, 4 inches high by 2 inches deep at front and 4 inches high by 3/4-inch deep at exposed ends.

9. Drawer construction: Dovetailed joints at drawer box, with drawer bottom ploughed into drawer sides, backs and subfronts. Provide 3/8-inch thick bottoms at drawers 30 inches and wider.
 - a. Hot-melt glue drawer bottom in place.
 - b. Glue all drawer box joints.
 - c. File drawers shall be fabricated to receive standard, letter-size Pendaflex hanging file folders; provide steel rails for hanging files.
10. Drawer pulls: Install door pulls horizontally, centered vertically and horizontally on drawer faces. Do not install pulls on false drawer fronts or sink base panels. Do not install pulls on drawers located directly above knee spaces, such as pencil drawers, or on keyboard trays.
11. Door pulls: Install door pulls vertically, with top mounting hole centered 1-1/2 inches from both top and strike (non-hinge) edge of door. Install pulls at 34 inches to center line above floor for full height cabinets.
12. Shelves:
 - a. Base cabinets: Unless otherwise indicated, one adjustable shelf.
 - b. Full-height cabinets: Unless otherwise indicated, four adjustable shelves.
13. Door catches at doors without locks: Install typically on all doors except as specified below for double doors with locks. Install spring-loaded latch body to inside face of door, with the catch installed on the bottom face of cabinet bottom panel. Center catches 1-1/2 inches from strike (non-hinge) edge of door.
14. Door catches at double doors with locks: Installed on door leaf without lock. Install spring-loaded latch body to inside face of door, with the catch installed on the top face of cabinet bottom panel. Center catches 1-1/2 inches from strike (non-hinge) edge of door.

G. Wall Cabinets Fabrication:

1. Mounting strips: Minimum 1/2-inch by 2-1/2 inches, at top and bottom of case. Provide intermediate mounting strip at middle of casework 60 inches and taller.
2. Back: 1/4-inch thick tempered hardboard, dadoed into top rail, sides and bottom of cabinet.
3. Wall cabinet depth: 15 inches, excluding door and drawer front thicknesses, unless otherwise indicated on the Drawings.
4. Shelves: Unless otherwise indicated, all wall cabinets shall two adjustable shelves.
5. Wall cabinet height: 36 inches, unless otherwise indicated on the Drawings. Provide closure to ceiling or soffit, typically.
6. Door pulls: Install door pulls vertically, with top mounting hole centered 1-1/2 inches from both bottom and strike (non-hinge) edge of door.

3.2 PLASTIC LAMINATE COUNTERTOPS FABRICATION

A. Plastic Laminate Countertop Core Material:

1. Countertops without sinks: Medium density fiberboard (MDF) or close-grained hardwood plywood, 3/4-inch minimum thickness, except 1 inch thickness for mobile units.
2. Countertops with sinks: Marine grade plywood, 3/4-inch thick.

B. Plastic Laminate Countertops Fabrication, General: WIC Premium Grade at locations with sinks and WIC Custom Grade at all other locations. See Drawings for details and notes.

1. Locate counter butt joints minimum 2 feet from sink cut-outs.
2. Countertops shall extend 1/2-inch beyond faces of doors and drawer fronts along the front face of base cabinets and 1/2-inch beyond the exposed ends of base cabinets (those ends not abutting walls).
3. Unless otherwise indicated, all back and side splashes shall be 4 inches high.
4. Provide support from below countertop, either by base cabinets or welded steel angle supports as indicated on the Drawings, spaced so that unsupported length does not exceed 36 inches. Comply with requirements specified in Section 05 50 00 - Metal Fabrications.
5. At each knee space and other locations to have communications or electrical receptacles installed below countertop, provide on 1-1/2-inch ID plastic grommet, black or color to match countertop/work surface, installed directly over the outlet, centered 1-1/2 inches from the back wall (if no back splash) or 1-3/4 inches from face of back splash.

C. Plastic Laminate Countertop Edges:

1. Front edge, countertops without sinks: Waterfall edge.
2. Front edge, countertops with sinks: No Drip edge (post-formed).
3. Backsplash, countertops without sinks: 1/4-inch radiused butt joint, side or back mount at mill option.
4. Backsplash, countertops with sinks: Integral coved (post-formed).
5. Backsplash top edge: Square.
6. Side splash top edges: Square.
7. Exposed corners: Bevel corners 45-degrees where end of cabinet is exposed and corner subject to impact.

D. Plastic Laminate Surfacing: High-pressure plastic laminate surfacing with minimum 0.020-inch backing sheet, in compliance with referenced WIC standard.

END OF SECTION

06 64 00 – PLASTIC PANELING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fiberglass-reinforced plastic (FRP) wall panels.
- B. Related trim, fasteners and adhesive.

PART 2 - PRODUCTS

2.1 FIBERGLASS REINFORCED PLASTIC (FRP) WALL PANELS

- A. Specified Manufacturer: Nudo Products, Inc., Springfield, IL (217/528-5636 or 800/826-4132; local representative, Dublin, CA, 510/551-5800 or 800/553-1031).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below or other manufacturers will be acceptable in accordance with the "or equal" provision of the General Conditions.
 - 1. Kemlite Corporation, Joliet, IL (815/727-5000)
 - 2. Sequentia, Inc. (Structoglas brand), Strongsville, OH (216/238-2400; local contact, San Diego, CA, 619/273-2331).
- C. Fiberglass Reinforced Plastic (FRP) Wall Panels: Nudo Fiber-Lite Liner Panels LP-F9-FR, smooth surface glass fiber reinforced plastic (FRP), 0.090-inch thick fire-resistive FRP, NSF 35 approved for food service installations, white color.
- D. Flame Spread Rating: California Building Code (CBC), Table 8-A, minimum Class II rated.
- E. Physical Properties, FRP Facing:

	Property	Test	Value
1.	Flexural Strength	ASTM D790	17,000 psi
2.	Flexural Modulus	ASTM D790	6.0 x10 ⁵
3.	Tensile Strength	ASTM D638	8,000 psi
4.	Tensile Modulus	ASTM D638	8.8 x10 ⁵
5.	Izod Impact Strength	ASTM D256	7.0 ft. lbs./in. notched
6.	Barcol Hardness	ASTM D2583	40 (average)
7.	Water Absorption	ASTM D570	0.2 percent in 24 hrs at 77 degrees F
8.	Thermal Coefficient of Linear Expansion	ASTM D696	1.6 x10 ⁶ in./in./degrees F

2.2 ACCESSORIES

- A. FRP Panel and Paneling Moldings: Extruded PVC, ASTM D3678, for panel and paneling joints and edges, one-piece design, as indicated and as recommended by the manufacturer for complete capture of all edges and corners.
- B. Panel Adhesive: Water-based, contact adhesive as recommended by panel manufacturer.
- C. Sealant: White silicone sanitary sealant, as specified in Section 07 90 00 - Joint Protection.

PART 3 - EXECUTION - NOT USED

END OF SECTION

DIVISION 07 – THERMAL AND MOISTURE PROTECTION

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

07 11 00 – DAMPPROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Bituminous dampproofing for moisture protection at exterior seat walls, low retaining walls (less than 3 feet high) and planter walls not part of building structure.

PART 2 - PRODUCTS

2.1 BITUMINOUS DAMPPROOFING MATERIALS

- A. Cold-Applied Asphalt Emulsion Mastic: Fibrated dampproofing mastic of troweling (heavy) consistency, meeting the requirements of ASTM D1227, Type IV; asbestos free. Acceptable products include the following. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 – Product Requirements:
 - 1. Emulsified Asphalt Mastic, as produced by The Euclid Chemical Company.
 - 2. Tex-Mastic No. 633-F, as produced by TexMastic International, Inc.
 - 3. #920 Fibrated Emulsion Mastic, as produced by Karnak Corporation.
 - 4. Hydrocide 700 Mastic, as produced by Sonneborn Building Products Division/ChemRex, Inc.
 - 5. Sealmastic, Type 3-Trowel-On Grade, as produced by W.R. Meadows, Inc.

2.2 INSTALLATION ACCESSORIES

- A. Reinforcing Fabric: Woven or non-woven glass fiber, treated with organic binders and coated for compatibility with dampproofing bitumen.
- B. Detailing Mastic: Asphalt-based plastic roof cement, trowel consistency, meeting the requirements of ASTM D4586.

2.3 PROTECTION MATERIALS

- A. Protection Board: 1/8-inch-thick (nominal) semi-rigid sheets of fiberglass or mineral reinforced asphaltic core, pressure laminated between two asphalt-saturated fibrous liners.
- B. Protection Course Adhesive: Rubber-based solvent type recommended by protection course manufacturer.

PART 3 - EXECUTION - NOT USED

END OF SECTION

07 21 00 – THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Thermal batt insulation in exterior stud wall construction.
- B. Thermal batt insulation in wood structure at roofs.

PART 2 - PRODUCTS

2.1 THERMAL BATT INSULATION

- A. Specified Manufacturer: Owens Corning Fiberglas Corporation (OCF), Toledo, OH (419/248-8000 or 800/438-7465).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. CertainTeed Corp., Valley Forge, PA (610/341-7739 or 800/233-8990)
 - 2. Manville Building Insulation, Division of Johns Manville Corp., Denver, CO (303/978-2000 or 800/654-3103).
- C. Thermal Batt Insulation, General: Flexible, resilient, noncombustible blankets of mineral or glass fiber, complying with ASTM C665, type, class and facing material as indicated following.
- D. Thermal Batt Insulation for Concealed Locations: ASTM C665, Type II, Class C.
 - 1. Product: OCF Thermal Batt Insulation.
 - 2. Facing: Vapor-retarding kraft.
 - 3. Surface burning characteristics: Not rated.
- E. Thermal Batt Insulation for Exposed Locations: ASTM C655, Type III, Class A.
 - 1. Product: OCF Flame Spread 25 Insulation.
 - 2. Facing: Fire-resistant, foil-reinforced-kraft (FRK).
 - 3. Surface burning characteristics: Flame spread rating 25 and smoke developed 50; suitable for all California Building Code (CBC) construction types.

- F. Insulation Thermal Values: When tested in accordance with ASTM C518, R-value as indicated on Drawings or, if not indicated, minimum R-11 at walls and R-30 at ceiling/roof condition.

2.2 ACCESSORIES

- A. Nailing Flanges: Provide nailing flanges stud and joist framing cavities. Provide insulation without flanges, for wired-in-place or installation on retainer clips, elsewhere.
- B. Retainer Clips: Spindle or prong-type anchors, as recommended by insulation manufacturer for Project conditions.
- C. Metal Mesh: Galvanized steel wire, woven, size and gauge as recommended by insulation manufacturer to suit Project conditions.
- D. Wire: ASTM A641, soft temper, pre-stretched, Class 1 galvanized coating, gauge as recommended by insulation manufacturer to suit Project conditions.

PART 3 - EXECUTION - NOT USED

END OF SECTION

07 26 00 – VAPOR RETARDERS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Underslab vapor retarder.

PART 2 - PRODUCTS

2.1 UNDERSLAB VAPOR RETARDER

- A. Specified Manufacturer: Stego Industries, LLC, San Juan Capistrano CA (949/493-5460 or 877/464-7834)
- B. Acceptable Manufacturers: Equivalent products of Permalon Division, Reef Industries, Inc., Houston, TX (800/231-2417) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. Vapor-Retarding Sheet Membrane: Stego Wrap 15 mil, coextruded sheet of virgin resins and additives, complying with ASTM E 1745, Class A permeance and Class B puncture resistance.
 - 1. Vapor transmission rating: 0.006 grains/ft²/hr, when tested according to ASTM E 96 at 73.4 degrees F.
 - 2. Permeance rating:
 - a. New material: 0.012 perms, when tested according to ASTM E 96 at 73.4 degrees F.
 - b. After elevated temperature conditioning: 0.015 perms, ASTM E 154 Section 11 Method and ASTM E 96 Procedure B.
 - c. After low temperature/bending: 0.017 perms, ASTM E 154 Section 12 Method and ASTM E 96 Procedure B.
 - d. After exposure to soil organisms: 0.014 perms, ASTM E 154 Section 13 Method and ASTM E 96 Procedure B.
 - e. After exposure to petroleum and soil poison: 0.013 perms, ASTM E 154 Section 14 Method and ASTM E 96 Procedure B.
 - 3. Tensile strength: 48.6 lbf/in. (CD) and 47.8 lbf/in. (CDM), when tested according to ASTM E 154 Section 9 Method and ASTM D 828.

4. Puncture resistance: 1970 grams when tested according to ASTM E 154 Section 10 Method and ASTM D 1709.

2.2 ACCESSORIES

- A. Seam tape: Stego High Density Polyethylene Tape with pressure-sensitive adhesive, minimum 4 inches wide.
- B. Pipe boots: Constructed from vapor barrier material and pressure-sensitive adhesive tape according to manufacturer's instructions.
- C. Adhesive mastic: Spray-applied contact adhesive, compatible with sheet barrier and substrate materials, with excellent water-resistive qualities, Miracle Adhesives Corporation, Bellmore, NY (800/647-2253), Miracle 1330 Spray Adhesive, or equal.

PART 3 - EXECUTION - NOT USED

END OF SECTION

07 26 33 – VAPOR EMISSION REDUCTION SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Multiple-component moisture vapor emission mitigation system and moisture barrier coating for suspended, on or below-grade concrete floor slabs.

1.3 MANUFACTURER'S WARRANTY

- A. When below grade, on grade, or above grade concrete slab has been treated with vapor reduction system according to manufacturer's instructions and recommendations, manufacturer shall warranty applied floor covering against delamination due to negative-side moisture migration or moisture-born contaminants for a period of 10 years from date established by Substantial Completion. Warranty shall cover both labor and materials necessary to repair or replace floor finish if acceptable repairs cannot be made, as determined by Architect.
- B. Upon completion of application of vapor emission mitigation and sealing system, furnish manufacturer's warranty covering all labor and materials for period not less than 10-years from date established by Notice of Completion.
- C. Warranties shall have no exclusions due to vapor emission increase after system installation.

PART 2 - PRODUCTS

2.1 VAPOR EMISSION REDUCTION SYSTEM

- A. Specified Manufacturer: SINAK Corporation, San Diego, CA (800/523-3147).
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. Vapor Emission Reduction System: Two-component system for treating concrete floor slabs to correct excessive water vapor emissions and to control alkalinity.
 - 1. Moisture vapor mitigation penetrant: First component shall be water-based liquid containing a blend of silicates, which penetrates and reacts with the minerals and soluble calcium compounds in the concrete to form additional insoluble silicate and silica structure within the concrete.
 - 2. Moisture vapor barrier coating: Second component shall be water-based epoxy sealer which acts to restrict water vapor emission.

- D. Moisture Vapor Mitigation Penetrant: VECT-R Penetrant, clear, penetrating, non-toxic, non-silicone, non-acrylic, non-epoxy, water-based silicate material with documented performance of 30 percent to 50 percent reduction in vapor emission when tested in accordance with specified calcium chloride test method.
- E. Vapor Barrier Coating: VECT-R Epoxy, 2-part epoxy, water-based epoxy that acts to restrict future water vapor emission from concrete floors.

PART 3 - EXECUTION

3.1 INITIAL TESTING

- A. Initial Moisture Vapor Testing, General: Testing will be performed by Testing Laboratory. Testing shall not be performed by vapor emission mitigation and sealing products manufacturer, its affiliates or agents, or by Contractor.
 - 1. Moisture vapor testing will be performed using prepackaged calcium chloride dome test kits according to following test schedule:
 - a. Use minimum of 3 kits for area up to 1000 square feet. Use additional test kit for each additional 1000 square feet or portion thereof.
 - b. Place kits in either rectangular or cross-diagonal pattern.
 - c. Comply with procedures according to manufacturer's instructions and recommendations and ASTM E 907.
 - 2. Testing Laboratory shall determine moisture vapor emissions from concrete floors.
 - a. Results of such tests shall be expressed in pounds of moisture vapor emitted per 24 hours in 1,000 square foot area.
 - b. Measurements shall be taken in under conditions similar to anticipated service environment.
 - c. Since moisture vapor emission testing may require 60 to 72 hours to complete, Contractor shall schedule and sequence Work to avoid delays and disruption of scheduled construction activities.
- B. Determination of Requirement for Vapor Emission Mitigation: Perform moisture vapor emission mitigation at all concrete floor areas to receive loose-laid or adhesively-applied floor coverings if measured moisture vapor emission level is 5.0 pounds or greater per 1000 square feet. Perform moisture vapor emission mitigation at all concrete floor areas to receive applied coatings, including epoxy terrazzo, if measured moisture vapor emission level is 3.0 pounds or greater per 1000 square feet.
 - 1. If measured moisture vapor emission level is 5.0 pounds but not greater than 10.0 pounds per 1000 square feet at locations to receive loose-laid or adhesively-applied floor coverings, apply VECT-Rx System to reduce moisture levels to specified maximum or less.
 - 2. If measured moisture vapor emission level is in excess of 10.0 pounds but not greater than 12 pounds per 1000 square feet at locations to receive loose-laid or adhesively-applied floor coverings, apply VECT-R5 System to reduce moisture vapor levels to specified maximum or less.

3. If measured moisture vapor emission level is greater than 3.0 pounds but not greater than 10.0 pounds at locations to receive applied coatings, including epoxy terrazzo, apply VECT-Rx System to reduce moisture vapor levels to specified maximum or less.
4. If measured level are in excess of 12.0 pounds per 1000 square feet, apply VECT-R3 System to reduce moisture vapor levels to specified maximum or less.
5. If, after retesting, floor areas measure in excess of specified maximums, concrete floor Work shall be considered defective and Contractor shall perform additional moisture vapor mitigation measures or reconstruct concrete floor slab in accordance with provisions of the General Conditions, as acceptable to Architect, at no change in Contract Time and Contract Sum.
 - a. Concrete floors that consistently exhibit moisture readings in excess of 5.0 pounds per 1000 square feet in 24 hours will be tested by Testing Laboratory for water/cement ratio and adequacy of moist curing, using a petrographic analysis.
 - b. Petrographic analysis will confirm water/cement ratio and concrete curing. If test confirms that water cement ratio exceeds 0.48 or that the floor slab was moist cured less than 10 days, Contractor shall pay for petrographic analysis and shall perform additional concrete curing and moisture vapor emission mitigation measures as directed by Architect at no change in Contract Time and Contract Sum.
6. Cost of first retest after moisture vapor mitigation measures will be paid by Owner. Should retest indicate moisture vapor levels in excess of specified maximum, costs for additional retesting shall be compensated by Contractor to Owner according to General Conditions of the Contract and Section 01 45 00 - Quality Control. Costs for additional retesting by Testing Laboratory shall be compensated by Contractor to Owner by deductive Change Order.
7. Treated surfaces shall be tested for compatibility with adhesives and floor coating materials, including testing for acceptable pH level, prior to installation of finish flooring materials.
8. When tested areas comply with specified maximum pounds per 1000 square feet, proceed with application of vapor barrier coating.

3.2 EXAMINATION AND PREPARATION

- A. Surface Inspection: Verify that surfaces are solid, free of loose particles, cracks, pits, rough projections or foreign matter detrimental to maximum adhesion of the system.
- B. Surface Preparation:
 1. Surfaces shall be cleaned and prepared in accordance with manufacturer's instructions and recommendations.
 2. Remove foreign materials detrimental to system, such as curing compounds, sealers, loose patching materials or surface oil) shall be removed by mechanical scarification or shotblasting.
 3. Repair cracks, joints, low spots and bumps as acceptable to Architect and according to criteria of manufacturer of moisture vapor emission mitigation and sealing products.
 4. Moisture vapor emission mitigation and sealing system shall not be applied to damp, frozen, dirty, non-absorptive or glossy surfaces.

- C. Protection: Protect surrounding construction from effects of testing and application of moisture vapor emission mitigation and sealing system. Provide protective coverings as necessary.

3.3 APPLICATION

- A. Moisture Vapor Emission Mitigation and Sealing Products Application, General: Comply with manufacturer's instructions and recommendations.
- B. Post-Application Testing: Testing Laboratory will test concrete floors after application of vapor barrier coating for pH level.
 - 1. If pH level is within acceptable limits according to adhesive and floor coatings manufacturers, proceed with application and installation of floor finishes.
 - 2. If pH level exceeds acceptable limits according to adhesive and floor coatings manufacturers, Contractor shall perform pH mitigation to achieve acceptable pH level, at no change in Contract Time and Contract Sum.
 - 3. Upon demonstration of corrected pH level, proceed with application and installation of finish flooring materials.
 - 4. Costs of retesting by Testing Laboratory shall be compensated by Contractor to Owner by deductive Change Order.

3.4 PROTECTION AND CLEANING

- A. Protection: Protect moisture vapor emission treatment from damage until flooring is installed. Comply with manufacturer's instructions and recommendations and requirements.
- B. Cleaning: Coordinate cleaning and other surface preparation activities for application or installation of finish flooring with protective measures for vapor emission treatment.

END OF SECTION

07 31 13 – ASPHALT SHINGLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Asphalt shingles.
 - 2. Underlayment.
- B. Related Requirements:
 - 1. Section 077200 "Roof Accessories" for ridge vents.

1.2 DEFINITION

- A. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Roofing manufacturer's representative shall inspect and accept the substrate prior to the application of any roofing materials.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each exposed product and for each color and texture specified.
 - 1. Asphalt Shingles: Full size.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each type of asphalt shingle and underlayment product indicated, for tests performed by a qualified testing agency.
- C. Evaluation Reports: For high-temperature, self-adhering sheet underlayment, from ICC-ES or other testing and inspecting agency acceptable to authorities having jurisdiction, indicating that product is suitable for intended use under applicable building codes.
- D. Sample Warranty: For manufacturer's warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For asphalt shingles to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Asphalt Shingles: Not less than 5% of each type, in unbroken bundles.
- 1.8 QUALITY ASSURANCE
 - A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
- 1.9 DELIVERY, STORAGE, AND HANDLING
 - A. Store roofing materials in a dry, well-ventilated location protected from weather, sunlight, and moisture according to manufacturer's written instructions.
 - B. Store underlayment rolls on end on pallets or other raised surfaces. Do not double stack rolls.
 - C. Protect unused roofing materials from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.
 - D. Handle, store, and place roofing materials in a manner to prevent damage to roof deck or structural supporting members.
- 1.10 FIELD CONDITIONS
 - A. Environmental Limitations: Install self-adhering sheet underlayment within the range of ambient and substrate temperatures recommended in writing by manufacturer.
- 1.11 WARRANTY
 - A. Manufacturer's Warranty: Manufacturer agrees to repair or replace asphalt shingles that fail within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Manufacturing defects.
 - 2. Material Warranty Period: 25 years from date of Substantial Completion, prorated, with first five years nonprorated.
 - 3. Wind-Speed Warranty Period: Asphalt shingles will resist blow-off or damage caused by wind speeds of up to<Insert value> for 10 years from date of Substantial Completion.
 - 4. Algae-Resistance Warranty Period: Asphalt shingles will not discolor for 10 years from date of Substantial Completion.
 - B. Roofing Installer's Warranty: On warranty form at end of this Section, signed by Installer, in which Installer agrees to repair or replace components of asphalt-shingle roofing that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Atlas Roof Shingles
 - 2. Certainteed; Saint-Gobain
 - 3. GAF
 - 4. Owens Corning
 - 5. Tamko Building Products
 - 6. Or equal.

2.2 GLASS-FIBER-REINFORCED ASPHALT SHINGLES

- A. Three-Tab-Strip Asphalt Shingles: ASTM D 3462/D 3462M, glass-fiber reinforced, mineral-granule surfaced, and self-sealing; with tabs regularly spaced.
 - 1. Strip Size: Manufacturer's standard.
 - 2. Algae Resistance: Granules resist algae discoloration.
 - 3. Color and Blends: As selected by Architect from manufacturer's full range.
- B. Hip and Ridge Shingles: Manufacturer's standard units to match asphalt shingles.

2.3 UNDERLAYMENT MATERIALS

- A. Felt: ASTM D 226/D 226M, asphalt-saturated organic felts, nonperforated.
 - 1. Type: Type I or Type II.
- B. Self-Adhering Sheet Underlayment, High Temperature: Minimum of 40-mil- (1.0-mm-) thick; with slip-resisting, polymer-film-reinforced or glass-reinforced top surface laminated to layer of butyl or SBS-modified asphalt adhesive; with release backing; cold applied; and evaluated and documented to be suitable for use for intended purpose under applicable codes by a testing and inspecting agency acceptable to authorities having jurisdiction. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.
 - 1. Thermal Stability: Stable after testing at 240 deg F (116 deg C) according to ASTM D 1970/D 1970M.
 - 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C) according to ASTM D 1970/D 1970M.

2.4 ACCESSORIES

- A. Asphalt Roofing Cement: ASTM D 4586, Type II, asbestos free.
- B. Roofing Nails: ASTM F 1667; aluminum, stainless-steel, copper, or hot-dip galvanized-steel wire shingle nails, minimum 0.120-inch- (3-mm-) diameter, sharp-pointed, with a minimum 3/8-inch- (9.5-mm-) diameter flat head and of sufficient length to penetrate 3/4 inch (19

mm) into solid wood decking or extend at least 1/8 inch (3 mm) through OSB or plywood sheathing.

1. Shank: Barbed.
2. Where nails are in contact with metal flashing, use nails made from same metal as flashing.

- C. Felt-Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, 1-inch (25-mm) minimum diameter.

2.5 METAL FLASHING AND TRIM

- A. General: Comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking or metal clips and that installation is within flatness tolerances.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and completely anchored; and that provisions have been made for flashings and penetrations through asphalt shingles.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

- A. General: Comply with underlayment manufacturer's written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
- B. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (50 mm) over underlying course. Lap ends a minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with felt-underlayment nails.
1. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 3 inches (75 mm) in direction that sheds water. Lap ends of felt not less than 6 inches (150 mm) over self-adhering sheet underlayment.
 2. Install fasteners at no more than 36 inches (914 mm) o.c.
- C. Metal-Flashed, Open-Valley Underlayment: Install two layers of minimum 36-inch- (914-mm-) wide underlayment centered in valley. Stagger end laps between layers at least 72 inches (1830 mm). Lap ends of each layer at least 12 inches (300 mm) in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck.

1. Lap roof-deck underlayment over first layer of valley underlayment at least 6 inches (150 mm).

3.3 METAL FLASHING INSTALLATION

- A. General: Install metal flashings and other sheet metal to comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."
 1. Install metal flashings according to recommendations in ARMA's "Residential Asphalt Roofing Manual" and NRCA's "NRCA Guidelines for Asphalt Shingle Roof Systems."
- B. Apron Flashings: Extend lower flange over and beyond each side of downslope asphalt shingles and up the vertical surface.
- C. Step Flashings: Install with a headlap of 2 inches (50 mm) and extend over the underlying asphalt shingle and up the vertical surface. Fasten to roof deck only.
- D. Cricket or Backer Flashings: Install against the roof-penetrating element extending concealed flange beneath upslope asphalt shingles and beyond each side.
- E. Open-Valley Flashings: Install centered in valleys, lapping ends at least 8 inches (200 mm) in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.
 1. Secure hemmed flange edges into metal cleats spaced 12 inches (300 mm) apart and fastened to roof deck.
- F. Rake Drip Edges: Install rake drip-edge flashings over underlayment and fasten to roof deck.
- G. Eave Drip Edges: Install eave drip-edge flashings below underlayment and fasten to roof sheathing.
- H. Pipe Flashings: Form flashing around pipe penetrations and asphalt shingles. Fasten and seal to asphalt shingles as recommended by manufacturer.

3.4 ASPHALT-SHINGLE INSTALLATION

- A. General: Install asphalt shingles according to manufacturer's written instructions, recommendations in ARMA's "Residential Asphalt Roofing Manual," and recommendations in NRCA's "NRCA Guidelines for Asphalt Shingle Roof Systems."
- B. Install starter strip along lowest roof edge, consisting of an asphalt-shingle strip with tabs removed with self-sealing strip face up at roof edge.
 1. Extend asphalt shingles 1/2 inch (13 mm) over fasciae at eaves and rakes.
 2. Install starter strip along rake edge.
- C. Install first and remaining courses of asphalt shingles stair-stepping diagonally across roof deck with manufacturer's recommended offset pattern at succeeding courses, maintaining uniform exposure.
- D. Hip and Ridge Shingles: Maintain same exposure of cap shingles as roofing shingle exposure. Lap cap shingles at ridges to shed water away from direction of prevailing winds. Fasten with roofing nails of sufficient length to penetrate sheathing.

3.5 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("the work") on the following project:
1. Owner: <Insert name of Owner>.
 2. Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Address: <Insert address>.
 5. Area of the Work: <Insert information>.
 6. Acceptance Date: <Insert date>.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: <Insert date>.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant the work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of the work as are necessary to correct faulty and defective work and as are necessary to maintain the work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to the work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Insert required wind speed in first subparagraph below.
 - c. Peak gust wind speed exceeding <Insert wind speed> mph (m/sec);
 - d. Fire;
 - e. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - f. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - g. Vapor condensation on bottom of roofing; and
 - h. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When the work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to the work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of the work.

4. During Warranty Period, if Owner allows alteration of the work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of the alterations, but only to the extent the alterations affect the work covered by this Warranty. If Owner engages Roofing Installer to perform the alterations, Warranty shall not become null and void unless Roofing Installer, before starting the alterations, notified Owner in writing, showing reasonable cause for claim, that the alterations would likely damage or deteriorate the work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a use or service more severe than originally specified, this Warranty shall become null and void on date of the change, but only to the extent the change affects the work covered by this Warranty.
 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect the work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on the work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of the work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.
- E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.
1. Authorized Signature: <Insert signature>.
 2. Name: <Insert name>.
 3. Title: <Insert title>.

END OF SECTION

07 32 13 – CLAY ROOF TILES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Clay roof tiles.
 - 2. Underlayment.

1.2 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079, glossaries in TRI/WSRCA's "Concrete and Clay Roof Tile Design Criteria Installation Manual for Moderate Climate Regions," and NRCA's "NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Roofing manufacturer's representative shall inspect and accept the substrate prior to the application of any roofing materials.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Samples: For each exposed product and for each color and texture specified.
 - 1. Clay Roof Tiles: Full size, showing full range of values and blends.
 - 2. Accessory Tiles: Full size.
 - 3. Metal Valley Flashing: 12 inches (305 mm) square.
 - 4. Ridge Vents: 12-inch- (305-mm-) long Sample.
 - 5. Fastenings: Wire-tie system components, 12 inches (305 mm) long.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes:
 - 1. Clay Roof Tiles: Full size, showing full range of values and blends.
 - 2. Accessory Tiles: Full size, each type.
 - 3. Metal Valley Flashing: 12 inches (305 mm) square.
 - 4. Ridge Vents: 12-inch- (305-mm-) long Sample.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: For each type of clay roof tile, based on evaluation of comprehensive tests performed by a qualified testing agency.
- B. Evaluation Reports: From ICC-ES or other testing and inspecting agency acceptable to authorities having jurisdiction, indicating that product is suitable for intended use under applicable building codes for the following:
 - 1. Clay roof tiles, fasteners, and attachment systems.
 - 2. Synthetic underlayment.
 - 3. High-temperature self-adhering underlayment.
- C. Sample Warranty: For manufacturer's materials warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Clay Roof Tiles: Not less than 5% of each type, in unbroken bundles.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store underlayment rolls in a dry, well-ventilated location protected from weather, sunlight, and moisture according to manufacturer's written instructions.
 - 1. Store on end, on pallets or other raised surfaces. Do not double stack rolls.
- B. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.
- C. Handle, store, and place roofing materials in a manner to prevent damage to roof deck or structural supporting members.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed according to manufacturer's written instructions and warranty requirements.
 - 1. Install self-adhering sheet underlayment within the range of ambient and substrate temperatures recommended by manufacturer.

1.10 WARRANTY

- A. Materials Warranty: Manufacturer agrees to repair or replace clay roof tiles that fail in materials within specified warranty period.
 - 1. Warranty Period: 50 years from date of Substantial Completion.

- B. Roofing Installer's Warranty: On warranty form at end of this Section, signed by Installer, in which Installer agrees to repair or replace components of clay-tile roofing that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Boral Roofing Company
 - 2. Boston Valley Terra Cotta
 - 3. Crown Roof Tiles
 - 4. Gladding, McBean
 - 5. MCA Clay Roof Tile
 - 6. SantaFe Tile Corp.
 - 7. Or equal.

2.2 CLAY ROOF TILES

- A. Clay Roof Tiles: ASTM C 1167, molded- or extruded-clay roof tile units of shape and configuration indicated, kiln fired, and free of surface imperfections. Provide with fastening holes prepunched at factory before firing.
 - 1. Durability: Grade 2.
 - 2. High-Profile Shape: Type I, Spanish or "S".
 - 3. Finish and Texture: Matte, smooth.
 - 4. Color: Terra cotta.
 - 5. Recycled content Value (RCV): Minimum RCV per California Green Building Standards Code, T24 Part 11, Section A5.

2.3 UNDERLAYMENT MATERIALS

- A. Felt Underlayment: ASTM D 226/D 226M, Type II, asphalt-saturated organic felt, unperforated.
- B. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970/D 1970M, a minimum of 40-mil- (1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified-asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.

2.4 ACCESSORIES

- A. Asphalt Roofing Cement: ASTM D 4586/D 4586M, Type II, asbestos free.

- B. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
- C. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane-based joint sealant of type, grade, class, and use classifications required to seal joints in clay-tile roofing and remain watertight.
- D. Roofing Asphalt: ASTM D 312, Type IV.
- E. Cold-Applied Adhesive: Manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with underlayments.
- F. Mortar materials, plastic cement and sealant: Code approved adhesive suitable to bond to clay roof tile.
 - 1. Sand: ASTM C 144.
 - 2. Portland Cement: ASTM C 150, Type I.
- G. Mortar: ASTM C 270, Type M, with ASTM C 979/C 979M, pigmented mortar matching the color of clay roof tiles for exposed-to-view mortar, and natural color for concealed-from-view mortar.
- H. Rake and Gable End: Prefabricated Rake and Ridge Tile matching field tile profile and color.
- I. Foam Adhesive: Two-component, polyurethane expanding adhesive recommended for application by clay-roof-tile manufacturer.
- J. Eave Closure: Manufacturer's standard clay tile eave closure formed to shape of clay roof tile.
- K. Wood Nailers: Comply with requirements for pressure-preservative-treated wood in Section 061000 "Rough Carpentry."

2.5 FASTENERS

- A. Roofing Nails: ASTM F 1667, hot-dip galvanized-steel, 0.120-inch- (3.05-mm-) diameter shank, sharp-pointed, conventional roofing nails with barbed shanks; minimum 3/8-inch- (10-mm-) diameter head; of sufficient length to penetrate 3/4 inch (19 mm) into substrate or through thickness of the sheathing, whichever is less.
 - 1. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
- B. Underlayment Nails: Stainless-steel, or hot-dip galvanized-steel wire with low-profile metal or plastic caps, 1-inch (25-mm) minimum diameter.
 - 1. Provide cap nails complying with written instructions of synthetic-underlayment manufacturer.
 - 2. Provide with minimum 0.0134-inch- (0.34-mm-) thick cap, and with minimum 0.105-inch- (2.67-mm-) thick shank of length to penetrate at least 3/4 inch (19 mm) into roof sheathing.

2.6 METAL FLASHING AND TRIM

- A. General: Comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."

1. Sheet Metal: Zinc-tin alloy-coated steel.
- B. Fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for design, dimensions, metal, and other characteristics of the item.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking or metal clips and that installation is within flatness tolerances.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and completely anchored and that provision has been made for flashings and penetrations through roofing.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

- A. General: Comply with clay roof tile manufacturer's written instructions and with recommendations in NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are indicated.
 1. Cover [ridge] [hip] wood nailers with underlayment strips.
- B. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (51 mm) over underlying course. Lap ends a minimum of 4 inches (102 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm). Fasten with underlayment nails.
 1. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than [3 inches (76 mm)] [4 inches (102 mm)] in direction that sheds water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.
 2. Install fasteners at no more than [36 inches (914 mm) o.c.] [12 inches (305 mm) o.c. between side laps and 6-inch (152-mm) spacing at side laps.]
- C. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a 19-inch- (483-mm-) wide starter course at eaves and completely cover with a 36-inch- (914-mm-) wide second course. Install succeeding 36-inch- (914-mm-) wide courses lapping previous courses 19 inches (483 mm) in shingle fashion. Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm). Fasten with underlayment nails.
 1. Install fasteners at no more than [36 inches (914 mm) o.c.] [12 inches (305 mm) o.c. between side laps and 6-inch (152-mm) spacing at side laps.]

2. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than 4 inches (102 mm) in direction that sheds water.
3. Terminate felt underlayment flush against sidewalls, curbs, chimneys, and other roof projections.

D. Double-Layer Felt/Roll-Roofing Underlayment:

1. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (51 mm) over underlying course. Lap ends a minimum of 4 inches (102 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm). Fasten with underlayment nails.
2. Install roll-roofing underlayment, in parallel courses, on felt underlayment and in same direction. Lap sides a minimum of 3 inches (76 mm). Lap ends a minimum of 6 inches (152 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm).
 - a. Mechanically fasten over felt underlayment with fasteners located under side lap.
 - b. Adhere to felt underlayment with uniform coating of asphalt roofing cement.
3. Terminate felt underlayment flush against chimneys, sidewalls, curbs, and other projections.

E. Synthetic Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides and ends and treat laps as recommended in writing by manufacturer a minimum of [2 inches (51 mm)] [4 inches (102 mm)] for side laps and 8 inches (203 mm) for end laps. Stagger end laps between succeeding courses at interval recommended in writing by manufacturer. Fasten with underlayment nails according to manufacturer's written instructions. Cover underlayment within period recommended in writing by manufacturer.

1. Install in [single] [double] layer.
2. Install fasteners at no more than [36 inches (914 mm) o.c.] [12 inches (305 mm) o.c.] between side laps and 6-inch (152-mm) spacing at side laps.]

F. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install lapped in direction that sheds water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.

1. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
2. Extend self-adhering sheet underlayment over entire roof deck.
3. Eaves: Extend from edges of eaves 24 inches (610 mm) beyond interior face of exterior wall.
4. Rakes: Extend from edges of rakes 24 inches (610 mm) beyond interior face of exterior wall.
5. Valleys: Extend from lowest to highest point 18 inches (457 mm) on each side.
6. Hips: Extend 18 inches (457 mm) on each side.
7. Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot.

8. Sidewalls: Extend 18 inches (457 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (102 mm).
9. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (457 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (102 mm).
10. Roof-Slope Transitions: Extend 18 inches (457 mm) on each roof slope.

G. Double-Layer Felt/Self-Adhering Sheet Underlayment:

1. Install single layer of felt underlayment on roof deck parallel with and starting at the eaves. Lap sides a minimum of 2 inches (51 mm) over underlying course. Lap ends a minimum of 4 inches (102 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm). Fasten with underlayment nails.
 - a. Install fasteners at no more than 36 inches (914 mm) o.c.
2. Install self-adhering sheet underlayment, wrinkle free, on felt underlayment; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Lap sides not less than 3-1/2 inches (89 mm) in direction that sheds water. Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.

H. Valley Underlayment: Install two layers of 36-inch- (914-mm-) wide felt underlayment centered in valley. Stagger end laps between layers at least 72 inches (1829 mm). Lap ends of each layer at least 12 inches (305 mm) in direction that sheds water, and seal with asphalt roofing cement. Fasten each layer to roof deck with underlayment nails.

1. Lap roof-deck underlayment over first layer of valley underlayment at least 6 inches (152 mm).

3.3 METAL FLASHING INSTALLATION

- A. General: Install metal flashings and other sheet metal to comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."
1. Install metal flashings according to clay roof tile manufacturer's written instructions and recommendations in NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems."
- B. Apron Flashings: Extend lower flange over and beyond each side of downslope tile roofing and up the vertical surface.
- C. Step Flashings: Install with a head lap of 3 inches (76 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying tile. Fasten to roof deck only.
- D. Cricket and Backer Flashings: Install against roof-penetrating elements, extending concealed flange beneath upslope tile roofing and beyond each side.
- E. Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (203 mm) in direction that sheds water. Fasten upper end of each length to roof deck beneath overlap.
1. Adhere 9-inch- (229-mm-) wide strips of self-adhering sheet underlayment to metal flanges and to roof-deck underlayment. Extend 4 inches (102 mm) over metal flanges.
- F. Channel Flashings: Install over underlayment and fasten to roof deck.
- G. Rake Pan Flashings: Install over underlayment and fasten to roof deck.

- H. Rake Drip Edges: Install over underlayment and fasten to roof deck.
 - I. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.
 - J. Pipe Flashings: Form flashing around pipe penetrations and tile roofing. Fasten and seal to tile roofing.
 - K. Sheet Metal Ridge Vents: Install centrally, and mechanically fasten to wood ridge. Adhere each side to clay roof tile with elastomeric sealant.
 - 1. Install fabric mesh over roof-deck air ventilation gaps to prevent insect entry.
- 3.4 WOOD NAILERS
- A. Install wood nailers securely fastened to roof deck at the following locations:
 - 1. Hips.
 - 2. Ridges.
 - 3. Rakes.
 - B. Install beveled wood cant at eaves and securely fasten to roof deck.
 - C. Install nominal 1-by-2-inch (25-by-51-mm) wood battens horizontally [over 1/2-inch- (13-mm-) high, pressure-preservative-treated wood lath strips] [in 48-inch (1219-mm) lengths with ends separated by 1/2 inch (13 mm)], at spacing required by clay roof tile manufacturer, and securely fasten to roof deck.
- 3.5 CLAY ROOF TILE INSTALLATION
- A. General: Install clay roof tiles according to manufacturer's written instructions and recommendations in TRI/WSRCA's "Concrete and Clay Roof Tile Design Criteria Installation Manual for Moderate Climate Regions" and NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are indicated.
 - 1. Maintain uniform exposure and coursing of clay roof tiles throughout roof.
 - 2. Extend tiles 2 inches (51 mm) over eave fasciae.
 - 3. Nail Fastening: Drive nails to clear the clay roof tile so the tile hangs from the nail and is not drawn up.
 - a. Install wire through nail holes of cut tiles that cannot be nailed directly to roof deck and fasten to nails driven into deck.
 - 4. Mortar Setting: Install clay roof tile according to TRI/FRSA's "Concrete and Clay Roof Tile Installation Manual."
 - 5. Cut and fit clay roof tiles neatly around roof vents, pipes, ventilators, and other projections through roof. Fill voids with mortar.
 - 6. Install clay roof tiles with color blend approved by Architect.
 - B. High-Profile Clay Roof Tile Installation:
 - 1. Install tile eave closure.
 - 2. Provide minimum 3-inch (76-mm) lap between succeeding courses of clay roof tiles.
 - 3. Install rake tiles indicated.

4. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement.
 - C. Open Valleys: Cut clay roof tiles at open valleys to form straight lines. Maintain uniform width of exposed open valley from highest to lowest point.
 1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
 2. Do not nail tiles to metal flashings.
 - D. Closed Valleys: Cut clay roof tiles at closed valleys to form straight lines, trimming upper concealed corners of tiles. Maintain uniform gap of 3/4 to 1 inch (19 to 25 mm) on either side of the water diverter at centerline of valley.
 1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
 2. Do not nail tiles to metal flashings.
- 3.6 PLASTIC RIDGE VENTS
- A. Rigid-Plastic Ridge Vents: Install continuous ridge vents over clay roof tiles according to manufacturer's written instructions. Fasten with nails of sufficient length to penetrate substrate.
- 3.7 ADJUSTING AND CLEANING
- A. Remove and replace damaged or broken clay roof tiles.
 - B. Remove excess clay roof tiles and debris from Project site.
- 3.8 ROOFING INSTALLER'S WARRANTY
- A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("the work") on the following project:
 1. Owner: <Insert name of Owner>.
 2. Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Address: <Insert address>.
 5. Area of the Work: <Insert information>.
 6. Acceptance Date: <Insert date>.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: <Insert date>.
 - B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant the work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
 - C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause

to be made such repairs to or replacements of the work as are necessary to correct faulty and defective work and as are necessary to maintain the work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to the work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding <Insert wind speed> mph (m/sec);
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and
 - g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
2. When the work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to the work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of the work.
4. During Warranty Period, if Owner allows alteration of the work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of the alterations, but only to the extent the alterations affect the work covered by this Warranty. If Owner engages Roofing Installer to perform the alterations, Warranty shall not become null and void unless Roofing Installer, before starting the alterations, notified Owner in writing, showing reasonable cause for claim, that the alterations would likely damage or deteriorate the work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a use or service more severe than originally specified, this Warranty shall become null and void on date of the change, but only to the extent the change affects the work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect the work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on the work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of the work

according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

- E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.
1. Authorized Signature: <Insert signature>.
 2. Name: <Insert name>.
 3. Title: <Insert title>.

END OF SECTION

07 32 16 – CONCRETE ROOF TILES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Concrete roof tiles.
 - 2. Underlayment.

1.2 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079, glossaries in TRI/WSRCA's "Concrete and Clay Roof Tile Design Criteria Installation Manual for Moderate Climate Regions," and NRCA's "NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Roofing manufacturer's representative shall inspect and accept the substrate prior to the application of any roofing materials.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
- C. Samples: For each exposed product and for each color and texture specified.
 - 1. Concrete Roof Tiles: Full size, showing full range of color values and blends.
 - 2. Accessory Tiles: Full size, each type.
 - 3. Metal Valley Flashing: 12 inches (305 mm) square.
 - 4. Ridge Vents: 12-inch- (305-mm-) long Sample.
 - 5. Fastenings: Wire-tie system components, 12 inches (305 mm) long.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes:
 - 1. Concrete Roof Tiles: Full size, showing full range of color values and blends.
 - 2. Accessory Tiles: Full size, each type.
 - 3. Metal Valley Flashing: 12 inches (305 mm) square.
 - 4. Ridge Vents: 12-inch- (305-mm-) long Sample.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: For each type of concrete roof tile, based on evaluation of comprehensive tests performed by a qualified testing agency.
- B. Evaluation Reports: From ICC-ES or other testing and inspecting agency acceptable to authorities having jurisdiction, indicating that product is suitable for intended use under applicable building codes for the following:
 - 1. Concrete roof tiles, fasteners, and attachment systems.
 - 2. Synthetic underlayment.
 - 3. High-temperature self-adhering underlayment.
- C. Sample Warranty: Manufacturer's materials warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Concrete Roof Tiles: Not less than 5% of each type, in unbroken bundles.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store underlayment rolls in a dry, well-ventilated location protected from weather, sunlight, and moisture according to manufacturer's written instructions.
 - 1. Store on end, on pallets or other raised surfaces. Do not double stack rolls.
- B. Protect unused underlayment from weather, sunlight, and moisture when left overnight or when roofing work is not in progress.
- C. Handle, store, and place roofing materials in a manner to prevent damage to roof deck or structural supporting members.

1.9 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed according to manufacturer's written instructions and warranty requirements.
 - 1. Install self-adhering sheet underlayment within the range of ambient and substrate temperatures recommended by manufacturer.

1.10 WARRANTY

- A. When warranties are required, verify with Owner's counsel that warranties stated in this article are not less than remedies available to Owner under prevailing local laws.

- B. Materials Warranty: Standard form in which manufacturer agrees to repair or replace concrete roof tiles that fail in materials within specified warranty period.
 - 1. Warranty Period: 50 years from date of Substantial Completion.
- C. Roofing Installer's Warranty: On warranty form at end of this Section, signed by Installer, in which Installer agrees to repair or replace components of concrete-tile roofing that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Boral Roofing Company
 - 2. Eagle Roofing Products
 - 3. Hanson Roof Tile, Inc.
 - 4. Monier Lifetile
 - 5. Westile
 - 6. Or equal.

2.2 CONCRETE ROOF TILES

- A. Concrete Roof Tiles: ASTM C 1492, molded- or extruded-concrete roof tile units of shape and configuration indicated, with integral color, and free of surface imperfections. Provide with fastening holes prepunched at factory.
 - 1. Weight: Normal.
 - 2. High-Profile Shape: Type I, Spanish or "S" or Spanish or "S," interlocking.
 - 3. Finish and Texture: Matte, smooth.
 - 4. Colors, Blends, and Patterns: As selected by Architect from manufacturer's full range.
 - 5. Recycled content Value (RCV): Minimum RCV per California Green Building Standards Code, T24 Part 11, Section A5.

2.3 UNDERLAYMENT MATERIALS

- A. Felt Underlayment: ASTM D 226/D 226M, Type II, asphalt-saturated organic felt, unperforated.
- B. Roll-Roofing Underlayment: ASTM D 6380, Class M, Type II, asphalt-saturated and -coated organic felt, mineral-granule surfaced.
- C. Synthetic Underlayment: UV-resistant polypropylene, polyolefin, or polyethylene polymer fabric with surface coatings or treatments to improve traction underfoot and abrasion resistance; evaluated and documented to be suitable for use as a roof underlayment under

applicable codes by a testing and inspecting agency acceptable to authorities having jurisdiction.

- D. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970/D 1970M, minimum of 40-mil- (1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified-asphalt adhesive, with release paper backing; cold applied. Provide primer for adjoining concrete or masonry surfaces to receive underlayment.

2.4 ACCESSORIES

- A. Asphalt Roofing Cement: ASTM D 4586/D 4586M, Type II, asbestos free.
- B. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied.
- C. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane-based joint sealant of type, grade, class, and use classifications required to seal joints in concrete-tile roofing and remain watertight.
- D. Roofing Asphalt: ASTM D 312, Type IV.
- E. Cold-Applied Adhesive: Manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with underlayments.
- F. Mortar: ASTM C 270, Type M, with ASTM C 979/C 979M, pigmented mortar matching the color of concrete roof tiles for exposed-to-view mortar, and natural color for concealed-from-view mortar.
- G. Foam Adhesive: Two-component, polyurethane expanding adhesive recommended for application by concrete-roof-tile manufacturer.
- H. Eave Closure: Manufacturer's standard EPDM eave closure formed to shape of concrete roof tiles.
- I. Ridge Closure: Manufacturer's standard EPDM ridge closure, formed to shape of concrete roof tiles.
- J. Wood Nailers: Comply with requirements for pressure-preservative-treated wood in Section 061000 "Rough Carpentry."
- K. Mesh Fabric: 18-by-14 (1.1-by-1.4-mm) mesh of PVC-coated, glass-fiber thread.

2.5 FASTENERS

- A. Roofing Nails: ASTM F 1667, hot-dip galvanized-steel, 0.120-inch- (3.05-mm-) diameter shank, sharp-pointed, conventional roofing nails with barbed shanks; minimum 3/8-inch- (10-mm-) diameter head; of sufficient length to penetrate 3/4 inch (19 mm) into substrate or through thickness of the sheathing, whichever is less.
 - 1. Where nails are in contact with metal flashing, use nails made from same metal as flashing.
- B. Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile metal or plastic caps, 1-inch (25-mm) minimum diameter.
 - 1. Retain first subparagraph below for synthetic underlayment.

2. Provide cap nails complying with written instructions of synthetic-underlayment manufacturer.
 3. Provide with minimum 0.0134-inch- (0.34-mm-) thick cap, and with minimum 0.105-inch- (2.67-mm-) thick shank of length to penetrate at least 3/4 inch (19 mm) into roof sheathing.
- C. Wood Batten Nails: ASTM F 1667; common or box, steel wire, flat head, and smooth shank.
 - D. Wire Ties: Stainless steel, 0.083-inch (2.11-mm) minimum diameter.
- 2.6 METAL FLASHING AND TRIM
- A. General: Comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."
 1. Sheet Metal: Zinc-tin alloy-coated steel.
 - B. Fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for design, dimensions, metal, and other characteristics of the item.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking or metal clips and that installation is within flatness tolerances.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and completely anchored and that provision has been made for flashings and penetrations through roofing.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

- A. General: Comply with concrete roof tile manufacturer's written instructions and with recommendations in NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are indicated.
 1. Cover ridge wood nailers with underlayment strips.
- B. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of 4 inches (102 mm) over underlying course. Lap ends a minimum of 4 inches (102 mm). Stagger end laps between succeeding courses at least 72 inches (1829 mm). Fasten with underlayment nails.
 1. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than 4

inches (102 mm) in direction that sheds water. Lap ends of felt not less than 6 inches (152 mm) over self-adhering sheet underlayment.

2. Install fasteners at no more than 36 inches (914 mm) o.c.

C. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install lapped in direction that sheds water. Lap sides not less than 3-1/2 inches (89 mm). Lap ends not less than 6 inches (152 mm), staggered 24 inches (610 mm) between succeeding courses. Roll laps with roller. Cover underlayment within seven days.

1. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
2. Extend self-adhering sheet underlayment over entire roof deck.
3. Eaves: Extend from edges of eaves 24 inches (610 mm) beyond interior face of exterior wall.
4. Rakes: Extend from edges of rakes 24 inches (610 mm) beyond interior face of exterior wall.
5. Valleys: Extend from lowest to highest point 18 inches (457 mm) on each side.
6. Hips: Extend 18 inches (457 mm) on each side.
7. Ridges: Extend 36 inches (914 mm) on each side without obstructing continuous ridge vent slot.
8. Sidewalls: Extend 18 inches (457 mm) beyond sidewalls and return vertically against sidewalls not less than 4 inches (102 mm).
9. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend 18 inches (457 mm) beyond penetrating elements and return vertically against penetrating elements not less than 4 inches (102 mm).
10. Roof-Slope Transitions: Extend 18 inches (457 mm) on each roof slope.

3.3 METAL FLASHING INSTALLATION

- A. General: Install metal flashings and other sheet metal to comply with requirements in Section 076200 "Sheet Metal Flashing and Trim."
 1. Install metal flashings according to concrete roof tile manufacturer's written instructions and recommendations in NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems."
- B. Apron Flashings: Extend lower flange over and beyond each side of downslope tile roofing and up the vertical surface.
- C. Step Flashings: Install with a head lap of 3 inches (76 mm) and extend both horizontally and vertically. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying tile. Fasten to roof deck only.
- D. Cricket and Backer Flashings: Install against roof-penetrating elements, extending concealed flange beneath upslope tile roofing and beyond each side.
- E. Valley Flashings: Install centrally in valleys, lapping ends at least 8 inches (203 mm) in direction that sheds water. Fasten upper end of each length to roof deck beneath overlap.
- F. Channel Flashings: Install over underlayment and fasten to roof deck.

- G. Rake Pan Flashings: Install over underlayment and fasten to roof deck.
 - H. Rake Drip Edges: Install over underlayment and fasten to roof deck.
 - I. Eave Drip Edges: Install beneath underlayment and fasten to roof deck.
 - J. Pipe Flashings: Form flashing around pipe penetrations and tile roofing. Fasten and seal to tile roofing.
 - K. Sheet Metal Ridge Vents: Install centrally, and mechanically fasten to wood ridge. Adhere each side to concrete roof tile with elastomeric sealant.
 - 1. Install fabric mesh over roof-deck air ventilation gaps to prevent insect entry.
- 3.4 WOOD NAILERS
- A. Install wood nailers securely fastened to roof deck at the following locations:
 - 1. Hips.
 - 2. Ridges.
 - 3. Rakes.
 - B. Install beveled wood cant at eaves and securely fasten to roof deck.
- 3.5 CONCRETE ROOF TILE INSTALLATION
- A. General: Install concrete roof tiles according to manufacturer's written instructions and with recommendations in TRI/WSRCA's "Concrete and Clay Roof Tile Design Criteria Installation Manual for Moderate Climate Regions" and NRCA's "NRCA Roofing Manual: Steep-Slope Roof Systems" unless more stringent requirements are indicated.
 - 1. Maintain uniform exposure and coursing of concrete roof tiles throughout roof.
 - 2. Extend tiles 2 inches (51 mm) over eave fasciae.
 - 3. Nail Fastening: Drive nails to clear the concrete roof tile so the tile hangs from the nail and is not drawn up.
 - a. Install wire through nail holes of cut tiles that cannot be nailed directly to roof deck, and fasten to nails driven into deck.
 - 4. Mortar Setting: Install concrete roof tiles according to TRI/FRSA's "Concrete and Clay Roof Tile Installation Manual."
 - 5. Cut and fit concrete roof tiles neatly around roof vents, pipes, ventilators, and other projections through roof. Fill voids with mortar.
 - 6. Install concrete roof tiles with color blend approved by Architect.
 - B. High-Profile Concrete Roof Tile Installation:
 - 1. Install tile eave closure.
 - 2. Provide minimum 3-inch (76-mm) lap between succeeding courses of concrete roof tiles.
 - 3. Install rake tiles indicated.
 - 4. Install ridge tiles with laps facing away from prevailing wind. Seal laps with asphalt roofing cement.

- C. Open Valleys: Cut concrete roof tiles at open valleys to form straight lines. Maintain uniform width of exposed open valley from highest to lowest point.
 - 1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
 - 2. Do not nail tiles to metal flashings.
 - D. Closed Valleys: Cut concrete roof tiles at closed valleys to form straight lines, trimming upper concealed corners of tiles. Maintain uniform gap of 3/4 to 1 inch (19 to 25 mm) on either side of the water diverter at centerline of valley.
 - 1. Drill or notch cut valley tiles and wire-tie to fastener placed clear of valley metal flashings.
 - 2. Do not nail tiles to metal flashings.
- 3.6 PLASTIC RIDGE VENTS
- A. Rigid-Plastic Ridge Vents: Install continuous ridge vents over concrete roof tiles according to manufacturer's written instructions. Fasten with nails of sufficient length to penetrate substrate.
- 3.7 ADJUSTING AND CLEANING
- A. Remove and replace damaged or broken concrete roof tiles.
 - B. Remove excess concrete roof tiles and debris from Project site.
- 3.8 ROOFING INSTALLER'S WARRANTY
- A. WHEREAS <Insert name> of <Insert address>, herein called the "Roofing Installer," has performed roofing and associated work ("the work") on the following project:
 - 1. Owner: <Insert name of Owner>.
 - 2. Address: <Insert address>.
 - 3. Building Name/Type: <Insert information>.
 - 4. Address: <Insert address>.
 - 5. Area of the Work: <Insert information>.
 - 6. Acceptance Date: <Insert date>.
 - 7. Warranty Period: <Insert time>.
 - 8. Expiration Date: <Insert date>.
 - B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant the work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
 - C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of the work as are necessary to correct faulty and defective work and as are necessary to maintain the work in a watertight condition.
 - D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to the work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding <Insert wind speed> mph (m/sec);
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and
 - g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When the work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to the work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of the work.
 4. During Warranty Period, if Owner allows alteration of the work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of the alterations, but only to the extent the alterations affect the work covered by this Warranty. If Owner engages Roofing Installer to perform the alterations, Warranty shall not become null and void unless Roofing Installer, before starting the alterations, notified Owner in writing, showing reasonable cause for claim, that the alterations would likely damage or deteriorate the work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a use or service more severe than originally specified, this Warranty shall become null and void on date of the change, but only to the extent the change affects the work covered by this Warranty.
 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect the work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on the work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of the work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.
- E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day> day of <Insert month>, <Insert year>.

1. Authorized Signature: <Insert signature>.
2. Name: <Insert name>.
3. Title: <Insert title>.

END OF SECTION

07 41 13 – METAL ROOF PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Sealed seam steel roofing system.
- B. Related flashings and accessories.

1.3 RELATED SECTIONS:

- A. Section 07 60 00 - Flashing and Sheet Metal
- B. Section 07 71 00 - Roof Specialties
- C. Section 07 72 00 - Roof Accessories
- D. Section 07 90 00 - Joint Protection

1.4 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A446: Steel Sheet, Zinc-Coated (Galvanized) by the Hot Dip Process, Structural (Physical) Quality
 - 2. ASTM A525-91b: General Requirements for Steel Sheet, Zinc-Coated (Galvanized) by the Hot Dip Process
 - 3. ASTM A527-80: Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Lock-Forming Quality
 - 4. ASTM A792-77: Steel Sheet, Aluminum-Zinc Alloy-Coated by the Hot-Dip Process
 - 5. ASTM E241-77: Increased Durability of Building Constructions against Water Induced Damage
 - 6. ASTM E283: Static Air Infiltration
 - 7. ASTM E331: Static Water Infiltration
- B. Sheet Metal and Air Conditioning Contractors of North America (SMACNA): Architectural Sheet Metal Manual
- C. National Coil Coaters Association
- D. Uniform Building Code
- E. Underwriters Laboratories (UL): Applicable listings.
- F. Factory Mutual Research Corporation (FM): Applicable listings.

1.5 SUBMITTALS

A. Prior to Bid:

1. Product Data:
 - a. Manufacturers product catalogs or descriptive data, standard specifications and details.
 - b. Technical data to substantiate compliance with these specifications.
2. Certification:
 - a. Independent laboratory testing report for system design load and seam integrity.
 - b. Professional engineer's documentation that system incorporates sufficient allowance for stress and movement.
 - c. A letter from an officer of the manufacturing company certifying that the materials furnished for this project are the same as represented in tests and supporting data.
 - d. Manufacturer's verifications that the panels are factory roll formed.

B. Prior to Fabrication:

1. Shop drawings showing layout of every roof panel and structural supporting member required in the installation with side laps and end laps marked within 1% deviation of their actual location. Details shall also be provided for edge conditions, seams, joints, corners, panel profiles, assembly anchoring techniques, round and square flashings and counterflashings.
2. Samples illustrating thickness, finish, color and textures of materials.
3. Mill production reports showing that the steel thicknesses are within allowable tolerances of the nominal or minimum thickness or gauge specified.

C. Prior to Final Acceptance:

1. Manufacturer's standard Care and Maintenance Manual.
2. A final corrected copy of catalog data and as-built shop drawings.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer shall demonstrate written proof that he/she has completed the manufacturer's Approved Roofing Contractor course and is formally licensed for the installation of this roof system.
2. Installer shall further provide evidence that the superintendent and foreman selected for supervision on this job shall be approved by the manufacturer or shall submit a resume of past jobs of similar scope and complexity that the personnel have been involved with.

B. Submit certifications of compliance with regulatory requirements:

1. State and City Uniform Building Code.
2. Compliance with Recycled Materials Act.

C. Manufacturer's Qualifications:

1. Roof system manufacturer shall be a nationally recognized, prime manufacturer of metal roof systems.
2. Manufacturer shall have direct authority and control over all fabrication of steel components as well as the raw materials used in their fabrication.
3. Manufacturer shall be a member of the National Roofing Contractors Association (NRCA) and shall abide by the published standard practices of the organization.
4. Manufacturer shall have in place a documented, standardized method for maintaining quality control such as ISO-9001 approval.

D. Designer/Inspector Qualifications:

1. The roof system shall be designed by an employee of the manufacturer who has visited the job site and has familiarized himself with all conditions of the job.
2. The designer shall conduct all required periodic inspections of work in progress as described herein and shall furnish written documentation of all such inspections.

1.7 SOURCE QUALITY CONTROL

- A. Manufacturer shall furnish written documentation that all roof panels, flashing, trim, seam attachment devices, framing members, weather-exposed accessories, tape, caulking and sealants were furnished by this single-source company.
- B. Manufacturer shall furnish mill production documentation of specifications for steel coil stock used in the fabrication of the roof system, without organic coating per ASTM A446, ASTM A525, ASTM A527 or ASTM A792.

1.8 WARRANTY

- A. Complete roof system shall be warranted against leaks for a period of 30 years.
- B. All steel and paint finishes shall be warranted by the manufacturer to be free from red rust, chipping, cracking, flaking, blisters or peeling for a period of twenty years.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Provide a factory-formed, prefinished, sealed-seam metal roofing system with non-thermal bridging fastening system over rigid insulating substrate that includes:
 1. Panels pre-manufactured in continuous lengths up to one hundred feet.
 2. Flashings, edges, and terminations pre-manufactured by the panel manufacturer.
 3. Steel framing and support structure pre-fabricated and furnished by the panel manufacturer.
 4. All exposed fasteners shall be furnished by the panel manufacturer.
 5. All caulking, sealants, and related roofing components furnished by the panel manufacturer.

- B. Provide a completed roofing system that has been evaluated and tested with documentation to support the following requirements:
 - 1. Roof system's ability to withstand a minimum 200 PSF live load.
 - 2. System shall be verified to support an 80 PSF design live load with a 2.5 minimum factor of safety.
 - 3. The sealed seam of the roofing system shall be tested and verified to retain 3" of water above the highest point of the seam for a period of one hour without any leakage.
 - 4. Thermal Performance:
 - a. Roofing system shall be metal Title 24 Energy Star roof.
 - b. Manufacturer shall verify that no heat-conductive mechanical fastener shall be required in the roof system that will be in contact with both the steel roof surface and the interior building space, air plenum, or attic.
- C. Provide positive drainage over entire roofing area, at no less, than 1/2"-12".
- D. Existing roofs, with ridges, shall be 1"-12" four feet from eave, and then 1/2"-12" to the ridge. Ridge cap shall be 22 gauge 16"x120", white.

2.2 SYSTEM PERFORMANCE-FLAT METAL SEAM ROOFING SYSTEM

- A. Longevity:
 - 1. System, as specified, shall have been in continuous use for a minimum of 30 years.
- B. Utility:
 - 1. System shall be capable of accommodating the existing building structure without the need for major structural modification, alteration, or disturbance of the existing operation.
- C. Versatility:
 - 1. System shall be capable of adaptation to any commonly used structural type so that standardization of use may be maintained in the future.
 - 2. System shall demonstrate that future modifications can be made such as addition and/or removal of roof top equipment or building additions.
- D. Design:
 - 1. System shall be capable of installation with all seam and flashing sealants in continuous, full compression.
 - 2. System shall be capable of accommodating all expected, normal building movement without any transmittal of expansion or contraction through or along a sealed seam.

2.3 COMPONENTS

- A. Aluminum-Zinc Alloy Coated Steel:
 - 1. Steel sheet, Aluminum-Zinc Alloy Coated, ASTM A792, Coating Designation AZ-50, in thickness of 0.0157 for field panel, 0.0217 for accessory components, .0336 for

framing pieces by min. 36 in. by coil, chemically treated, commercial, lock-forming quality.

2. No plastic, or rubber single ply will be accepted, the membrane must meet performance properties enclosed, and must be aluminum-zinc alloy coated steel.

B. Steel Finishes

1. Siliconized modified polyester, epoxy primer baked both sides, as approved by finish coat manufacturer.

	<u>Property</u>	<u>Test Method</u>	<u>SMP</u>
a.	Pencil	ASTM D-3363 NCCA II-2	F-H
b.	Bend	ASTM D-4145 NCCA II-19	2-T
c.	Cross-Hatch Adhesion	ASTM D-3359	no loss of adhesion
d.	Gloss (60° angle)	ASTM D-523	90±5%
e.	Reverse Impact	ASTM D-2794	no cracking or loss of adhesion
f.	Nominal Thickness	ASTM D-1005	
	1) primer	0.2 mils	
	2) topcoat	<u>0.8 mils</u>	
	3) TOTAL	1.0 mils	

C. Accessories:

1. Job Installed In-Seam Sealant: Modified polyisobutylene tape, 1/8" thick by 1-1/2" wide, minimum.
 - a. Seaming material shall be comprised of a pre-formed, non-hardening polyisobutylene rubber based elastic compound designed for use where space tolerance is limited.
 - b. Material shall be furnished in a two-sided, moisture-proof, self-adhering tape form that shall accommodate compression, extension, elongation in a form fitting profile without exhibiting memory tendency in order to allow for permanent or semi-permanent surface irregularities or structural expansion/contraction within the system.
 - c. Elongation: 25% Maximum
 - d. Recovery: 2% Maximum
 - e. Solids: 100% Maximum
 - f. Odor: None
 - g. Cure Time: Non-Curing
 - h. Flow: Slight
 - i. Color: Black or white
 - j. Adhesion (Metal): Peel: 15l lbs./lin.in. Shear: 55 lbs./in.
 - k. Seamability: 100% cohesion of mating surfaces
 - l. Cold Temperature: Passes -30°F. Flex over 1" Mandrel

- m. Softening Point: 200°F.
- 2. Factory Applied Sealant:
 - a. Sealant must consist of a specified hot melt (100% solids thermoplastic material) in a 100% consistent application to affect a permanent, water-tight seal in a full compression configuration.
- 3. One component urethane meeting FS TT-S-00230C and ASTM C-920-79.
- 4. One component acrylic terpolymer meeting FS TT-S-00230.
- 5. Framing System Fasteners:
 - a. Metal Deck: FM 4470 Pinch point, fluorocarbon coated #14 fastener.
 - b. LightWeight Concrete, or Concrete Olympic Fastener, to be installed every 18" O.C. Staggered, or Rawl, Spike, that must be pre-drilled
 - c. Wood Deck: FM 4470 Pinch point, fluorocarbon coated #14 fastener or wood deck auger type fastener, or peel rivet, to be installed every 12" O.C. Staggered.
- 6. Seam Screws: Sheet Metal Fastener size #10 or #12 by 3/4" or 1" supplied by roof system manufacturer.
- 7. Wood Nailers, Curbs and Sleepers: California Redwood, #2 grade. No treated wood utilizing salt-base preservatives shall be allowed. Material safety Data Sheets must be provided to the roofing manufacturer for verification of preserving agents prior to the installation of any pressure treated wood.
- 8. Miscellaneous Fasteners:
 - a. TEK #1 or #4 screws
 - b. Expanding fasteners 1/4" min.
- 9. Prefabricated Stack Flashings: Flexible pre-fabricated round stack flashings with integrated pressure ring shall be used for all round pipe flashings as furnished by roof system manufacturer. Flashings shall be wraparound style, flexible flashing with integral metal flashing ring.
- 10. Temporary Night Sealant: Self-contained, two-component urethane foam.
- 11. Unitized Vents: Spun-aluminum, one-way moisture vapor relief vents as furnished by roof system manufacturer.

PART 3 - EXECUTION

3.1 FABRICATION

- A. In order to maximize quality control and conform to inorganic coating manufacturers' warranty limitations, all roll forming processes shall be done at the manufacturer's factory. Absolutely no roll forming will be permitted on the job site.
- B. Exercise careful compliance with specified requirements for fabricated profile, dimensional, and structural requirements.
- C. Provision shall be made for the roof system to self-ventilate and breathe according to ASTM E241 guidelines.

1. Ventilation shall be shown to be free-flowing between panels in each contiguous roof area.

D. Roofing system shall be designed to resist capillary action of water at any slope.

E. Tolerances:

1. Roof system shall be designed to accommodate normal building dimension tolerances without panel distortion or weaving.
2. Panels shall not be shimmed to straighten an out-of-line structure.
3. Follow the correct published panel alignment recommendations of the manufacturer without variation.

3.2 DELIVERY, STORAGE, AND HANDLING

- A. All roof panels shall be shipped from the manufacturer with polystyrene or similar cushioned packaging material separating the individual panels to minimize flexing, stressing, scratching or otherwise damaging the material during transit to the job.
- B. All steel shall be fully covered during transit by tarpaulins or similar protective cover to prevent dirt and debris from coming in contact with the finished goods.
- C. Stack prefinished materials to prevent twisting, bending, abrasion and denting and elevate one end to facilitate moisture run-off.
- D. Load roof panels using a boom or crane, supporting the panels in at least two locations during lifting, and never lift more than three panels at a time.
- E. Cover all materials that are moisture sensitive to keep completely protected from the weather.
- F. Protect water-based materials from inclement weather.
- G. It is the installer's responsibility to confirm the correct quantity and condition of all material prior to accepting delivery.

3.3 PROJECT/SITE CONDITIONS

- A. Field Measurements:
 1. It is the installer's responsibility to confirm field dimensions prior to ordering for fabrication.
 2. All field measurements shall be performed in a manner to allow for the minimum number of field seams while assuring that water flows parallel to the roll-formed direction of the panels.
- B. Pre-Installation Conference shall be required a minimum of two weeks prior to starting job.
 1. Review specifications, proposed deviations, discuss shop drawings, and verify substrate conditions.
 2. Clarify site access, storage areas, crane access, coordination with trades and sequencing of work.
 3. Verify exact measurements of roof areas to order material sizes and determine if manufacturer technical support should be scheduled.

3.4 SEQUENCING AND SCHEDULING

- A. All tapered insulation and/or structural systems, including drain crickets and saddles shall be installed prior to installation of the roof framing system. All debris is to be cleaned down to wood deck, if metal deck, contractor shall to install in accordance with specifications. Contractor shall be responsible for replacing all defecting decking. All accessories to include new wall panels, and coping.
- B. All masonry repairs, painting, or debris removal to occur above the roof system shall be completed prior to completion of this roof area.
- C. All copper, lead or other metal that may induce galvanic corrosion shall be removed or replaced prior to the installation of steel products that will be in direct exposure with the dissimilar material.
- D. Coordinate all plumbing, mechanical and electrical trades so that newly installed roofing is not unnecessarily damaged.

3.5 VERIFICATION OF CONDITIONS

- A. Contractor shall verify, on-site, that conditions presented are suitable for performance of the work. Report discrepancies in writing to the Owner or Project Designer.
- B. The roof deck or substrate shall be inspected to assure that all surfaces are even, sound, and free of defects, damage, or decay and in good condition.
- C. Contractor shall verify all physical dimensions so that all materials are ordered to fit the job.

3.6 PREPARATION

- A. System shall be designed so that the panel installation may be started and/or terminated at any given point in the area. It is understood that the ongoing operations of the Owner are of a critical nature as to leak sensitivity. Do not work on more roof area than can be restored completely watertight in one day. Price/ square foot to be quoted in contractor 's bid for deck replacement, where the is defective decking.
- B. All accumulations of asphalt or other repair materials shall be removed to provide a relatively level substrate.
 - 1. Existing metal details and other metal accessories specified for re-use that interfere with the installation of the new roof system shall be carefully removed and set aside for re-use.
 - 2. Any metal described above that will come in contact with the new roof shall be checked for type and replaced or protected if galvanic action may be a problem.
- C. Existing contaminating material must be stripped from all metal components that are indicated to be re-utilized. Care must be taken to protect these metal components and any damaged shall be replaced with new of similar type and dimension.
- D. All wood blocks and/or sleepers are to be replaced as part of this project with new treated wood or redwood. Any treated wood shall not contain salt based preservatives or materials corrosive to steel. Material Safety Data Sheets must be provided to the roofing manufacturer for verification prior to installation.
- E. Any pipes, conduits or equipment that the Owner determines to be no longer needed shall be removed under this contract.

- F. All curbs, soil stacks, and other interior flashing surfaces shall be extended to a minimum of 8" above the new horizontal roof surface or shall be pressure sealed at the top edge.

3.7 INSTALLATION

- A. Install all components of the roof system in exact accordance with the manufacturer's standard published procedures as applicable to these project conditions and substrates.
- B. The expressed and implied intent of all specifications contained herein shall prevail and take precedent over the manufacturer or any other specifying or associated authority.
- C. At any time during the installation, should manufacturer's procedures and these specifications come into unworkable conflict, all work shall be stopped, interested parties notified, and no work shall take place until a resolution is reached. Contractor to install Base sheet, (where there are existing wood decks,) as underlayment for the new metal roofing system. This shall be attached to the deck, and be purchased from the metal membrane manufacturer, for warranty purposes, if substrate is a wood deck.
- D. Steel framing system installation
 1. The steel framing system shall be installed around the entire perimeter of the roof, all curbs and boxes and as closely to the existing edge and vertical walls as possible. A secondary framing system shall be installed at a nominal distance of 48" in from all outside perimeters of roof areas. This wind protection frame shall be adjustable 24" in either direction, in order to accommodate coincidental field seams that may occur.
 2. The entire roof area shall then be measured and laid out to determine the designed or practical use of the furnished panels. The framing system shall be installed to the roof surface so that the framing system may be fastened through the existing roof and into the roof deck or structured supports with the entire perimeter of all steel panels covering the fastening flange of the metal framing system.
 3. A pre-fabricated drain or ridge line framing system shall be installed along the bottom of all valleys, including along the leading edge of crickets and saddles and along the ridges formed by adjoining slopes in excess of 2" in 12" or as specified. All roof slope shall be no less than 1/2"-12".
 4. All steel frames, as described above, shall be anchored to the roof deck with appropriate fasteners.
 5. The adjoining ends of framing sections shall be overlapped. Ends that adjoin or abut the sides of frames shall be lap cut so that there are no gaps between adjoining sections.
- E. Install rigid board insulation. The insulation will be EPS board insulation with a required minimum density of 1.5 lbs/cu.ft. All tapered insulation shall be installed to create, a minimum 1/2"-12" slope where necessary, before framing channels are installed. After framing channels are installed, 3/4" EPS insulation shall be installed between hat sections.
- F. Steel roof membrane installation
 1. All panels and other components of the work shall be installed and anchored to the framing supports, making provision for the critical concerns specified below:
 2. Seam tape shall be applied to the tops of all framing sections occurring in valley channels, on secondary framing systems, or along leading edge of crickets or saddles,

centered along the top of the framing sections. The paper seam tape backer shall be removed

3. The steel roof membrane shall be applied over the framing sections, beginning at the valley or lowest point of the roof, assuring that the panels completely cover the tops of the steel framing sections. 2" x 8" dimensional wood planks shall be used to hold the membrane in place until properly aligned and anchored.
4. Seam tape shall be applied to the underside of the overlapping portion of adjoining pieces of metal so that approximately 1/8" of tape extends beyond the edge of the metal.
5. The taped steel panel shall be aligned so that it overlaps the preceding panel by approximately 1-1/2" but does not extend beyond the edge of the top of the underlying framing section.
 - a. Seam fasteners may be placed at any point along the steel panels to temporarily anchor them in place, but these fasteners may require removal during the final anchoring process to allow all slack to be removed from the panel.
 - b. The location of all blind framing sections shall be marked before placing next panel.
6. The paper seam tape backer shall be carefully removed from the seam tape, and the panels pressed together.
7. With the installer using 2" X 8" (min.) wood planks to kneel or stand on, the seam fasteners shall be placed approximately 18" O.C., beginning at the middle of the panel and working towards the ends, so that all slack is distributed throughout the length of the panels.
8. Final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. between the stabilizing fasteners. Fastener guns with adjustable clutch shall be used on all fastening panels and accessories. Final seaming is to occur, for all panels installed, at the end of each day.
 - a. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The head of each seam fastener shall be set with its leading edge approximately 1/8" to 1/4" from the edge of the steel panel, but never extending beyond the edge of the seam nor occurring greater than 1/4" away from the edge of the seam.
 - c. Final seaming shall not be completed at the walls or vertical surfaces until the wall flashing system is installed.
 - d. A seam fastener shall be placed in the corner of every panel.
 - e. A seam fastener shall be placed directly on either side of every factory seam.
9. Blind seams shall be completed after all panels are in place.
 - a. All seam screws shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. Using the marks placed on the panels as a guide to the location of the underlying steel framing section, the installer shall snap a chalk line the entire length of the valley, ridge, or secondary framing section.

- c. The paper backer shall be carefully removed from the seam tape prior to fastening the panel.
- d. The final blind seaming shall be completed by installing seam fasteners as specified between the stabilizing fasteners, assuring that the fasteners penetrates the underlying sealant. All fasteners to be installed with a template to insure proper fastening pattern.

G. Steel flashings installation at curb and wall

- 1. Factory fabricated wall flashing pieces shall be installed so that the leading edge of the deck flange lines up with the top of the underlying framing section.
- 2. Seam tape shall be applied to the underside of the wall flashing metal so that approximately 1/8" of tape extends beyond the edge of the metal.
- 3. The wall flashing piece shall press against the vertical wall with a spring tension action.
- 4. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C.
 - a. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam. The adjoining sections of metal shall be seamed together with an overlap a minimum of 2".
 - c. Parapet Wall Detail, and Coping Cap will be furnished by metal membrane manufacturer, and installed according to enclosed drawing. All coping will be installed, according to manufacturer's recommendation.
- 5. The final seaming along the vertical portion of the metal flashing shall be completed by installing seam fasteners every 1-1/4" O.C.
 - a. Seam tape shall be applied to the underside of the overlapping piece, allowing approximately 1/8" of tape to be exposed beyond the leading edge. The paper seam tape backer shall be removed.
 - b. The seamed area of metal shall be pressed onto the underlying section at appropriate overlap, beginning at the vertex of the angle, so that there is no gap where the two pieces adjoin.
 - c. The first seam fastener shall be installed directly into the angle, securely anchoring this spot, to the underlying flashing.
 - d. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - e. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam. The adjoining sections of metal shall be seamed together with an overlap a minimum of 2".
 - f. The inside and outside corners shall be mitered and shall be installed with seam tape and seam fasteners as described above.

H. Flashing installation at pipes, projections, pitch pans and conduits.

- 1. All soil stacks shall receive new pre-fabricated unitized stack flashings, to be purchased from the membrane manufacturer. The stacks, shall be the wrap around version.

- a. The base flange on the unitized flashing shall receive seam tape to the underside of the leading edge of the flange so that approximately 1/8" of tape extends beyond the edge of the metal. The paper seam tape backer shall be removed.
 - b. The flexible rubber upper portion of the flashing shall be cut to the size of the O.D. of the pipe, as inscribed on the flashing.
 - c. A bead of caulking shall be applied around the pipe, approximately 2" above the point where the flexible rubber will terminate. The flashing shall then be slid down over the pipe so that the caulking bead is compressed as full contact with the roof is made.
 - d. A stainless steel pipe clamp shall be installed to the upper seal area of the flexible rubber top.
 - e. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - f. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - g. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.
2. All pitch pans, if required, shall be replaced with new 26 gauge (min.) Galvalume or stainless steel sheet metal.
 - a. New pans shall be constructed so that a continuous 4" flange is in place around the perimeter, with sides a minimum of 3" high and hemmed to the outside.
 - b. There shall be a minimum of 2" clearance, at all points, between the sides of the pan and the projection that it is flashing.
 - c. The base flange on the pan shall receive seam tape to the underside of the leading edge of the flange, so that approximately 1/8" of tape extends beyond the edge of the metal. The paper seam tape backer shall be removed.
 - d. The taped metal flange shall be aligned so that it overlaps the underlying panel by a minimum of 2" on all sides.
 - e. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - f. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners. Seam Fasteners shall be installed using manufacturer's seam fastener template.
 - g. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.
 - h. The pitch pan shall be filled half-full with non-shrink grout, then filled full with 100% solids pitch pan filter, tapered in a watershed fashion away from the projection.
3. All conduits and mechanical lines and pipes shall be installed resting on redwood or treated wood weigh displacement supports. All copper pipes shall be protected from exposing the roof to galvanic reactions.
 - a. The conduit or pipe shall be anchored to the wood block with fasteners and brackets of similar metal to that of the pipe.

- b. Wood blocks shall be of sufficient size and spacing to adequately support the conduit or pipe above the roof membrane, without bowing.
- 4. All closed top round flashing shall be flashed with a pre-fabricated wrap-around style unitized flashing.
 - a. The base flange on the unitized flashing shall receive seam tape to the underside of the leading edge of the flange so that approximately 1/8" of tape extends beyond the edge of the metal. The paper seam tape backer shall be removed.
 - b. The flexible rubber upper portion of the flashing shall be cut to the size of the O.D. of the pipe, as inscribed on the flashing.
 - c. A bead of caulking shall be applied around the pipe, at the top of the unitized flashing
 - d. A stainless steel pipe clamp shall be installed to the upper seal area of the flexible rubber top.
 - e. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - f. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - g. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.

I. Counterflashing installation

- 1. Prefabricated counterflashings shall be installed as required along all perimeter walls and over all interior flashings that do not have a protective flange covering the top of the baseflashing
- 2. Seam tape or sealant shall be applied to the back side of the fastening flange of the counterflashing piece. The paper seam tape backer shall be removed.
- 3. The counterflashing shall be installed in place with appropriate, required fasteners placed 6"-12" O.C. through the center of the fastening flange and anchored so that the flange is secured in place in a spring compression situation. The adjoining sections of metal shall overlap a minimum of 1/2" and a seam fastener shall be installed through both pieces of metal to anchor them to the wall or substrate.
- 4. A bead of urethane sealant shall be applied to the top edge of the metal, centered over the edge, and tooled to shed water.

J. Metal edge installation

- 1. If the roof system has been designed for water to drain away from the edge, the metal edge shall be installed after the roof membrane has been installed; if the roof system has been designed for water to flow over the metal edge, the metal edge shall be installed before the roof membrane is installed.
- 2. If necessary the steel roof membrane shall be cut to be even with the outside edge of the perimeter steel framing section.
- 3. The metal edge shall be installed with seam tape in place between it and the roof membrane, with the tape exposed approximately 1/8". The open bottom hem of the metal edge shall be used as the outside anchoring cleat. The paper seam tape backer shall be removed.

4. Deck flange on metal edge shall terminate evenly with the inside edge of the top portion of the steel framing section.
5. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - a. All seam fasteners shall be set so that the seam tape is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.
6. New coping shall be installed, on the facility, with a wood nailer, installed with Olympic fastener, 1 every 2 square feet. Install new coping, per membrane manufacturer's recommendation, including, cleat to be furnished by the membrane manufacturer.

K. Vent installation

1. One-way, moisture vapor relief vents shall be installed on the roof area.
2. One vent shall be installed in a central location of every major roof panel, over 200 square feet, and aligned for a consistent appearance.
3. A 4" round hole shall be cut at each vent location.
4. Seam tape shall be applied to the underside of the prefabricated vent, allowing approximately 1/8" to extend beyond the edge of the metal. The paper seam tape backer shall be removed.
5. The vent shall be pressed to the roof surface and centered over the 4" hole.
6. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - a. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.

L. Drain flashing installation

1. Fabricated metal sump pan with integral framing sections shall be installed.
2. Steel roof membrane shall be cut evenly with the inside edge of the top section of the integral framing section. All drains to be purchased from the steel membrane manufacturer.
3. Seam tape shall be installed to the underside of the roof membrane so that 1/8" shows beyond the leading edge. Paper seam tape backer shall be removed, and tape pressed in place.
4. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - a. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.

5. The adjusting nuts on the backflow prevention device shall be adjusted to expand the urethane seal against the inside of the drain leader.
6. The drain strainer shall be installed.

M. Scupper and through-wall termination installation

1. Prefabricated scupper liners shall be installed in place before the wall flashings are installed.
2. Scupper liners shall be large enough to slip through the opening in the wall, and all flanges must fit flush to their corresponding adjoining surfaces.
3. Scuppers shall be anchored in place with appropriate, recommended fasteners placed 4" O.C. and in all corners and transitions.
4. Seam tape shall be installed on the underside of all flashings and membrane terminations at the scupper. The paper seam tape backer shall be removed
5. The final seaming shall be completed by installing seam fasteners every 1-1/4" O.C. around the base.
 - a. All seam fasteners shall be set so that the seam is fully compressed, with caution being taken not to over-torque or under-torque the fasteners.
 - b. The heads of the seam fasteners shall never extend beyond the edge of the seam nor occur greater than 1/4" away from the edge of the seam.

N. Protective coating installation

1. All excess seam tape shall be trimmed away even with the edge of the lap, using a piece of discarded sheet metal rounded-off as a knife (do not use utility knives).
2. After all work is complete and the roof has been inspected and approved by the material manufacturer and the owner, a protective coating shall be applied to all seam areas.
3. Protective coating shall be applied to all inside and outside corner seams, along the tops of seams in projections, and around all sump pan and through wall scupper seams, etc.
4. Protective coating shall be applied to all field seam, blind seam and other mechanically fastened areas, and over all caulking applications. Coating shall be premium urethane coating, with application rate of 100 lineal feet, per gallon. Seams shall be taped, no less than 3 inches wide, and screws will not be visible, after coating. Coating to furnished by membrane manufacturer.
5. Protective coating is to be applied within 72 hours of completion of seam areas.

END OF SECTION

07 41 13.16 – STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes standing-seam metal roof panels.

1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Meet with Owner, Architect, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review structural loading limitations of deck, purlins and rafters during and after roofing.
 - 6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
 - 7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 - 8. Review temporary protection requirements for metal panel systems during and after installation.
 - 9. Review procedures for repair of metal panels damaged after installation.
 - 10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
2. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 3 inches per 12 inches (1:5).

D. Calculations:

1. Include calculations with registered engineer seal, verifying roof panel and attachment method resist wind pressures imposed on it pursuant to applicable building codes.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in architectural sheet metal products.

- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof area and eave, including fascia, and soffit as shown on Drawings; approximately 12 feet (3.5 m) square by full thickness, including attachments, underlayment, and accessories.
 - 2. Build mockups for typical roof area only, including accessories.
 - a. Size: 12 feet (3.5 m) long by 6 feet (1.75 m).
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.8 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.9 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

- B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

- A. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.
- B. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
 - 1. Warranty Period: 20 years from date of Substantial Completion.
- C. Special Installer Warranty: Furnish a written warranty signed by the Panel Applicator guaranteeing materials and workmanship for watertightness of the roofing system, flashings, penetrations, and against all leaks.
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. ASC Profiles; AEP Span; A BlueScope Steel Company
 - 2. ATAS International, Inc.
 - 3. Berridge Manufacturing Company
 - 4. Fabral

5. MBCI; a Division of NCI Group, Inc.
6. McElroy Metal, Inc.
7. Morin; a Kingspan Group Company
8. Or equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Recycled content Value (RCV): Minimum RCV per California Green Building Standards Code, T24 Part 11, Section A5.
- B. Solar Reflectance Index (SRI): Three-year-aged SRI not less than 32 or initial SRI not less than 39 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
- C. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for steep-slope roof products.
- D. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
 1. Wind Loads: As indicated on Drawings.
 2. Other Design Loads: As indicated on Drawings.
 3. Deflection Limits: For wind loads, no greater than 1/180 of the span.
- E. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E 1680 or ASTM E 283 at the following test-pressure difference:
 1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).
- F. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 1646 or ASTM E 331 at the following test-pressure difference:
 1. Test-Pressure Difference: 15 lbf/sq. ft. (718 Pa).
- G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.3 STANDING-SEAM METAL ROOF PANELS

- A. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.
 - 1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.
 - 2. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1637.
- B. Vertical-Rib, Snap-Joint, Standing-Seam Metal Roof Panels **<Insert drawing designation>**: Formed with vertical ribs at panel edges and a flat pan between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and snapping panels together.
 - 1. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: 0.028 inch (0.71 mm).
 - b. Exterior Finish: Two-coat fluoropolymer.
 - c. Color: As selected by Architect from manufacturer's full range.
 - 2. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: 0.032 inch (0.81 mm).
 - b. Surface: Smooth, flat finish.
 - c. Exterior Finish: Two-coat fluoropolymer.
 - d. Color: As selected by Architect from manufacturer's full range.
 - 3. Clips: **Continuous Cee-Rib with Vinyl Weatherseal Insert** to accommodate thermal movement.
 - a. Material: 0.028-inch- (0.71-mm-) nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - b. Material: 0.025-inch- (0.64-mm-) thick, stainless-steel sheet.

4. Panel Coverage: 12 inches (305 mm).
5. Panel Height: 1.5 inches (38 mm).

2.4 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 40 mils (1.02 mm) thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.
 1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D 1970.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
- B. Felt Underlayment: ASTM D 226/D 22M, Type II (No. 30), asphalt-saturated organic felts.

2.5 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

- D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match roof fascia and rake trim.
- E. Downspouts: Formed from same material as roof panels. Fabricate in 10-foot- (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.
- F. Roof Curbs: Fabricated from same material as roof panels, 0.048-inch (1.2-mm) nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of 0.060-inch- (1.52-mm-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.
 - 1. Insulate roof curb with 1-inch- (25-mm-) thick, rigid insulation.
- G. Panel Fasteners: Self-tapping screws designed to withstand design loads.
- H. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish. Select sealant color to match as close to color of panels as possible with standard color selections.
 - 1. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.

2.6 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

2. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
3. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
4. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.7 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- D. Aluminum Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
 - 2. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 UNDERLAYMENT INSTALLATION

- A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.
 - 1. Apply over the entire roof surface.
- B. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 076200 "Sheet Metal Flashing and Trim."

3.4 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Shim or otherwise plumb substrates receiving metal panels.
 - 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 3. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 4. Install flashing and trim as metal panel work proceeds.
 - 5. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 6. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 7. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
 - 1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
 - 2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
- C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
- D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
 - 1. Install clips to supports with self-tapping fasteners.
 - 2. Install pressure plates at locations indicated in manufacturer's written installation instructions.

- 3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
- F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.
- G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
- H. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches (914 mm) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- I. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.
 - 1. Provide elbows at base of downspouts to direct water away from building.
 - 2. Connect downspouts to underground drainage system indicated.
- J. Roof Curbs: Install flashing around bases where they meet metal roof panels.
- K. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.
- B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.
- C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

07 51 13 – BUILT-UP ASPHALT ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Built-up asphalt roofing.
2. Roof insulation.

B. Related Requirements:

1. Section 072100 "Thermal Insulation" for insulation beneath the roof deck.
2. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

- A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" apply to Work of this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. If needed, insert list of conference participants not mentioned in Section 013100 "Project Management and Coordination."
2. Retain subparagraphs below if required. If retaining, revise to include Project-specific requirements. Insert additional requirements to suit Project.
3. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
4. Roofing manufacturer's representative shall inspect and accept the substrate prior to the application of any roofing materials.
5. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

6. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
7. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
8. Review structural loading limitations of roof deck during and after roofing.
9. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing.
10. Review governing regulations and requirements for insurance and certificates if applicable.
11. Review temporary protection requirements for roofing during and after installation.
12. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For built-up roofing. Include plans, elevations, sections, details, and attachments to other work, including:
 1. Base flashings and built-up terminations.
 2. Tapered insulation, including slopes.
 3. Crickets, saddles, and tapered edge strips, including slopes.
 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- C. Samples for Verification: For the following products:
 1. Cap sheet, of color required.
 2. Flashing sheet, of color required.
 3. Aggregate surfacing material in gradation and color required.
 4. Walkway pads or rolls, of color required.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.

- B. Manufacturer Certificates: Signed by roofing manufacturer certifying that built-up roofing complies with requirements specified in "Performance Requirements" Article.
 - 1. Submit evidence of compliance with performance requirements.
- C. Product Test Reports: For components of built-up roofing, for tests performed by manufacturer and witnessed by a qualified testing agency.
- D. Research/Evaluation Reports: For components of built-up roofing, from ICC-ES.
- E. Field quality-control reports.
- F. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For built-up roofing to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is FM Global approved for built-up roofing identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by built-up roofing manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of built-up roofing that fail in materials or workmanship within specified warranty period.
 - 1. Retain options in first subparagraph below based on those used on Project. Verify availability of manufacturer's total-system warranty and components included.
 - 2. Special warranty includes built-up roofing membrane, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, and other components of built-up roofing.
 - 3. Verify available roofing warranties and warranty periods with manufacturers.
 - 4. Warranty Period: 20 years from date of Substantial Completion. No Dollar Limit.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of built-up roofing such as built-up roofing membrane, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, , and walkway products, for the following warranty period:
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Firestone Building Products
 - 2. GAF
 - 3. Johns Manville; a Berkshire Hathaway company
 - 4. Tamko Building Products
 - 5. Tremco
 - 6. Or equal

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed built-up roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Built-up roofing and base flashings shall remain watertight.
 - 1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
 - 2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D4272.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by built-up roofing manufacturer based on testing and field experience.
- C. FM Global Listing: Built-up roofing, base flashings, and component materials shall comply with requirements in FM Global 4450 or FM Global 4470 as part of a built-up roofing system, and shall be listed in FM Global's "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
 - 1. Fire/Windstorm Classification: Class 1A-60.
 - 2. Hail-Resistance Rating: MH.
- D. Energy Performance: Roofing products shall be compliant with 2016 California Energy Code, Title 24, Part 6 and 2016 California Green Building Standards Code, Title 24, Part 8; "Cool Roof", tested and labeled by the Cool Roof Rating Council (CRRRC).
 - 1. Low-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.63 Minimum Thermal Emittance: 0.75 or minimum SRI value of 75.
 - 2. Steep-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.20 Minimum Thermal Emittance: 0.75 or minimum SRI value of 16.

2.3 ROOFING MEMBRANE SHEET MATERIALS

- A. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
- B. Base Sheet: ASTM D 4601, Type II, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
- C. Base Sheet: ASTM D 4897/D 4897M, Type II, venting, nonperforated, heavyweight, asphalt-impregnated and -coated, glass-fiber base sheet with coarse granule surfacing or embossed venting channels on bottom surface.
- D. Ply Sheet: ASTM D 4601, Type II, Asphalt-coated, glass-fiber reinforced felt.

2.4 BASE FLASHING SHEET MATERIALS

- A. Backer Sheet: ASTM D 4601, Type II, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
- B. Granule-Surfaced Flashing Sheet: ASTM D 6163, Grade G, Type I or II, glass-fiber-reinforced, SBS-modified asphalt sheet; granule-surfaced base flashing; suitable for application method specified, and as follows:
 - 1. Granule Color: White or Gray.

2.5 ASPHALT MATERIALS

- A. Asphalt Primer: ASTM D 41/D 41M.
- B. Roofing Asphalt: ASTM D 312, Type IV.

2.6 AUXILIARY BUILT-UP ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing manufacturer for intended use and compatible with built-up roofing.
 - 1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
- B. Cold-Applied Adhesive: Roofing manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with built-up base flashings. Each container labeled with UL and FM logos indicating material was manufactured under the specified UL and FM quality assurance programs.
- C. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required by roofing manufacturer for application.
- D. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.
- E. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening built-up roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing manufacturer.
- F. Aggregate Surfacing: White aggregate coated with reflective ceramic-mineral surface.
 - 1. Glacier White (3/8 inch) by A-1 Grit. Tel: (800) 266-GRIT.
- G. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

2.7 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, 5/8 inch (16 mm) thick.
- B. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/2 inch (13 mm) thick, factory primed.
- C. Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) thick, seal coated.
- D. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening substrate board to roof deck.

2.8 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Global-approved roof insulation.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 3, felt or glass-fiber mat facer on both major surfaces.
- C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.
- D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.9 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatible with built-up roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation to substrate and acceptable to roofing manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 - 1. Modified asphaltic, asbestos-free, cold-applied adhesive.
- D. Wood Nailer Strips: Comply with requirements in Section 061053 "Miscellaneous Rough Carpentry."
- E. Tapered Edge Strips: ASTM C 728, perlite insulation board.
- F. Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

- G. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) thick, factory primed.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. Certainteed; GlasRoc.
 - b. Georgia-Pacific Building Products; DensDeck.
 - c. National Gypsum Company; DEXcell FA.
 - d. USG Corporation; Securock Glass Mat Roof Board.
 - e. Or equal.
- H. Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) thick.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. JM; Invinsa Roof Board.
 - b. USG Corporation; Securock Gypsum-Fiber Roof Board.
 - c. Or equal.
- I. Substrate Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass fiber.

2.10 WALKWAYS

- A. Walkway Pads: Mineral-granule-surfaced, reinforced asphaltic composition, slip-resisting pads, manufactured as a traffic pad for foot traffic and acceptable to roofing manufacturer, 1/2 inch (13 mm) thick, minimum.
 - 1. Pad Size: 36 inch by 60 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:
 - 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.

2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.
 5. Verify that minimum concrete drying period recommended by roofing manufacturer has passed.
 6. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - a. Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with Work of this Section if test sample foams or can be easily and cleanly stripped after cooling.
 7. Verify that concrete curing compounds that impair adhesion of roofing components to roof deck have been removed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove existing built-up roof system, insulation and flashings down to substrate.
- B. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing manufacturer's written instructions. Remove sharp projections.
- C. Notify Owner 48 hours in advance for an inspection prior to start of roofing installation.
- D. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- E. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.

3.3 INSTALLATION, GENERAL

- A. Comply with built-up roofing manufacturer's written instructions.

- B. Provide temporary roofing membrane and tie-ins at end of each work shift to maintain a watertight roof at all times.
- C. Asphalt Heating: Heat asphalt to its equiviscous temperature, measured at the mop cart or mechanical spreader immediately before application. Circulate asphalt during heating. Do not raise asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed asphalt manufacturer's recommended temperature limits during asphalt heating. Do not heat asphalt within 25 deg F (14 deg C) of flash point. Discard asphalt maintained at a temperature exceeding finished blowing temperature for more than 4 hours.
 - 1. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
- D. Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing manufacturer's written instructions.
- E. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging built-up roofing components or adjacent building construction.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 - 1. Fasten substrate board to top flanges of steel deck according to recommendations in FM Global's "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
 - 2. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to built-up roofing manufacturer's written instructions.

3.5 INSULATION INSTALLATION

- A. Install one lapped base-sheet course and mechanically fasten to substrate according to built-up roofing manufacturer's written instructions.
- B. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of built-up roofing with vertical surfaces or angle changes greater than 45 degrees.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install insulation with long joints of insulation in a continuous straight line, with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

1. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
- E. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
- F. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- G. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.
- H. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
 1. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
 2. Set each layer of insulation in a solid mopping of hot roofing asphalt.
 3. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- I. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 1. Fasten insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
- J. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 1. Fasten first layer of insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 2. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
 3. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt.
 4. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 5. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

- K. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together and fasten to roof deck. Tape joints if required by roofing manufacturer.
 - 1. Fasten cover boards according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 - 2. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.
 - 3. Apply hot roofing asphalt or insulation adhesive to underside and immediately bond cover board to substrate.

3.6 BUILT-UP ROOFING INSTALLATION, GENERAL

- A. Install roofing according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing."
 - 1. Install roofing system BU- 4- [I] [C]-A-[A], according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" as well as Section requirements.
- B. Install roofing according to roofing manufacturer's written instructions and applicable recommendations of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing" and as follows:
 - 1. Deck Type: [N (nailable)] [I (insulated)] [C (concrete or nonnailable)].
 - 2. Base Sheet: One.
 - 3. Number of Ply Sheets: Three.
 - 4. Surfacing Type: A (aggregate).
 - 5. Mineral-granule-surfaced cap sheet is in addition to number of ply sheets specified.
- C. Start installation of built-up roofing in presence of manufacturer's technical personnel.
- D. Where roof slope exceeds 1/2 inch per 12 inches (1:24), install built-up roofing sheets parallel with slope.
 - 1. Backnail built-up roofing sheets to [nailer strips] [substrate] according to roofing manufacturer's written instructions.
- E. Coordinate installation of roofing so insulation and other components of built-up roofing not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed built-up roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.
2. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.7 ROOFING MEMBRANE INSTALLATION

- A. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
- B. Install lapped base-sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
 1. Mechanically fasten to nailable substrate.
 2. Spot or strip mop vented base sheet to substrate with hot roofing asphalt.
 3. Adhere to non-nailable or insulated substrate in a solid mopping of hot roofing asphalt.
- C. Install three ply sheets starting at low point of roofing. Align ply sheets without stretching. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane. Shingle in direction to shed water. Extend ply sheets over and terminate beyond cants.
 1. Embed each ply sheet in a solid mopping of hot roofing asphalt applied at rate required by roofing manufacturer, to form a uniform membrane without ply sheets touching.
- D. Cap Sheet: Install lapped granulated cap sheet starting at low point of roofing. Offset laps from laps of preceding ply sheets, and align cap sheet without stretching. Lap in direction to shed water. Extend cap sheet over and terminate beyond cants.
 1. Embed cap sheet in a solid mopping of hot roofing asphalt applied at rate required by built-up roofing manufacturer.
- E. Aggregate Surfacing: After installing and testing roofing, base flashing, and stripping, promptly apply flood coat to roof surface with 60 lb/100 sq. ft. (3.0 kg/sq. m) of hot roofing asphalt. While flood coat is hot and fluid, cast the following average weight of aggregate in a uniform course:
 1. Aggregate Weight: 400 lb/100 sq. ft. (20 kg/sq. m).
 2. If aggregate surfacing is delayed, promptly apply glaze coat of hot roofing asphalt at a rate of 10 lb/100 sq. ft. (0.5 kg/sq. m).

- F. Glaze coat roofing surface with hot roofing asphalt applied at a rate of 10 to 15 lb/100 sq. ft. (0.5 to 0.75 kg/sq. m).

3.8 FLASHING AND STRIPPING INSTALLATION

- A. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof; secure to substrates according to built-up roofing manufacturer's written instructions and as follows:
 - 1. Prime substrates with asphalt primer if required by built-up roofing manufacturer.
 - 2. Backer-Sheet Application: Mechanically fasten backer sheet to walls or parapets. Adhere backer sheet over built-up roofing at cants in [a solid mopping of hot roofing asphalt] [cold-applied adhesive].
 - 3. Backer-Sheet Application: Adhere backer sheet to substrate in [a solid mopping of hot roofing asphalt] [cold-applied adhesive].
 - 4. Flashing-Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C). Apply hot roofing asphalt to back of flashing sheet if recommended by roofing manufacturer.
 - 5. Flashing-Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing manufacturer.
 - 6. Flashing-Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing manufacturer.
 - 7. Flashing-Sheet Application: Torch apply flashing sheet to substrate.
- B. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above built-up roofing and 4 inches (100 mm) onto field of built-up roofing.
- C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
 - 1. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement.
- D. Install stripping according to roofing manufacturer's written instructions, where metal flanges and edgings are set on built-up roofing.
 - 1. Flashing-Sheet Stripping: Install flashing-sheet stripping in a continuous coating of asphalt roofing cement or in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C), and extend onto roofing membrane.
 - 2. Flashing-Sheet Stripping: Install flashing-sheet stripping by heat welding and extend onto roofing membrane.
 - 3. Built-up Stripping: Install stripping of not fewer than two roofing ply sheets, setting each ply in a continuous coating of asphalt roofing cement or in a solid mopping of

hot roofing asphalt, and extend onto roofing membrane 4 inches (100 mm) and 6 inches (150 mm), respectively.

- E. Roof Drains: Set 30-by-30-inch (760-by-760-mm) metal flashing in bed of asphalt roofing cement on completed built-up roofing. Cover metal flashing with built-up roofing cap-sheet stripping, and extend a minimum of 6 inches (150 mm) beyond edge of metal flashing onto field of built-up roofing. Clamp built-up roofing, metal flashing, and stripping into roof-drain clamping ring.
 - 1. Install stripping according to roofing manufacturer's written instructions.

3.9 WALKWAY INSTALLATION

- A. Walkway Pads: Install walkway pads, using units of size indicated or, if not indicated, of manufacturer's standard size, according to walkway pad manufacturer's written instructions.
 - 1. Set walkway pads in additional pour coat of hot roofing asphalt after sweeping away loose aggregate surfacing.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.
 - 1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - c. Flood each area for 24 hours.
 - d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - e. Testing agency shall prepare survey report indicating locations initial leaks, if any, and final survey report.
 - 2. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).

- B. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of built-up roofing as follows:
 - 1. Determine approximate quantities of components within built-up roofing according to ASTM D 3617.
 - 2. Examine test specimens for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Built-up Roofing."
 - 3. Repair areas where test cuts were made according to roofing manufacturer's written instructions.
- C. Repair or remove and replace components of built-up roofing where test results or inspections indicate that they do not comply with specified requirements.
 - 1. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.11 PROTECTING AND CLEANING

- A. Protect built-up roofing from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove built-up roofing that does not comply with requirements, repair substrates, and repair or reinstall roofing to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.12 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
 - 1. Owner: <Insert name of Owner>.
 - 2. Address: <Insert address>.
 - 3. Building Name/Type: <Insert information>.
 - 4. Address: <Insert address>.
 - 5. Area of Work: <Insert information>.

6. Acceptance Date: _____.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/s)>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this

Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

END OF SECTION

07 52 16 – STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hybrid roofing system that combines built-up ply sheets with styrene-butadiene-styrene (SBS)-modified bituminous membrane roofing.
2. Roof insulation.

B. Related Requirements:

1. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
2. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

- A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Roofing manufacturer's representative shall inspect and accept the substrate prior to the application of any roofing materials.
3. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
4. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

5. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
6. Review structural loading limitations of roof deck during and after roofing.
7. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
8. Review governing regulations and requirements for insurance and certificates if applicable.
9. Review temporary protection requirements for roofing system during and after installation.
10. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
 2. Product Data: For adhesives and sealants, indicating VOC content.
 3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:
 1. Base flashings and membrane terminations.
 2. Tapered insulation, including slopes.
 3. Crickets, saddles, and tapered edge strips, including slopes.
 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- D. Samples for Verification: For the following products:
 1. Cap sheet, of color required.
 2. Flashing sheet, of color required.
 3. Aggregate surfacing material in gradation and color required.
 4. Walkway pads or rolls, of color required.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer manufacturer and testing agency.
- B. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - 1. Submit evidence of complying with performance requirements.
- C. Product Test Reports: For components of membrane roofing system, for tests performed by manufacturer and witnessed by a qualified testing agency.
- D. Research/Evaluation Reports: For components of membrane roofing system, from ICC-ES.
- E. Field quality-control reports.
- F. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is FM Global approved for membrane roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, substrate board, roofing accessories, and other components of roofing system.
 - 2. Warranty Period: 20 years from date of Substantial Completion. No Dollar Limit.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as membrane roofing, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, and walkway products, for the following warranty period:
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Carlisle SynTec Incorporated.
 - 2. Johns Manville; a Berkshire Hathaway Company.
 - 3. Sika Sarnafil.
 - 4. Soprema
 - 5. Or equal.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.
 - 1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.
- C. FM Global Listing: Roofing, base flashings, and component materials shall comply with requirements in FM Global 4450 or FM Global 4470 as part of a roofing system, and shall be listed in FM Global's "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
 - 1. Fire/Windstorm Classification: Class 1A-60.
 - 2. Hail-Resistance Rating: MH.
- D. Energy Performance: Roofing products shall be compliant with 2016 California Energy Code, Title 24, Part 6 and 2016 California Green Building Standards Code, Title 24, Part 8; "Cool Roof", tested and labeled by the Cool Roof Rating Council (CRRRC).
 - 1. Low-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.63 Minimum Thermal Emittance: 0.75 or minimum SRI value of 75.
 - 2. Steep-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.20 Minimum Thermal Emittance: 0.75 or minimum SRI value of 16.

2.3 ROOFING SHEET MATERIALS

- A. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
- B. Base Sheet: ASTM D 4601, Type II, SBS-modified asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.
 - 1. Weight: 50 lb/100 sq. ft. (2.4 kg/sq. m) , minimum.
- C. Glass-Fiber Base-Ply Sheet: ASTM D 2178, [**Type IV**] [**Type VI**], asphalt-impregnated, glass-fiber felt.
- D. SBS-Modified Ply Sheet: ASTM D 4601, Type II, SBS-modified asphalt-impregnated and -coated sheet, with glass-fiber-reinforcing mat, dusted with fine mineral surfacing on both sides.

- E. Roofing Membrane Sheet: ASTM D 6163, Grade S, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers); smooth surfaced; suitable for application method specified.
- F. Granule-Surfaced Roofing Cap Sheet: ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers); granule surfaced; suitable for application method specified, and as follows:
 - 1. Granule Color: White.

2.4 BASE FLASHING SHEET MATERIALS

- A. Backer Sheet: ASTM D 4601, Type II, asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.
- B. Granule-Surfaced Flashing Sheet: ASTM D 6163, Grade G, Type I or II, SBS-modified asphalt sheet (reinforced with glass fibers); granule surfaced; suitable for application method specified, and as follows:
 - 1. Granule Color: White.
- C. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668, Type I.

2.5 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.
 - 1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
- B. Asphalt Primer: ASTM D 41/D 41M.
- C. Roofing Asphalt: ASTM D 312, Type IV.
- D. Cold-Applied Adhesive: Roofing system manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with roofing membrane and base flashings.
- E. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required by roofing system manufacturer for application.
- F. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.
- G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing

components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

- H. Roofing Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 (2.36-mm) sieve and 98 percent of mass retained on No. 40 (0.425-mm) sieve, color to match roofing.
- I. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

2.6 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/2 inch (13 mm) thick, factory primed.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening substrate board to roof deck.
- C. Glass-Fiber Felt: ASTM D 2178, Type IV, asphalt impregnated.

2.7 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Global-approved roof insulation.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 3, felt or glass-fiber mat facer on both major surfaces.
- C. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
- D. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.
- E. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.8 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 - 1. Modified asphaltic, asbestos-free, cold-applied adhesive.
 - 2. Bead-applied, low-rise, one-component or multicomponent urethane adhesive.
 - 3. Full-spread spray-applied, low-rise, two-component urethane adhesive.
- D. Insulation Cant Strips: ASTM C 728, perlite insulation board.
- E. Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
- F. Wood Nailer Strips: Comply with requirements in [Section 061000 "Rough Carpentry."] [Section 061053 "Miscellaneous Rough Carpentry."]
- G. Tapered Edge Strips: ASTM C 728, perlite insulation board.
- H. Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.
- I. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch (13 mm) thick.
- J. Cover Board: DOC PS 2, Exposure 1, oriented strand board, 7/16 inch (11 mm) thick.
- K. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (6 mm) thick, factory primed.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. Certainteed; GlasRoc.
 - b. Georgia-Pacific Building Products; DensDeck.
 - c. National Gypsum Company; DEXcell FA.
 - d. USG Corporation; Securock Glass Mat Roof Board.
 - e. Or equal.
- L. Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, 1/4 inch (6 mm) thick.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. JM; Invinsa Roof Board.
 - b. USG Corporation; Securock Gypsum-Fiber Roof Board.

c. Or equal.

M. Substrate Joint Tape: 6- or 8-inch- (150- or 200-mm-) wide, coated, glass fiber.

2.9 WALKWAYS

A. Walkway Pads: Reinforced asphaltic composition pads with slip-resisting mineral-granule surface, manufactured as a traffic pad for foot traffic and acceptable to roofing system manufacturer, 1/2 inch (13 mm) thick, minimum.

1. Pad Size: 36 inches by 60 inches.

2. Granule color: White.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch (1.6 mm) out of plane relative to adjoining deck.
5. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
6. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - a. Test for moisture by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with Work of this Section if test sample foams or can be easily and cleanly stripped after cooling.
7. Verify that concrete-curing compounds that impair adhesion of roofing components to roof deck have been removed.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Prime surface of concrete deck with asphalt primer at a rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
- D. Install insulation strips in ribs of acoustical roof decks according to acoustical roof deck manufacturer's written instructions.

3.3 INSTALLATION, GENERAL

- A. Comply with roofing system manufacturer's written instructions.
- B. Asphalt Heating: Heat asphalt to its equiviscous temperature, measured at the mop cart or mechanical spreader immediately before application. Circulate asphalt during heating. Do not raise asphalt temperature above equiviscous temperature range more than one hour before time of application. Do not exceed asphalt manufacturer's recommended temperature limits during asphalt heating. Do not heat asphalt within 25 deg F (14 deg C) of flash point. Discard asphalt maintained at a temperature exceeding finished blowing temperature for more than four hours.
 - 1. Apply hot roofing asphalt within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
- C. Asphalt Heating: Heat and apply SEBS-modified roofing asphalt according to roofing system manufacturer's written instructions.
- D. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 - 1. Fasten substrate board to top flanges of steel deck according to recommendations in FM Global's "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.

2. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.

3.5 INSULATION INSTALLATION

- A. Install one lapped base-sheet course and mechanically fasten to substrate according to roofing system manufacturer's written instructions.
- B. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 degrees.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install insulation with long joints of insulation in a continuous straight line, with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 1. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
- E. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.
- F. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- G. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.
- H. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
 1. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
 2. Set each layer of insulation in a solid mopping of hot roofing asphalt.
 3. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 4. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- I. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

1. Fasten insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
- J. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
1. Fasten first layer of insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 2. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
 3. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt.
 4. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 5. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- K. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together. Tape joints if required by roofing system manufacturer.
1. Fasten cover boards according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 2. Apply hot roofing asphalt or insulation adhesive to underside, and immediately bond cover board to substrate.

3.6 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
1. Install roofing system according to roof assembly identification matrix and roof assembly layout illustrations in NRCA's "The NRCA Roofing and Waterproofing Manual" and to Section requirements.
- B. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing" and as follows:
1. Deck Type [N (nailable)] [I (insulated)] [C (concrete or nonnailable)].

2. Adhering Method: [T (torched)] [M (mopped)] [L (cold-applied adhesive)].
 3. Base Sheet: One.
 4. Number of Glass-Fiber Base-Ply Sheets: Two.
 5. Number of SBS-Modified Asphalt Sheets: One.
 6. Surfacing Type: M (mineral-granule-surfaced cap sheet).
- C. Start installation of roofing in presence of manufacturer's technical personnel.
- D. Where roof slope exceeds 1/2 inch per 12 inches (1:24), install roofing membrane sheets parallel with slope.
1. Backnail roofing sheets to nailer strips according to roofing system manufacturer's written instructions.
- E. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
 2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
 3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.7 BASE-SHEET INSTALLATION

- A. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively.
- B. Install lapped base-sheet course, extending sheet over and terminating beyond cants. Attach base sheet as follows:
1. Mechanically fasten to substrate.
 2. Spot or strip mop to substrate with hot roofing asphalt.
 3. Adhere to substrate in a solid mopping of hot roofing asphalt.

3.8 BASE-PLY SHEET INSTALLATION

- A. Install glass-fiber base-ply sheets according to roofing system manufacturer's written instructions starting at low point of roofing system. Align glass-fiber base-ply sheets without stretching. Extend sheets over and terminate beyond cants.
 - 1. Shingle side laps of glass-fiber base-ply sheets uniformly to ensure that required number of glass-fiber base-ply sheets covers substrate at any point. Shingle in direction to shed water.
 - 2. Embed each glass-fiber base-ply sheet in a continuous void-free mopping of hot roofing asphalt to form a uniform membrane without glass-fiber base-ply sheets touching.

3.9 SBS-MODIFIED BITUMINOUS MEMBRANE INSTALLATION

- A. Install modified bituminous roofing sheet and cap sheet according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, installing as follows:
 - 1. Adhere to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C).
 - 2. Adhere to substrate in cold-applied adhesive.
 - 3. Torch apply to substrate.
 - 4. Unroll roofing sheets and allow them to relax for minimum time period required by manufacturer.
- B. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.
 - 1. Repair tears and voids in laps and lapped seams not completely sealed.
 - 2. Apply roofing granules to cover exuded bead at laps while bead is hot.
- C. Install roofing sheets so side and end laps shed water.

3.10 FLASHING AND STRIPPING INSTALLATION

- A. Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to roofing system manufacturer's written instructions and as follows:
 - 1. Prime substrates with asphalt primer if required by roofing system manufacturer.
 - 2. Backer-Sheet Application: Adhere backer sheet to substrate in a solid mopping of hot roofing asphalt or cold-applied adhesive.

3. Flashing-Sheet Application: Adhere flashing sheet to substrate in a solid mopping of hot roofing asphalt applied at not less than 425 deg F (218 deg C). Apply hot roofing asphalt to back of flashing sheet if recommended by roofing system manufacturer.
 4. Flashing-Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.
 5. Flashing-Sheet Application: Adhere flashing sheet to substrate in asphalt roofing cement at rate required by roofing system manufacturer.
 6. Flashing-Sheet Application: Torch apply flashing sheet to substrate.
- B. Extend base flashing up walls or parapets a minimum of 8 inches (200 mm) above roofing membrane and 4 inches (100 mm) onto field of roofing membrane.
- C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.
1. Seal top termination of base flashing with a strip of glass-fiber fabric set in asphalt roofing cement.
- D. Install roofing cap-sheet stripping where metal flanges and edgings are set on roofing according to roofing system manufacturer's written instructions.
- E. Roof Drains: Set [30-by-30-inch- (760-by-760-mm-)] <Insert dimensions> metal flashing in bed of asphaltic adhesive on completed roofing membrane. Cover metal flashing with roofing cap-sheet stripping, and extend a minimum of [4 inches (100 mm)] [6 inches (150 mm)] beyond edge of metal flashing onto field of roofing membrane. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.
1. Install stripping according to roofing system manufacturer's written instructions.

3.11 WALKWAY INSTALLATION

- A. Walkway Pads: Install walkway pads using units of size indicated or, if not indicated, of manufacturer's standard size, according to walkway pad manufacturer's written instructions.
1. Set walkway pads in cold-applied adhesive.
 2. Set walkway pads in additional pour coat of hot roofing asphalt after aggregate surfacing of modified bituminous roofing membrane.

3.12 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - c. Flood each area for 24 hours.
 - d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - e. Testing agency shall prepare survey report indicating locations initial leaks, if any, and final survey report.
 2. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).
- B. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:
1. Determine approximate quantities of components within roofing membrane according to ASTM D 3617.
 2. Examine test specimens for interply voids according to ASTM D 3617 and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
 3. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.
- C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
1. Notify Architect and Owner 48 hours in advance of date and time of inspection.
- D. Roofing system will be considered defective if it does not pass tests and inspections.
1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.13 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for

deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.14 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

- 1. Owner: <Insert name of Owner>.
- 2. Address: <Insert address>.
- 3. Building Name/Type: <Insert information>.
- 4. Address: <Insert address>.
- 5. Area of Work: <Insert information>.
- 6. Acceptance Date: _____.
- 7. Warranty Period: <Insert time>.
- 8. Expiration Date: _____.

- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

- D. This Warranty is made subject to the following terms and conditions:

- 1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/s)>;

- c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
- 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 - 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 - 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
 - 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
 - 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
 - 7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether

Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.

2. Name: _____.

3. Title: _____.

END OF SECTION

07 52 20 – MODIFIED BITUMEN MEMBRANE ROOFING – 20-YEAR

PART 1 - GENERAL

1.1 DISTRICT REPRESENTATIVE

- A. In this specification section, "District Representative" means the project manager assigned by the District. If the project manager is not from the Maintenance Department, then "District Representative" means both the project manager assigned to the project and a representative assigned by the Maintenance Department. Both individuals must be invited to all meetings where the District Representative is present and both individuals must receive all correspondence related to the roofing.

1.2 SCOPE OF WORK

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.
- B. Provide all labor, equipment, insulation, and materials to install modified bitumen roof system over the properly prepared substrate.
- C. All debris to be swept clean down to deck.
- D. All decking to be inspected before roofing.
- E. Recover deck with Modified Bitumen Roofing System.
- F. Roof deck shall have new coping installed by roofing contractor.
- G. Install felts, SBS+SIS+ES rubber modified Mineral membrane, and Title 24 Coating.
- H. All membrane shall conform to Title 24.
- I. Contractor shall be responsible for proper handling of all gas lines, and electrical system in accordance with applicable codes.
- J. Contractor is to ensure all gas, electrical, and other utilities involved, as part of this contract will be in the same working condition, after roofing project is completed.
- K. There shall be a minimum 8 inches flashing height on all curbs.

1.3 RELATED WORK

- A. Furnish and install specified roofing and related components. Coordinate related work specified in other parts of this specification including, but not limited to, the following:
 - 1. Properly prepared, and clean deck.
 - 2. Repair, re-attach or replace defective decking, if needed.
 - 3. Install new pitch pockets, and fabricate lead flashing at ALL ANGLE support.
 - 4. Correctly anchor all conduit lines onto blocking. All new wood sleepers are required.
 - 5. Wood curbs for conduits, shall match existing that is being replaced.

6. Properly support all pipes and equipment with blocking set on protection pads.
7. All existing roof mounted gas lines shall be in the same working condition as when the project commenced.
8. All drains are to be replaced with new drain assemblies. Note this includes: basket, clamps, rings, nuts, bolts, pots and all other accessories. Drain manufacturer shall be JR Smith, or equal. All drains and downspouts are to be tested before roof tearoff. If leakage is detected, owner's representative is to be contacted. After roof assembly is completed, drains are to be tested again and if leakage is detected, owner's representative is to be contacted.

- I. ASTM D - 2824 Specification for Aluminum-Pigmented Asphalt Roof Coating
- J. ASTM D - 4601 Specification for Asphalt-Coated Glass Fiber Base Sheet Used in Roofing
- K. ASTM D - 5147 1991 Test Method for Sampling and Testing Modified Bituminous Sheet Materials All submittals for approval shall come from independent testing agency, no data tested in manufacturer's facility or underwritten, or witnessed in manufacturer's laboratory shall be accepted.
- L. ASTM E - 108 Test Methods for Fire Test of Roof Coverings
- M. NRCA National Roofing Contractors Association
- N. UL Underwriters Laboratories
- O. WH Warnock Hersey

1.5 SUBMITTALS

- A. Submit under provisions of district standards.
- B. Product Data for each type of product specified include manufacturer's technical product data, installation instructions, and recommendations for each type of roofing product required. Include data substantiating that materials comply with specified requirements.
- C. Show evidence that the products and materials are manufactured in the United States and that materials provided conform to all requirements specified herein, and are chemically and physically compatible with each other and are suitable for inclusion within the total roof system specified herein.

- D. Show evidence that the Installer specializes in modified bituminous roof application with a minimum 5 years of experience and who is certified by the roofing system manufacturer as qualified to install manufacturer's roofing materials.
 - E. Submit certification that the roof system furnished is Tested and Approved by Factory Mutual as a Class 1A roof system with 1-60 Wind Uplift Requirements, or Listed by Underwriters Laboratories or Warnock Hersey for external fire tests of ASTM E-108
 - F. Any deficiencies in performance, warranty terms or improper submittal procedure will constitute grounds for immediate rejection or alternate.
 - G. For all modified bituminous sheet roofing include independent test data according to ASTM D-5147 "Standard Test Methods for Sampling and Testing Modified Bituminous Sheet Material" substantiating that material comply with specified requirements.
 - H. Unexecuted Manufacturer's warranty
 - I. Certified copy of ISO 9001
 - J. Provide a sample of each product, including but not limited to:
 - 1. A sample of each modified membrane sheet.
 - 2. A sample of modified integrated base flashing.
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Roofing system manufacturer shall have a minimum of 10 years of experience in manufacturing modified bitumen roofing products in the United States and be ISO 9001 certified.
 - B. Installer Qualifications: Installer (Roofing) shall be specializing in modified bituminous roof application with minimum 5 years of experience and who is certified by the roofing system manufacturer as qualified to install manufacturer's roofing materials.
 - C. It is the intent of this specification to provide a roof system with an external fire rating. The components shall be as required by the membrane manufacturer to provide a Class A fire resistance rating.
 - D. Installer's Field Supervision: Require Installer to maintain a full-time Supervisor/Forman on the job site during all phases of modified bituminous sheet roofing work and at any time roofing work is in progress: proper supervision of workmen shall be maintained. A copy of the specification shall be in the possession of the Supervisor/Foremen and on the roof at all times.
 - E. It shall be the Contractor's responsibility to respond immediately to correction of roof leakage during construction.
 - F. Pre-application Roofing Conference: Approximately 2 weeks before scheduled commencement of modified bitumen sheet roof system and associated work, meet at Project site with Installer, installer of each component of associated work, installers of deck or substrate construction to receive roofing work, installers of rooftop units and other work if any), District Representative, roofing system manufacturer's representative, and other representatives directly concerned with performance of the Work, including (where applicable) Owner's insurers, test agencies, and governing authorities. Objectives to include:
 - 1. Review foreseeable methods and procedures related to roofing work.

2. Tour representative areas of roofing substrates (decks) inspect and discuss condition of substrate, roof drains, curbs, penetrations, and other preparatory work performed by other trades.
3. Review structural loading limitations of deck and inspect deck for loss of flatness and for required attachment.
4. Review roofing systems requirements (drawings, specifications, and other contract documents).
5. Review required submittals, both completed and yet to be completed.
6. Review and finalize construction schedule related to roofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
7. Review required inspection, testing, certifying, and material usage accounting procedures.
8. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions, including possibility of temporary roofing (if not a mandatory requirement).
9. Record (contractor) discussion of conference, including decisions and agreements (or disagreements) reached, and furnishes copy of record to each party attending. If substantial disagreements exist at conclusion of conference, determine how disagreements will be resolved and set date for reconvening conference.
10. Review notification procedures for weather or non-working days.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site with seals and labels intact, in manufacturer's original containers, dry and undamaged.
- B. Store and handle roofing sheets in a dry, well-ventilated, weather-tight place to ensure no possibility of significant moisture exposure. Store rolls of felt and other sheet materials on pallets or other raised surface. Stand all roll materials on end. Cover all goods with a canvas tarpaulin or other breathable material (not polyethylene).
- C. Do not leave unused rolled goods on the roof overnight or when roofing work is not in progress unless protected from weather and other moisture sources.
- D. Handle and store materials or equipment in a manner to avoid significant or permanent deflection of deck.

1.8 Manufacturer's Inspections

- A. When the project is in progress, the Roofing System Manufacturer will provide the following:
 1. Keep the District Representative informed as to the progress and quality the work as observed.
 2. Provide daily job site inspections.
 3. Report to the District Representative/Architect in writing, any failure or refusal of the Contractor to correct unacceptable practices called to the Contractor's attention.

4. Confirm, after completion of the project and based on manufacturer's observations and tests, that manufacturer has observed no applications procedures in conflict with the specifications other than those that may have been previously reported and corrected.

1.9 PROJECT CONDITIONS

- A. Weather Condition Limitations: Do not apply roofing membrane during inclement weather or when a 40% chance of precipitation is expected.
- B. Do not apply roofing membrane to damp deck surface.
- C. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.
- D. Proceed with roofing work only when existing and forecasted weather conditions will permit unit of work to be installed in accordance with manufacturer's recommendations and warranty requirements.

1.10 SEQUENCING AND SCHEDULING

- A. Sequence installation of modified bituminous sheet roofing with related units of work specified in other sections to ensure that roof assemblies, including roof accessories, flashing, trim, and joint sealers, are protected against damage from effects of weather, corrosion, and adjacent construction activity.
- B. All work must be fully completed on each day. Phased construction will not be accepted. Contractor must glaze any exposed felts, before next day's work.

1.11 WARRANTY

- A. Membrane manufacturer, upon completion of installation, and acceptance by the District Representative, will supply to the Owner a 20-year partnership pledge warranty. Upon completion of installation, and acceptance by the owner all metal integrated base flashings, adhesive, modified sheet, wall cover panels, coping, shall be from single source of responsibility. All coping and metal accessories to be sourced, from The Membrane Manufacturer.
- B. Contractor will submit a minimum of a five-year labor warranty to the membrane manufacturer with a copy directly to District Representative.

PART 2 - PRODUCTS

2.1 GENERAL

- A. When a particular trade name or performance standard is specified it shall be indicative of a standard required.
- B. Provide products, and independent test data confirming tear strength, and tensile strength, along with all other pertinent data as specified.
- C. Any item or materials submitted as an alternate to the manufacturer specified must comply in all respects as to the quality and performance, including job site investigation of the brand name specified.

2.2 BITUMINOUS MATERIALS

- A. Asphalt Primer: V.O.C. compliant, ASTM D-41.
- B. Asphalt Roofing Mastic: V.O.C. compliant, ASTM D-2822, and Type II.
- C. Asphalt: Shall meet ASTM Specification D-312 Type III.

2.3 SHEET MATERIALS

A. Felts Type VI Felts

- 1. Minimum 2 plies of ASTM D2178, Type VI glass fiber roofing felt bonded to prepared substrate with hot bitumen, to be sourced, and purchased from the membrane manufacturer.

B. Base Sheet minimum requirements:

	Machine Direction	Cross Machine Direction
1. Load Strain at 77 degrees F	100	100
2. Elongation at Max Load%	5	5
3. Tear Strength at 77 degrees F, lbf.	150	150

C. Mineral Cap Sheet (or Cap Sheet) minimum requirements:

	Machine Direction	Cross Machine Direction
1. Load Strain at 77 degrees F	100	100
2. Max Load, lbf.	3	3
3. Tear Strength at 77 degrees F	150	150
4. Low Temperature Flexibility degrees F	Passes -30	

2.4 SURFACING

- A. Mineral Cap Sheet, will be coated with pyramic, Title 24 Coating at the rate of 1.5 gallon / 100 square feet, (2 Coats).

2.5 RELATED MATERIALS

- A. All flashings, (drip edge, wall flashings), shall be a high gloss white, steel flashing system with a self-ventilation, movement absorbing design. This shall be applicable for the drip edge, and base flashings, if their existing conditions are metal flashings. All base flashings, that have existing mineral cap sheet flashings, shall be replaced by Title 24 Mineral Cap sheet base flashings. If metal base flashings the flashing system shall be comprised of aluminum-zinc alloy steel. The modified sheet attached to the termination strip shall be either torched into the field membrane, or set in hot or cold adhesive. Sheet shall be pained, by the contractor with urethane coating, to be purchased from the membrane manufacturer. The installation shall be 1 gallon/100 square feet. 2 Coats are required. Metal wall cover panels, shall be stucco embossed, pre-fab wall cover panel designed for additional rigidity with no exposed fasteners. Panels shall have 13" coverage width (3" in S-Lock), up to 12 feet. Metal wall panels will be installed, by certified licensed membrane contractor. Metal wall panels will be warranted, and manufactured, by the modified membrane sheet manufacturer. All stucco walls are to be covered by wall covering panel,

with inside, and outside corner panels, which shall be (.0157 nom.) They will be pre-fab inside, and outside corner pieces for wall covering panels. (Female interlock each side accepts male edge of wall cover panel or adjoining corner panel.) New coping will be installed. All coping to be sourced, and warranted by the modified membrane manufacturer.

- B. Nails and Fasteners: Non-ferrous metal or galvanized steel, except that hard copper nails shall be used with copper; aluminum or stainless steel nails shall be used with aluminum; and stainless steel nails shall be used with stainless steel. Nails and fasteners shall be flush-driven through flat metal discs of not less than 1 inch diameter. Metal discs may be omitted when one piece composite nails or fasteners with heads not less than 1 inch diameter are used.
- C. Metal Discs: Flat discs or caps of zinc-coated sheet metal not lighter than 28 gauges and not less than 1 inch in diameter. Discs shall be formed to prevent dishing. Bell or cup-shaped caps are not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrate surfaces to receive modified bitumen sheet roofing system and associated work and conditions under which roofing will be installed. Do not proceed with roofing until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION REQUIREMENTS

- A. Cooperate with manufacturer, inspection and test agencies engaged or required to perform services in connection with installing modified bitumen roofing system.
- B. Insurance/Code Compliance: Where required, install and test modified bitumen roofing system to comply with governing regulations and specified insurance requirements.
- C. Protect other work from spillage of modified bitumen roofing materials, and prevent liquid materials from entering or clogging drains and conductors. Replace or restore other work damaged by installations of modified bituminous roofing system work. Note: Where there are existing roof curbs that have been roofed, they are to be demolished, new decking installed, and to be re-roofed per specifications.
- D. Coordinate installing roofing system components so that insulation and roofing plies are not exposed to precipitation or left exposed overnight. Provide cut offs at end of each day's work to cover exposed ply sheets and insulation with two (2) plies of #15 organic felt set in full moppings of bitumen and with joints and edges sealed with roofing cement. Remove cut offs immediately before resuming work. Install new counter-flashing, furnished, and warranted by membrane manufacturer.
- E. Asphalt Bitumen Heating: Heat and apply bitumen according to EVT Method as recommended by NRCA. Do not raise temperature above minimum normal fluid-holding temperature necessary to attain EVT (plus 5° F at point of application) more than 1 hour prior to time of application. Determine flash point, finished blowing temperature, EVT, and fire-safe handling temperature of bitumen either by information from manufacturer or by suitable test. Do not exceed recommended temperature limits during bitumen heating. Do not heat to a temperature higher than 25° below flash point. Discard bitumen that has been

held at temperature exceeding finishing blowing temperature (FBT) for more than 3 hours. Keep kettle lid closed except when adding bitumen.

- F. Bitumen; Mopping Weights: For interply mopping, apply bitumen at the rate of approximately 25 lbs of asphalt per roof square (plus or minus 25 percent on a total job average).
- G. Substrate joint penetrations: Prevent bitumen from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.
- H. Apply roofing materials as specified herein, unless recommended otherwise by manufacturer's instructions. Keep roof material dry before and during application. Do not permit phased construction. Complete application of roofing plies, modified sheet and flashing in a continuous operation. Begin and apply only as much roofing in one day as can be completed that same day. If phased construction is desired, roofing contractor shall glaze felts prior to leaving jobsite and beginning following day's work.
 - 1. (Metal Decks) Mechanically attach 2" of Polyisocyanurate insulation, into metal deck, with #12, or #14 olympic fastener, at the rate of 1 each every square foot. Then in Type III Asphalt, mop 1/2" fiberboard insulation, to ISO board at the rate of 25bs/ 100 square feet. Mop Base Sheet, Mop 2 each Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/ 100 square feet. (2 Coats) (As specified)
 - 2. (Structural Concrete Decks) Prime existing deck with Primer, at the rate of 1 gallon/ 100 square feet. Sprinkle Mop 1/2" fiberboard insulation, in Type III Asphalt. Mop Base Sheet, Mop 2 each Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/100 square feet. (2 Coats) (As specified)
 - 3. (Wood Decks). Roll out red rosin paper, then mechanically attach Base Sheet. Mop 2 each Type VI Felts, and Cap Sheet, with Pyramic Coating, 1.5 gallons/100 square feet. (2 Coats) (As specified)
 - 4. (Metal Decks with Lightweight Concrete) Mechanically attach 1" of Polyisocyanurate insulation, down through lightweight concrete, into metal deck, with #12 or #14 olympic fastener, at the rate of 1 every square foot. Mop 1/2" fiberboard insulation, in Type III Asphalt at the rate of 25 lbs/100 square feet. Mop Base Sheet. Mop 2 each Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/100 square feet. (2 Coats) (As specified).
 - 5. (If Applicable) all slopes of greater than 1-1/2:12 require back-nailing to prevent slippage of the ply sheets. Use ring or spiral shank one-inch cap nails, or screws and plates at a rate of one (1) fastener per ply (including the modified membrane), at each insulation stop. Place insulation stops at 16 ft o.c. for slopes less than 3:12 and (4) ft o.c. for slopes greater than 3:12. On non-insulated systems, nail each ply directly into the deck at the rate specified above. When slope exceeds 1:12, strapping plies is recommended to help prevent slippage. Install for (4) additional fasteners at the upper edge of the modified bitumen sheet when strapping the plies.
- I. Cut-Offs At end of each day's roofing installation, protect exposed edge of incomplete work, including ply sheets. Provide temporary covering of two plies of #15 organic roofing felt set in full moppings of bitumen with joins and edges sealed.
- J. All curbs extended shall be a minimum of 8 inches in height. New curbs, to be mechanically attached, with treated lumber, and Flashed with Cap Sheet. Metal pans to be mechanically attached to curbs, and drip edge shall be 3.5 inches below field of curb.

- K. All designated conduit, shall be carefully lifted, during tear off process, and conduit will be placed on new wood blocks to match existing.

3.3 SAFETY REQUIREMENTS

- A. All application, material handling, and associated equipment shall conform to and be operated in conformance with OSHA safety requirements.
- B. Comply with federal, state, local, and fire, and safety requirements.
- C. Advise owner whenever work is expected to be hazardous to owner, employees, and/or operators.
- D. Maintain a crewman as a floor area guard whenever roof decking is being repaired or replaced.
- E. Maintain fire extinguisher within easy access whenever power tools are being used.

3.4 WASTE DISPOSAL

- A. Do not re-use, re-cycle or dispose of material manufacturer's product containers except in accordance with all applicable regulations. The user of manufactured products is responsible for proper use and disposal of product container. Asbestos material shall be treated in accordance with local codes.

3.5 CALIFORNIA PROPOSITION 65

- A. Contractor will post notices, make all communications and otherwise comply with California Proposition 65 requirements concerning notification of those who may be exposed to Prop 65 listed chemicals, as revised from time to time. Contractor will also comply with requirements concerning the safe use and handling of roofing material, including preventing vapors from entering buildings.

3.6 PREPARATION

- A. Contractor shall have sole responsibility of accuracy of all measurements and estimates of materials, quantities and sizes. Make sure roof is cleaned down to deck, and insulation.
- B. Plug all drains to prevent debris entry and remove all clamping rings and related materials and store for later re-installation. Install new drains, with lead flanges.
- C. Sweep deck clean to remove all dirt and debris and dispose of away from site.
- D. Deck Repair: Replace all defective decking with like materials, following manufacturer's recommendation.

3.7 FELT PLY INSTALLATION

- A. Mop base sheet and install (2) each Type VI Felt sheets, in 25 lbs per square of bitumen shingled uniformly to achieve two plies throughout over the prepared substrate. Shingle in proper direction to shed water on each area of the roof.
- B. Lap ply sheet end eight inches (8"). Stagger end laps twelve inches (12") minimum.
- C. Extend plies two inches (2") beyond top edges of wall and projection bases.

- D. Install Mineral Cap Sheet Title 24 base flashings, and wall cover panels.
 - E. The modified membrane shall then be solidly bonded to the base layers with specified asphalt at the rate of 35lbs/ 100 square feet. The roll must push a puddle of asphalt in front of it with asphalt slightly visible at all side laps. Care should be taken to eliminate air entrapment under the membrane. Apply pressure to all seams to ensure that laps are solidly bonded to substrate. Subsequent rolls of modified membrane shall be installed across the roof, as above, with a minimum of four-inch (4") side laps and eight-inch (8") end laps. The end laps shall be staggered. The modified membrane shall be laid in the same direction as the underlayments, but the laps shall not coincide with the laps of the base layers. Apply asphalt no more than five feet ahead of each roll being embedded. The modified membrane will be coated with pyramic Title 24 Coating, at the rate of 1.5 gallons per 100 square feet. (2 Coats)
- 3.8 PLUMBING STACK, AND ALL OTHER MISCELLANEOUS STACKS
- A. Minimum stack height is twelve inches.
 - B. Run roof system over the roof. Seal the base of the stack with elastomeric sealant.
 - C. Prime flange of new sleeve. Install properly-sized sleeves set in a 1/4" base of elastomeric sealant.
 - D. Install base flashing ply bitumen.
 - E. Install modified membrane in bitumen.
 - F. Caulk the intersection of the membrane and the base flashing with elastomeric sealant.
 - G. Turn sleeve a minimum of one inch down inside of stack.
- 3.9 SCUPPER THROUGH WALL
- A. Inspect the nailer to assure proper attachment and configuration.
 - B. Run one ply over nailer up the overflow, in the scupper hole and flash up. Install a scupper box in 1/4-inch bed of mastic. Assure all box seams are soldered and have a minimum four (4)-inch flange. Make sure all corners are closed and soldered. Prime scupper at a rate of one hundred square feet per gallon and allow to dry. Fasten flange of scupper box every three inches o.c. staggered. Strip in flange of scupper box with base flashing ply covering entire area with six-inch overlap on to the field of the roof and wall flashing. Install a second ply of modified flashing ply in bitumen over the base flashing ply, nine inches on to the field of the roof. Apply a three-course application of mastic and mesh at all seams.
- 3.10 ROOF DRAIN
- A. Plug drain to prevent debris from entering plumbing
 - B. Install to drain minimum of twenty four inches from center of drain.
 - C. Run roof system plies over drain. Cut out plies inside drain bowl.
 - D. Set lead/copper flashing (30-inch square minimum) in 1/4-inch bed of mastic. Run lead/copper into drain a minimum of two inches. Prime lead/copper at a rate of one hundred square feet per gallon, and allow to dry. Install base flashing 40-inch square minimum in bitumen. Install clamping ring and assure that all plies are under the clamping ring. Remove drain plug and install strainer.

3.11 HEAT STACK

- A. Minimum stack height is twelve inches
- B. Run roof system over the entire surface of the roof. Seal the base of the stack with elastomeric sealant.
- C. Prime flange of new sleeve. Install properly sized sleeves set in 1/4-inch bed of roof cement.
- D. Install base flashing ply in bitumen.
- E. Install modified membrane in bitumen.
- F. Caulk the intersection of the membrane with elastomeric sealant.
- G. Install new collar over cape. Weld collar or install stainless steel draw band.

3.12 CLEANING

- A. Remove drippage of bitumen from all walls, windows, floors, ladders and finished surfaces.
- B. In areas where finished surfaces are soiled by asphalt or any other sources of soiling caused by work of this section, consult manufacturer of surfaces for cleaning advice and conform to their instructions.

3.13 FINAL INSPECTION

- A. At completion of roofing installation and associated work, meet with installer, installers of associated work, district representative, roofing system manufacturer's representative and other representatives directly concerned with the performance of the roofing system.
- B. Walk roof surface areas of the building, inspect perimeter building edges as well as flashing of roof penetrations, walls, curbs and other equipment. List all items requiring correction or completion and furnish copy of list to each representative attending inspection.
- C. The roofing system manufacturer reserves the right to request a thermographic scan of roof during final inspection to determine if any damp or wet materials have been installed. The thermographic scan shall be provided by the roofing contractor at roofing contractor's expense.
- D. Repair, or replace, as required, deteriorated or defective work found at time of inspection to a condition free of damage and deterioration at time of substantial completion and according to warranty requirements.
- E. The contractor is to notify the district's facilities department upon completion of corrections.
- F. Following the final inspection, acceptance will be made in writing by the material manufacturer.

END OF SECTION

07 52 30 – MODIFIED BITUMEN MEMBRANE ROOFING – 30-YEAR

PART 1 - GENERAL

1.1 DISTRICT REPRESENTATIVE

- A. In this specification section, "District Representative" means the project manager assigned by the District. If the project manager is not from the Maintenance Department, then "District Representative" means both the project manager assigned to the project and a representative assigned by the Maintenance Department. Both individuals must be invited to all meetings where the District Representative is present and both individuals must receive all correspondence related to the roofing.

1.2 SCOPE OF WORK

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.
- B. Provide all labor, equipment, insulation, and materials to install modified bitumen roof system over the properly prepared substrate.
- C. All debris to be swept clean down to deck.
- D. All decking to be inspected before roofing.
- E. Recover deck with Modified Bitumen Roofing System.
- F. Roof deck shall have new coping installed by roofing contractor.
- G. Install felts, SBS+SIS+ES rubber modified Mineral membrane, and Title 24 Coating.
- H. All membrane shall conform to Title 24.
- I. Contractor shall be responsible for proper handling of all gas lines, and electrical system in accordance with applicable codes.
- J. Contractor is to ensure all gas, electrical, and other utilities involved, as part of this contract will be in the same working condition, after roofing project is completed.
- K. There shall be a minimum 8 inches flashing height on all curbs.
- L. Modified sheet shall have Kevlar, and 7% post-consumer recycle content.

1.3 RELATED WORK

- A. Furnish and install specified roofing and related components. Coordinate related work specified in other parts of this specification including, but not limited to, the following:
 - 1. Properly prepared, and clean deck.
 - 2. Repair, re-attach or replace defective decking, if needed.
 - 3. Install new pitch pockets, and fabricate lead flashing at ALL ANGLE support.
 - 4. Correctly anchor all conduit lines onto blocking. All new wood sleepers are required.

5. Wood curbs for conduits, shall match existing that is being replaced.
6. Properly support all pipes and equipment with blocking set on protection pads.
7. All existing roof mounted gas lines shall be in the same working condition as when the project commenced.
8. All drains are to be replaced with new drain assemblies. Note this includes: basket, clamps, rings, nuts, bolts, pots and all other accessories. Drain manufacturer shall be JR Smith, or equal. All drains and downspouts are to be tested before roof tearoff. If leakage is detected, owner's representative is to be contacted. After roof assembly is completed, drains are to be tested again and if leakage is detected, owner's representative is to be contacted.

1.5 SUBMITTALS

- A. Submit under provisions of district standards.
- B. Product Data for each type of product specified include manufacturer's technical product data, installation instructions, and recommendations for each type of roofing product required. Include data substantiating that materials comply with specified requirements.
- C. Show evidence that the products and materials are manufactured in the United States and that materials provided conform to all requirements specified herein, and are chemically and

physically compatible with each other and are suitable for inclusion within the total roof system specified herein.

- D. Show evidence that the Installer specializes in modified bituminous roof application with a minimum 5 years of experience and who is certified by the roofing system manufacturer as qualified to install manufacturer's roofing materials.
 - E. Submit certification that the roof system furnished is Tested and Approved by Factory Mutual as a Class 1A roof system with 1-60 Wind Uplift Requirements, or Listed by Underwriters Laboratories or Warnock Hersey for external fire tests of ASTM E-108
 - F. Any deficiencies in performance, warranty terms or improper submittal procedure will constitute grounds for immediate rejection or alternate.
 - G. For all modified bituminous sheet roofing include independent test data according to ASTM D-5147 "Standard Test Methods for Sampling and Testing Modified Bituminous Sheet Material" substantiating that material comply with specified requirements.
 - H. Unexecuted Manufacturer's warranty
 - I. Certified copy of ISO 9001
 - J. Provide a sample of each product, including but not limited to:
 - 1. A sample of each modified membrane sheet.
 - 2. A sample of modified integrated base flashing.
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Roofing system manufacturer shall have a minimum of 10 years of experience in manufacturing modified bitumen roofing products in the United States and be ISO 9001 certified.
 - B. Installer Qualifications: Installer (Roofing) shall be specializing in modified bituminous roof application with minimum 5 years of experience and who is certified by the roofing system manufacturer as qualified to install manufacturer's roofing materials.
 - C. The roofing components shall provide a Class A fire resistance rating.
 - D. Installer's Field Supervision: Require Installer to maintain a full-time Supervisor/Forman on the job site during all phases of sheet roofing work and at any time roofing work is in progress: proper supervision of workmen shall be maintained. A copy of the specification shall be in the possession of the Supervisor/Foremen and on the roof at all times.
 - E. It shall be the Contractor's responsibility to respond immediately to correction of roof leakage during construction.
 - F. Pre-application Roofing Conference: Approximately 2 weeks before scheduled commencement of modified bitumen sheet roof system and associated work, meet at Project site with Installer, installer of each component of associated work, installers of deck or substrate construction to receive roofing work, installers of rooftop units and other work if any), District Representative, roofing system manufacturer's representative, and other representatives directly concerned with performance of the Work, including (where applicable) Owner's insurers, test agencies, and governing authorities. Objectives to include:
 - 1. Review foreseeable methods and procedures related to roofing work.

2. Tour representative areas of roofing substrates (decks) inspect and discuss condition of substrate, roof drains, curbs, penetrations, and other preparatory work performed by other trades.
3. Review structural loading limitations of deck and inspect deck for loss of flatness and for required attachment.
4. Review roofing systems requirements (drawings, specifications, and other contract documents).
5. Review required submittals, both completed and yet to be completed.
6. Review and finalize construction schedule related to roofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
7. Review required inspection, testing, certifying, and material usage accounting procedures.
8. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions, including possibility of temporary roofing (if not a mandatory requirement).
9. Record (contractor) discussion of conference, including decisions and agreements (or disagreements) reached, and furnishes copy of record to each party attending. If substantial disagreements exist at conclusion of conference, determine how disagreements will be resolved and set date for reconvening conference.
10. Review notification procedures for weather or non-working days.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver products to site with seals and labels intact, in manufacturer's original containers, dry and undamaged.
- B. Store and handle roofing sheets in a dry, well-ventilated, weather-tight place to ensure no possibility of significant moisture exposure. Store rolls of felt and other sheet materials on pallets or other raised surface. Stand all roll materials on end. Cover all goods with a canvas tarpaulin or other breathable material (not polyethylene).
- C. Do not leave unused rolled goods on the roof overnight or when roofing work is not in progress unless protected from weather and other moisture sources.
- D. Handle and store materials or equipment in a manner to avoid significant or permanent deflection of deck.

1.8 Manufacturer's Inspections

- A. When the project is in progress, the Roofing System Manufacturer will provide the following:
 1. Keep the District Representative informed as to the progress and quality the work as observed.
 2. Provide daily job site inspections.
 3. Report to the District Representative/Architect in writing, any failure or refusal of the Contractor to correct unacceptable practices called to the Contractor's attention.

4. Confirm, after completion of the project and based on manufacturer's observations and tests, that manufacturer has observed no applications procedures in conflict with the specifications other than those that may have been previously reported and corrected.

1.9 PROJECT CONDITIONS

- A. Weather Condition Limitations: Do not apply roofing membrane during inclement weather or when a 40% chance of precipitation is expected.
- B. Do not apply roofing membrane to damp deck surface.
- C. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.
- D. Proceed with roofing work only when existing and forecasted weather conditions will permit unit of work to be installed in accordance with manufacturer's recommendations and warranty requirements.

1.10 SEQUENCING AND SCHEDULING

- A. Sequence installation of modified bituminous sheet roofing with related units of work specified in other sections to ensure that roof assemblies, including roof accessories, flashing, trim, and joint sealers, are protected against damage from effects of weather, corrosion, and adjacent construction activity.
- B. All work must be fully completed on each day. Phased construction will not be accepted. Contractor must glaze any exposed felts, before next day's work.

1.11 WARRANTY

- A. Membrane manufacturer, upon completion of installation, and acceptance by the District Representative, will supply to the Owner a 30-year partnership pledge warranty. Upon completion of installation, and acceptance by the owner all metal integrated base flashings, adhesive, modified sheet, wall cover panels, coping, shall be from single source of responsibility. All coping and metal accessories to be sourced, from The Membrane Manufacturer.
- B. Contractor will submit a minimum of a five-year labor warranty to the membrane manufacturer with a copy directly to District Representative.

PART 2 - PRODUCTS

2.1 GENERAL

- A. When a particular trade name or performance standard is specified it shall be indicative of a standard required.
- B. Provide products, and independent test data confirming tear strength, and tensile strength, along with all other pertinent data as specified.
- C. Any item or materials submitted as an alternate to the manufacturer specified must comply in all respects as to the quality and performance, including job site investigation of the brand name specified.

2.2 BITUMINOUS MATERIALS

- A. Asphalt Primer: V.O.C. compliant, ASTM D-41.
- B. Asphalt Roofing Mastic: V.O.C. compliant, ASTM D-2822, and Type II.
- C. Asphalt: Shall meet ASTM Specification D-312 Type III.

2.3 SHEET MATERIALS

A. Felts Type VI Felts

- 1. Minimum 2 plies of ASTM D2178, Type VI glass fiber roofing felt bonded to prepared substrate with hot bitumen, to be sourced, and purchased from the membrane manufacturer.

B. Base Sheet minimum requirements:

	Machine Direction	Cross Machine Direction
1. Load Strain at 77 degrees F	100	100
2. Elongation at Max Load%	5	5
3. Tear Strength at 77 degrees F, lbf.	150	150

C. Mineral Cap Sheet (or Cap Sheet) minimum requirements:

	Machine Direction	Cross Machine Direction
1. Load Strain at 77 degrees F	100	100
2. Max Load, lbf.	3	3
3. Tear Strength at 77 degrees F	150	150
4. Compound Stability degrees F	Passes 225	

2.4 SURFACING

- A. Mineral Cap Sheet, will be coated with pyramic, Title 24 Coating at the rate of 1.5 gallon / 100 square feet, (2 Coats).

2.5 RELATED MATERIALS

- A. All flashings, (drip edge, wall flashings), shall be a high gloss white, steel flashing system with a self-ventilation, movement absorbing design. This shall be applicable for the drip edge, and base flashings, if their existing conditions are metal flashings. All base flashings, that have existing mineral cap sheet flashings, shall be replaced by Title 24 Mineral Cap sheet base flashings. If metal base flashings the flashing system shall be comprised of aluminum-zinc alloy steel. The modified sheet attached to the termination strip shall be either torched into the field membrane, or set in hot or cold adhesive. Sheet shall be pained, by the contractor with urethane coating, to be purchased from the membrane manufacturer. The installation shall be 1 gallon/100 square feet. 2 Coats are required. Metal wall cover panels, shall be stucco embossed, pre-fab wall cover panel designed for additional rigidity with no exposed fasteners. Panels shall have 13" coverage width (3" in S-Lock), up to 12 feet. Metal wall panels will be installed, by certified licensed membrane contractor. Metal wall panels will be warranted, and manufactured, by the modified membrane sheet manufacturer. All stucco walls are to be covered by wall covering panel,

with inside, and outside corner panels, which shall be (.0157 nom.) They will be pre-fab inside, and outside corner pieces for wall covering panels. (Female interlock each side accepts male edge of wall cover panel or adjoining corner panel.) New coping will be installed. All coping to be sourced, and warranted by the modified membrane manufacturer.

- B. Nails and Fasteners: Non-ferrous metal or galvanized steel, except that hard copper nails shall be used with copper; aluminum or stainless steel nails shall be used with aluminum; and stainless steel nails shall be used with stainless steel. Nails and fasteners shall be flush-driven through flat metal discs of not less than 1 inch diameter. Metal discs may be omitted when one piece composite nails or fasteners with heads not less than 1 inch diameter are used.
- C. Metal Discs: Flat discs or caps of zinc-coated sheet metal not lighter than 28 gauges and not less than 1 inch in diameter. Discs shall be formed to prevent dishing. Bell or cup-shaped caps are not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrate surfaces to receive modified bitumen sheet roofing system and associated work and conditions under which roofing will be installed. Do not proceed with roofing until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

3.2 INSTALLATION REQUIREMENTS

- A. Cooperate with manufacturer, inspection and test agencies engaged or required to perform services in connection with installing modified bitumen roofing system.
- B. Insurance/Code Compliance: Where required, install and test modified bitumen roofing system to comply with governing regulations and specified insurance requirements.
- C. Protect other work from spillage of modified bitumen roofing materials, and prevent liquid materials from entering or clogging drains and conductors. Replace or restore other work damaged by installations of modified bituminous roofing system work. Note: Where there are existing roof curbs that have been roofed, they are to be demolished, new decking installed, and to be re-roofed per specifications.
- D. Coordinate installing roofing system components so that insulation and roofing plies are not exposed to precipitation or left exposed overnight. Provide cut offs at end of each day's work to cover exposed ply sheets and insulation with two (2) plies of #15 organic felt set in full moppings of bitumen and with joints and edges sealed with roofing cement. Remove cut offs immediately before resuming work. Install new counter-flashing, furnished, and warranted by membrane manufacturer.
- E. Asphalt Bitumen Heating: Heat and apply bitumen according to EVT Method as recommended by NRCA. Do not raise temperature above minimum normal fluid-holding temperature necessary to attain EVT (plus 5 °F at point of application) more than 1 hour prior to time of application. Determine flash point, finished blowing temperature, EVT, and fire-safe handling temperature of bitumen either by information from manufacturer or by suitable test. Do not exceed recommended temperature limits during bitumen heating. Do not heat to a temperature higher than 25° below flash point. Discard bitumen that has been

held at temperature exceeding finishing blowing temperature (FBT) for more than 3 hours. Keep kettle lid closed except when adding bitumen.

- F. Bitumen; Mopping Weights: For interply mopping, apply bitumen at the rate of approximately 25 lbs of asphalt per roof square (plus or minus 25 percent on a total job average)
- G. Substrate joint penetrations: Prevent bitumen from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.
- H. Apply roofing materials as specified herein, unless recommended otherwise by manufacturer's instructions. Keep roof material dry before and during application. Do not permit phased construction. Complete application of roofing plies, modified sheet and flashing in a continuous operation. Begin and apply only as much roofing in one day as can be completed that same day. If phased construction is desired, roofing contractor shall glaze felts prior to leaving jobsite and beginning following day's work.
 - 1. (Metal Decks) Mechanically attach 2" of Polyisocyanurate insulation, into metal deck, with #12, or #14 olympic fastener, at the rate of 1 each every square foot. Then in Type III Asphalt, mop 1/2" fiberboard insulation, to ISO board at the rate of 25bs/ 100 square feet. Mop Base Sheet, Mop Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/ 100 square feet. (2 Coats) (As specified)
 - 2. (Structural Concrete Decks) Prime existing deck with Primer, at the rate of 1 gallon/ 100 square feet. Sprinkle Mop 1/2" fiberboard insulation, in Type III Asphalt. Mop Base Sheet, Mop Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/100 square feet. (2 Coats) (As specified)
 - 3. (Wood Decks). Roll out red rosin paper, then mechanically attach Base Sheet. Mop 2 ea. Type VI Felts, and Cap Sheet, with Pyramic Coating, 1.5 gallons/100 square feet. (2 Coats) (As specified)
 - 4. (Metal Decks with Lightweight Concrete) Mechanically attach 1" of Polyisocyanurate insulation, down through lightweight concrete, into metal deck, with #12 or #14 olympic fastener, at the rate of 1 every square foot. Mop 1/2" fiberboard insulation, in Type III Asphalt at the rate of 25 lbs/100 square feet. Mop Base Sheet. Mop 2 each Type VI Felts, and Cap Sheet, with Pyramic Coating 1.5 gallons/100 square feet. (2 Coats) (As specified).
 - 5. (If Applicable) all slopes of greater than 1-1/2:12 require back-nailing to prevent slippage of the ply sheets. Use ring or spiral shank one (1) inch cap nails, or screws and plates at a rate of one (1) fastener per ply (including the modified membrane), at each insulation stop. Place insulation stops at 16 ft o.c. for slopes less than 3:12 and (4) ft o.c. for slopes greater than 3:12. On non-insulated systems, nail each ply directly into the deck at the rate specified above. When slope exceeds 1:12, strapping plies is recommended to help prevent slippage. Install for (4) additional fasteners at the upper edge of the modified bitumen sheet when strapping the plies.
- I. Cut-Offs At end of each day's roofing installation, protect exposed edge of incomplete work, including ply sheets. Provide temporary covering of two plies of #15 organic roofing felt set in full moppings of bitumen with joins and edges sealed.
- J. All curbs extended shall be a minimum of 8 inches in height. New curbs, to be mechanically attached, with treated lumber, and Flashed with Base Flashing. Metal pans to be mechanically attached to curbs, and drip edge shall be 3.5 inches below field of curb.

- K. All designated conduit, shall be carefully lifted, during tear off process, and conduit will be placed on new wood blocks to match existing.

3.3 SAFETY REQUIREMENTS

- A. All application, material handling, and associated equipment shall conform to and be operated in conformance with OSHA safety requirements.
- B. Comply with federal, state, local, and fire, and safety requirements.
- C. Advise owner whenever work is expected to be hazardous to owner, employees, and/or operators.
- D. Maintain a crewman as a floor area guard whenever roof decking is being repaired or replaced.
- E. Maintain fire extinguisher within easy access whenever power tools are being used.

3.4 WASTE DISPOSAL

- A. Do not re-use, re-cycle or dispose of material manufacturer's product containers except in accordance with all applicable regulations. The user of manufactured products is responsible for proper use and disposal of product container. Asbestos material shall be treated in accordance with local codes.

3.5 CALIFORNIA PROPOSITION 65

- A. Contractor will post notices, make all communications and otherwise comply with California Proposition 65 requirements concerning notification of those who may be exposed to Prop 65 listed chemicals, as revised from time to time. Contractor will also comply with requirements concerning the safe use and handling of roofing material, including preventing vapors from entering buildings.

3.6 PREPARATION

- A. Contractor shall have sole responsibility of accuracy of all measurements and estimates of materials, quantities and sizes. Make sure roof is cleaned down to deck, and insulation.
- B. Plug all drains to prevent debris entry and remove all clamping rings and related materials and store for later re-installation. Install new drains, with lead flanges.
- C. Sweep deck clean to remove all dirt and debris and dispose of away from site.
- D. Deck Repair: Replace all defective decking with like materials, following manufacturer's recommendation.

3.7 FELT PLY INSTALLATION

- A. Mop base sheet and install (2) each Type VI felt sheets, in 25 lbs per square of bitumen shingled uniformly to achieve two plies throughout over the prepared substrate. Shingle in proper direction to shed water on each area of the roof.
- B. Lap ply sheet end eight inches (8"). Stagger end laps twelve inches (12") minimum.
- C. Extend plies two inches (2") beyond top edges of wall and projection bases.

- D. Install Drip Edge Flashings, base flashings, and wall cover panels.
 - E. Bond the modified membrane to the base layers with specified asphalt at the rate of 35lbs/100 square feet. The roll must push a puddle of asphalt in front of it with asphalt slightly visible at all side laps. Care should be taken to eliminate air entrapment under the membrane. Apply pressure to all seams to ensure that laps are solidly bonded to substrate. Subsequent rolls of modified membrane shall be installed across the roof, as above, with a minimum of four-inch (4") side laps and eight-inch (8") end laps. The end laps shall be staggered. The modified membrane shall be laid in the same direction as the underlayments, but the laps shall not coincide with the laps of the base layers. Apply asphalt no more than five feet ahead of each roll being embedded. The modified membrane will be coated with pyramic Title 24 Coating, at the rate of 1.5 gallons per 100 square feet. (2 Coats)
- 3.8 PLUMBING STACK, AND ALL OTHER MISCELLANEOUS STACKS
- A. Minimum stack height is twelve inches.
 - B. Run roof system over the roof. Seal the base of the stack with elastomeric sealant.
 - C. Prime flange of new sleeve. Install properly-sized sleeves set in a 1/4" base of elastomeric sealant.
 - D. Install base flashing ply bitumen.
 - E. Install modified membrane in bitumen.
 - F. Caulk the intersection of the membrane and the base flashing with elastomeric sealant.
 - G. Turn sleeve a minimum of one inch down inside of stack.
- 3.9 SCUPPER THROUGH WALL
- A. Inspect the nailer to assure proper attachment and configuration.
 - B. Run one ply over nailer up the overflow, in the scupper hole and flash up. Install a scupper box in 1/4-inch bed of mastic. Assure all box seams are soldered and have a minimum four (4) -inch flange. Make sure all corners are closed and soldered. Prime scupper at a rate of one hundred square feet per gallon and allow to dry. Fasten flange of scupper box every three inches o.c. staggered. Strip in flange of scupper box with base flashing ply covering entire area with six-inch overlap on to the field of the roof and wall flashing. Install a second ply of modified flashing ply in bitumen over the base flashing ply, nine inches on to the field of the roof. Apply a three-course application of mastic and mesh at all seams.
- 3.10 ROOF DRAIN
- A. Plug drain to prevent debris from entering plumbing
 - B. Install to drain minimum of twenty four inches from center of drain.
 - C. Run roof system plies over drain. Cut out plies inside drain bowl.
 - D. Set lead/copper flashing (30-inch square minimum) in 1/4-inch bed of mastic. Run lead/copper into drain a minimum of two inches. Prime lead/copper at a rate of one hundred square feet per gallon, and allow to dry. Install base flashing 40-inch square minimum in bitumen. Install clamping ring and assure that all plies are under the clamping ring. Remove drain plug and install strainer.

3.11 HEAT STACK

- A. Minimum stack height is twelve inches
- B. Run roof system over the entire surface of the roof. Seal the base of the stack with elastomeric sealant.
- C. Prime flange of new sleeve. Install properly sized sleeves set in 1/4-inch bed of roof cement.
- D. Install base flashing ply in bitumen.
- E. Install modified membrane in bitumen.
- F. Caulk the intersection of the membrane with elastomeric sealant.
- G. Install new collar over cape. Weld collar or install stainless steel draw band.

3.12 CLEANING

- A. Remove drippage of bitumen from all walls, windows, floors, ladders and finished surfaces.
- B. In areas where finished surfaces are soiled by asphalt or any other sources of soiling caused by work of this section, consult manufacturer of surfaces for cleaning advice and conform to their instructions.

3.13 FINAL INSPECTION

- A. At completion of roofing installation and associated work, meet with installer, installers of associated work, district representative, roofing system manufacturer's representative and other representatives directly concerned with the performance of the roofing system.
- B. Walk roof surface areas of the building, inspect perimeter building edges as well as flashing of roof penetrations, walls, curbs and other equipment. List all items requiring correction or completion and furnish copy of list to each representative attending inspection.
- C. The roofing system manufacturer reserves the right to request a thermographic scan of roof during final inspection to determine if any damp or wet materials have been installed. The thermographic scan shall be provided by the roofing contractor at roofing contractor's expense.
- D. Repair, or replace, as required, deteriorated or defective work found at time of inspection to a condition free of damage and deterioration at time of substantial completion and according to warranty requirements.
- E. The contractor is to notify the district's facilities department upon completion of corrections.
- F. Following the final inspection, acceptance will be made in writing by the material manufacturer.

END OF SECTION

07 53 23 – ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Adhered ethylene-propylene-diene-terpolymer (EPDM) roofing system.
2. Loosely laid and ballasted, ethylene-propylene-diene-terpolymer (EPDM) roofing system.
3. Substrate board.
4. Vapor/air retarder.
5. Roof insulation.
6. Cover board.
7. Walkways.

B. Related Requirements:

1. Section 061053 "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking; and for wood-based, structural-use roof deck panels.
2. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

A. Roofing Terminology: Refer to the following publications for definitions of roofing work related terms used in this Section:

1. ASTM D 1079 "Terminology Relating to Roofing and Waterproofing."
2. Glossary of NRCA's "The NRCA Roofing and Waterproofing Manual."
3. Roof Consultants Institute "Glossary of Roofing Terms."

B. Sheet Metal Terminology and Techniques: SMACNA Architectural Sheet Metal Manual.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing.

B. Sustainable Design Submittals:

1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
2. Product Data: For adhesives and sealants, indicating VOC content.
3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.

- C. Shop Drawings: Include roof plans, sections, details, and attachments to other work, including the following:
 - 1. Layout and thickness if insulation.
 - 2. Base flashings and membrane terminations.
 - 3. Flashing details at penetrations.
 - 4. Tapered insulation, thickness, and slopes.
 - 5. Roof plan showing orientation of steel roof deck and orientation of roof membrane and fastening spacings and patterns for mechanically fastened roofing system.
 - 6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- D. Samples for Verification: For the following products:
 - 1. Roof membrane and flashings of color required.
- E. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of complying with performance requirements.
 - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Product Test Reports: For components of roof membrane and insulation, for tests performed by a qualified testing agency, indicating compliance with specified requirements.
- D. Evaluation Reports: For components of roofing system, from ICC-ES.
 - 1. Field Test Reports:
 - 2. Concrete internal relative humidity test reports.
 - 3. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

- E. Field quality-control reports.
- F. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.
- B. Certified statement from existing roof membrane manufacturer stating that existing roof warranty has not been affected by Work performed under this Section.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is listed in FM Approvals' RoofNav for roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, substrate board, and other components of roofing system.
 - 2. Warranty Period: 20 years from Date of Substantial Completion. No Dollar Limit.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roof membrane, base flashing, roof insulation, fasteners, cover boards, substrate boards, and walkway products, for the following warranty period:
 - 1. Warranty Period: Two years from Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - 1. Carlisle SynTec Incorporated.
 - 2. Firestone Building Products.
 - 3. Gen Flex Roofing Systems.
 - 4. Johns Manville; a Berkshire Hathaway Company.
 - 5. Or equal.

See Editing Instruction No. 1 in the Evaluations for cautions about named manufacturers and products. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements." PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and flashings shall remain watertight.
 - 1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.

- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.
- C. Wind Uplift Performance: Roofing system shall be identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist wind uplift pressure calculated in accordance with ASCE-7. Meeting the manufacturers uplift requirements for issuance of the specified NDL Guarantee.
- D. FM Approvals' RoofNav Listing: Roof membrane, base flashings, and component materials shall comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and shall be listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
 - 1. Fire/Windstorm Classification: Class 1A-60.
 - 2. Hail-Resistance Rating: MH.
- E. Energy Performance: Roofing products shall be compliant with 2016 California Energy Code, Title 24, Part 6 and 2016 California Green Building Standards Code, Title 24, Part 8; "Cool Roof", tested and labeled by the Cool Roof Rating Council (CRRC).
 - 1. Low-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.63 Minimum Thermal Emittance: 0.75 or minimum SRI value of 75.
 - 2. Steep-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.20 Minimum Thermal Emittance: 0.75 or minimum SRI value of 16.
- F. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A ; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 ETHYLENE-PROPYLENE-DIENE-TERPOLYMER (EPDM) ROOFING

- A. Fabric-Backed EPDM Sheet: ASTM D 4637/D 4637M, Type III, nonreinforced, EPDM sheet, laminated to a nonwoven polyester fabric backing except at selvages with factory-applied seam tape.
 - 1. Composite Thickness: 90 mils (2.3 mm), nominal.
 - 2. Exposed Face Color: White on black.
 - 3. Source Limitations: Obtain components for roofing system from roof membrane manufacturer or manufacturers approved by roof membrane manufacturer.

2.4 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.

1. Adhesive and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, partially cured or cured, according to application.
- C. Slip Sheet: Manufacturer's standard, of thickness required for application.
- D. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
- E. Roof Vents: As recommended by roof membrane manufacturer.
 1. Size: Not less than 4-inch (100 mm) diameter.
- F. Water-Based, Fabric-Backed Membrane Adhesive: Roofing system manufacturer's standard water-based, cold-applied adhesive formulated for compatibility and use with fabric-backed membrane roofing.
- G. Seaming Material: Manufacturer's standard, synthetic-rubber polymer primer and 3-inch- (75-mm-) wide minimum, butyl splice tape with release film.
- H. Lap Sealant: Manufacturer's standard, single-component sealant, colored to match membrane roofing.
- I. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
- J. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
- K. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening components to substrate, and acceptable to roofing system manufacturer.
- L. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, molded pipe boot flashings, preformed inside and outside corner sheet flashings, reinforced EPDM securement strips, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.
 1. Provide white flashing accessories for white EPDM membrane roofing.

2.5 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board.
 1. Thickness: 5/8 inch (16 mm).
- B. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum board or ASTM C 1278/C 1278M, fiber-reinforced gypsum board.
 1. Thickness: 1/2 inch (13 mm).

2. Surface Finish: Factory primed.

C. Substrate Board: ASTM C 728, perlite board; seal coated.

1. Thickness: 3/4 inch (19 mm).

D. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate panel to roof deck.

2.6 VAPOR/AIR RETARDER

A. Polyethylene Film: ASTM D 4397, 10 mils (0.25 mm) thick, minimum, with maximum permeance rating of 0.13 perm (0.084 metric perm).

1. Adhesive: Manufacturer's standard lap adhesive, listed by FM Approvals for vapor/air retarder application.

2.7 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by EPDM roof membrane manufacturer, approved for use in FM Approvals' RoofNav-listed roof assemblies.

B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.

1. Provide rigid insulation with minimum LTTR R-value of 5.6 per inch ASTM C 1289-2014.

2. Compressive Strength: 25 psi (172 kPa).

3. Thickness: Refer to Drawings.

a. Base Layer: [1-1/2 inches (38 mm)] <Insert thickness>.

b. Upper Layer: <Insert thickness>.

C. Tapered Insulation: Provide factory-tapered insulation boards.

1. Material: Match roof insulation.

2. Minimum Thickness: 1/4 inch (6.35 mm).

3. Slope:

a. Roof Field: 1/4 inch per foot (1:48) unless otherwise indicated on Drawings.

b. Saddles and Crickets: 1/2 inch per foot (1:24) unless otherwise indicated on Drawings.

2.8 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
- D. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, or ASTM C 1278/C 1278M, fiber-reinforced gypsum board.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. Certainteed; GlasRoc.
 - b. Georgia-Pacific Building Products; DensDeck.
 - c. National Gypsum Company; DEXcell FA.
 - d. USG Corporation; Securock Glass Mat Roof Board.
 - e. Or equal.
 - 2. Thickness: [1/4 inch (6 mm)].
 - 3. Surface Finish: Factory primed.

2.9 BALLAST

- A. Aggregate Ballast: Smooth, washed, riverbed gravel or other acceptable smooth-faced stone that withstands weather exposure without significant deterioration and does not contribute to membrane degradation, of the following size:
 - 1. Size: ASTM D 448, Size 3, ranging in size from 1 to 2 inches (25 to 50 mm).

2.10 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.
 - 1. Size: Approximately 36 by 60 inches (914 by 1524 mm).
 - 2. Color: Contrasting with roof membrane.

- B. Walkway Roof Pavers: Heavyweight, hydraulically pressed concrete units, with top edges beveled 3/16 inch (5 mm), factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140/C 140M; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
1. Size: 24 by 24 inches (600 by 600 mm). Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch (1.6 mm) in length, height, and thickness.
 2. Weight: 18 lb/sq. ft. (90 kg/sq. m).
 3. Compressive Strength: 6500 psi (45 MPa), minimum.
 4. Colors and Textures: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 5. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than 75 percent, or as recommended by roofing system manufacturer when tested according to ASTM F 2170.
 - a. Test Frequency: One test probe per each 1000 sq. ft. (93 sq. m), or portion thereof, of roof deck, with not less than three test probes.
 - b. Submit test reports within 24 hours of performing tests.
 6. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.
 7. Verify that minimum curing period recommended by roof system manufacturer for lightweight insulating concrete roof decks has passed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Perform fastener-pullout tests according to roof system manufacturer's written instructions.
 - 1. Submit test result within 24 hours of performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- D. Confirm all HVAC units and other equipment supported by curbs conform with the following:
 - 1. Curbs are required to provide a minimum 8" base flashing height measured from the surface of the new membrane to the top of the flashing membrane.
 - 2. Nail top of flashing and install new metal counterflashing prior to installation of unit.
 - 3. Perimeter nailers must be elevated to match elevation of roof insulation.

3.3 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roof membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing roofing system.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches (610 mm) in adjacent rows.
 - 1. At steel roof decks, install substrate board at right angle to flutes of deck.
 - a. Locate end joints over crests of steel roof deck.

2. Tightly butt substrate boards together.
3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
4. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.

3.5 VAPOR/AIR RETARDER INSTALLATION

- A. Provide vapor/air barrier where air leakage from interior can occur through roof substrate; such as wood, wood panel or metal deck. Do not install where vapor/air barrier is not a part of listed roof assembly, or where roofing manufacturer's installation instructions do not require vapor/air barrier.
- B. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches (50 and 150 mm), respectively.
 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 2. Continuously seal side and end laps with adhesive.
- C. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.6 INSULATION INSTALLATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Installation Over Metal Decking:
 1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows and with long joints continuous at right angle to flutes of decking.
 - a. Locate end joints over crests of decking.
 - b. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

- c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay base layer of insulation units over substrate.
 - i. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - f. Trim insulation so that water flow is unrestricted.
 - g. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - h. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

- i. Loosely lay each layer of insulation units over substrate.
 - j. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- D. Installation Over Wood Panel Decking:
- 1. Mechanically fasten slip sheet to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to wood panel decks.
 - a. Fasten slip sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten slip sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to wood panel decks.

- 1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
3. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

E. Installation Over Concrete Decks:

1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.

- a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to concrete roof deck according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
 - 2) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 3) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (305 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.

- e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- F. Installation Over Lightweight Insulating Concrete Roof Decks:
- 1. Mechanically fasten vented base sheet to lightweight insulating concrete, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight insulating concrete roof decks.
 - a. Fasten vented base sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.

- e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to vented base sheet according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:

- 1) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
- 2) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.7 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Loosely lay cover board over substrate.
 5. Adhere cover board to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - a. Set cover board in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - b. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - c. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- B. Install slip sheet over cover board and immediately beneath roofing.

3.8 ADHERED ROOFING INSTALLATION

- A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll membrane roof membrane and allow to relax before installing.
- C. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency.
- D. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

- E. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer, and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.
- F. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer, and install fabric-backed roof membrane.
- G. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations, and perimeters.
- H. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- I. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
 - 3. Apply a continuous bead of in-seam sealant before closing splice if required by roofing system manufacturer.
- J. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
- K. Factory-Applied Seam Tape Installation: Clean and prime surface to receive tape.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
- L. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- M. Spread sealant or mastic bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.
- N. Adhere protection sheet over roof membrane at locations indicated.

3.9 LOOSELY LAID AND BALLASTED MEMBRANE ROOFING INSTALLATION

- A. Loosely lay roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.

- C. Comply with requirements in SPRI RP-4 for System 1.
- D. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency.
- E. Accurately align roof membrane, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- F. Mechanically fasten or adhere perimeter of roof membrane according to requirements in SPRI RP-4.
- G. Apply roof membrane with side laps shingled with slope of deck where possible.
- H. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
- I. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
- J. Factory-Applied Seam Tape Installation: Clean and prime surface to receive tape.
 - 1. Firmly roll side and end laps of overlapping roof membrane to ensure a watertight seam installation.
 - 2. Apply lap sealant and seal exposed edges of roofing terminations.
- K. Leave seams uncovered until inspected by roofing system manufacturer and Owner's testing agency.
- L. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- M. Spread sealant or mastic bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.
- N. Install protection mat over roof membrane at walkway pavers, overlapping a minimum of 6 inches (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of 12 inches (300 mm).
- O. Aggregate Ballast: Apply uniformly over roof membrane at the rate required by roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to roofing system. Lay ballast as roof membrane is installed, leaving roof membrane ballasted at end of workday.

1. Ballast Weight: Size 3 aggregate, <Insert weight>, at corners, <Insert weight> at perimeter, and <Insert weight>, elsewhere.

3.10 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.11 COATING INSTALLATION

- A. Apply coatings to roof membrane and base flashings according to manufacturer's written recommendations, by spray, roller, or other suitable application method.

3.12 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products according to manufacturer's written instructions.
 1. Install flexible walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.

- g. As required by roof membrane manufacturer's warranty requirements.
 - 2. Provide 6-inch (76-mm) clearance between adjoining pads.
 - 3. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.
- B. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions.
- 1. Install roof paver walkways at the following locations:
 - a. Perimeter of each rooftop unit.
 - b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
 - c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
 - d. Top and bottom of each roof access ladder.
 - e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
 - f. Locations indicated on Drawings.
 - g. As required by roof membrane manufacturer's warranty requirements.
 - 2. Provide 3 inches (75 mm) of space between adjacent roof pavers.

3.13 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, sheet flashings, protection, and drainage components, and to furnish reports to Architect.
- B. Owner will engage a qualified testing agency to perform the following tests:
 - 1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - c. Flood each area for 24 hours.

- d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - e. Testing agency shall prepare survey report indicating locations initial leaks, if any, and final survey report.
2. Low-Voltage Electrical Conductance Testing: Testing agency shall survey entire roof area and flashings to locate discontinuity in the roof membrane using an exposed metal electrical loop to create an electrical field tested with handheld probes or a scanning platform with integral perimeter electrical loops creating a complete electrical field.
- a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.
- C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
- D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.14 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing system, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.15 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
1. Owner: <Insert name of Owner>.
 2. Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Address: <Insert address>.
 5. Area of Work: <Insert information>.
 6. Acceptance Date: _____.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/s)>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and

- g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
 5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.
- E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.
1. Authorized Signature: _____.
 2. Name: _____.
 3. Title: _____.

END OF SECTION

07 54 19 – POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Adhered polyvinyl-chloride (PVC) roofing system.
2. Cover board
3. Roof insulation.
4. Walkway pads

B. Related Requirements:

1. Section 061053 "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking; and for wood-based, structural-use roof deck panels.
2. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

A. Roofing Terminology: Refer to the following publications for definitions of roofing work related terms used in this Section:

1. ASTM D 1079 "Terminology Relating to Roofing and Waterproofing."
2. Glossary of NRCA's "The NRCA Roofing and Waterproofing Manual."
3. Roof Consultants Institute "Glossary of Roofing Terms."

B. Sheet Metal Terminology and Techniques: SMACNA Architectural Sheet Metal Manual.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
 2. Product Data: For adhesives and sealants, indicating VOC content.
 3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:
 1. Layout and thickness of insulation.
 2. Base flashings and membrane terminations.
 3. Flashing details at penetrations.
 4. Tapered insulation, including slopes.
 5. Roof plan showing orientation of steel roof deck and orientation of roofing, fastening spacings, and patterns for mechanically fastened roofing.

6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

D. Samples for Verification: For the following products:

1. Sheet roofing, and flashings of color required.

E. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Manufacturer Certificates:

1. Performance Requirement Certificate: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

a. Submit evidence of compliance with performance requirements.

2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

C. Product Test Reports: For components of roofing system, for tests performed by manufacturer and witnessed by a qualified testing agency.

D. Research/Evaluation Reports: For components of roofing system, from ICC-ES.

E. Field Test Reports:

1. Concrete internal relative humidity test reports.

2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

F. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is listed in FM Approvals' RoofNav for roofing system identical to that used for this Project.

- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, vapor/air retarder, substrate board, and other components of roofing system.
 - 2. Warranty Period: 20 years from date of Substantial Completion. No Dollar Limit.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as membrane roofing, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor/air retarders, and walkway products, for the following warranty period:

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 1. Carlisle SynTec Incorporated.
 2. GAF
 3. Johns Manville; a Berkshire Hathaway Company.
 4. Sika Sarnafil.
 5. Soprema
 6. Tremco
 7. Or equal.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.
 1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.
- C. Wind Uplift Performance: Roofing system shall be identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist wind uplift pressure calculated in accordance with ASCE-7. Meeting the manufacturers uplift requirements for issuance of the specified NDL Guarantee.
- D. Energy Performance: Roofing products shall be compliant with 2016 California Energy Code, Title 24, Part 6 and 2016 California Green Building Standards Code, Title 24, Part 8; "Cool Roof", tested and labeled by the Cool Roof Rating Council (CRRRC).
 1. Low-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.63 Minimum Thermal Emittance: 0.75 or minimum SRI value of 75.

- 2. Steep-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.20
Minimum Thermal Emittance: 0.75 or minimum SRI value of 16.
- E. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 PVC ROOFING

- A. PVC Sheet: ASTM D 4434, Type III, fabric reinforced to reduce plasticizer migration, felt backed.
 - 1. Certification, by letter, stating that the formulation has a minimum 15 years of performance history in North America.
 - 2. Thickness: 80 mils (2.03 mm), nominal
 - 3. PVC Membrane must meet reflectivity and Emissivity requirements for California Title 24.
 - 4. Exposed Face Color: [White] [Gray] <Insert color>.

2.4 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.
 - 1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement and color as PVC sheet.
- C. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
- D. Roof Vents: As recommended by roof membrane manufacturer.
 - 1. Size: Not less than 4-inch (100-mm) diameter.
- E. Bonding Adhesive: Manufacturer's standard water-based bonding adhesive for membrane, and Low VOC solvent-based bonding adhesive for base flashings.
- F. Slip Sheet: Manufacturer's standard, of thickness required for application.
- G. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, with anchors.

- H. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing to substrate, and acceptable to roofing system manufacturer.
- I. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.5 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board.
 - 1. Thickness: 5/8 inch (16 mm).
- B. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum board or ASTM C 1278/C 1278M, fiber-reinforced gypsum board.
 - 1. Thickness: 1/2 inch (13 mm) thick.
 - 2. Surface Finish: Factory primed.
- C. Substrate Board: ASTM C 728, perlite board, seal coated.
 - 1. Thickness: 3/4 inch (19 mm).
- D. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.6 VAPOR/AIR RETARDER

- A. Polyethylene Film: ASTM D 4397, 10 mils (0.25 mm) thick, minimum, with maximum permeance rating of 0.13 perm (0.084 metric perm).
 - 1. Adhesive: Manufacturer's standard lap adhesive, listed by FM Approvals for vapor/air retarder application.

2.7 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by PVC roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 3, felt or glass-fiber mat facer on both major surfaces.
 - 1. Provide rigid insulation with minimum LTTR R-value of 5.6 per inch ASTM C 1289-2014.

2. Compressive Strength: 25 psi (172 kPa).
 3. Size: 48 by 96 inches (1219 by 2438 mm).
 4. Thickness:
 - a. Base Layer: 1-1/2 inches (38 mm).
 - b. Upper Layer: <Insert thickness>.
- C. Tapered Insulation: Provide factory-tapered insulation boards:
1. Material: Match roof insulation.
 2. Minimum Thickness: 1/4 inch (6.35 mm).
 3. Slope:
 - a. Roof Field: 1/4 inch per foot (1:48) unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: 1/2 inch per foot (1:24) unless otherwise indicated on Drawings.

2.8 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 1. Full-spread spray-applied, low-rise, two-component urethane adhesive.
- D. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum board or ASTM C 1278/C 1278M fiber-reinforced gypsum board.
 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. Certaineed; GlasRoc.
 - b. Georgia-Pacific Building Products; DensDeck.
 - c. National Gypsum Company; DEXcell FA.
 - d. JM InvinSA Roof Board.
 - e. USG Corporation; Securock Glass Mat Roof Board.

- f. Or equal.
- 2. Thickness: 1/4 inch (6 mm).
- 3. Surface Finish: Factory primed.

2.9 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.
 - 1. Size: Approximately 36 by 60 inches (914 by 1524 mm).
 - 2. Color: Contrasting with roof membrane.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:
 - 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 - 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 - 5. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than 75 percent, or as recommended by roofing system manufacturer, when tested according to ASTM F 2170.
 - a. Test Frequency: One test probe per each 1000 sq. ft. (93 sq. m), or portion thereof, of roof deck, with not less than three tests probes.
 - b. Submit test reports within 24 hours after performing tests.
 - 6. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.

7. Verify that minimum curing period recommended by roofing system manufacturer for lightweight insulating concrete roof decks has passed.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Perform fastener-pullout tests according to roof system manufacturer's written instructions.
 1. Submit test result within 24 hours after performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- D. Confirm all HVAC units and other equipment supported by curbs conform with the following:
 1. Curbs are required to provide a minimum 8" base flashing height measured from the surface of the new membrane to the top of the flashing membrane.
 2. Nail top of flashing and install new metal counterflashing prior to installation of unit.
 3. Perimeter nailers must be elevated to match elevation of roof insulation.

3.3 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing roofing system.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches (610 mm) in adjacent rows.
 - 1. At steel roof decks, install substrate board at right angle to flutes of deck.
 - a. Locate end joints over crests of steel roof deck.
 - 2. Tightly butt substrate boards together.
 - 3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - 4. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
 - 5. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.

3.5 VAPOR/AIR RETARDER INSTALLATION

- A. Provide vapor/air barrier where air leakage from interior can occur through roof substrate; such as wood, wood panel or metal deck. Do not install where vapor/air barrier is not a part of listed roof assembly, or where roofing manufacturer's installation instructions do not require vapor/air barrier.
- B. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches (50 and 150 mm), respectively.
 - 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 - 2. Continuously seal side and end laps with adhesive.
- C. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.6 INSULATION INSTALLATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Installation Over Metal Decking:

1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows and with long joints continuous at right angle to flutes of decking.
 - a. Locate end joints over crests of decking.
 - b. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay base layer of insulation units over substrate.
 - i. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.

- d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 2) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- D. Installation Over Wood Panel Decking:
- 1. Mechanically fasten slip sheet to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to wood panel decks.
 - a. Fasten slip sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten slip sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).

- 1) Trim insulation so that water flow is unrestricted.
- e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
- f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
- g. Loosely lay base layer of insulation units over substrate.
3. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to wood panel decks.
 - a. Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
4. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:

- 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
- 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
- 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

E. Installation Over Concrete Decks:

1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to concrete roof deck according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
 - 2) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 3) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.

- a. Staggered end joints within each layer not less than 24 inches (305 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- F. Installation Over Lightweight Insulating Concrete Decks:
- 1. Mechanically fasten vented base sheet to lightweight insulating concrete, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight insulating concrete decks.
 - a. Fasten vented base sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten vented base sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.

- a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to vented base sheet according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation[**and tapered insulation**] with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).

- 1) Trim insulation so that water flow is unrestricted.
- f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
- g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
- h. Loosely lay each layer of insulation units over substrate.
- i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.7 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Loosely lay cover board over substrate.
 5. Adhere cover board to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - a. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - b. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.8 ADHERED ROOFING INSTALLATION

- A. Adhere roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll roofing and allow to relax before retaining.
 - 1. Install sheet according to ASTM D 5036.
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
- C. Accurately align roofing, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply to substrate and underside of roofing at rate required by manufacturer, and allow to partially dry before installing roofing. Do not apply to splice area of roofing.
- E. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer, and install fabric-backed roof membrane.
- F. In addition to adhering, mechanically fasten roofing securely at terminations, penetrations, and perimeter of roofing.
- G. Apply roofing with side laps shingled with slope of roof deck where possible.
- H. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roofing and sheet flashings according to manufacturer's written instructions, to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that do not comply with requirements.
- I. Spread sealant bed over deck-drain flange at roof drains, and securely seal roofing in place with clamping ring.

3.9 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.

- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.10 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.
 - 1. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

Retain "Flood Testing" Paragraph below if flood testing of roofing is required. Localize testing to flashings or penetrations if preferred. Limit water depth to not more than load capacity of deck as determined by structural engineer. ASTM D 5957 offers guidance on flood testing waterproof membranes, rather than roofing systems, on horizontal surfaces not exceeding 1/4 inch per foot (1:48). If retaining, review procedures in ASTM D 5957 for applicability.

- 2. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
- 3. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.

4. Flood each area for 24 hours.
 5. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
- B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
- C. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.12 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.13 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
1. Owner: <Insert name of Owner>.
 2. Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Address: <Insert address>.
 5. Area of Work: <Insert information>.
 6. Acceptance Date: _____.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: _____.

- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
 - 1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/sec)>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 - 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 - 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 - 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely

damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

END OF SECTION

07 54 23 – THERMOPLASTIC-POLYOLEFIN (TPO) ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Adhered thermoplastic polyolefin (TPO) roofing system.
2. Substrate board.
3. Roof insulation.
4. Cover board.
5. Walkways.

B. Related Requirements:

1. Section 061053 "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking; and for wood-based, structural-use roof deck panels.
2. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.2 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary in NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1. ASTM D 1079 "Terminology Relating to Roofing and Waterproofing."
2. Glossary of NRCA's "The NRCA Roofing and Waterproofing Manual."
3. Roof Consultants Institute "Glossary of Roofing Terms."

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work

interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing.

B. Sustainable Design Submittals:

1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
2. Product Data: For adhesives and sealants, indicating VOC content.
3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.
4. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
5. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
6. Environmental Product Declaration: For each product.

- 7. Health Product Declaration: For each product.
- 8. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
- C. Shop Drawings: Include roof plans, sections, details, and attachments to other work, including the following:
 - 1. Layout and thickness of insulation.
 - 2. Base flashings and membrane termination details.
 - 3. Flashing details at penetrations.
 - 4. Tapered insulation layout, thickness, and slopes.
 - 5. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
 - 6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- D. Samples for Verification: For the following products:
 - 1. Roof membrane and flashings, of color required.
- E. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, manufacturer and testing agency.
- B. Manufacturer Certificates:
 - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 - a. Submit evidence of compliance with performance requirements.
 - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.
- C. Product Test Reports: For roof membrane and insulation, for tests performed by a qualified testing agency, indicating compliance with specified requirements.
- D. Evaluation Reports: For components of roofing system, from ICC-ES.
- E. Field Test Reports:
 - 1. Concrete internal relative humidity test reports.

2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

- F. Sample Warranties: For manufacturer's special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is listed in FM Approvals' RoofNav for roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, vapor/~~air~~ retarder, substrate board, and other components of roofing system.
 2. Warranty Period: 20 years from date of Substantial Completion. No Dollar Limit.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roof membrane, base flashing, roof insulation, fasteners, cover boards, substrate boards, and, for the following warranty period:
1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
1. Carlisle SynTec Incorporated.
 2. Johns Manville; a Berkshire Hathaway Company. (Basis of Design).
 3. Sika Sarnafil.
 4. Or equal.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.
1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.
- C. Wind Uplift Performance: Roofing system shall be identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist wind uplift pressure calculated in accordance with ASCE-7. Meeting the manufacturers uplift requirements for issuance of the specified NDL Guarantee.

- E. FM Approvals' RoofNav Listing: Roof membrane, base flashings, and component materials shall comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and shall be listed in FM Approvals' RoofNav for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals Certification markings.
 - 1. Fire/Windstorm Classification: Class 1A-60.
 - 2. Hail-Resistance Rating: MH.
- F. Energy Performance: Roofing products shall be compliant with 2016 California Energy Code, Title 24, Part 6 and 2016 California Green Building Standards Code, Title 24, Part 8; "Cool Roof", tested and labeled by the Cool Roof Rating Council (CRRC).
 - 1. Low-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.63 Minimum Thermal Emittance: 0.75 or minimum SRI value of 75.
 - 2. Steep-sloped roof Climate zone 1-16: Minimum 3-yr. aged Solar Reflectance: 0.20 Minimum Thermal Emittance: 0.75 or minimum SRI value of 16.
- G. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

- A. TPO Sheet: ASTM D 6878/D 6878M, internally fabric- or scrim-reinforced, fabric-backed TPO sheet.
 - 1. Carlisle Syntec Incorporated
 - 2. GAF
 - 3. Firestone Building Products
 - 4. Johns Manville; a Berkshire Hathaway Company.
 - 5. Tremco
 - 6. Or equal
 - 7. Thickness: 60 mils (1.5 mm), nominal.
 - 8. Exposed Face Color: [Gray] [Tan] [White] <Insert color.

2.4 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.

1. Adhesive and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: Manufacturer's standard unreinforced TPO sheet flashing, 55 mils (1.4 mm) thick, minimum, of same color as TPO sheet.
- C. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
- D. Roof Vents: As recommended by roof membrane manufacturer.
 1. Size: Not less than 4-inch (100-mm) diameter.
- E. Bonding Adhesive: Manufacturer's standard, water based.
- F. Slip Sheet: Manufacturer's standard, of thickness required for application.
- G. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
- H. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate, and acceptable to roofing system manufacturer.
- I. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.5 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board.
 1. Thickness: 5/8 inch (16 mm).
- B. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum board or ASTM C 1278/C 1278M, fiber-reinforced gypsum board.
 1. Thickness: 1/2 inch (13 mm) thick.
 2. Surface Finish: Factory primed.
- C. Substrate Board: ASTM C 728, perlite board, seal coated.
 1. Thickness: 3/4 inch (19 mm).
- D. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.6 VAPOR/AIR RETARDER

- A. Polyethylene Film: ASTM D 4397, 10 mils (0.25 mm) thick, minimum, with maximum permeance rating of 0.13 perm (0.084 metric perm).
 - 1. Adhesive: Manufacturer's standard lap adhesive, listed by FM Approvals for vapor/air retarder application.

2.7 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by TPO roof membrane manufacturer, approved for use in FM Approvals' RoofNav-listed roof assemblies.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade **3**, felt or glass-fiber mat facer on both major surfaces.
 - 1. Provide rigid insulation with minimum LTTR R-value of 5.6 per inch ASTM C 1289-2014.
 - 2. Compressive Strength: 25 psi (172 kPa).
 - 3. Size: 48 by 96 inches (1219 by 2438 mm).
 - 4. Thickness:
 - a. Base Layer: 1-1/2 inches (38 mm).
 - b. Upper Layer: <Insert thickness>.
- C. Tapered Insulation: Provide factory-tapered insulation boards.
 - 1. Material: Match roof insulation.
 - 2. Minimum Thickness: 1/4 inch (6.35 mm).
 - 3. Slope:
 - a. Roof Field: 1/4 inch per foot (1:48) unless otherwise indicated on Drawings.
 - b. Saddles and Crickets: 1/2 inch per foot (1:24) unless otherwise indicated on Drawings.

2.8 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.

- B. Fasteners: Factory-coated steel fasteners with metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 - 1. Modified asphaltic, asbestos-free, cold-applied adhesive.
 - 2. Bead-applied, low-rise, one-component or multicomponent urethane adhesive.
 - 3. Full-spread, spray-applied, low-rise, two-component urethane adhesive.
- D. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum board or ASTM C 1278/C 1278M fiber-reinforced gypsum board.
 - 1. Manufacturers: Subject to compliance with requirements, provide listed products by one of the following:
 - a. Certainteed; GlasRoc.
 - b. Georgia-Pacific Building Products; DensDeck.
 - c. JM Invinisa Roof Board.
 - d. National Gypsum Company; DEXcell FA.
 - e. USG Corporation; Securock Glass Mat Roof Board.
 - f. Or equal.
 - 2. Thickness: 1/4 inch (6 mm) .
 - 3. Surface Finish: Factory primed.

2.9 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.
 - 1. Size: Approximately 36 by 60 inches (914 by 1524 mm).
 - 2. Color: Contrasting with roof membrane.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 - 1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 - 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 - 5. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than 75 percent, or as recommended by roofing system manufacturer, when tested according to ASTM F 2170.
 - a. Test Frequency: One test probe per each 1000 sq. ft. (93 sq. m), or portion thereof, of roof deck, with not less than three tests probes.
 - b. Submit test reports within 24 hours after performing tests.
 - 6. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.
 - 7. Verify that minimum curing period recommended by roofing system manufacturer for lightweight insulating concrete roof decks has passed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Perform fastener-pullout tests according to roof system manufacturer's written instructions.

1. Submit test result within 24 hours after performing tests.
 - a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.
- D. Confirm all HVAC units and other equipment supported by curbs conform with the following:
 1. Curbs are required to provide a minimum 8" base flashing height measured from the surface of the new membrane to the top of the flashing membrane.
 2. Nail top of flashing and install new metal counterflashing prior to installation of unit.
 3. Perimeter nailers must be elevated to match elevation of roof insulation.

3.3 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning Work on adjoining roofing.
- C. Install roof membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing roofing system.

3.4 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches (610 mm) in adjacent rows.
 1. At steel roof decks, install substrate board at right angle to flutes of deck.
 - a. Locate end joints over crests of steel roof deck.
 2. Tightly butt substrate boards together.
 3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 4. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
 5. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.

3.5 VAPOR/AIR RETARDER INSTALLATION

- A. Provide vapor/air barrier where air leakage from interior can occur through roof substrate; such as wood, wood panel or metal deck. Do not install where vapor/air barrier is not a part of listed roof assembly, or where roofing manufacturer's installation instructions do not require vapor/air barrier.
- B. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 and 6 inches (50 and 150 mm), respectively.
 - 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 - 2. Continuously seal side and end laps with adhesive.
- C. Completely seal vapor/air retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.6 INSULATION INSTALLATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.
- B. Comply with roofing system and roof insulation manufacturer's written instructions for installing roof insulation.
- C. Installation Over Metal Decking:
 - 1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows and with long joints continuous at right angle to flutes of decking.
 - a. Locate end joints over crests of decking.
 - b. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.

- f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay base layer of insulation units over substrate.
 - i. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 - 1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - 2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

- 2) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

D. Installation Over Wood Panel Decking:

1. Mechanically fasten slip sheet to roof deck using mechanical fasteners specifically designed and sized for fastening slip sheet to wood panel decks.
 - a. Fasten slip sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten slip sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
2. Install base layer of insulation with [joints staggered not less than 24 inches (610 mm) in adjacent rows] [end joints staggered not less than 12 inches (305 mm) in adjacent rows].
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
3. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to wood panel decks.
 - a. Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.

4. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

E. Installation Over Concrete Decks:

1. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.

- c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to concrete roof deck according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. (0.3 L/sq. m), and allow primer to dry.
 - 2) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 3) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (305 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

- g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- F. Installation Over Lightweight Insulating Concrete Decks:
- 1. Mechanically fasten vented base sheet to lightweight insulating concrete, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight insulating concrete decks.
 - a. Fasten vented base sheet according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
 - b. Fasten vented base sheet to resist specified uplift pressure at corners, perimeter, and field of roof.
 - 2. Install base layer of insulation with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - a. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

- f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Loosely lay base layer of insulation units over substrate.
 - h. Adhere base layer of insulation to vented base sheet according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - 1) Set insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
 - 2) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 3) Set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
3. Install upper layers of insulation [and tapered insulation] with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
- a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Install with long joints continuous and with end joints staggered not less than 12 inches (305 mm) in adjacent rows.
 - c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - d. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - e. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
 - 1) Trim insulation so that water flow is unrestricted.
 - f. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - g. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - h. Loosely lay each layer of insulation units over substrate.
 - i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:

- 1) Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
- 2) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
- 3) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.7 INSTALLATION OF COVER BOARDS

- A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction.
 1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
 3. Cut and fit cover board tight to nailers, projections, and penetrations.
 4. Loosely lay cover board over substrate.
 5. Adhere cover board to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
 - a. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - b. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.8 ADHERED ROOFING INSTALLATION

- A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.
- C. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency.
- D. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

- E. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer, and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.
- F. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer, and install fabric-backed roof membrane.
- G. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations, and perimeter of roofing.
- H. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- I. Seams: Clean seam areas, overlap roof membrane, and hot-air weld side and end laps of roof membrane and sheet flashings, to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
- J. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.

3.9 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.10 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and to inspect substrate conditions, surface preparation, roof membrane application, sheet flashings, protection, and drainage components, and to furnish reports to Architect.
- B. Owner will engage a qualified testing agency to perform the following tests:
 - 1. Flood Testing: Flood test each roof area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - a. Perform tests before overlying construction is placed.
 - b. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
 - c. Flood each area for 24 hours.
 - d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - e. Testing agency shall prepare survey report indicating locations of initial leaks, if any, and final survey report.
 - 2. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).
 - a. Perform tests before overlying construction is placed.
 - b. After testing, repair areas of discontinuities, repeat tests, and make further repairs until roofing and flashing installations are contiguous.
 - 1) Cost of retesting is Contractor's responsibility.
 - c. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.
- C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
- D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.12 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing system, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.13 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
 - 1. Owner: <Insert name of Owner>.
 - 2. Address: <Insert address>.
 - 3. Building Name/Type: <Insert information>.
 - 4. Address: <Insert address>.
 - 5. Area of Work: <Insert information>.
 - 6. Acceptance Date: _____.
 - 7. Warranty Period: <Insert time>.
 - 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
 - 1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

- a. lightning;
 - b. peak gust wind speed exceeding <Insert mph (m/sec)>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources

lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.

2. Name: _____.

3. Title: _____.

END OF SECTION

07 60 00 – FLASHING AND SHEET METAL

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Flashing and sheet metal components for building construction:
 - 1. Roof and sill flashings.
 - 2. Flashings at aluminum-framed storefronts.
- B. Sheet metal covers and counterflashings at roof mounted mechanical equipment and vent stacks.
- C. Counterflashings for plumbing, mechanical, electrical and other roof penetrations.
- D. Lead flashing at drains and pipes.

PART 2 - PRODUCTS

2.1 SHEET METAL FLASHING AND TRIM MATERIALS

- A. Sheet Metal Materials, General: Meet or exceed minimum requirements and recommendations of reference standards.
- B. Zinc-Coated (Galvanized) Steel: Commercial quality sheet steel with 0.20 percent copper, ASTM A526 except ASTM A527 for lock-forming; Coating Designation G60 hot-dip galvanized typically and G90 for parapet caps and concealed gutters, mill phosphatized where indicated for painting; 24 gauge minimum except as otherwise indicated or recommended by SMACNA Architectural Sheet Metal Manual or as follows:
 - 1. Gutters: 20 gauge.
 - 2. Parapet caps: 22 gauge.
- C. Lead: ASTM B749, Type L51121, copper-bearing sheet lead, minimum 4 lb/sq ft (0.0625-inch thick) except not less than 6 lb/sq ft (0.0937-inch thick) for burning (welding) unless otherwise indicated.
- D. Zinc Sheet and Strip: ASTM B69, Type I, minimum 0.024-inch thick.

2.2 ACCESSORY MATERIALS

- A. Accessory Materials: Provide accessory materials and other items essential to complete the sheet metal installation. Metal accessories shall be made of the same materials as the items to which they are applied.
- B. Underlayment: Asphalt saturated roofing felt (commonly referred to as #15 and #30 felt).

- C. Paper Slip Sheet: 5-lb. rosin-sized building paper.
- D. Polyethylene Underlayment: Reinforced polyethylene sheet, minimum 6 mils thick, resistant to decay when tested in accordance with ASTM E154.
- E. Fasteners, General: Use roofing nails typically.
 - 1. Sheet steel fasteners: Galvanized steel or stainless steel.
 - 2. Fasteners to wood substrate: Refer to Section 06 11 11 - Wood Backing, Blocking and Curbing for requirements. See details on Drawings. Use full-threaded screws unless otherwise indicated.
 - 3. Fasteners to concrete, masonry and metal substrates: Refer to Section 05 05 23 - Metal Fastenings for requirements. See details on Drawings.
 - a. Use threaded concrete and masonry anchors typically at concrete and solid masonry substrates.
 - b. Use self-drilling, self-threading fasteners typically at metal substrates.
 - c. Use sheet metal screws at wood substrates.
- F. Solder:
 - 1. For use with steel, 50 - 50 tin/lead solder (ASTM B32), with rosin flux.
 - 2. For use with stainless steel, provide 60 - 40 tin/lead solder (ASTM B32), with acid-chloride type flux, except use rosin flux over tinned surfaces.
- G. Flux: FS O-F-506.
- H. Shop Primer Paint:
 - 1. Shop primer for ferrous metal at exposed exterior locations: Tnemec 90E-92, ethyl silicate zinc-rich primer, or equal.
 - 2. Shop primer for ferrous metal at concealed exterior locations and for interior locations: Tnemec Series 10, modified alkyd rust-inhibitive primer, or manufacturer's or fabricator's standard, fast-curing, lead-free, universal modified alkyd primer, complying with performance requirements of FS TT-P-645.
 - 3. Shop primer for galvanized steel, for exposed exterior locations: Tnemec S-22 Galv-Gard, oil-cementitious coating.
- I. Field Primer and Finish Coatings: As specified in Section 09 90 00 - Painting and Coating.
- J. Bituminous Coating: Tnemec 46-450 Heavy Tnemecol, high-build mineral-filled coal tar pitch coating, or a cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.
- K. Mastic Sealant: Polyisobutylene; non-hardening, non-skinning, non-drying, non-migrating sealant, as specified in Section 07 90 00 - Joint Protection.
- L. Elastomeric Sealant: Generic type recommended by manufacturer of metal and fabricator of components being sealed and complying with requirements for joint sealants as specified in Section 07 90 00 - Joint Protection.
- M. Epoxy Seam Sealer: 2-part non-corrosive metal seam cementing compound, recommended by metal manufacturer for exterior/interior non-moving joints including riveted joints.

- N. Adhesives: Type recommended by flashing sheet manufacturer for waterproof/weather-resistant seaming and adhesive application of flashing sheet.
- O. Elastic Flashing Filler: Closed-cell polyethylene or other soft closed-cell material recommended by elastic flashing manufacturer as filler under flashing loops to ensure movement with minimum stress on flashing sheet.
- P. Roofing Cement: Asphaltic cement, asbestos-free, complying with ASTM D4586, Type 1.
- Q. Lead Flashing: ASTM B749, minimum 4# lead with 6 to 7 percent antimony content.
- R. Miscellaneous Metal Accessories: Provide sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of the Work, matching or compatible with material being installed, non-corrosive, size and gauge required for performance.

PART 3 - EXECUTION

3.1 FABRICATION

- A. Shop Fabrication, General: Shop-fabricate sheet metal to greatest extent possible. Comply with details shown on Drawings and with applicable requirements of referenced standards and other recognized industry practices to accommodate local climatic considerations.
 - 1. Fabricate sheet metal for waterproof and weather-resistant performance, with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the Work.
 - 2. Fabricate sheet metal items of the materials specified below. Form sheet metal Work to fit substrates.
 - 3. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels indicated, with exposed edges folded back to form hems.
 - 4. Form pieces and sections in longest practical lengths, true to shape, accurate in size, square, and free from distortion or defects.
 - 5. Typically, provide sheet metal items in 8- to 10-foot lengths. Single pieces less than 8 feet long may be used to connect to factory-fabricated inside and outside corners, and at ends of runs.
 - 6. Fabricate vertical faces with bottom edge formed outward 1/4-inch and hemmed to form drip.
- B. Edges: Hem exposed edges on underside 1/2-inch. Miter and seam corners.
- C. Corners: Fabricated from one piece with minimum 18-inch long legs; lock seam and solder for rigidity.
- D. Seams: Typically fabricate non-moving seams in sheet metal with flat lock seams.
 - 1. Typical Seams: Overlapped and sealed seams.
 - 2. Coping Seams: Lock seams, flattened.
 - 3. Seams, Horizontal to Vertical Transitions: Solder joints.
 - 4. Soldered seams: Tin edges to be seamed, form seams, and solder.

- E. Configurations: As indicated on Drawings and as referenced to SMACNA Architectural Sheet Metal Manual.
- F. Expansion Provisions: Where lapped or bayonet-type expansion provisions in sheet metal Work cannot be used or would not be sufficiently waterproof and weatherproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).
- G. Sealant Joints: Where movable, non-expansion type joints are indicated or required for proper performance of sheet metal Work, form metal to provide for proper installation of elastomeric sealant, in compliance with referenced SMACNA standards.
- H. Cleats and Starter Strips: Fabricated of same material as sheet metal fabrication, minimum 4 inches wide, except at continuous strips, interlockable with sheet metal fabrication. Typically use continuous strips.
- I. Exposed Sheet Metal Items: Galvanized sheet steel.
- J. Metal Separations: Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.
- K. Pitch Pans: SMACNA Plates 65, 66, 67 and 68.

3.2 SHEET METAL FINISHES

- A. Sheet Metal Finish: Unless otherwise indicated, all exposed exterior sheet metal is intended to receive paint finish.
 - 1. Sheet metal at exterior walls and other locations exposed to public view: Finish as indicated on the Drawings.
 - a. Metallic paint finish shall be shop-applied and shall match metallic paint finish specified in Section 07 41 13 - Metal Roof Panels.
 - b. Solid color paint finish shall be field-applied coating as specified in Section 09 90 00 – Painting and Coating.
 - 2. Sheet metal exposed at metal roofing: Factory-applied paint finish as specified in Section 07 41 13 - Metal Roof Panels. Sheet metal shall be integral components of metal roofing system.
 - 3. Sheet metal at other locations not exposed to public view: Field coated as specified in Section 09 90 00 – Painting and Coating.
- B. Preparation: Shop prepare metal surfaces for field painting by bonderizing or priming. Pretreat galvanized metal as recommended by primer paint manufacturer.
- C. Priming: All exposed sheet metal, except stainless steel and shop finished metal, is intended for field finish painting. Shop prime all sheet metal to receive field finish coating. Exposed surfaces shall be ready for field finish coating as specified in Section 09 90 00 – Painting and Coating.
- D. Backpriming: Backpaint concealed metal surfaces with bituminous coating, to a minimum dry film thickness of 15 mils.
- E. Fasteners: Exposed fasteners shall match finish of surrounding material.

END OF SECTION

07 62 00 – SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manufactured reglets with counterflashing.
2. Formed roof-drainage sheet metal fabrications.
3. Formed low-slope roof sheet metal fabrications.
4. Formed equipment support flashing.

B. Related Requirements:

1. [Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"] for wood nailers, curbs, and blocking.
2. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.

1.2 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
3. Review requirements for insurance and certificates if applicable.
4. Review sheet metal flashing observation and repair procedures after flashing installation.

5. Obtain roofing manufacturer's review and acceptance of sheet metal roof flashings specified in this Section.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
- B. Shop Drawings: For sheet metal flashing and trim.
 1. Include plans, elevations, sections, and attachment details.
 2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
 3. Include identification of material, thickness, weight, and finish for each item and location in Project.
 4. Include details for forming, including profiles, shapes, seams, and dimensions.
 5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 6. Include details of termination points and assemblies.
 7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
 8. Include details of roof-penetration flashing.
 9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
 10. Include details of special conditions.
 11. Include details of connections to adjoining work.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

2.2 SHEET METALS

- A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.
- B. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.
 - 1. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil (0.013 mm).
- C. Metallic-Coated Steel Sheet: Provide zinc-coated (galvanized) steel sheet according to ASTM A 653/A 653M, G90 (Z275) coating designation or aluminum-zinc alloy-coated steel sheet according to ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation, Grade 40 (Grade 275).
 - 1. Surface: Smooth, flat and mill phosphatized for field painting .

2.3 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Sheet: Minimum 30 mils (0.76 mm) thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl-

or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; WIP 300 HT.
 - b. GCP Applied Technologies Inc. (formerly Grace Construction Products).; Ultra.
 - c. Henry Company.; Blueskin PE 200 HT.
 - d. Protecto Wrap Company.; Jiffy Seal Ice & Water Guard HT.
 - e. Or equal.
2. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F (116 deg C) or higher.
3. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F (29 deg C) or lower.

B. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft. (0.16 kg/sq. m) minimum.

2.4 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.
- B. Fasteners: Self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.
 1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
 - c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
 2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

3. Fasteners for Zinc-Coated (Galvanized) Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

C. Solder:

1. For Zinc-Coated (Galvanized) Steel: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead with maximum lead content of 0.2 percent.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.

E. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

H. Bituminous Coating: Cold-applied asphalt emulsion according to ASTM D 1187.

2.5 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines

indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

- C. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."
- D. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
 - 1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.
 - 2. Use lapped expansion joints only where indicated on Drawings.
- E. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.
- F. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- G. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.
- H. Seams: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
- I. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.
- J. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.
- K. Do not use graphite pencils to mark metal surfaces.

2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Downspouts: Fabricate round downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors. Shop fabricate elbows.
 - 1. Manufactured Hanger Style: As indicated. If not indicated, then use Fig 1-34A according to SMACNA's "Architectural Sheet Metal Manual."
 - 2. Fabricate from the following materials:
 - a. Galvanized Steel: 0.034 inch (0.86 mm) thick.

- B. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch (0.71 mm) thick.

- C. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch (0.71 mm) thick.

- D. Splash Pans: Fabricate to dimensions and shape required and from the following materials:

1. Stainless Steel: 0.025 inch thick.

2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Copings: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12-foot- (3.6-m-) long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and drill elongated holes for fasteners on interior leg. Miter corners, fasten and seal solder or weld watertight. Shop fabricate interior and exterior corners.

1. Coping Profile: as indicated and matching standard details/figures for shop fabricated coping according to SMACNA's "Architectural Sheet Metal Manual."

2. Joint Style: Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate.

3. Fabricate from the Following Materials:

a. Aluminum: 0.050 inch (1.27 mm) thick.

- B. Roof and Roof-to-Wall Transition Expansion-Joint Cover: Fabricate from the following materials: Shop fabricate interior and exterior corners.

1. Stainless Steel: 0.025 inch (0.64 mm) thick.

- C. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch (0.71 mm) thick.

- D. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Stainless Steel: 0.019 inch (0.48 mm) thick.

E. Flashing Receivers: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch (0.40 mm) thick.

F. Roof-Penetration Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch (0.48 mm) Insert dimension thick.

G. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.025 inch thick.

2.8 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch (0.71 mm) thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches (50 mm).

B. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, according to manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.

- C. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches (150 mm) staggered 24 inches (600 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps and edges with roller. Cover underlayment within 14 days.
- D. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.

3.3 INSTALLATION, GENERAL

- A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 - 1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
 - 2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
 - 3. Space cleats not more than 12 inches (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
 - 4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
 - 5. Torch cutting of sheet metal flashing and trim is not permitted.
 - 6. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
 - 1. Coat concealed side of uncoated-aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
 - 2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet (3 m) with no joints within 24 inches (600 mm) of corner or intersection.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
 1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
 2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets with solder to width of 1-1/2 inches (38 mm); however, reduce pre-tinning where pre-tinned surface would show in completed Work.
 1. Do not solder metallic-coated steel and aluminum sheet.
 2. Do not use torches for soldering.
 3. Heat surfaces to receive solder, and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
 4. Stainless-Steel Soldering: Tin edges of uncoated sheets, using solder for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

3.4 ROOF-DRAINAGE SYSTEM INSTALLATION

- A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.
- B. Built-in Gutters: Join sections with riveted and soldered joints or joints sealed with sealant. Provide for thermal expansion. Slope to downspouts. Provide end closures and seal watertight with sealant.

1. Install underlayment layer in built-in gutter trough and extend to drip edge at eaves and under underlayment on roof sheathing. Lap sides minimum of 2 inches (50 mm) over underlying course. Lap ends minimum of 4 inches (100 mm). Stagger end laps between succeeding courses at least 72 inches (1830 mm). Fasten with roofing nails. Install slip sheet over underlayment.
 2. Anchor back of gutter that extends onto roof deck with cleats spaced not more than 18 inches (460 mm) apart.
 3. Install gutter with expansion joints at locations indicated, but not exceeding, 50 feet (15.24 m) apart. Install expansion-joint caps.
- C. Downspouts: Join sections with 1-1/2-inch (38-mm) telescoping joints.
1. Provide hangers with fasteners designed to hold downspouts securely to walls. Locate hangers at top and bottom and at approximately 60 inches (1500 mm) o.c.
 2. Provide elbows at base of downspout to direct water away from building.
 3. Connect downspouts to underground drainage system.
- D. Splash Pans or plant precast splash blocks: Install where downspouts discharge on low-slope roofs and grade level. Place on walkpad surface at roof. Place on grade at downspout discharge.
- E. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
1. Anchor scupper closure trim flange to exterior wall and solder or seal with elastomeric sealant to scupper.
 2. Loosely lock front edge of scupper with conductor head.
 3. Solder exterior wall scupper flanges into back of conductor head.
- F. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch (25 mm) below scupper or gutter discharge.
- G. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated. Lap joints minimum of 4 inches (100 mm) in direction of water flow.

3.5 ROOF FLASHING INSTALLATION

- A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

- B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch (75-mm) centers.
- C. Copings: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated.
 - 1. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at 16-inch (400-mm) centers.
 - 2. Anchor interior leg of coping with washers and screw fasteners through slotted holes at 16-inch (400-mm) 24-inch (600-mm) centers.
- D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches (100 mm) over base flashing. Install stainless-steel draw band and tighten.
- E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches (100 mm) over base flashing. Lap counterflashing joints minimum of 4 inches (100 mm). Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant unless otherwise indicated.
- F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.6 MISCELLANEOUS FLASHING INSTALLATION

- A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

3.7 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.
- B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.8 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.
- D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.
- E. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

07 71 00 – ROOF SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Factory-manufactured reglets and counterflashing.
- B. Factory-manufactured, formed aluminum parapet copings.

PART 2 - PRODUCTS

2.1 REGLETS

- A. Specified Manufacturer: Fry Reglet Corporation, Alhambra, CA (626/289-4744 or 800/237-9773).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. O'Keefes, Inc., Aluminum Building Products, San Francisco, CA (415/822-4222 or 800/227-3305).
 - 2. MM Systems Corporation, Tucker, GA (404/938-7570 or 800/241-3460).

2.2 FORMED ALUMINUM PARAPET COPINGS

- A. Specified Manufacturer: MM Systems Corporation, Tucker, GA (404/938-7570 or 800/241-3460; local representative, Specialty Building Components, Whittier, CA, 310/945-8951).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. W.P. Hickman Co., Asheville, NC (704/274-4000)

PART 3 - EXECUTION

3.1 REGLETS

- A. Reglets and Flashing, General: Springlok Flashing, as manufactured by Fry Reglet Corporation, formed metal reglet with snap-in metal counter-flashing, factory-fabricated, with a minimum opening of 1/4-inch and a depth of 1-1/4 inches.
 - 1. Reglet material: Galvanized steel.

2. Flashing material: 0.020-inch Type 302 stainless steel.
 3. End laps: Factory-formed, 1 inch at reglets and 3-inch at flashings.
 4. Corners: Provide built-up mitered corner pieces for internal and external angles.
 5. Wind clips: Provide Fry Windlok Clip, sheet metal clips to be secured to wall prior to installing flashing in reglet, and to be bent up over bottom edge of flashing.
- B. Surface-Applied Reglets, on Concrete Walls: Fry Springlok Flashing System Type SM.
- C. Recessed Reglets, in Exterior Wall Finish: Fry Springlok Flashing System Type ST.
- D. Mounting Provisions: Provide slotted mounting holes spaced 16 inches on center for fastening reglet to wall.
- E. Accessories:
1. Corners: Factory-manufactured, mitered inside and outside corners.
 2. Splices: Factory-manufactured, integral component of reglet and flashing system.
- 3.2 FORMED ALUMINUM PARAPET COPINGS
- A. Formed Aluminum Parapet Coping: MM Systems Snap-Lok Coping System, multi-part coping system, style to suit size indicated on Drawings and existing wall conditions.
1. Coping shall be formed from 0.063-inch aluminum sheet to profile and of thickness indicated.
 2. Anchor plate shall be minimum nominal 0.0276-inch (0.7-mm) thick, zinc-coated steel anchor plate or cleat located at coping joint.
 3. Provide formed aluminum gutter chair or gutter/splice plate or compression pad/gutter.
 4. Inside and outside corners shall be prefabricated, with miters welded before finishing.
 5. Coping system shall require no exposed fasteners.
- 3.3 ACCESSORY MATERIALS
- A. Accessory Materials: Manufacturer's standard anchors, fasteners, set screws, spacers, seals and filler materials, adhesive, and other accessories compatible with material in contact, as indicated or required for complete installations.
- B. Anchors and Fasteners: Comply with general requirements specified in Section 05 05 23 – Metal Fastenings. Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate.
1. For fastening galvanized steel to concrete substrate: Zinc-coated (galvanized) or stainless steel. Steel with cadmium-plating or other rust-inhibitive coating, except at aluminum materials provide
 2. For fastening aluminum: Stainless steel only.
- C. Screw Heads, Typical: Unless otherwise noted, exposed screws shall be Phillips oval or flat head, countersunk.

- D. Bituminous Coating: Tnemec 46-450 Heavy Tnemecol, high-build mineral-filled coal tar pitch coating, or a cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

3.4 FABRICATION AND FINISHING

- A. Formed Aluminum Parapet Coping Fabrication:
 - 1. Furnish units in longest practicable lengths to minimize number of end joints. Minimize site splicing.
 - 2. Provide hairline mitered corners where coping changes directions or abuts other materials.
 - 3. Provide factory splices, guttering and other components of manufactured coping system. Installed coping shall present continuous faces and edges, with no apparent joints from ground level.
 - 4. Back paint components in contact with cementitious materials to prevent electrolysis.
- B. Metal Finishes, General: Comply with NAAMM - Metal Finishes Manual, for finish designations and application recommendations, except as otherwise indicated. Apply finishes in factory after products are fabricated. Protect finishes on exposed surfaces with protective covering before shipment.
- C. Aluminum Finishes:
 - 1. Concealed aluminum components: AA-M10 (unspecified mill finish).
 - 2. Exposed aluminum components: Thermoplastic organic coating system containing minimum 70 percent Kynar 500/Hylar 5000 polyvinylidene fluoride (PVDF) resin, factory-applied, complying with American Architectural Manufacturers Association (AAMA) standard AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels and Architectural Spray Coaters Association (ASCA) standard ASCA 96 - Voluntary Specification for Superior Performance of Organic Coatings. Provide custom color to match color used for field painted exterior metal products.
- D. Concealed Steel Components: Hot-dipped galvanized or stainless steel.

END OF SECTION

07 72 00 – ROOF ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Roof access hatches.

1.3 SUBMITTALS

- A. Submit product data for all accessories.

PART 2 - PRODUCTS

2.1 ROOF HATCHES

- A. Specified Manufacturer: The Bilco Company, New Haven, CT (208/934-6363; local representative, Specialty Building Components, Whittier, CA, 310/945-8951).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Dur-Red Products, Cudahy, CA (213/771-9000).
 - 2. Milcor, Lima, OH (419/227-6899).
 - 3. Wasco Products, Inc., Sanford, ME (207/324-8060 or 800/388-1181).
 - 4. Acralight International Skylights, Santa Ana, CA (800/325-4355).
- C. Vertical Ladder Roof Access Hatches (Scuttles): Bilco Type E, steel roof scuttle for installation at vertical roof access ladder. Scuttle shall have clear inside curb dimensions of 2 feet 6 inches by 3 feet 0 inches.
- D. Curb: 12 inches high, fabricated from 14 gauge steel and formed with 3-1/2-inch flanges with drilled holes for attachment to roof deck. Provide curb with integral cap flashing formed from 14 gauge galvanized steel.
- E. Cover: 14 gauge galvanized steel sheet with 3-inch beaded flange, neatly welded.
 - 1. Cover hardware: Heavy pintel hinges, compression spring operators enclosed in telescopic tubes, positive snap latch with turn handles and padlock hasps inside and outside, and thermoplastic rubber gasket.
 - 2. Cover operator: Automatic hold-open arm complete with red vinyl grip handle to permit easy release and one-hand control of cover to closed and latched position.

- F. Access Ladder Safety Rail: Acralight, Acragrab rail or equal.
- G. Access Hatch Finish: Factory primer finish, ready for field finish painting as specified in Section 09 90 00 – Painting and Coating.

PART 3 - EXECUTION - NOT USED

END OF SECTION

07 84 00 – FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 Section includes:

- A. Penetration seals through fire and smoke barriers, including:
 - 1. Voids around:
 - a. Pipes.
 - b. Ducts.
 - c. Conduit.
 - d. Cables and wires not in conduit.
 - e. Structural framing.
 - 2. Joints between smoke barriers and other construction.
 - 3. Other joints and openings, as required by authorities having jurisdiction and as necessary to maintain fire-resistive integrity of wall, ceiling and floor construction.
- B. Firesafing as draftstop to subdivide concealed construction to prevent passage of smoke, fumes and flame during fire.

PART 2 - PRODUCTS

- A. Acceptable Manufacturers: Products of the manufacturers listed below will be acceptable, subject to approval of Division of the State Architect (DSA). Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Bio Fireshield, Inc., Concord, MA (508/369-7700 or 800/221-8408).
 - 2. The Carborundum Company, Niagara Falls, NY (716/278-2000).
 - 3. GE Silicones, Waterford, NY (800/255-8886).
 - 4. Nelson Firestop Products, Tulsa, OK (918/627-5530 or 800/331-7325).
 - 5. Semco Division/Products Research and Chemical Corporation, Glendale, CA (818/247-7140 or 800/423-2411).
 - 6. Fire Protection Products Group, 3M Ceramic Materials Department, St. Paul, MN (612/733-1110).
 - 7. Hilti, Inc., Tulsa, OK (800/333-1150).

PART 3 - EXECUTION

3.1 FIRESTOPPING AND SMOKE SEALS MATERIALS

A. Firestopping and Smoke Seals Materials, General:

1. Materials shall be asbestos-free.
2. All firestopping and smokestopping materials, assemblies and installation details shall comply with the requirements of authorities having jurisdiction, including the Building Official and the Fire Marshal having jurisdiction over the facility.
3. It shall be the Contractor's responsibility to determine the types of penetrations and gaps to be sealed and to select appropriate firestopping and smokestopping system designs.
4. All firestopping and smokestopping products shall be from a single manufacturer throughout the project, regardless of system or trade responsible for the penetrating components through the fire or smoke barrier.
5. Provide products which:
 - a. Allow normal expansion and contraction movement of the penetrating or adjoining elements without failure of the penetration or gap seal.
 - b. Emit no hazardous, combustible, or irritating by-products during installation or curing period.
 - c. Do not require special tools for installation or maintenance, including removal and reinstallation of firestopping or smokestopping products to accommodate addition or deletion of penetrating components.
6. Where gunnable or pourable sealant is used, provide only fully-curing types of sealant where penetration accessible in the finished Work.

B. Through-Penetration Firestopping at Fire-Rated Construction: Provide firestopping materials and assemblies to seal all penetrations at all fire barriers. Firestopping assemblies shall be listed in the UL Fire Resistance Directory under categories XHCR and XHEZ, providing that such assemblies conform to the construction type, penetration type, annular space requirements and fire rating requirement for each distinct condition, and that the system shall be symmetrical for wall applications.

1. Fire-resistance ratings of each firestopping assembly shall be determined by testing in the configurations necessary for Project conditions and fire-resistance ratings shall be at least as high as that of the fire barrier in which the firestopping assembly is installed.
2. If a tested assembly is not available for a particular penetration configuration, modify the penetration configuration to suit available assemblies, as acceptable to authorities having jurisdiction. Do not modify assembly configuration except as specifically stated in the test report or as approved by authorities having jurisdiction.

C. Construction Gap Firestopping at Fire-Rated Construction: Provide firestopping materials and assemblies to seal all gaps between building elements at all fire barriers. Firestopping assemblies shall be listed in the UL Fire Resistance Directory and shall conform to the construction type, type of gap and fire rating requirement for each distinct condition.

- D. Smokestopping at Smoke Partitions: Provide firestopping assemblies to seal all penetrations at all smoke barriers. Sealing materials shall be any firestopping assembly using the same materials as used for firestopping in fire-rated construction, specified above, provided that such assembly includes rating as a smoke seal and is acceptable to authorities having jurisdiction. Fire resistance time may be disregarded.
- E. Warning Labels: Self-adhesive or wired-on labels, providing warning that penetration or gap has been sealed with firestopping or smokestopping and providing pertinent information about such firestopping or smokestopping.
 - 1. Label shall be as acceptable by authorities having jurisdiction, including size of label, size of lettering and color of lettering.
 - 2. At a minimum, label shall include:
 - a. Product used for sealing penetration or gap.
 - b. "WARNING" and "DO NOT REMOVE".
 - c. Installer's firm name.
 - d. UL classification number.
 - e. Hour rating, if fire barrier.
 - f. Date.

END OF SECTION

07 90 00 – JOINT PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Exterior joints sealers in vertical surfaces and nontraffic horizontal surfaces.
- B. Exterior joints in horizontal traffic surfaces.
- C. Interior joints in vertical surfaces and horizontal nontraffic surfaces.
- D. Interior joints in horizontal traffic surfaces.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealers, joint fillers and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
- B. Colors: Standard or custom colors as selected by Architect to match or suit surrounding finish materials.

2.2 ELASTOMERIC JOINT SEALANTS

- A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealant of base polymer indicated which complies with ASTM C920 requirements, including those referenced for Type, Grade, Class, and Uses.
- B. One-Part Neutral-Curing Silicone Sealant (Sealant Types A1 and A2): Type S, Grade NS, Class 25; suitable for Uses T, NT, M, G, A, and, as applicable to joint substrates indicated, O.
 - 1. Sealant Type 1A: Dow Corning 790 Silicone Building Sealant. No substitutions will be considered.
 - 2. Sealant Type 1B: Dow Corning 795 Silicone Building Sealant, by Dow Corning Corp., GE Silpruf by General Electric Company, or Pecora 895 by Pecora Corporation.
- C. One-Part Mildew-Resistant Silicone Sealant (Sealant Type 2): Type S, Grade NS, Class 25; suitable for Uses NT, G, A, and, as applicable to non-porous joint substrates indicated, O; formulated with fungicide; intended for sealing interior joints with non-porous substrates and subject to in-service exposure to conditions of high humidity and temperature extremes; Dow Corning 786 Mildew Resistant Silicone Sealant, by Dow Corning Corp. or GE

Silicones 1700 Sanitary Sealant, by General Electric Company or 898 Silicone, by Pecora Corporation.

- D. One-Part Moisture-Cured Polyurethane (Sealant Type 3): Type M, Grade NS, Class 25; Sikaflex -2c NS/SL by Sika Corporation or Sonneborn SL-2 by Sonneborn Building Products.

2.3 LATEX JOINT SEALANTS

- A. Acrylic-Emulsion Sealant (Sealant Type 4): Manufacturer's standard, one part, non-sag, mildew-resistant, acrylic-emulsion sealant complying with ASTM C834, formulated to be paintable and recommended for exposed applications on interior and on protected exterior locations involving joint movement of not more than plus or minus 5 percent; one of the following:
 - 1. Chem-Calk 600, by Bostik Construction Products Div.
 - 2. AC-20, by Pecora Corp.
 - 3. Sonolac, by Sonneborn Building Products Div.; Rexnord Chemical Products, Inc.
 - 4. Tremco Acrylic Latex 834, by Tremco Inc.

2.4 JOINT SEALANTS FOR PAVING

- A. Specified Manufacturer: L.M. Scofield Company, Los Angeles, CA, (213/720-3000 or 800/800-9900).
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. Three-Component Paving Joint Sealant (Sealant Type 5): Lithoseal Trafficalk-3G by L.M. Scofield Company, three-component urethane formulation with proprietary hybrid polymer,, which cures to a firm, flexible, tear-resistant rubber, complying with ASTM C920 Type M, Grade NS, Class 25, suitable for Use T.
 - 1. Consistency: Gun-grade.
 - 2. Shore hardness: 40 +/-5.
 - 3. Joint movement capability: +/-25 percent.
 - 4. Ultimate elongation: 500 percent plus.
 - 5. Service temperature range: -40 to 158 degrees F.
 - 6. Paving Joint Sealant Color: As selected by Architect from manufacturer's full 72 color selection.

2.5 JOINT SEALANT BACKING

- A. Joint Sealant Backing, General: Provide sealant backings of material and type which are non-staining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Plastic Foam Joint Fillers: Preformed, compressible, resilient, non-waxing, non-extruding strips of flexible, non-gassing plastic foam of material indicated below; non-absorbent to

water and gas; and of size, shape and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

1. Specified Manufacturer and Product: Applied Technologies, Inc., Sof Rod, proprietary, reticulated, closed-cell polymeric foam, non-outgassing, with a density of 2.5 pcf and tensile strength of 35 psi per ASTM D1623, and with water absorption less than 0.02 gms/cc in accordance with ASTM C1083.
 2. Acceptable Manufacturer and Product: None identified. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Elastomeric Tubing Joint Fillers: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D1056, non-absorbent to water and gas, capable of remaining resilient at temperatures down to -26 degrees F. Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and otherwise contribute to optimum sealant performance.
- D. Bond-Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.
- 2.6 JOINT FILLERS FOR PAVING
- A. Joint Fillers for Paving, General: Provide joint fillers of thickness and widths indicated.
- B. Bituminous Fiber Joint Filler: Preformed strips of composition below, complying with ASTM D1751, asphalt saturated fiberboard.
- 2.7 MISCELLANEOUS MATERIALS
- A. Primer: Provide type recommended by joint sealer manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealer-substrate tests and field tests.
- B. Cleaners for Non-porous Surfaces: Provide non-staining, chemical cleaners of type which are acceptable to manufacturers of sealants and sealant backing materials, which are not harmful to substrates and adjacent non-porous materials, and which do not leave oily residues or otherwise have a detrimental effect on sealant adhesion or in-service performance.
- C. Masking Tape: Provide non-staining, non-absorbent type compatible with joint sealants and to surfaces adjacent to joints.

PART 3 - EXECUTION - NOT USED

END OF SECTION

DIVISION 08 – OPENINGS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

08 11 00 – METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Flush hollow steel doors, fire-rated and non-rated.
- B. Rolled steel door, sidelight and fixed window frames, welded construction ("hollow metal" frames).
- C. Vision lights and louvers in doors.

PART 2 - PRODUCTS

2.1 METAL DOOR AND FRAME MATERIALS

- A. Sheet Steel for Doors and Frames: Prime quality cold rolled, annealed, stretcher leveled steel, conforming to Commercial Standard CS 242 or CS 211, with bonderized finish.
- B. Hot-Rolled Steel Sheets and Strip: ASTM A 569/A 569M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- C. Cold-Rolled Steel Sheets: ASTM A 366, Commercial Steel (CS), or ASTM A 620/A 620M, Drawing Steel (DS), Type B; stretcher-leveled standard of flatness.
- D. Metallic-Coated Steel Sheets: ASTM A 653/, Commercial Steel (CS), Type B, with an zinc-iron-alloy (galvannealed) coating; stretcher-leveled standard of flatness.
- E. Electrolytic Zinc-Coated Steel Sheet: ASTM A 591, Commercial Steel (CS), Class B coating; mill phosphatized; suitable for unexposed applications; stretcher-leveled standard of flatness where used for face sheets.
- F. Supports and Anchors: Galvanized sheet steel, minimum 18- gauge sheet.
- G. Inserts, Bolts, and Fasteners: Manufacturer's standard units. Where items are built into exterior walls, hot-dip galvanize in compliance with ASTM A153, Class C or D as applicable.
- H. Shop Applied Paint: Apply after fabrication, rust-inhibitive enamel or paint, either air-drying or thermosetting, suitable as a base for specified finish paints, complying with ANSI A224.1 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.

2.2 DOOR LOUVERS AND VISION LIGHTS

- A. Specified Manufacturer: Anemostat Door Products, Division of Dynamics Corporation of America, Carson, CA (562/775-7441 or 800/982-9000).

- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
1. Air Louvers, Inc., Pico Rivera, CA (562/948-3495): Louvers and vision lights.
 2. Construction Specialties, Inc. (C/S), San Marcos, CA (619/744-0300; local representative, Integrated Marketing Concepts, Inc., Laverne, CA 909/392-5500): Aluminum louvers.
 3. K.N. Crowder Mfg., Inc. (KNC), Lewiston, NY (716/754-8247):
 4. Leslie- Locke, Inc., Atlanta, GA (404/953-6366 or 800/321-3415): Louvers and vision lights.
 5. The Airolite Company, Marietta, OH (614/373-7676): Door louvers.

PART 3 - EXECUTION

3.1 FLUSH STEEL DOORS

- A. Flush Steel Doors: Full flush panel steel doors, complying with requirements indicated below by reference to ANSI 250.8 for level and model and ANSI A250.4 for physical-endurance level.
1. Interior steel doors: Level 2 and Physical Performance Level B (Heavy Duty), Model 1 Full Flush, 16 gauge steel.
 2. Exterior steel doors: Level 2 and Physical Performance Level B (Heavy Duty), Model 1 Full Flush, 14 gauge steel. Provide flush top and bottom, not open channel, to prevent water intrusion at exterior steel doors.
- B. Facing Material:
1. Interior steel doors: Plain steel sheet or electrolytic zinc-coated steel sheet.
 2. Exterior and damp location steel doors: Metallic-coated steel sheets.
- C. Internal Construction: Manufacturer's standard core materials according to ANSI 250.8, as follows:
1. Interior doors:
 - a. Resin-impregnated paper honeycomb, at non-fire rated doors.
 - b. Rigid mineral fiber with internal sound deadener on inside of face sheets, at fire-rated doors.
 2. Exterior doors: One of the following:
 - a. Rigid polyurethane conforming to ASTM C 591.
 - b. Rigid polystyrene conforming to ASTM C 578.
- D. Supports and Anchors: Fabricate of not less than 18- gauge sheet steel; galvanized where used with galvanized frames or at exterior, damp or wet locations.
- E. Inserts, Bolts, and Fasteners: Manufacturer's standard units. Where items are to be built into exterior walls, hot-dip galvanize in compliance with ASTM A153, Class C or D as applicable.

- F. Clearances:
 - 1. Head and jambs: Not more than 1/8-inch, except not more than 1/4-inch between non-fire-rated pairs of doors.
 - 2. Bottom: Not more than 3/8-inch from finish surface.
 - 3. Fire Doors: Provide clearances according to ANSI/NFPA 80.
 - G. Shop-Applied Paint: After fabrication apply rust-inhibitive enamel or paint, either air-drying or baking, suitable as a base for specified finish paints, complying with ANSI A224.1 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
 - H. Shop Painting:
 - 1. Clean, treat, and paint exposed surfaces of steel door and frame units, including galvanized surfaces.
 - 2. Clean steel surfaces of mill scale, rust, oil, grease, dirt, and other foreign materials before application of paint.
 - 3. Apply shop coat of prime paint of even consistency to provide a uniformly finished surface ready to receive finish paint.
 - 4. Apply finish coat to doors indicated as prefinished by electrostatically spraying and baking, to produce a paint thickness of 1.25 mils.
- 3.2 WELDED STEEL FRAMES
- A. Welded Steel Frames: Full-formed sheet steel frames for doors, transoms, sidelights, borrowed lights, fixed windows and other openings, of types and styles as shown on Drawings and schedules, with concealed fastenings, welded construction, complying with ANSI A250.
 - 1. Exterior Frames: 14 gauge minimum gauge steel, galvanized steel, shop primer finish.
 - 2. Interior Frames: 16 gauge minimum steel, primer painted steel finish.
 - B. Shapes: As indicated on the Drawings.
 - C. Fabrication: Mitered and welded corners.
 - D. Reinforcements, General: Provide in accordance with SDI 107.
 - 1. Hinge Reinforcements: 9 gauge, full mortise.
 - 2. Closer Reinforcements: 9 gauge.
 - 3. Strike Reinforcement: 11 gauge.
 - E. Wide Openings: Reinforce frames wider than 48 inches with roll formed steel channels, minimum 12 gauge, fitted tightly into frame head, or provide frames of minimum 14 gauge steel.
 - F. Preparations for Door Hardware: Comply with ANSI A115. Provide factory-prepared cutouts from hardware instructions and templates. Refer to Section 08 70 00 - Hardware. Prepare cutouts with fully drilled and tapped fittings.
 - G. Plaster Guards: 24 gauge, at strike and head cutouts, welded to back of hardware openings at locations where grouted frame only turn out to be rusted frames, due to the moisture

against the metal, plaster or other materials might interfere with hardware installation and operation. Provide plaster guards at cement plaster (stucco} and mortar-set tile conditions, typically.

- H. Anchors, General: Provide in accordance with SDI 105. Anchors at fire rated frames shall also conform to UL Standard 10B.
- I. Anchors at Stud Partitions: Provide at least 3 wall anchors per jamb at hinge and strike levels.
- J. Anchors at Door Frames in Concrete or Masonry: Frames erected after concrete or masonry.
 - 1. Floor anchors: 12 gauge angle welded to frame, full width of frame section, one each jamb.
 - 2. Jamb anchors: 12 gauge channel or Z welded to frame full width of frame section less wall finish thickness with tube sleeve welded to anchor and to frame stop, drilled and deep dimpled for anchor and flat head screw for completely concealed fastening.
 - 3. Head Anchors: Provide anchors same as for wall, located at center of head, for pairs of doors only.
- K. Anchors at Door Frames in Concrete or Masonry: Frames erected before concrete or masonry.
 - 1. Jamb anchors: 12 gauge T-anchor, loose in frame, full width of frame engaging frame returns, T-leg equal to wall thickness less 2 inches or frame width whichever is less. T-leg shall be 6 inches long with 1/2-inch diameter hole for reinforcement bar dowel, 3 per jamb.
 - 2. Head anchors: Provide T-anchor same as wall anchors, located at center of head, at pairs of doors only.
- L. Frames For Interior Borrowed Lights and Windows: Full formed, 16 gauge cold rolled steel with concealed fastenings, welded corners, fabricated as for door frames, shapes as detailed and scheduled on Drawings.
 - 1. Jamb anchors: Same as for door frames for respective wall condition, except jamb anchors located within 6 inches of head and sill plus spaced not more than 24 inches on center.
 - 2. Head and sill anchors: Same as for door frames for respective wall condition, except located within 6 inches of jambs plus spaced not more than 24 inches on center.
- M. Glazing Stops: Channel glazing stops, miter at corners, drill and countersink for oval head screws, completely fit ready for removal and glazing at site.
- N. Built-up Transom and Sill Bars: Fabricate from same material as for frames as detailed. Fabricate concealed portions from tube stock, double channels, roll formed sections or break shape; maintain structural adequacy. Fabricate exposed portions, break shape to profile detail.
- O. Double Mullions: Fabricate same as frame, back to back with welded and filled seam.
- P. Door Silencers: Drill stops at frames to receive button-type silencers specified in Section 08 70 00 - Hardware.
 - 1. Provide three silencers on strike jamb stop for single leaf doors and two at head stop for pairs of doors.

2. Omit silencers where head and jamb where door seals (weatherstripping and smoke or sound seals) are specified.
3. Omit silencers where in violation of fire rating.

3.3 DOOR LOUVERS AND VISION LIGHTS

- A. Louvers, Exterior Flush Steel Doors: Anemostat Model PLSL, inverted split-Y blade design, 12 gauge steel frame with 18 gauge steel louver blades, galvanized sheet steel with factory prime finish, through-bolt security screw fasteners and 18-14 bronze mesh screen mounted on interior face.
- B. Louvers, Interior Flush Steel Doors: Anemostat Model AFDL, inverted-Y blade, 14 gauge steel frame with 16 gauge steel louver blades, with manufacturer's standard gray primer finish.
- C. Louvers, Interior Wood Doors: At Contractor's option, provide one of the following:
 1. Anemostat Model AFDL, inverted-Y blade, extruded aluminum frame and blades, clear anodized finish, for doors with stained and varnished wood veneer finish.
 2. Anemostat Model AFDL, inverted-Y blade, 18 gauge steel frame with 20 gauge steel louver blades, with manufacturer's standard gray primer finish for doors with opaque painted finish, for field finish painting to match door face at painted doors as specified in Section 09 90 00 – Painting and Coating.
- D. Vision Lights:
 1. Fire Rated: Anemostat Model BFL-123 for 1/4-inch thick glass and Anemostat Model FGS-IS for thicker glass, with UL or Warnock-Hersey classification to suit fire rating of door. Confirm glass type and thickness with notes at Door Schedule in the Drawings.
 2. Non-Rated: Anemostat Model BFL-123, for 1/4-inch thick glass.
 3. Finish: At Contractor's option, provide either plated finish to match door hardware (satin chrome), brushed stainless steel or manufacturer's standard gray primer finish with field-applied finish paint to match door face, as specified in Section 09 90 00 – Painting and Coating.

END OF SECTION

08 14 00 – WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Solid core flush doors with hardwood faces for stain and varnish finish.
- B. Solid core flush doors with hardwood or hardboard faces, for paint finish.
- C. Pre-fitting and pre-machining.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Graham Wood Doors, Mason City, IA (641/423-2444). See Part 4 – PRODUCT DATA
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable. Products of other manufacturers will be acceptable in accordance with the "or equal" provision of the Contract.
 - 1. Marshfield DoorSystems, Inc., Marshfield, WI (800/869-3667).
 - 2. Algoma Hardwoods, Inc., Algoma, WI (414/487-5221 or 800/558-8032).
 - 3. Eggers Industries, Architectural Door Division, Two Rivers, WI (414/793-1351).
 - 4. T.M. Cobb Co., Riverside, CA (909/248-2440).
 - 5. Haley Bros., Inc., Buena Park, CA (714/670-2112).
 - 6. Vancouver Door, Inc., Puyallup, WA (206/845-9581).

2.2 WOOD DOORS, GENERAL

- A. Door Materials: Conform to Woodwork Institute of California (WIC) Manual of Millwork, Section 12 - Wood Doors for door type and grade specified.

2.3 FLUSH PANEL, ENGINEERED COMPOSITE LUMBER CORE DOORS

- A. Flush Panel, Engineered Composite Lumber Core Doors, Grand Premium Grade: Formed Structural composite lumber bond to 1" minimum birch vertical styles, full & square, complying with WDMA/AWS.
- B. Engineered Composite Lumber Core Doors, Non-Rated: For typical interior doors, 1-3/4-inch thick, unless otherwise indicated, 5-ply Engineered Composite Lumber Core, Graham GPD-EC WDMA/AWS – Extra Heavy Duty, WDMA – Premium Grade

- C. Engineered Composite Lumber Core Doors, Fire-Rated: 1-3/4-inch thick, 5-ply construction, Graham
 - D. GPD-EC WDMA/AWS – Extra Heavy Duty, WDMA – Premium Grade or UL 20-minute fire rating.
- 2.4 FLUSH PANEL, MINERAL CORE DOORS
- A. Mineral Core Doors, Fire-Rated: Non-combustible mineral core, birch wood veneer doors, 5-ply construction, Graham GPD-FD 90 or UL fire rating for 3/4-Hour to 1-1/2 Hours, as indicated on the Drawings.

PART 3 - EXECUTION

3.1 DOOR FABRICATION

- A. Fabrication, General: Fabricate wood doors factory-prefit and premachined to fit frame opening sizes indicated, with uniform clearances and bevels to suit door operation.
 - 1. Fitting clearances for fire-rated doors: Comply with NFPA 80.
 - 2. Non-rated door edges: Bevel lock and hinge edges 1/8-inch in 2 inches.
 - 3. Fire-rated door edges: Bevel lock edge 1/8-inch in 2 inches; trim stiles and rails only to extent permitted by labeling agency.
- B. Facings:
 - 1. Facing for transparent finish: WIC Custom Grade, hardwood species as indicated on the Drawings or, if not indicated, white oak, plain sliced and bookmatched.
 - 2. Facing for opaque (painted) finish: Rotary sliced natural birch or tempered hardboard.
- C. Finishes: Field primed and painted as specified in Section 09 90 00 – Painting and Coating.
- D. Edge Finish: Hardwood, as allowed by Grade.
- E. Metal Astragals: Pre-machine astragals and formed steel edges for hardware where required for pairs of fire-rated doors.
- F. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of doors required.
- G. Fire Labeling: Provide permanent steel labels of rating authority on each rated door. Place label in inconspicuous location.

3.2 PRE-FITTING AND PRE-MACHINING

- A. Pre-Fitting and Pre-Machining: Provide all wood doors prefit and pre-machined.
 - 1. Refer to Section 08 70 00 – Hardware and Door Schedule on the Drawings for door hardware requirements.
 - 2. For fire-rated wood door assemblies, all cutting and fitting for door sizing and hardware preparation shall be done by door manufacturer in accordance with fire labeling requirements.

- B. Fitting: Fit doors to frames for uniform clearance at each edge, as required by reference standards and as specified herein. Doors shall be exact net sizes, including undercuts, for specified installation clearances.
 - 1. Fitting clearances for fire-rated doors: Comply with NFPA 80.
 - 2. Non-rated doors: Bevel lock and hinge edges 1/8-inch in 2 inches.
 - 3. Fire-rated doors: Bevel lock edge 1/8-inch in 2 inches; trim stiles and rails only to extent permitted by labeling agency.
 - 4. Metal astragals: Pre-machine astragals and formed steel edges for hardware where required for pairs of fire-rated doors.
- C. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of doors required.
- D. Pre-Machining at Fire-Rated Wood Door Assemblies: All cutting and fitting for door sizing and hardware preparation shall be done by door manufacturer in accordance with fire labeling requirements.

PART 4 - PRODUCT DATA

- 4.1 The following cut sheets are for the specified manufacturer in section 2.1.

ASSA ABLOY

ASSA ABLOY, the global leader
in door opening solutions

GPD-PC

5-Ply Particleboard Core
WDMA/AWS Extra Heavy Duty
PC-5

Construction

Horizontal Edges:

- Top and bottom rails - structural composite lumber
- Bonded to core
- 1" minimum after factory trim
- No additional blocking required for thru bolted closers
- Optional closer and lock blocks available

Vertical Edges:

- Matching vertical edges
- Bonded to core
- Structural composite lumber (SCL) laminated to a matching hardwood face (standard for Oak, Birch, and Maple)
- Structural composite lumber (SCL) laminated with a matching veneer edge band on veneers other than listed above as standard with optional hardwood stiles face available

Core:

- Conforms to ANSI A208.1
- Standard LD1 Particleboard Core - 28 lbs/ft³
- Optional LD2 available - 32 lbs/ft³
- Meets requirements of LEED MR4
- Optional to UL 10c (positive pressure) Category 'A'

Fire Rating:

- 20 minute fire rating available
- Meets UL 10b (neutral pressure) and UL 10c (positive pressure) Category "B" requirements
- Option to UL 10c (positive pressure) Category "A"

Acoustical Rating:

- Sound Transmission Class (STC) 30 operable with required seals

Adhesive:

- Doors constructed using Type I adhesives which contain no added Urea-formaldehyde

Construction Grade:

- Performance: WDMA/AWS -Extra Heavy Duty*
- Aesthetic: WDMA - Premium Grade

Face Veneer:

- Available in a wide variety of vertical & horizontal grain wood species. Sketch Face, Medium Density Overlay (MDO), and Primed Hardboard
- WDMA/AWS "A" Grade, Book and Running Match, standard
- Slip, Balance, and Center Balance Match available upon request
- WDMA/AWS "AA" Grade available upon request

Crossband:

- 1/16" (1.6 mm) minimum high density engineered wood composite
- Optional with no added Urea-formaldehyde

Finish:

- UV cured factory finish meets or exceeds WDMA TR-6 and Architectural Woodwork Standards (AWS) First Edition - System #9
- Available in 28 standard colors and custom color match
- Available with MicroShield® Antimicrobial finish

Certifications and Sustainability:

- Optional LEED 3.0 credits available
- MR 4 - Recycled Content (standard)
- MR 6 - Regional Materials
- MR 7 - FSC Certified Wood
- IEQ 4.4 - Low-emitting Materials
- IEQ 5 - Enhanced Acoustical Performance (LEED for schools) STC 35 operable (flush door)
- California Air Resources Board (CARB)
- GreenGuard - Indoor Air Quality & Children in Schools
- Collaborative for High Performance Schools (CHPS)

Lifetime Warranty

*Optional blocking required to meet Extra heavy Duty face screw holding standards.

END OF SECTION

08 15 00 – PLASTIC DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fiberglass reinforced polyester (FRP) flush doors with aluminum frames.
- B. If shown on the drawings:
 - 1. Architectural panels
 - 2. Insert framing systems
 - 3. Vision Lites
 - 4. Security Grates
 - 5. Louvers

1.3 RELATED SECTIONS

- A. Section 08 70 00 - Hardware.

1.4 REFERENCES

- A. AAMA 1503.1 - Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
- B. ASTM B 209 - Aluminum and Aluminum-Alloy Sheet and Plate.
- C. ASTM B 221 - Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
- D. ASTM D 256 - Determining the Pendulum Impact Resistance of Notched Specimens of Plastics.
- E. ASTM D 543 - Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents.
- F. ASTM D 570 - Water Absorption of Plastics.
- G. ASTM D 638 - Tensile Properties of Plastics.
- H. ASTM D 790 - Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
- I. ASTM D 1308 - Effect of Household Chemicals on Clear and Pigmented Organic Finishes.
- J. ASTM D 2583 - Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
- K. ASTM E 84 - Surface Burning Characteristics of Building Materials.

- L. ASTM E 283 – Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- M. ASTM E 330 - Structural Performance of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference.
- N. ASTM E 331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- O. SFBC P.A. 203 - Criteria for Testing Products Subject to Cyclic Wind Pressure Loading.
- P. SFBC 3603.2 (b) (5) - Forced Entry Resistance Test.

1.5 PERFORMANCE REQUIREMENTS

- A. General: Provide door assemblies that have been designed and fabricated to comply with specified performance requirements, as demonstrated by testing manufacturer's corresponding standard systems.
- B. Air Infiltration: For a single door 3'-0" x 7'-0", test specimen shall be tested in accordance with ASTM E 283 at pressure differential of 6.24 psf. Door shall not exceed 0.90 cfm per linear foot of perimeter crack.
- C. Water Resistance: For a single door 3'-0" x 7'-0", test specimen shall be tested in accordance with ASTM E 331 at pressure differential of 7.50 psf. Door shall not have water leakage.
- D. Single Door with Single Point Latching:
 - 1. Uniform Static Load, ASTM E 330: Plus or minus 75 pounds per square foot.
 - 2. Forced Entry Test, 300 Pound Load Applied, SFBC 3603.2 (b)(5): Passed.
 - 3. Cyclic Load Test, SFBC P.A. 203: Plus or minus 53 pounds per square foot.
 - 4. Large Missile Impact Test, PA 201: Passed.
- E. Thermal Transmission, Exterior Doors, U-Value, AAMA 1503.1: Maximum of 0.09 BTU/hr x sf x degrees F.
- F. Surface Burning Characteristics, FRP Doors and Panels, ASTM E 84:
 - 1. Flame Spread: Maximum of 200, Class C.
 - 2. Smoke Developed: Maximum of 450, Class C.
- G. Surface Burning Characteristics, Class A Option On Interior Faces of FRP Exterior Panels and Both Faces of FRP Interior Panels, ASTM E 84:
 - 1. Flame Spread: Maximum of 25.
 - 2. Smoke Developed: Maximum of 450.
- H. Impact Strength, FRP Doors and Panels, Nominal Value, ASTM D 256: 15.0 foot-pounds per inch of notch.
- I. Tensile Strength, FRP Doors and Panels, Nominal Value, ASTM D 638: 14,000 psi.
- J. Flexural Strength, FRP Doors and Panels, Nominal Value, ASTM D 790: 21,000 psi.
- K. Water Absorption, FRP Doors and Panels, Nominal Value, ASTM D 570: 0.20 percent after 24 hours.

- L. Indentation Hardness, FRP Doors and Panels, Nominal Value, ASTM D 2583: 55.
 - M. Abrasion Resistance, Face Sheet, Taber Abrasion Test, 25 Cycles at 1,000 Gram Weight With CS-17 Wheel: Maximum of 0.029 average weight loss percentage.
 - N. Stain Resistance, ASTM D 1308: Face sheet unaffected after exposure to red cabbage, tea, and tomato acid. Stain removed easily with mild abrasive or FRP cleaner when exposed to Sharpie ink pen and white spray paint.
 - O. Chemical Resistance: ASTM D 543. Excellent rating
 - 1. Acetic acid, 5 percent solution.
 - 2. Chlorine bleach, 10 percent solution.
 - 3. Sodium hypochlorite, 4 to 6 percent solution.
 - 4. Citric acid, 10 percent solution.
 - 5. Sodium Carbonate, 20 percent solution.
 - 6. Turpentine.
- 1.6 SUBMITTALS
- A. Product Data: Submit manufacturer's product data, including description of materials, components, fabrication, finishes, and installation.
 - B. Shop Drawings: Submit manufacturer's shop drawings, including elevations, sections, and details, indicating dimensions, tolerances, materials, fabrication, doors, panels, framing, hardware schedule, finish, options, and accessories.
 - C. Samples:
 - 1. Door: Submit manufacturer's sample of door showing face sheets, core, framing, finish, and accessories.
 - 2. Color: Submit manufacturer's samples of standard colors of doors and frames.
 - D. Test Reports: Submit certified test reports from qualified independent testing agency indicating doors comply with specified performance requirements.
 - E. Manufacturer's Project References: Submit list of successfully completed projects including project name and location, name of architect, and type and quantity of doors manufactured.
 - F. Maintenance Manual: Submit manufacturer's maintenance and cleaning instructions for doors, including maintenance and operating instructions for hardware.
 - G. Warranty: Submit manufacturer's standard warranty.
- 1.7 QUALITY ASSURANCE
- A. Manufacturer's Qualifications: Continuously engaged in manufacturing of doors of similar type to that specified, with a minimum of 25 years successful experience.
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying opening door mark and manufacturer.

- B. Storage: Store materials in clean, dry area indoors in accordance with manufacturer's instructions.
 - C. Handling: Protect materials and finish from damage during handling and installation.
- 1.9 WARRANTY
- A. Warrant doors, frames, and factory hardware against failure in materials and workmanship, including excessive deflection, faulty operation, defects in hardware installation, and deterioration of finish or construction in excess of normal weathering.
 - B. Warranty Period: Ten years from the notice of completion or occupancy whichever occurs first.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Special-Lite, Inc., PO Box 6, Decatur, Michigan 49045. Toll Free (800) 821-6531. Phone (616) 423-7068. Fax (800) 423-7610. Web Site www.special-lite.com. E-Mail info@special-lite.com.
- B. Alternate manufacturers: Products of other manufacturers will be acceptable in accordance with the "or equal" provision of the Contract.

2.2 FRP FLUSH DOORS

- A. Model: SL-17 Flush Doors with SpecLite3 fiberglass reinforced polyester (FRP) face sheets.
- B. Construction:
 - 1. Door Thickness: 1-3/4 inches.
 - 2. Stiles and Rails: Aluminum Alloy 6063-T5, minimum of 2-5/16-inch depth.
 - 3. Corners: Mitered.
 - 4. Provide joinery of 3/8-inch diameter full-width tie rods through extruded splines top and bottom as standard tubular shaped stiles and rails reinforced to accept hardware as specified.
 - 5. Securing Internal Door Extrusions: 3/16-inch angle blocks and hex-type nuts for joinery. Welds, glue, or other methods are not acceptable.
 - 6. Furnish extruded stiles and rails with integral reglets to accept face sheet and lock it into place to permit flush appearance.
 - 7. Rail caps or other face sheet capture methods are not acceptable.
 - 8. Extrude top and bottom rail legs for interlocking continuous weather bar.
 - 9. Meeting Stiles: Nylon brush weatherstripping. Extrude meeting stile to include integral pocket to accept nylon brush.
 - 10. Bottom of Door: Install bottom weather bar, with nylon brush weatherstripping, into extruded interlocking edge of bottom rail.

- C. Face Sheet:
 - 1. Material: SpecLite3 FRP, 0.120-inch thickness, finish color throughout. Abuse-resistant engineered surface.
 - 2. Texture: Pebble.
 - D. Color: From manufacturer's standard colors as specified on the drawings.
 - E. Core:
 - 1. Material: Poured-in-place polyurethane foam.
 - 2. Density: Minimum of 5 pounds per cubic foot.
 - 3. R-value: Minimum of 11.
 - F. Cutouts:
 - 1. Manufacture doors with cutouts for required vision lites, louvers, and panels.
 - 2. Factory install vision lites, louvers, and panels.
 - G. Hardware:
 - 1. Premachine doors in accordance with templates from specified hardware manufacturers and hardware schedule.
 - 2. Factory install hardware.
- 2.3 MATERIALS
- A. Aluminum Members:
 - 1. Extrusions: ASTM B 221.
 - 2. Sheet and Plate: ASTM B 209.
 - 3. Alloy and Temper: As required by manufacturer for strength, corrosion resistance, application of required finish, and control of color.
 - B. Components: Door and frame components from same manufacturer.
 - C. Fasteners:
 - 1. Material: Aluminum, 18-8 stainless steel, or other noncorrosive metal.
 - 2. Compatibility: Compatible with items to be fastened.
 - 3. Exposed Fasteners: Screws with finish matching items to be fastened.
- 2.4 FABRICATION
- A. Sizes and Profiles: Required sizes for door and frame units, and profile requirements shall be as indicated on the drawings.
 - B. Coordination of Fabrication: Field measure before fabrication and show recorded measurements on shop drawings.
 - C. Assembly:
 - 1. Complete cutting, fitting, forming, drilling, and grinding of metal before assembly.
 - 2. Remove burrs from cut edges.

- D. Welding: Welding of doors or frames is not acceptable.
 - E. Fit:
 - 1. Maintain continuity of line and accurate relation of planes and angles.
 - 2. Secure attachments and support at mechanical joints with hairline fit at contacting members.
- 2.5 ARCHITECTURAL PANELS
- A. FRP Panels:
 - 1. Model: SL-37 Architectural Panels with SpecLite3 FRP face sheets.
 - 2. Size: As indicated on the drawings.
 - 3. As indicated on the drawings
 - B. Face Sheets:
 - 1. Material: SpecLite3 FRP, 0.120-inch thickness, finish color throughout. Abuse-resistant engineered surface.
 - 2. Texture: Pebble.
 - C. Color: From manufacturer's standard colors as specified on the drawings.
 - D. Insulated SpecLite3 FRP Panels (if applicable):
 - 1. Insulated Panels: Two 0.120-inch minimum thickness sheets.
 - 2. Core: Foamed polyurethane core of a minimum of 5 pounds per cubic foot density.
 - 3. Form components to function as single unit.
 - 4. U-Value: Minimum of 0.18 for 1 inch panels.
 - E. Class A Flame Spread and Smoke Developed Rating (if applicable):
 - 1. Class A flame spread and smoke developed rating on interior faces of exterior panels and both faces of interior panels.
 - 2. Flame Spread, ASTM E 84: Maximum of 25.
 - 3. Smoke Developed, ASTM E 84: Maximum of 450.
- 2.6 ALUMINUM DOOR FRAMING SYSTEMS
- A. Tubular Framing:
 - 1. Size and Type: As indicated on the drawings.
 - 2. Materials: Aluminum Alloy 6063-T5, 1/8-inch minimum wall thickness.
 - 3. Applied Door Stops: 0.625-inch high, with screws and weatherstripping. Door stop shall incorporate pressure gasketing for weathering seal. Counterpunch fastener holes in door stop to preserve full metal thickness under fastener head.
 - 4. Frame Members: Box type with 4 enclosed sides. Open back framing is not acceptable.
 - 5. Caulking: Caulk joints before assembling frame members.

6. Joints:
 - a. Secure joints with fasteners.
 - b. Provide hairline butt joint appearance.
 7. Field Fabrication: Field fabrication of framing using stick material is not acceptable.
 8. Applied Stops: For side, transom, and borrowed lites and panels. Applied stops shall incorporate pressure gasketing for weathering seal. Reinforce with solid bar stock fill for frame hardware attachments.
 9. Hardware:
 - a. Premachine and reinforce frame members for hardware in accordance with manufacturer's standards and hardware schedule.
 - b. Factory install hardware.
 10. Anchors:
 - a. Anchors appropriate for wall conditions to anchor framing to wall materials.
 - b. Door Jamb and Header Mounting Holes: Maximum of 24-inch centers.
 - c. Secure head and sill members of transom, side lites, and similar conditions.
 11. Side Lites:
 - a. Factory preassemble side lites to greatest extent possible.
 - b. Mark frame assemblies according to location.
- B. Insert Framing System:
1. Model: SL-1030 Series - SL-1031, SL-1032, or SL-1034 as specified on the drawings.
 2. Insert frame as indicated on the drawings, using integral stop fitted with weatherstripping.
 3. Corner joints of miter design, secure with furnished aluminum clips, and screw into place.
 4. Hardware:
 - a. Premachine and reinforce insert frame members for hardware in accordance with manufacturer's standards and hardware schedule.
 - b. Factory install hardware
 5. Anchors:
 - a. Anchors of suitable type to fasten insert framing to existing frame materials.
 - b. Minimum of 5 anchors on jambs up to 7'-4" height, 3 anchors on headers, and 1 additional anchor for each additional foot of frame.
- C. Frame Capping:
1. Model: SL-70.
 2. Capping: With insert frame as indicated on the drawings.
 3. Finish: Match framing.

2.7 HARDWARE

- A. Premachine doors in accordance with templates from specified hardware manufacturers and hardware schedule.
- B. Factory install hardware.
- C. Hardware Schedule: As specified in Section 08 70 00.
- D. Finish: As specified in Section 08 07 00.

2.8 VISION LITES

- A. Factory Glazing: 1/4-inch glass or 1 inch glass insulating units as specified on the drawings.
- B. Lites in Exterior Doors: Allow for thermal expansion.
- C. Rectangular Lites:
 - 1. Size: As indicated on the drawings.
 - 2. Factory glazed with screw-applied aluminum stops anodized to match perimeter door rails.
- D. Security Grate: SL-SG349.
 - 1. Frame Perimeter: 1 inch by 1 inch by 1/8-inch steel angle.
 - 2. Expanded Metal: 1/4-inch diameter, round hole perforated, 14 gauge steel sheet.
 - 3. Finish: Factory painted to match door finish.

2.9 LOUVERS

- A. Type: Aluminum, inverted Y-type, fixed blade, 12 inches minimum from bottom of door.
- B. Size: As indicated on the drawings.
- C. Installation: Factory installed into standard vision lite kit. Exterior side of louver shall be free of fasteners.
- D. Insect screen.

2.10 ALUMINUM FINISHES

- A. Anodized finishes to be Class I finish, 0.7 mils thick.
- B. Anodized colors as shown on the drawings from the following:
 - 1. Clear 215 R1, AA-M10C12C22A41, Class I, 0.7 mils thick.
 - 2. Champagne, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - 3. Light Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - 4. Medium Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - 5. Dark Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - 6. Black, AA-M10C12C22A44, Class I, 0.7 mils thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive doors. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 PREPARATION

- A. Ensure openings to receive frames are plumb, level, square, and in tolerance.

3.3 INSTALLATION

- A. Install doors in accordance with manufacturer's instructions.
- B. Install doors plumb, level, square, true to line, and without warp or rack.
- C. Anchor frames securely in place.
- D. Separate aluminum from other metal surfaces with bituminous coatings or other means approved by Architect.
- E. Set thresholds in bed of mastic and backseal.
- F. Install exterior doors to be weathertight in closed position.
- G. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.
- H. Remove and replace damaged components that cannot be successfully repaired as determined by Architect.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Services: Manufacturer's representative shall provide technical assistance and guidance for installation of doors.

3.5 ADJUSTING

- A. Adjust doors, hinges, and locksets for smooth operation without binding.

3.6 CLEANING

- A. Clean doors promptly after installation in accordance with manufacturer's instructions.
- B. Do not use harsh cleaning materials or methods that would damage finish.

3.7 PROTECTION

- A. Protect installed doors to ensure that, except for normal weathering, doors will be without damage or deterioration at time of substantial completion.

END OF SECTION

08 34 53 – SECURITY DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Theft-resistant, flat sill, fire-resistance rated, insulated steel door and frame assemblies, complete with hardware and factory finish.
- B. If shown on the drawings: Day Gate.

PART 2 - PRODUCTS

A. MANUFACTURERS

- 1. Acceptable Manufacturers: As listed below. Products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- 2. Diebold, Inc.
- 3. LeFebure Div./Kidde, Inc.
- 4. Meilink Safe Co. Div./Meilink Ind.
- 5. Mosler/American-Standard Co.
- 6. Schwab Safe Co.

B. INSULATING SECURITY DOOR AND FRAME ASSEMBLY

- 1. Construction: Manufacturer's standard all-welded construction with interlocking door and frame to provide fire-resistance rating and lock protection indicated and as herein specified.
- 2. Door: Hollow steel construction with minimum 1/8-inch thick face plate.
- 3. Frame: Exterior facing, minimum 1/8-inch thick, sides and top. Jambs, not less than 18-gauge steel. Sill, 1/4-inch thick flat plate.
- 4. Sizes: Provide units of sizes as shown or scheduled.
- 5. Fire-Resistive Insulation: Manufacturer's standard to comply with UL label requirements for fire-resistance rating indicated.
- 6. Finish: Door manufacturer's standard baked-on gray finish or textured vinyl, unless otherwise indicated.

C. INSULATING SECURITY DOOR HARDWARE AND ACCESSORIES

- 1. Insulating Security Door Hardware and Accessories, General: Provide hardware units as required for specified UL labeling.

2. Hinges: Not less than three offset roller or ball bearing hinges, of design, size, and weight necessary for smooth operation of security door and to allow full, clear door opening.
3. Bolts: Permanently lubricated, rust and corrosion resistive bolts. Provide not less than ten 3/4" nominal diameter bolts, installed in door to extend only when door is in closed position.
4. Lock: See specification section 08 70 00 - Hardware
5. Re-Locking Device: Provide UL labeled re-locking device or devices which function automatically when door is subjected to mechanical, explosive, or torch attack.
6. Emergency Escape Device: Provide instant unlocking device for emergency escape from locked vault, activated only from vault side of door.
7. Bolt-Throw Handle: Provide manufacturer's standard vault door bolt-throw handle.
8. Trim: Stainless steel, chromium-plated, or other trim standard with door manufacturer.
9. Day Gate: Provide manufacturer's standard grille gate on inside jamb opening with self-closing gravity hinges. Equip gate with key operated lock. Provide stainless steel floor stop and rubber bumper.

PART 3 - EXECUTION - NOT USED

END OF SECTION

08 31 00 – ACCESS DOORS AND PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Access doors and panels in walls and partitions.
- B. Access doors and panels in ceilings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Karp Associates, Inc., Maspeth, NY (718/784-2105 or 800/888-4212).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Milcor Limited Partnership, Lima, OH (419/228-1411).
 - 2. Samson Products (Affiliate of JL Industries), Pico Rivera, CA (310/801-6226).
 - 3. Larsen's Manufacturing Co., Minneapolis, MN (612/571-1181).
 - 4. Cesco Products, Minneapolis, MN (612/424-4919).

PART 3 - EXECUTION

3.1 WALL ACCESS DOORS AND PANELS

- A. Interior Gypsum Board Walls, (Non-Fire Rated) Access Door, Flush Face, for Service and Utility Spaces: Karp DSC-214M, or approved equal, primer paint finished flush steel door, size as indicated on Drawings. Unless otherwise indicated, door is intended to be field finish painted to match surrounding wall finish.
- B. Interior Gypsum Board Walls, (Non-Fire Rated) Access Door, Flush Face, for Toilet, Sanitary and Damp Spaces: Karp DSC-214M, or approved equal, stainless steel finish flush steel door, size as indicated on Drawings.
- C. Interior Gypsum Board Walls, (Fire-Rated) Access Door: Karp KRP-150FR, or approved equal, surface-mounted, primer paint finish, UL-listed B-Label assembly for walls, 20 gauge steel door in 16 gauge steel frame, filled with 2-inch thick fire-rated insulation, with automatic closer, self-latching bolt-type latch operated by flush key device, size as indicated

on Drawings. Unless otherwise indicated, door is intended to be field finish painted to match surrounding wall finish.

- D. Interior Ceramic Tile Wall, (Fire-Rated) Access Doors: Karp KRP-150FR, or approved equal, surface-mounted, stainless steel finish, UL-listed B-Label assembly for walls, 20 gauge steel door in 16 gauge steel frame, filled with 2-inch thick fire-rated insulation, with automatic closer, self-latching bolt-type latch operated by flush key device, size as indicated on Drawings.
- E. Interior Ceramic Tile Wall, (Non-Fire Rated) Access Doors Karp DSB-214SM, or approved equal, flush-mounted with face of tile, stainless steel finish, size as indicated on Drawings.
- F. Lock, Non-Rated Access Doors: Manufacturer's standard cam-action latch with keyed lock cylinder.
- G. Lock, Fire-Rated Access Doors: Manufacturer's standard flush key device.

3.2 CEILING ACCESS DOORS AND PANELS

- A. Interior Gypsum Board Ceiling, (Non-Fire Rated) Access Door, Dry Locations: Karp KDW Flush Drywall Access Door, or approved equal, primer paint finished flush steel door, size as indicated on Drawings. Unless otherwise indicated, door is intended to be field finish painted to match surrounding ceiling finish.
- B. Interior Gypsum Board Ceiling, (Non-Fire Rated) Access Door, Toilet Room, Sanitary and Damp Locations: Karp DSC-214M, or approved equal, flush stainless steel door face, size as indicated on Drawings.
- C. Lock, Non-Rated Access Doors: Manufacturer's standard cam-action latch with keyed lock cylinder.
- D. Lock, Fire-Rated Access Doors: Manufacturer's standard flush key device.

END OF SECTION

08 34 57 – FIRE-RATED SECURITY DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fire-rated security doors for vaults.
- B. Fire-rated security doors for file rooms.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Listed below are specified manufacturers, whose products are the basis of the design, and acceptable manufacturers, whose equivalent products the Contractor may use in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Diebold, Incorporated.
 - 2. Mosler, Inc.
 - 3. Schwab Corporation.

2.2 MATERIALS

- A. Steel Plate, Shapes, and Bars: ASTM A 36/A 36M.
- B. Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- C. Stainless-Steel Sheet: ASTM A 666, Type 304.
- D. Aluminum Extruded Bar and Tube: ASTM B 221 (ASTM B 221M).
- E. Aluminum Plate and Sheet: ASTM B 209 (ASTM B 209M).

2.3 DOOR AND FRAME ASSEMBLY

- A. Door and Frame Assembly, General: UL 155, Class 350, rating as shown on drawings.
 - 1. Insurance Rating: Mercantile, Class B.
- B. Door: Fabricated from all-welded, insulated steel sheet construction; overall thickness not less than 3-1/2 inches thick; with jambs and head shaped to interlock with frame.
 - 1. Cladding: Manufacturer's standard stainless-steel sheet.
 - 2. Clear Opening Size: As indicated on Drawings.

- C. Frame: Beveled entrance frame, tapered no more than 10 degrees, fabricated from steel sheet of thickness required by UL listing, and designed for nongrout installation; with removable rear architrave and adjustable wall flange to accommodate wall thicknesses indicated, fabricated from steel sheet and finished to match frame.
- D. Finish: Manufacturer's standard factory-applied paint finish, applied to door, frame, and wall flanges.
 - 1. Color: As selected by Architect from manufacturer's full range.

2.4 HARDWARE AND ACCESSORIES

- A. Hardware and Accessories, General: Provide hardware components as required for specified UL listing.
- B. Hinges: Not less than three roller-thrust-bearing hinges of design, size, and weight required for smooth operation of door and to allow full, clear door opening.
 - 1. Hinge Cover: Stainless steel, extending full height of door and covering hinges on door.
- C. Door Bolts: Permanently lubricated, 11/16 or 3/4-inch diameter, and nickel plated. Provide five door bolts on each vertical side of door that engage frame when extended. Bolts shall automatically retract when handle is operated and automatically extend when door closes.
- D. Handle: Manufacturer's standard stainless-steel lever handle with satin finish.
- E. Combination Lock: UL 768, Group [2, 3-tumbler, key change, mechanical] [1, electronic] type, capable of not less than one million possible combinations; equipped with UL 140 relocking device that automatically locks bolt when lock is subjected to mechanical attack.
 - 1. Provide drill-resistant metal plate for protection of lock case and locking mechanism.
- F. Relocking Device: UL 140 listed, designed to automatically lock door bolts when door is subjected to mechanical or torch attack.
- G. Escape Mechanism: Provide emergency operation of lock from vault side of door by means of inside door release fabricated from stainless-steel rod.
- H. Sill: Reinforced formed steel or flat-steel plate.
- I. Trim: Stainless steel, chromium plated, or other trim standard with door manufacturer.

2.5 FABRICATION

- A. Fabricate fire-rated security doors and frames rigid, neat in appearance, and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Weld exposed joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Factory prepare fire-rated security doors and frames to receive hardware and accessories, including cutouts, reinforcements, mortising, drilling, and tapping.

2.6 FINISHES, GENERAL

- A. Finishes, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and so surfaces are free of oil and other contaminants.

PART 3 - EXECUTION – NOT USED

END OF SECTION

08 51 13 – ALUMINUM WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Commercial-grade, fixed and operable aluminum windows.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Specified Manufacturer: Kawneer Company, Inc., Norcross, GA (770/449-5555).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below (or others) will be acceptable in accordance with the "or equal" provision specified in the Divisions 0 and 1.
 - 1. EFCO Corporation, Monett, MO (417/235-3193 or 800/221-4169; local representative, Yorba Linda, CA, 714/985-9141).
 - 2. TRACO, Warrendale, PA (412/776-7000).

2.2 ALUMINUM WINDOWS

- A. Fixed Aluminum Windows: Kawneer Sealair Series 5200, AAMA Specification HC 65/AW65 minimum, deflection limited to L/175 at 20 pounds per square foot wind load, stacked combinations and configurations as indicated on the Drawings.
 - 1. Fixed aluminum windows: AAMA Specification F HC60 minimum.
 - 2. Project-out aluminum windows: AAMA Specification P C40 minimum.
- B. Aluminum Window Framing: Extruded aluminum extrusions, alloys and tempers as determined by manufacturer to provide strength, extrudability, corrosion resistance and suitability for specified finishes.
- C. Hinges: Concealed four-bar friction hinges (2 per ventilator) located on each jamb near the top rail, complying with AAMA 904.
- D. Locks:
 - 1. Operable sash, windows less than 72 inches above finish floor: Combination lever handle and cam-action lock with concealed pawl.
 - 2. Operable sash, windows 72 inches and more above finish floor: Pole-operated, face-mounted transom latch.

- E. Limit Devices: Provide limit devices designed to restrict sash or ventilator opening.
 - 1. Safety Devices: Limit clear opening to 6 inches for ventilation; with custodial key release.
 - F. Pole Operators: Provide one pole operator and pole hanger for every room that has operable windows more than 72 inches above the floor. Fabricate pole of tubular anodized aluminum with a rubber cap at the lower end and standard push-pull hook to match the hardware design at the top end. Provide sufficient length for window operation without reaching more than 60 inches above the floor.
 - G. Shop Sealants: Provide non-hardening sealants as standard with the manufacturer, equivalent to or exceeding minimum qualities of those specified in Section 07 90 00 Joint Protection, conforming to AAMA Specification 803.2 and as required to achieve AAMA performance ratings.
 - H. Anchors, Clips, Shims and Fasteners:
 - 1. Fasteners to surrounding construction: Concealed stainless steel or galvanized steel protected from direct contact with aluminum, or high-strength aluminum protected from contact with other metals and cementitious materials.
 - 2. Internal fasteners: Concealed, stainless steel or other corrosion-resistant metal, compatible with aluminum.
 - 3. Size and spacing of anchors, clips, and fasteners: Suitable for each aluminum window to withstand wind load equal to Performance Class number.
 - I. Flashing: For head and sill.
 - 1. Provide galvanized sheet metal flashing as indicated on Drawings and as specified in Section 07 60 00 - Flashing and Sheet Metal.
 - 2. Provide flexible flashing as indicated on the Drawings and as specified in Section 07 60 00 - Flashing and Sheet Metal.
- 2.3 GLASS AND GLAZING MATERIALS
- A. Glass: Provide glass as specified in Section 08 80 00 - Glazing and as indicated on Drawings.
 - B. Safety Glass: Provide safety glass as required by California Building Code (CBC) and as indicated on Drawings. Safety glazing may be tempered glass or laminated safety glazing as indicated and as permitted by Building Code. See Section 08 80 00 - Glazing.
 - C. Glazing Materials:
 - 1. Glazing materials shall be compatible with aluminum and those joint sealers and sealing materials used in composite structure which have direct contact with the gasket.
 - 2. Standard exterior and interior glazing gaskets shall be dry glazed elastomer complying with ASTM C509.
 - 3. Interior air sealants shall be silicone and shall comply with AAMA 802.5 (Type II).
 - 4. Glazing bead shall be extruded aluminum and shall be minimum 0.050-inch thick.
 - 5. Provide glazing colors approximate to that of aluminum window framing.

PART 3 - EXECUTION

3.1 FABRICATION

- A. Fabrication, General: Fabricate aluminum windows to produce weathertight, rigid, factory glazed or field glazed units in which the glass can be replaced without dismantling the ventilator.
- B. Fabrication for Performance Requirements: In addition to the performance requirements for each aluminum window Type, Grade, and Performance Class in AAMA 101, fabricate units to drain intruding water to the exterior and to fill openings fully.
- C. Expansion and Contraction Provisions: Make provisions for assemblies to expand and contract within a temperature range of 20 degrees F to 165 degrees F.

3.2 ALUMINUM FINISH

- A. Anodized Finish: Identified as "Anodized Finish" on Drawings, Architectural Class I, black color coating conforming to AA standard AA-M10 C22 A42/A44 (Mechanical Finish: as fabricated, nonspecular; Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color) complying with AAMA 606.1 or AAMA 608.1.

END OF SECTION

08 70 00 – HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Door hardware for hollow steel and wood doors.
- B. Thresholds.
- C. Weather, smoke and sound seals.
- D. Hardware for miscellaneous applications, such as padlocks for roof hatch and gates.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Acceptable Manufacturers: Listed below are specified manufacturers, whose products are the basis of the design, and acceptable manufacturers, whose equivalent products the Contractor may use in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

Product	Specified Manufacturer	Acceptable Manufacturer
Butt Hinges 5 Knuckle Bearing Hinges	Hager Hinge Company	Stanley Hardware Division/The Stanley Works
Anchor Hinges		McKinney Products Ccompany
Mortise Latchsets and Locksets	Sargent Manufacturing Co.	No substitutions allowed
Lock Cylinders	Sargent Manufacturing Co.	No substitutions allowed
Exit Devices	Sargent Manufacturing Co.	No substitutions allowed
Trilogy Lock	Alarm Lock	No substitutions allowed
Automatic Flush Bolts	H.B. Ives Co.	Door Controls

		International
Coordinators	H.B. Ives Co.	Door Controls International
Surface Overhead Door Closers	Sargent Manufacturing Co.	No substitutions allowed
Surface Pulls	H.B. Ives Co.	Trimco
Vandal-Resistant Pulls	Trimco	H.B. Ives Co.
Push/Pull Plates	H.B. Ives Co.	Trimco
Kick Plates	H.B. Ives Co.	Trimco
Stops and Holders	Trimco	H.B. Ives Co.
Overhead Stops	Glynn-Johnson	Rixson or H.B. Ives Co.
Thresholds	Pemko	Reese Enterprises, Inc. or Zero International
Weather Seals and Smoke Seals	Pemko	Reese Enterprises, Inc. or Zero International
Silencers	H.B. Ives Co.	Trimco

PART 3 - EXECUTION

3.1 DEMOLITION

- A. REMOVE ALL Continuous hinges. We have found that continuous hinges are mainte- NOT USEDnce headache

3.2 DOOR HARDWARE, GENERAL

- A. Door Hardware, General:
 - 1. Provide all door hardware necessary to complete the Work.
 - 2. Provide door hardware complying with accessibility requirements of California Building Code (CBC), including Sections 1133B.2.1, 1133B.2.5.1 and 1003.3.1.8.
 - 3. Provide door hardware as scheduled in DOOR HARDWARE SCHEDULE located at the end of PART 3 of this Section.
- B. Manufacturers: Obtain all items of each type from the same manufacturer.
 - 1. Manufacturer's Name Plates: Do not use products which have manufacturer's name or trade name displayed in a visible location.
 - 2. Exception: Required fire labels.
 - 3. Exception: As directed by or acceptable to the Architect.
 - 4. Exception: Manufacturer's identification on rim of lock cylinders.

- C. Manufacturer's Catalog Numbers: Catalog numbers are indicated in the DOOR HARDWARE SCHEDULE to establish operation, function, quality, weight, size, pattern, design, material, and finish required.
- D. Standards Conformance: Provide hardware manufactured to conform to published templates.
- E. Templates: All hardware applied to metal doors or jambs shall be made to template and secured by machine screws. Furnish templates to the metal door and frame manufacturer for application at the factory, unless otherwise requested.
- F. Scope: Provide all hardware necessary to complete Work. Products not specifically identified but necessary shall be provided of type and quality generally recognized in door hardware industry for service duty of Project type, location and usage, as selected by Contractor and subject to acceptance by Owner and Architect.
- G. Adaptation: Should specified hardware conflict with configuration of doors, frames and surrounding construction, provide comparable alternative hardware which maintains intended function of door, as selected by Contractor and subject to review and acceptance by Owner and Architect.

3.3 FASTENERS

- A. Fasteners, General: Furnish type, quality, size and quantity for long-life installation under hard usage. Conform to manufacturer's instructions and recommendations for fasteners and installation and the following minimum requirements. Provide fasteners which are suitable for the substrate.
- B. Expansion Shields, Hex Bolts and Other Anchors: Provide anchors and fasteners as recommended by hardware manufacturer, subject to review by Architect, and in conformance to fastener requirements specified in Section 05 05 23 - Metal Fastenings. Do not use toggle anchors or powder-actuated fasteners.
- C. Concrete and Masonry Substrates: Furnish hardware with machine screws and expansion anchors.
- D. Fastener Finishes: Match hardware item, typically. Provide stainless steel fasteners at aluminum and stainless steel hardware. Provide corrosion-resistant (zinc-plated steel or stainless steel) at exterior exposure, unheated spaces and damp atmospheres such as rooms with food service cooking and cleaning equipment.
- E. Fasteners at Fire Doors: Conform to labeling requirements of door, frame and hardware. At wood doors, provide sex-nut through-bolts for operating hardware typically unless permitted otherwise by hardware listing.

3.4 HARDWARE FINISHES

- A. Hardware Finishes, General: Provide finishes matching ANSI/BHMA A156.18 designations indicated in DOOR HARDWARE SCHEDULE.
 - 1. Metal finishes: At Contractor's option, stainless steel may be provided instead of satin chrome plating. Where stainless steel is indicated, substitution of satin chrome plating will not be acceptable.
 - 2. Plastic and painted finishes: Color shall be selected by Architect from manufacturer's full selection, if not otherwise indicated.

- B. Chrome, Satin Finish: Scheduled as 626.
 - 1. Plated on steel: BHMA 652 (US26D).
 - 2. Plated on brass or bronze: BHMA 626 (US26D).
- C. Stainless Steel: Scheduled as 630. Provide as scheduled and as alternative to Satin Finish Chrome finish at Contractor's option.
 - 1. Polished: BHMA 629 (US32).
 - 2. Brushed: BHMA 630 (US32D).
- D. Aluminum:
 - 1. Manufacturer's standard finish: Indicated as AL or ALUM, either satin anodized or clear coated as standard with product manufacturer.
 - 2. Satin anodized, natural metal color: BHMA 628.
 - 3. Clear coated: BHMA 673.
 - 4. Manufacturer's standard finish: Indicated as ALUM, either satin anodized or clear coated as standard with product manufacturer.
 - 5. Powder coated: Proprietary powdered stainless steel (PemKote).
- E. Primer Coat:
 - 1. Primer on steel: BHMA 600 (PC).
 - 2. Primer on brass or bronze: BHMA 163 (PC).
- F. Mill Finish: For brass and aluminum, as noted, MILL.
- G. Colored Finishes:
 - 1. Factory Colored Coatings: Color code as indicated, corresponding to specified manufacturer's coating type and color.
 - 2. Surface Door Closers: Factory powder coated on exposed metal components, to match door hardware finish color, unless otherwise noted.

3.5 FIRE-RATED HARDWARE

- A. Fire-Rated Hardware: Provide UL-listed and approved hardware for fire-labeled assemblies in compliance with NFPA 80.
 - 1. Confirm that hardware provided conforms to fire tested assembly (coordinate with doors provided).
 - 2. Where exit devices are provided on fire-rated doors, provide door with UL fire door label indicating, "Fire Door to be Equipped with Fire Exit Hardware", and provide door hardware with UL exit device label indicating "Fire Exit Hardware".
- B. Hinges at Fire-Rated Assemblies: Steel base material only.
- C. Closers: Bolted (not screwed) to door reinforcement or through-bolted with sex-nut fasteners.
- D. Latchbolts and Deadbolts: 1/2-inch minimum throw or as required for fire rated assembly label.

3.6 EXIT DOOR HARDWARE

- A. Exit Door Hardware: Provide UL listed and approved hardware for exit (panic) door operation.
- B. Exit Door Hardware Operation: Exit doors shall be openable at all times from the inside without use of key or special knowledge or effort.
- C. Door Closers at Exit Doors: Closers shall comply with California Building Code (CBC), wheelchair accessibility regulations and door pull forces at accessible doors, including CBC Sections 1133B.2.1, 1133B.2.5 and 1133B.2.5.1. Pressure required at doors with closers shall not exceed:
 - 1. Fire-rated doors: 15 pounds.
 - 2. All other exterior doors: 8.5 pounds.
 - 3. All other interior doors: 5 pounds.

3.7 BUTT HINGES

- A. Butt Hinges, General: Full-mortise, 5-knuckle design, templated. See DOOR HARDWARE SCHEDULE for specific products. Provide shims and shimming instructions for proper door adjustment.
 - 1. Typical interior butt hinges: Standard weight, steel base metal, steel pin, plated.
 - 2. Typical exterior butt hinges: Stainless steel, with stainless steel pin.
- B. Non-Removable Pins (NRP) at Butt Hinges:
 - 1. Exterior doors: Provide non-removable pins at all outswing exterior doors.
 - 2. Interior doors: Provide non-removable pins at all interior doors with locksets where hinges are exposed on key side of door.
- C. Low-Friction Hinges: Provide ball bearing hinges at all doors with closers.
- D. Butt Hinge Height and Weight: As scheduled. If not scheduled or otherwise indicated, provide height and weight of butt hinges as follows:

Door Thickness	Door Width	Hinge Height	Hinge Weight
1-3/4 inches	to 36 inches	4-1/2 inches	Standard
1-3/4 inches	37 inches to 42 inches	5 inches	Heavy
1-3/4 inches	over 42 inches	5 inches	Extra heavy

- E. Butt Hinge Width: Unless otherwise specified, the width of butt hinges shall be sufficient to clear frame and trim projection when door swings 180 degrees.
- F. Butt Hinge Quantity: As scheduled. If not scheduled or otherwise indicated, provide three hinges per leaf to 7'-6" height. Add one for each additional 30 inches in height or fraction thereof.
- G. Hinge Tips: Standard flat tips.

- H. Fire Rated Wood Doors: Use half surface half mortise hinges sex bolted through the door.
- 3.8 LATCHSETS AND LOCKSETS
- A. Latchsets and Locksets, General: Exit doors shall be openable from the inside without the use of a key or any special knowledge or effort, in compliance with California Building Code (CBC) Section 1003.3.1.8.
 - B. Mortise Latchsets/Locksets: Sargent Series and lever handle design to match existing campus standard latchsets and locksets. See DOOR HARDWARE SCHEDULE for latchset/lockset catalog numbers and functions.
 - C. Latchbolts: Throw shall conform to fire label requirements.
- 3.9 LOCK CYLINDERS, KEYING AND KEYS
- A. Lock Cylinders: Match existing school campus lock cylinder type, keyway and keying.
 - 1. District uses a restricted keyway.
 - 2. Obtain letter of authorization from District for Contractor (hardware supplier) to purchase locks with restricted keyway and keys.
 - B. Keying:
 - 1. Consult with Owner (District Locksmith) for keying and ordering instructions.
 - 2. Comply with Owner's instructions for key and lock control.
 - 3. Provide building masterkeying as directed by Owner, to suit keying of existing school campus.
 - 4. Final keying shall be by District Lock Shop.
 - C. Keys: Standard bow. Identify keys as directed by district lockshop.
 - D. Key Quantities:
 - 1. Construction keys: Twenty.
 - 2. Extractor keys: Two.
 - 3. Keying by district lockshop.
 - E. Temporary Construction Keying:
 - 1. Internal construction keying function: Provide temporary construction lock cylinder feature on door locks as necessary for security during construction.
 - 2. Removal of internal construction keying: Prior to Substantial Completion review or Owner occupancy, whichever is earliest, extract construction key blank and establish permanent lock keying.

3.10 EXIT DEVICES

- A. Exit Devices (Panic Hardware): Manufacturer and series as scheduled, lever handle to match building locksets, quiet return, deadlocking latchbolt, stainless steel touchpads, non-handed. See DOOR HARDWARE SCHEDULE for products.
 - 1. Unlatching force for exit devices shall not exceed 15 pounds applied in the direction of travel, in compliance with UBC Standard 10-4.
 - 2. Exit devices shall comply with CBC Section 1003.3.1.9.

3.11 ACCESS CONTROL LOCKS

- A. Access Control Locks to be Networx series as manufactured by Alarm Lock Systems
- B. Locks shall conform to ANSI A.156 Grade 1
- C. Provide configuration of lock as required by hardware group
 - 1. Cylindrical lock type
 - a. Proximity/keypad – Model Series PDL6100
 - 2. Mortise lock type
 - a. Proximity/keypad – Model Series PDL6500
 - 3. Exit device trim type
 - a. Proximity/keypad – Model Series ETPDLN
 - 4. Keypad switch type
 - a. Digital keypad only – Model Series NETPDK
- D. Programming
 - 1. All programming, including user credentials, scheduling and audit trail retrieval, shall be performed using Alarm Lock DL-Windows software version 4.1.8x or higher.
 - 2. Communication of all programming from computer containing software to locks shall be through Alarm Lock Gateway model appropriate for building's network system.
- E. Gateway
 - 1. Ethernet connected gateway – Model Series AL-IME
 - 2. Power over Ethernet connected gateway, plenum rated – Model Series AL-IMEPOEP
- F. Lock Features
 - 1. Locks, except keypad switch type, to be battery powered by 4 each "C" size batteries providing 5 year life under normal operating conditions.
 - 2. Locks to support up to 5000 users with 3-6 digit numeric PIN code, or HID format proximity credential, or both for dual credential requirement.
 - 3. Locks to support up to 500 event schedules.
 - 4. Locks to support in non-volatile memory 35,000 event audit trail.
 - 5. Locks to be weatherproof for indoor or outdoor use in operating temperature range of -31 to +151 degrees Fahrenheit.

6. Locks shall continue to operate as last instructed including maintaining schedules and audit trail, independent of building network system failure.
7. Locks shall be capable of providing a system-wide global emergency lockdown/unlock within 10 seconds when initiated by authorized user from any lock, or from the DL-Windows software.
8. Locks shall adjust schedules automatically to correspond with daylight savings time.
9. Locks shall have remote release capability through hard-wired connection.
10. Locks shall have a single pole, double throw relay output to provide external functions through hard-wired connection.

G. Gateway Features

1. Each gateway shall support up to 63 locks.
2. Each gateway to communicate to software through the building's network system.
3. Ethernet connected gateway
 - a. Interface: Ethernet 10Base-T or 100Base-TX
 - b. Protocols: TCP/IP, UDP/IP, DHCP
4. Security: IEEE 802.11 – PSK with 128-bit AES Rijndael Encryption
5. Each gateway to communicate to locks through 900 MHz GFSK proprietary 128-bit encryption.
 - a. 50 channels
 - b. 10mW power output
6. Environment
 - a. Indoor installation
 - b. Operating temperature: -4 to +140 degrees Fahrenheit

H. Software

1. Software to be Alarm Lock DL-Windows supporting 2000 locks per system account with a maximum of 50 gateways per system account.
2. Contractor shall provide end user software training by an Alarm Lock Networx Certified dealer or instructor.

I. Provide consulting services by Alarm Lock Networx Certified dealer or instructor to end user IT Department for installation of DL-Windows software and connection of Gateway(s) to building network system.

3.12 FLUSH BOLTS

- A. Automatic-Latching Flush Bolts: ANSI A115.4, UL listed. See DOOR HARDWARE SCHEDULE for products.
- B. Flush Bolt Strikes:
 1. Head Strikes: Manufacturer's standard.
 2. Sill Strikes: Dustproof.

3.13 COORDINATORS

- A. Coordinators, General: Automatic coordinating device for sequential closing of paired doors; prevent active leaf from closing ahead of inactive leaf. See DOOR HARDWARE SCHEDULE for products.
- B. Coordinators at Typical Locations: Provide at pairs of labeled fire doors, selection suitable for flush bolts and exit devices installed on doors. See DOOR HARDWARE SCHEDULE for products.
- C. Accessories: Provide carry-bar and strike at exit doors, as appropriate. Provide additional hardware for stop (soffit) applied coordinator for complete and proper installation in accordance with UL labeling requirements.

3.14 SURFACE OVERHEAD DOOR CLOSERS

- A. Surface Overhead Door Closers: Rack and pinion type with removable non-ferrous case and cast iron body. See DOOR HARDWARE SCHEDULE for products.
 - 1. Provide closers non-handed, non-sized and adjustable.
 - 2. Locate closers inside building and rooms.
 - 3. Exterior door closers shall have been successfully tested to 100 hours of ASTM B117 salt spray test.
 - 4. Exterior doors shall not require seasonal adjustments in temperatures from 120 degrees F to -30 degrees F.
 - 5. Provide through-bolts at wood doors unless doors are furnished with blocking for closers.
 - 6. Provide flush transom offset brackets where parallel arm closers are listed for doors with fixed panels over.
 - 7. Provide drop brackets at narrow head rails.
 - 8. Provide screw spacers as necessary for parallel-arm brackets.
- B. Wheelchair and Persons with Disabilities Accessibility Provisions: Reduced operating force design, complying with California Building Code (CBC) for wheelchair accessibility and dependent persons use. See DOOR HARDWARE SCHEDULE for products.
 - 1. Maximum effort to operate doors shall not exceed 8-1/2 pounds for exterior doors and 5 pounds for interior doors, such pull or push effort being applied at right angles to hinged doors and at the center plane of sliding or folding doors.
 - 2. Compensating devices or automatic door operators may be utilized to meet the above standards.
 - 3. When fire doors are required, the maximum effort to operate the door may be increased not to exceed 15 pounds.
- C. Door Closer Finishes: Provide metal covers and exposed arms painted to approximate plated finish.

3.15 PUSH/PULL PLATES

- A. Stainless Steel Push/Pull Plates: 0.050-inch, fully rounded top and bottom. See DOOR HARDWARE SCHEDULE for products and sizes.
- B. Plated Brass Push/Pull Plates: Cold-forged, 0.050-inch. See DOOR HARDWARE SCHEDULE for products and sizes.

3.16 KICKPLATES

- A. Kickplates: 0.50-inch thick stainless steel, with four beveled edges. Provide machine or wood screws of stainless steel. See DOOR HARDWARE SCHEDULE for products.
- B. Kickplate Sizes:
 - 1. Single doors: Door width less 2 inches.
 - 2. Double doors: Door width less 1 inch.
 - 3. Height: As scheduled, 10 inches typically.

3.17 DOOR BUMPERS AND DOOR STOPS

- A. Door Bumpers and Door Stops: See DOOR HARDWARE SCHEDULE for products.
 - 1. Unless otherwise noted in the DOOR HARDWARE SCHEDULE, provide floor type with appropriate fasteners.
 - 2. Where floor type cannot be used, provide wall type.
 - 3. If neither wall nor floor type can be used, provide overhead type.
- B. Fasteners:
 - 1. Anchors to concrete and masonry substrates: Provide expansion anchors. Refer to Section 05 05 23 – Metal Fastenings.
 - 2. Anchors to steel framing: Provide sheet metal screws into framing or into sheet metal backing. Provide expansion anchor.
 - 3. Anchors to wood framing: Provide wood screws or sheet metal screws into framing or into solid wood backing.
 - 4. Do not use toggle or molly-type anchors. Do not use powder-actuated driven fasteners.

3.18 THRESHOLDS

- A. Thresholds, General: Wheelchair-accessible design, complying with California Building Code (CBC) Section 1133B.2.4.1. See DOOR HARDWARE SCHEDULE for products. Provide closed end returns where threshold extends beyond face of door frame.
- B. Threshold Finish: Non-slip grit surfacing.
- C. Fasteners:
 - 1. Non-ferrous, 1/4-inch fasteners, Red-Head #SFS-1420 (or approved equivalent) Flat Head Sleeve Anchors (FHSL).
 - 2. Provide countersunk, corrosion-resistant fasteners.

3. At concrete slab on grade, provide expansion anchors.
4. Fasteners shall comply with general requirements for anchors and fasteners specified in Section 05 05 23 – Metal Fastenings.

3.19 WEATHER, SOUND AND SMOKE SEALS

- A. Weather Seals: Provide at all exterior doors. See DOOR HARDWARE SCHEDULE for products.
- B. Sound Seals: Provide at interior doors as scheduled. See DOOR HARDWARE SCHEDULE for products.
- C. Smoke Seals: See DOOR HARDWARE SCHEDULE for products. Provide UL-listed and UL-labelled smoke seals at all fire-rated door assemblies.
 1. Contractor shall provide intumescent seals complying with test requirements of door frame and door.
 2. Intumescent seals shall be concealed when door is closed and not rely upon exposed fasteners.

3.20 SILENCERS

- A. Silencers, General: Provide silencers (mutes) typically at all doors which do not have weather, sound or smoke seals. See DOOR HARDWARE SCHEDULE for products. Provide three silencers for single doors and two silencers at pairs of doors. Omit silencers at fire-rated door assemblies.
- B. Wired Glass Sealant: Fire-resistant compound which passes ASTM E152 or E163 when tested with wired glass in metal fire rated door vision lites or fire rated windows.

END OF SECTION

08 80 00 – GLAZING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Vision glass: Clear, low-E coated and clear wired.
- B. Safety glass: Tempered glass.
- C. Sealed insulating glass ("double-glazed") units.
- D. Glazing materials.
- E. Field installation of glazing for doors and windows provided open for field glazing. Commercial-grade, fixed and operable aluminum windows.

PART 2 - PRODUCTS

2.1 GLASS, GENERAL

- A. Primary Glass Standard: Provide primary glass which complies with ASTM C1036 requirements, including those indicated by reference to type, class, quality, and, if applicable, form, finish, mesh and pattern.
- B. Heat-Treated Glass Standard: Provide heat-treated glass which complies with ASTM C1048 requirements, including those indicated by reference to kind, condition, type, quality, class, and, if applicable, form, finish, and pattern.
- C. Tempered Glass: Provide tempered glass where required by California Building Code (CBC), Section 2406 - Safety Glazing, and US Consumer Product Safety Commission Standard 16CFR1201 CI and CII, including all openings of non-rated doors, all glazed openings within 4 feet of the side of a door and all glazed openings within 18 inches of the floor or walkway adjacent and wherever safety glazing or tempered glass is indicated or specified.

2.2 VISION GLASS

- A. Vision Glass, General: Vision glass shall conform to ASTM C1036 or ASTM C1048, as applicable. Thicknesses, where shown, are minimum. Determine thickness in conformance to applicable California Building Code (CBC) requirements and standards. Provide clear glass typically.
- B. Clear Float Glass: Q3 (Glazing Select) quality, annealed, heat-strengthened or tempered as indicated. Provide double-strength (DS) glass, minimum 3/16-inch thick, with actual thickness according to manufacturer's span tables.

- C. Clear Low-E Float Glass: Viracon Solarscreen 2000 Low-E VE 1-2M, low-emissivity clear glass, 70 percent light transmittance, Q3 (Glazing Select) quality, annealed, heat-strengthened or tempered as indicated. Provide 1/4-inch thick low-E glass typically.
- D. Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1 or 2, Quality q3, 1/4-inch thick unless otherwise noted.
 - 1. Provide tempered glass where required by Code, including in all openings of non-rated doors, all glazed openings within 4 feet of the side of a door and all glazed openings within 18 inches of the floor or walkway adjacent and wherever safety glazing or tempered glass is indicated or specified.
 - 2. Temper glass by horizontal (roller hearth, "tongless") process, to be free of tong marks.
 - 3. Label all tempered glass by permanent method, indicating glass type, manufacturer and compliance with applicable standard.
- E. Wired Glass: ASTM C1036, Type II, Class 1, Form 1, Quality q8, Mesh m2, rolled, polished glass with completely embedded layer of square mesh bright steel wires that will retard fire and be retained in frame upon fracture, Polished Misco by Hordis, or approved equivalent.
 - 1. Thickness: 1/4-inch nominal.
 - 2. Fire resistance: Certified by producer as capable of passing ASTM E152 or ASTM E163 fire resistance test, including hose stream test.
 - 3. Label all wired glass used in fire-rated assembly, by permanent method, indicating glass type, manufacturer and compliance with applicable standard.

2.3 SEALED INSULATING GLASS UNITS

- A. Sealed Insulating Glass Units: Preassembled units consisting of organically sealed lites of glass separated by dehydrated air spaces complying with Sealed Insulating Glass Manufacturers Association (SIGMA) standards for construction and insulating value. Insulating glass unit design shall have passed class CBA test in accordance with ASTM E774. Label each insulating glass unit.
 - 1. Provide double-glazed sealed insulating glass units as standard with glass fabricator. Units shall be 1 inch net thickness.
 - 2. Units shall consist of outboard lite of clear glass and inboard lite of specified low-E (low-emissivity) clear glass, with low-E coating at inside (no. 3) face.
 - 3. Provide units fabricated with tempered safety glass where required.
- B. Sealing System: Dual seal, with primary and secondary sealants as standard with manufacturer.
- C. Spacer Specifications: Manufacturer's standard spacer material and construction, using aluminum with black color-anodized finish.
 - 1. Desiccant: Molecular sieve or silica gel, or blend of both.
 - 2. Corner construction: Manufacturer's standard corner construction.

2.4 GLAZING MATERIALS

- A. Glass Setting Blocks, Edge Blocks, Spacers and Gaskets: Chloroprene (neoprene), EPDM or silicone.
 - 1. Applicable standard: ASTM C864.
 - 2. Hardness of setting blocks: Sufficient to compress no more than 20% under weight of glass.
- B. Shims and Spacers for Leveling and Securing Framing Members: Aluminum, compatible stainless steel, or other plated or corrosion resistant non-resilient material. Do not use wood for shims.
- C. Compressible Filler Rod: Closed-cell or waterproof-jacketed foam of polyethylene, butyl rubber, neoprene, polyurethane or vinyl, tested for compatibility with specified glazing sealants, of 5 to 10 psi compression strength (25 percent deflection), recommended by sealant manufacturer for use in glazing channel to prevent sealant exudation from the channel.
- D. Cleaners and Solvents: As recommended by glazing material producer for each type of glass, glazing material and substrate.

2.5 GLAZING ACCESSORIES

- A. Glazing Accessories, General: Provide accessories as required for a complete installation. Accessories shall include glazing points, clips, shims, angles, beads, and spacer strips.
- B. Metal Accessories: Provide noncorroding metal accessories.
- C. Primer-Sealers and Cleaners: As recommended by the glass and sealant manufacturers.

2.6 COMPRESSION GASKET AND PREFORMED GASKET DRY GLAZING

- A. Compression Gasket and Preformed Gasket Dry Glazing: Chloroprene (neoprene), EPDM, or silicone compression gaskets in a soft and a dense formulation for the two sides of the glass. Select soft gasket to compress 25 to 40 percent when glass and dense gasket are in place.
 - 1. Where small lites (as in doors) can be glazed with a continuous preformed elastomeric glazing extrusion, use a gasket of the dense formulation, compressed to watertightness outside and inside, with either a bent joint or a tightly compressed cut joint at corners.
- B. Applicable Standards:
 - 1. Soft gaskets: ASTM C509.
 - 2. Dense gaskets: ASTM C864.

2.7 WIRED GLASS SEALANT

- A. Wired Glass Sealant: Fire-resistant compound which passes ASTM E152 or E163 when tested with wired glass in metal fire rated door vision lites or fire rated windows.

PART 3 - EXECUTION - NOT USED

END OF SECTION

08 91 00 – LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fixed metal louvers in exterior walls.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Galvanized Steel Sheet: ASTM A526 or ASTM A527, G90 coating designation, unless otherwise indicated, mill phosphatized.
- B. Fasteners: Of same basic metal and alloy as fastened metal, unless otherwise indicated. Do not use metals which are corrosive or incompatible with materials joined.
 - 1. Use types, gauges, and lengths to suit unit installation conditions.
 - 2. Use Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.
- C. Anchors and Inserts: Of type, size, and material required for type of loading and installation indicated.
 - 1. Use nonferrous metal or hot-dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance.
 - 2. Use toothed steel or expansion bolt devices for drilled-in-place anchors.

2.2 MANUFACTURERS

- A. Specified Manufacturer: Industrial Louvers, Inc., Delano, MN (612/972-2981).
- B. Acceptable Manufacturers: As listed below. Products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Slight manufacturing variances will be accepted if general appearance, materials, finishes, weathering and air flow characteristics are equivalent to those specified.
 - 1. Airolite Company, Marietta, GA (614/373-7676).
 - 2. Penn Ventilator Company, Inc., Philadelphia, PA (215/464-8900).
 - 3. Construction Specialties, Inc. (C/S), Cranford, NJ (800/447-1983).

2.3 FIXED WALL LOUVERS

- A. Fixed Louvers for Wood-Framed (Cement Plaster) Walls: Industrial Louvers Model 406.
 - 1. Louver frame: Formed 16 gauge galvanized sheet steel, nominal 4 inches deep, channel-type "C" frame configuration, with integral nailing fin and plaster stop.
 - 2. Louver blades: Weather-resistant Z-blade design, 16 gauge galvanized sheet steel, 30-degree blade angle.
- B. Louver Sizes: As indicated on the Drawings.
- C. Mullions: If required due to width of louver, provide invisible type, spaced not to exceed manufacturers maximum recommendation.
- D. Screening: 18x16 insect mesh with formed metal frame.
 - 1. Provide removable screening at all exterior wall louvers, except where connected to exhaust ductwork.
 - 2. Mount screen at interior face of louver typically and at exterior face at air intake louvers connected to ductwork.
- E. Fasteners: Provide high-strength aluminum or stainless steel fasteners, clips and anchors to suit installation conditions. Fasteners shall be concealed or tamper-resistant.
- F. Flashing:
 - 1. Paper flashing: Pure copper laminated to heavy kraft paper, reinforced with glass fiber, 2 ounces per square foot weight, Fortifiber Corporation, Copper Armored Sisalkraft, to integrate with building paper specified in Section 09 24 00 - Portland Cement Plastering to properly flash and seal wall louvers.
 - 2. Metal flashing: Provide head flashing, of galvanized sheet metal, as specified in Section 07 60 00 - Flashing and Sheet Metal.
- G. Sealants: Refer to Section 07 90 00 - Joint Protection.

PART 3 - EXECUTION - NOT USED

END OF SECTION

DIVISION 09 – FINISHES

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

09 22 16 – NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Light gauge metal stud framing for gypsum board attachment at interior walls and partitions.
- B. Related backing and bridging.
- C. Furring at structural steel framing, masonry and concrete construction for gypsum board attachment.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Products of the manufacturers listed below will be acceptable. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. California Expanded Metal Products Co. (CEMCO), City of Industry, CA (818/369-3564).
 - 2. National Gypsum Co. (Gold Bond), Charlotte, NC (704/365-7315 or 800/628-4662; local sales office, Long Beach, CA 310/435-4465).
 - 3. Western Metal Lath Co., La Mirada, CA (310/944-6117 or 714/523-2160).
 - 4. Delta-Star, Inc., Belmont, CA (800/892-8673).

PART 3 - EXECUTION

3.1 LIGHT GAUGE METAL FRAMING, 20 GAUGE AND LIGHTER

- A. Framing Members (Studs/Joists): ASTM C645, minimum yield strength 33 ksi, types, and sizes as indicated on Drawings, gauge as indicated on Drawings and as required to meet span and deflection limitations, punched web unless otherwise indicated, with screw-type flanges.
- B. Tracks, Sills and Headers: Unpunched channels sized for stud flanges, gauge the same as studs unless otherwise noted. Under structural framing members and decking, provide deflection track at head of partition, as indicated on the Drawings.

- C. Flexible Track:
 - 1. Specified Manufacturer: Superior Metal Trim by Delta-Star, Inc., Belmont, CA (800/892-8673).
 - 2. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 3. Flexible Head Track: Superior SFT Series, gauge to match studs, width to suit stud framing.
 - D. Finish: Aluminum-zinc corrosion resistant coating, ASTM A792 or hot dipped galvanized ASTM A525 G60.
 - E. Screws: As recommended or required by manufacturer, self-drilling, self-tapping in accordance with manufacturer's recommendations and ML/SFA specifications.
- 3.2 LIGHT GAUGE METAL FRAMING, 18 GAUGE AND HEAVIER
- A. Studs: ASTM C645, minimum yield strength 33 ksi, types, sizes and gauges as indicated on Drawings, punched web unless otherwise indicated, with screw-type flanges.
 - B. Finish: Hot dipped galvanized, ASTM A525, coating weight G60.
 - C. Standard Structural Steel Shapes and Plates: As specified in Section 05 50 00 - Metal Fabrications.
 - D. Fabricated Steel Items: As specified in Section 05 50 00 - Metal Fabrications, ASTM A283, grade optional.
 - E. Flat-Rolled Carbon Steel Sheets: ASTM A611.
 - F. Cold-Rolled Carbon Steel Sheets: ASTM A366.
 - G. Other Fasteners: Provide all bolts, nuts, screws, clips, washers and any other fastenings necessary for proper erection of items specified herein. See S Section 05 05 23 – Metal Fastenings for additional requirements.
- 3.3 ACCESSORIES
- A. Backing Plates: 16 gauge galvanized sheet metal covering full width of stud spacing by 4 inches wide minimum, for attachment and support of products to be attached to framing.

END OF SECTION

09 22 26 – SUSPENSION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Grid suspension system for direct attachment of gypsum board at suspended interior soffits and ceilings.
- B. Suspended cold-rolled steel channels and screwable furring for furring at exterior plaster soffits.
- C. Related backing and bridging.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Grid Suspension System for Interior Ceilings: Subject to compliance with requirements, provide one of the following:
 - 1. Armstrong World Industries, Inc.; Furring Systems/Drywall.
 - 2. Chicago Metallic Corporation; Drywall Furring 640 or Drywall Furring 660 System, as appropriate to duty rating; Fire Front 630, Fire Front 650 or Fire Front 670 System as appropriate to duty rating and fire rating.
 - 3. USG Interiors, Inc.; Drywall Suspension System.
- B. Metal Furring
 - 1. Specified Manufacturer: United States Gypsum Company (USG), Chicago, IL (312/606-4000; local representative, Glendale, CA 818/956-1882 or 800/964-4874).
 - 2. Acceptable Manufacturers: Products of the manufacturers listed below will be acceptable.
 - a. Angeles Metal Systems, Los Angeles, CA (213/268-1777).
 - b. California Expanded Metal Products Co. (CEMCO), City of Industry, CA (818/369-3564).
 - c. National Gypsum Co. (Gold Bond), Charlotte, NC (704/365-7315 or 800/628-4662; local sales office, Long Beach, CA 310/435-4465).
 - d. Western Metal Lath Co., La Mirada, CA (310/944-6117 or 714/523-2160).

PART 3 - EXECUTION

3.1 GRID SUSPENSION SYSTEM OF INTERIOR CEILINGS

- A. Provide direct-hung system composed of main beams and cross-furring members that interlock complying with ASTM C645.

3.2 METAL FURRING

- A. Channels: 1-1/2-inch cold rolled steel channel, hot dipped galvanized.
- B. Hat Section Furring Channels: 1-5/8-inch steel stud or 7/8-inch deep special furring shape, cold rolled light gauge steel, minimum 25 gauge, galvanized, with matching track as required.
- C. Z-Shape Furring Channels: Cold rolled light gauge steel, minimum 25 gauge, galvanized, with matching track, depth to suit insulation thickness or as indicated.
- D. Furring Channel Clip: United States Gypsum Company (USG) Metal Furring Channel Clip, or equal.
- E. Wall Furring Bracket: United States Gypsum Company (USG) product, or equal.

3.3 BRACES AND SUPPORTS:

- A. Galvanized steel, size and type to suit application, to rigidly support and secure acoustic ceiling system including support of integral mechanical and electrical components with maximum deflection of 1/360 and to seismically brace ceiling in accordance with applicable Code requirements.
- B. Hanger Rods: Mild steel, zinc coated, or protected with rust- inhibitive paint.
- C. Flat Hangers: Mild steel, zinc coated, or protected with rust inhibitive paint.
- D. Angle Hangers: Angles with legs not less than 7/8-inch wide, formed with 0.0365-inch-thick galvanized steel sheet complying with ASTM A446, Coating Designation G90, with bolted connections and 5/16-inch-diameter bolts.
- E. Hangers Wires: ASTM A 641, soft temper, pre-stretched, Class 1 coating, sized so that stress at 3-times hanger design load (ASTM C 635, Table 1, Direct Hung), will be less than yield stress of wire, but provide not less than 12 gauge (0.1055-inch diameter).
- F. Tie Wire: 18 gauge annealed low carbon steel, galvanized.
- G. Screws: ITW/Buildex, USG or equal, self-drilling, self-tapping, low profile head where covered by gypsum board, length in accordance with manufacturer's recommendations and ML/SFA specifications.
- H. Nails: Annular ring drywall nail, length in accordance with framing manufacturer's recommendations and ML/SFA specifications.

3.4 ACCESSORIES

- A. Backing Plates: 16 gauge galvanized sheet metal covering full width of stud spacing by 4 inches wide minimum, for attachment and support of products to be attached to framing.

END OF SECTION

09 23 00 – GYPSUM PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Gypsum plasterwork on expanded-metal lath, to repair existing gypsum plaster.
- B. Patching of existing gypsum plaster.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Expanded-Metal Lath, General (ASTM C 847). Acceptable Manufacturers: Provide lath produced by one of the following or equivalent product in compliance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Alabama Metal Industries Corporation (AMICO).
 - 2. California Expanded Metal Products Company (CEMCO).
 - 3. Unimast, Inc.
 - 4. Western Metal Lath & Steel Framing Systems.
- B. Zinc and Zinc-Coated (Galvanized) Accessories: Provide lath produced by one of the following or equivalent product in compliance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Alabama Metal Industries Corporation (AMICO).
 - 2. California Expanded Metal Products Company (CEMCO).
 - 3. Unimast, Inc.
 - 4. Western Metal Lath & Steel Framing Systems.
- C. Paper Backing: Reinforced kraft-type paper with asphalt-treated core, complying with UBC Standard 14-1, or equivalent product in compliance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Super Jumbo-Tex, Fortifiber Corporation, Incline Village, NV (775/833-6161 or 800/443-4079)

- D. Gypsum Ready-Mixed Plaster. Acceptable manufacturers and products: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. National Gypsum Company; Gold Bond Gypsolite.
 - 2. United States Gypsum Co.; Structo-Lite.
- E. Gypsum Neat Plaster: For use with job-mixed aggregates. Acceptable manufacturers and products: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. National Gypsum Company; Gold Bond Two-Way Hardwall Plaster.
 - 2. United States Gypsum Co.; Red Top Two-Purpose Plaster.
- F. High-Strength Gypsum Neat Plaster: With a minimum, average, dry compressive strength of 2800 psi (19 MPa) per ASTM C 472 for a mix of 100 lb of plaster and 2 cu. ft. of sand. Acceptable manufacturer and product: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. United States Gypsum Co.; Structo-Base.
- G. Gypsum Gauging Plaster: ASTM C 28/C 28M. Acceptable manufacturers and products: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. National Gypsum Company; Gauging Plaster (Super-White).
 - 2. United States Gypsum Co.; Champion Gauging, Red Top Gauging Gypsum or Star Gauging Plaster, as recommended by manufacturer for application conditions.
- H. Gypsum Ready-Mixed Finish Plaster: Manufacturer's standard, mill-mixed, gauged, interior finish. Acceptable manufacturers and products: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. National Gypsum Company; Gold Bond Kal-Kote Smooth, Kal-Kote Texture, Uni-Kal or X-KALibur, as recommended by manufacturer for application conditions.
 - 2. United States Gypsum Co.; Imperial Finish Plaster, Diamond Brand Interior Finish Plaster or Red Top Finish, as recommended by manufacturer for application conditions.
- I. High-Strength Gypsum Gauging Plaster: ASTM C 28/C 28M, with a minimum, average, dry compressive strength of 5000 psi (34 MPa) per ASTM C 472 for a neat mix.
- J. Acceptable manufacturer and product: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. United States Gypsum Co.; Structo-Gauge.
- K. Lime: ASTM C 206, hydrated finishing type.
 - 1. Type S: Autoclaved, double-hydrate lime. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - a. United States Gypsum Co.; Ivory or Snowdrift Finish Lime, as recommended by manufacturer for application conditions.

2. Type N: Normal, single-hydrate lime. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - a. United States Gypsum Co.; Grand Prize Finish Lime.

PART 3 - EXECUTION

3.1 GENERAL

- A. Profice lath and accessories where indicated on the drawings.
- B. Finish: ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.

3.2 LATH

- A. Diamond-Mesh Lath: Self-furring, weighing 3.4 lb/sq. yd.
- B. Flat Rib Lath: Rib depth of not more than 1/8-inch weighing 3.4 lb/sq. yd.

3.3 ACCESSORIES

- A. Accessories, General: Comply with ASTM C 841 and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.
- B. Zinc and Zinc-Coated (Galvanized) Accessories:
 1. Cornerite: Fabricated from expanded-metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 2. Striplath: Fabricated from expanded-metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 3. Cornerbeads: Fabricated from zinc-coated (galvanized) steel.
 - a. Provide small nose cornerbead with expanded flanges, unless otherwise indicated.
 - b. Provide small nose cornerbead with perforated flanges on curved corners.
 - c. Provide small nose cornerbead with expanded flanges reinforced by perforated stiffening rib at on columns and for finishing unit masonry corners.
 - d. Provide bull nose cornerbead, radius 3/4-inch minimum, with expanded flanges at locations indicated on Drawings.
 4. Casing Beads: Fabricated from zinc-coated (galvanized) steel, square-edged style, with expanded flanges.
 5. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel, one-piece-type, folded pair of unperforated screeds in M-shaped configuration, with perforated flanges and removable protective tape on plaster face of control joint.
 6. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel, folded pair of unperforated screeds in M-shaped configuration, with expanded flanges.

3.4 MISCELLANEOUS MATERIALS

- A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
 - B. Bonding Compound: ASTM C 631.
 - C. Steel Drill Screws: For metal-to-metal fastening, ASTM C 1002 or ASTM C 954, as required by thickness of metal being fastened, with pan head that is suitable for application, in lengths required to achieve penetration through joined materials of not fewer than three exposed threads.
 - D. Fasteners for Attaching Metal Lath to Substrates: Complying with ASTM C 841.
 - E. Paper backing: Provide paper backing to reduce plaster "push-through" or "blow-through" waste.
- 3.5 BASE-COAT PLASTER MATERIALS
- A. Base-Coat Plasters, General: ASTM C 28/C 28M.
 - B. Gypsum Ready-Mixed Plaster: With mill-mixed perlite aggregate.
 - C. Gypsum Neat Plaster: For use with job-mixed aggregates.
 - D. High-Strength Gypsum Neat Plaster: With a minimum, average, dry compressive strength of 2800 psi (19 MPa) per ASTM C 472 for a mix of 100 lb of plaster and 2 cu. ft. of sand.
 - E. Aggregates for Base-Coat Plasters: ASTM C 35.
- 3.6 FINISH-COAT PLASTER MATERIALS
- A. Gypsum Gauging Plaster: ASTM C 28/C 28M.
 - B. Gypsum Ready-Mixed Finish Plaster: Manufacturer's standard, mill-mixed, gauged, interior finish.
 - C. High-Strength Gypsum Gauging Plaster: ASTM C 28/C 28M, with a minimum, average, dry compressive strength of 5000 psi (34 MPa) per ASTM C 472 for a neat mix.
 - D. Lime: ASTM C 206, hydrated finishing type. Type S or Type N as specified.
 - E. Aggregates for Float Finishes: ASTM C 35; graded per ASTM C 842.
- 3.7 PLASTER MIXES
- A. Plaster Mixes, General: Comply with ASTM C 842 and manufacturer's written instructions for applications indicated.
 - B. Base-Coat Mixes over Expanded-Metal Lath: High-strength gypsum plaster with job-mixed sand for scratch and brown coats of three-coat plasterwork.
 - C. Base-Coat Mix over Unit Masonry: Gypsum neat plaster with job-mixed sand or ready-mixed plaster, for single base coats of two-coat plasterwork.
 - D. Finish-Coat Mix for Smooth-Troweled Finishes: Gypsum ready-mixed finish plaster or 1 part high-strength gypsum gauging plaster to 1 part lime.
 - E. Finish-Coat Mix for Float Finishes: 1 part gypsum gauging plaster, 2 parts lime, and 6 parts sand.
 - F. Finish-Coat Mix for Sprayed Finishes: Gypsum ready-mixed finish plaster.

- G. Finish-Coat Mix for Textured Finishes: Gypsum ready-mixed finish plaster.

3.8 PATCHING AND REPAIRING OF EXISTING GYPSUM PLASTER

- A. Patching and Repairing of Existing Gypsum Plaster: Refer to general requirements specified in Section 01 73 29 - Cutting and Patching and Section 02 41 00 - Demolition.
 - 1. Cut, patch, replace, and repair plaster as necessary to accommodate other Work and to restore cracks, dents, and imperfections.
 - 2. Repair or replace plaster to eliminate blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.
 - 3. Remove all loose plaster.
 - 4. Install new paper backing and separate metal lath.

END OF SECTION

09 24 00 – PORTLAND CEMENT PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Metal lath and accessories.
- B. Stucco finishes.
- C. Soffit suspension system

1.3 SUBMITTALS

- A. Product Data for each product specified.
- B. Samples for initial selection in the form of manufacturer's color charts consisting of actual units or sections of units at least 12 inches square showing the full range of colors, textures, and patterns available for each type of finish indicated.
- C. Samples for verification in units at least 12 inches square of each type of finish; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
- D. Material Certificates: Submit certificate signed by manufacturer for each kind of plaster aggregate certifying that materials comply with requirements.

1.4 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: Where fire-resistance-rated portland cement plaster assemblies are used, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

1.5 REGULATORY REQUIREMENTS

- A. Comply with requirements of CBC Chapter 25.

1.6 PROJECT CONDITIONS

- A. Environmental Requirements, General: Comply with requirements of referenced plaster application standards and recommendations of plaster manufacturer for environmental conditions before, during, and after plaster application.
- B. Cold-Weather Requirements: Provide heat and protection, temporary or permanent, as required to protect each coat of plaster from freezing for at least 24 hours after application. Distribute heat uniformly to prevent concentration of heat on plaster near heat sources; provide deflection or protective screens.

- C. Warm-Weather Requirements: Protect plaster against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial. Apply and cure plaster as required by climatic and job conditions to prevent dry out during cure period. Provide suitable coverings, moist curing, barriers to deflect sunlight and wind, or combinations of these, as required.
- D. Exterior Plaster Work: Do not apply plaster when ambient temperature is below 40 deg F.
- E. Protect contiguous work from soiling and moisture deterioration caused by plastering. Provide temporary covering and other provisions necessary to minimize harmful spattering of plaster on other work.

PART 2 - PRODUCTS

2.1 LATH

- A. Expanded-Metal Lath: Comply with ASTM C 847 for material, type, configuration, and other characteristics indicated below.
 - 1. Diamond-Mesh Lath: Comply with the following requirements:
 - a. Configuration: Flat.
 - 1) Weight: 3.4 lb/sq. yd.
 - b. Configuration: Self-furring.
 - 1) Weight: 3.4 lb/sq. yd.
- B. Woven-Wire Lath: ASTM C 1032, fabricated into 1-1/2-inch hexagonal-shaped mesh with minimum 0.0510-inch- diameter, galvanized steel wire.
- C. Paper Backing: Where paper-backed lath is indicated, provide the following material factory bonded to back of lath. Comply with FS UU-B-790, Type I, grade and style as indicated below:
 - 1. Vapor-Retardant Paper: Grade B, Style 1 with flame-spread rating of 25 per ASTM E 84.

2.2 ACCESSORIES

- A. General: Comply with material provisions of ASTM C 1063 and the requirements indicated below; coordinate depth of accessories with thicknesses and number of plaster coats required.
 - 1. Aluminum Components: Alloy, temper, and finish recommended by manufacturer with not less than the strength and durability properties of aluminum extrusions complying with ASTM B 221 for alloy and temper 6063-T5.
 - 2. Galvanized Steel Components: Fabricated from zinc-coated (galvanized) steel sheet complying with ASTM A 653, G40 minimum coating designation.
 - 3. Zinc-Alloy Components: ASTM B 69, 99 percent pure zinc.
- B. Metal Corner Reinforcement: Expanded, large-mesh, diamond-metal lath fabricated from zinc-alloy or welded-wire mesh fabricated from 0.0475-inch- diameter, zinc-coated

(galvanized) wire and specially formed to reinforce external corners of portland cement plaster on exterior exposures while allowing full plaster encasement.

- C. Cornerbeads: Small nose cornerbeads fabricated from the following metal, with expanded flanges of large-mesh diamond-metal lath allowing full plaster encasement.
 - 1. Zinc Alloy: Minimum 0.0207-inch thick.
 - 2. Galvanized Steel: Minimum 0.0172-inch thick.
 - 3. Material: Any material above.
- D. Casing Beads: Square-edged style, with expanded flanges of the following material:
 - 1. Zinc Alloy: Minimum 0.0207-inch thick.
 - 2. Galvanized Steel: Minimum 0.0172-inch thick.
 - 3. Material: Any material above.
- E. Control Joints: Prefabricated, of material and type indicated below:
 - 1. Zinc Alloy: Minimum 0.0207-inch thick.
 - 2. Galvanized Steel: Minimum 0.0172-inch thick.
 - 3. Material: Any material above.
 - 4. One-Piece Type: Folded pair of nonperforated screeds in M-shaped configuration, with expanded or perforated flanges.
 - a. Provide removable protective tape on plaster face of control joints.
- F. Foundation Sill (Weep) Screed: Manufacturer's standard profile designed for use at sill plate line to form plaster stop and prevent plaster from contacting damp earth, fabricated from zinc-coated (galvanized) steel sheet.
- G. Lath Attachment Devices: Material and type required by ASTM C 1063 for installations indicated.

2.3 PLASTER MATERIALS

- A. Base-Coat Cements: Type as indicated below:
 - 1. Portland cement, ASTM C 150, Type I.
- B. Stucco Finish Coat: Manufacturer's standard factory-packaged stucco, including portland cement, aggregate, coloring agent, and other proprietary ingredients.
- C. Sand Aggregate for Base Coats: ASTM C 897.

2.4 MISCELLANEOUS MATERIALS

- A. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2-inch long, free of contaminants, manufactured for use in portland cement plaster.
- B. Water for Mixing and Finishing Plaster: Potable.
- C. Bonding Agent: ASTM C 932.
- D. Steel drill screws complying with ASTM C 1002 for fastening metal lath to wood.

2.5 PLASTER MIXES AND COMPOSITIONS

- A. General: Comply with ASTM C 926 for base- and finish-coat mixes as applicable to plaster bases, materials, and other requirements indicated.
- B. Base-Coat Mixes and Compositions: Proportion materials for respective base coats in parts by volume per sum of cementitious materials for aggregates to comply with the following requirements for each method of application and plaster base indicated. Adjust mix proportions below within limits specified to attain workability.
- C. Fiber Content: Add fiber to mixes after ingredients have mixed at least 2 minutes. Comply with fiber manufacturer's written instructions but do not exceed 1 lb/cu. ft. of cementitious materials. Reduce aggregate quantities accordingly to maintain workability.
- D. Three-Coat Work over Metal Lath: Base-coat proportions as indicated below:
 - 1. Scratch Coat: 1 part portland cement, 0 to 3/4 parts lime, 2-1/2 to 4 parts aggregate.
 - 2. Brown Coat: 1 part portland cement, 0 to 3/4 parts lime, 3 to 5 parts aggregate.
- E. Two-Coat Work over Concrete Unit Masonry: Base-coat proportions as indicated below:
 - 1. Base Coat: 1 part portland cement, 3/4 to 1-1/2 parts lime, 3 to 4 parts aggregate.
- F. Stucco Finish Coat: Add water only; comply with stucco manufacturer's written instructions.

2.6 MIXING

- A. Mechanically mix cementitious and aggregate materials for plasters to comply with applicable referenced application standard and with recommendations of plaster manufacturer.

PART 3 - EXECUTION - NOT USED

END OF SECTION

09 29 00 – GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Gypsum board applied by nailing or screwing to framing and furring.
- B. Drywall trim, fasteners and accessories.
- C. Taping and finishing.
- D. Drywall acoustical sealants.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Gypsum Board
 - 1. Specified Manufacturer: United States Gypsum Company (USG), Chicago, IL (312/606-4000; local representative, Glendale, CA 818/956-1882 or 800/964-4874).
 - 2. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- B. Acoustical Sealants
 - 1. Specified Manufacturers:
 - a. United States Gypsum Company (USG), Chicago, IL (312/606-4000; local representative, Glendale, CA 818/956-1882 or 800/964-4874).
 - b. Inmont Corp.
 - c. Harry A. Lowry & Associates, Inc., Sun Valley, CA (818/768-4661, 213/875-0223 or 800/225/8231)
 - 2. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

PART 3 - EXECUTION

3.1 GYPSUM BOARD

- A. Gypsum Board Materials, General: Gypsum board, joint treatment and finishing materials shall be manufactured from asbestos-free materials.

- B. Typical Gypsum Board: ASTM C36, Type X (special fire-resistant), typically 48 inches wide and 5/8-inch thick, square cut ends, tapered sides.

3.2 ACCESSORIES

- A. Accessories, General: Provide accessories as recommended in reference standards and manufacturer's product data. Provide accessories as required for a complete installation and in conformance to fire resistance ratings, where indicated.
- B. Joint Treatment Materials, General: ASTM C475.
- C. Taping and Embedding Compounds: Specifically formulated and manufactured for use in embedded tape at gypsum board joints and completely compatible with tape and substrate.
- D. Finishing or Topping Compound: Specifically formulated and manufactured for use as a finishing compound.
- E. All Purpose Compound: Specifically formulated and manufactured to serve as both a taping and a finishing compound and compatible with tape and substrate.
- F. Joint Tape, Gypsum Board: Perforated cross laminated, tapered edge, reinforced paper, or special tape recommended by the manufacturer.
- G. Gypsum Board Primer/Sealer: USG Sheetrock First Coat, flat vinyl latex paint, to equalize surface absorption and texture variations, non-asbestos.
- H. Nails: ASTM C514, annular ring drywall nail, length in accordance with framing manufacturer's recommendations, ML/SFA specifications and as required for fire-resistive construction.
- I. Screws: ASTM C646, USG Durock Flat Wafer Headscrews, Type W, steel self-drilling screws for wood substrate, low profile head, length in accordance with manufacturer's recommendations and ML/SFA specifications.
- J. Adhesive: Adhesives containing benzene, carbon tetrachloride and trichloroethylene shall not be used. Provide adhesive for laminating multi-layer installations of type as recommended by the gypsum board manufacturer and approved for fire rated construction.
- K. Hat Section Furring Channels: 1-5/8-inch steel stud or 7/8-inch deep special furring shape, cold rolled light gauge steel, minimum 25 gauge, galvanized, with matching track as required.
- L. Furring Channel Clip: USG Metal Furring Channel Clip,
- M. Cornerbead: USG No. 800 or equal.
- N. Edge Trim: USG No. 200-B or equal.
- O. Casing Bead: USG No. 66, square edge, or equal
- P. Control Joint: USG No. 093 or equal.
- Q. Water: Clean, fresh, potable.
- R. Acoustical Sealants:
 - 1. For gypsum board to gypsum board and gypsum board to structure joints: USG Acoustical Sealant or equal, non-hardening sealant specifically for gypsum board joints.

2. For non-electrical penetrations of gypsum board at non-fire rated construction: Inmont Corp., PressTite No. 579.64.
3. For electrical power and signal penetrations of gypsum board at non-fire rated construction: Lowry Outlet Box Pads, polybutene-butyl sheet caulking for application to exterior back, top and sides of recessed panelboards and outlet boxes for electrical power, CATV, telephone, fire alarm and other signal systems, manufactured by Harry A. Lowry & Associates, Inc.
4. For penetrations at fire-rated construction, provide firestopping as specified in Section 07 84 00 - Firestopping.

END OF SECTION

09 28 13 – CEMENTITIOUS BACKING BOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Tile backing board applied by screwing to framing and furring, to serve as substrate for thinset ceramic tile finish.
- B. Trim, fasteners and accessories.
- C. Taping and finishing.

PART 2 - PRODUCTS

2.1 PORTLAND CEMENT TILE BACKING BOARD

- A. Specified Manufacturer: United States Gypsum Co., Inc., Chicago, IL (800/874-4968).
- B. Acceptable Manufacturers: Equivalent products by National Gypsum Co., Charlotte, NC (704/365-7300 or 800/628-4662) will be acceptable in accordance with the "or equal" provision specified in Section 01 61 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 61 00 - Product Requirements.
- C. Portland Cement Tile Backing Board: DUROCK Cement Board by United States Gypsum Co. (USG), cementitious backing units complying with ANSI A118.9, 5/8-inch thick, with width and length to suit Work conditions and to minimize joints.
- D. Joint Tape for Cementitious Backer Units: Polymer-coated, open glass-fiber mesh.
- E. Joint Compound for Cementitious Backer Unit: Material recommended by cementitious backer unit manufacturer.
- F. Reinforcing Fabric: Balanced, alkali-resistant, open-weave glass fiber fabric, made from continuous multi-end strands, and complying with ASTM D578.
 - 1. Tensile strength: Not less than 120 lbs in warp and 140 lbs in fill directions, when tested according to ASTM D1682.
 - 2. Weight: Minimum 4.3 oz per square yard.
- G. Joint Tape: 2 inches wide, glass fiber mesh, Durock Interior Tape or equivalent.

2.2 GYPSUM-BASED TILE BACKING BOARD

- A. Specified Manufacturer: G-P Gypsum Corporation, Subsidiary of Georgia-Pacific Corporation (Eastern USA 800/947-4497 or Western USA 800/824-7503).

- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. Gypsum-Based Tile Backing Board: G-P Dens-Shield® Tile Backer, for use as tile backer board where ceramic tile finish is indicated, composed of silicone-treated gypsum core conforming to ASTM C1178, with glass mat water-resistant coating and embedded glass mats, both sides.
 - 1. Face finish: Face side shall be surfaced with heat-cured copolymer water- and vapor-retardant coating.
 - 2. Non-rated conditions: Provide 1/2-inch thick G-P Dens-Shield□.
 - 3. Fire-rated conditions: Provide 5/8-inch thick G-P Dens-Shield□ Fireguard□, Type X, complying with ASTM E119.
 - 4. Board size: Provide maximum feasible widths and lengths to minimize joints, with ends cut square and tapered edges.

2.3 ACCESSORIES

- A. Accessories, General: Provide accessories as recommended in reference standards and manufacturer's product data. Provide accessories as required for a complete installation and in conformance to fire resistance ratings, where indicated.
- B. Trim: As recommended by backing board manufacturer and as indicated on the Drawings, formed sheet steel, zinc coated (galvanized) by hot dip process.
 - 1. Cornerbead: USG No. 800 or equal.
 - 2. Edge Trim: USG No. 200-B or equal.
 - 3. Casing Bead: USG No. 66, square edge, or equal
- C. Nails: 11 ga nails with 7/16-inch head, hot dip galvanized.
- D. Screws: ASTM C646, Type W for wood substrate and Type S for steel substrate, self-drilling Hi-Lo bugle head, length in accordance with manufacturer's recommendations.
- E. Joint Tape: 2 inches wide, 10 by 10 glass fiber mesh, G-P Dens-Shield or equivalent.
- F. Reinforcing Fabric: Balanced, alkali-resistant, open-weave glass fiber fabric, made from continuous multi-end strands, and complying with ASTM D578.
 - 1. Tensile strength: Not less than 120 lbs in warp and 140 lbs in fill directions, when tested according to ASTM D1682.
 - 2. Weight: Minimum 4.3 oz per square yard.
- G. Taping and Embedding Compound for Tile Backing Board: Proprietary, factory-packaged material specifically formulated for spray application, chemical-hardening compound, USG Sheetrock Lightweight Setting-Type (Easy Sand), or equal.
- H. Setting-Type Joint Compound: For un-tiled and un-wet locations, G-P Speed Set®.
- I. Tile Setting Materials: As specified in Section 09 30 00 – Tiling.
- J. Adhesive: For laminating multi-layer installations, type as recommended by tile backing board manufacturer and approved for fire rated construction. Adhesives containing benzene, carbon tetrachloride and trichloroethylene shall not be used.

- K. Waterproof Membrane Under Tile Backer Board: For installations at shower.
 - 1. Specified manufacturer: Permalon Division, Reef Industries, Inc., Houston, TX (800/231-2417).
 - 2. Acceptable manufacturers: None identified. Equivalent products of other manufacturers will be considered under the "or equal" provisions specified in Section 01610 - Basic Product Requirements.
 - 3. Reinforced polyethylene sheet membrane: Black high-density polyethylene, cross-laminated, approximately 6.4 mils thick, Permalon X-100. Unreinforced polyethylene will not be accepted.
- L. Water: Clean, fresh, potable.
- M. Acoustical Sealants: As specified in Section 09 29 00 - Gypsum Board.

PART 3 - EXECUTION - NOT USED

END OF SECTION

09 30 00 – TILING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Unglazed ceramic mosaic tile for installation on interior floors.
- B. Porcelain tile for installation on floors and walls.
- C. Glazed ceramic tile, for walls.
- D. Marble thresholds.
- E. Anti-fracture and waterproof membranes under thinset floor tile.
- F. Setting mortar and grout.

PART 2 - PRODUCTS

2.1 UNGLAZED CERAMIC MOSAIC TILE

- A. Specified Manufacturer: As indicated in the FINISH SCHEDULE on the Drawings.
- B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Unglazed Ceramic Mosaic Floor Tile: TCA 137.1, cushion edge, products as indicated in the FINISH SCHEDULE on the Drawings.
 - 1. Slip-resistant surface: Provide embedded abrasive grain at floor tile, for minimum static coefficients of friction of 0.6, when tested according to ASTM C 1028.
 - 2. Size(s): As indicated on the Drawings.
 - 3. Color(s) and pattern(s): As indicated on the Drawings. If not indicated, color(s) and pattern(s) shall be as selected by Architect. Allow for Group B colors and patterns.
- D. Mosaic Tile Trim: Provide manufacturer's standard trim shapes.
 - 1. Provide base with outside and inside corner pieces and other shapes as indicated and required for a complete installation.
 - 2. Except as may be shown otherwise on Drawings, provide color and finish matching field tile.
 - 3. All outside corners shall have cover pieces.
 - 4. Provide bullnose edge on all wainscot tile.

2.2 UNGLAZED PORCELAIN TILE

- A. Specified Manufacturer: As indicated on FINISH SCHEDULE on Drawings.
- B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Unglazed Porcelain Tile: Manufacturer, series, size and color(s) as indicated on the Drawings, conforming to ANSI A137.1. Coefficient of friction for floor tiles shall be 0.6 minimum when tested according to ASTM C 1028.
- D. Trim and Shapes: Provide manufacturer's standard trim shapes, matching field tile.
 - 1. Provide matching porcelain tile base units, 8 inches high.

2.3 GLAZED CERAMIC TILE

- A. Specified Manufacturer: As indicated on FINISH SCHEDULE in the Drawings.
- B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Glazed Wall Tile: TCA 137.1, cushion edge, self-aligning, smooth surface.
 - 1. Size: As indicated unless otherwise indicated.
 - 2. Colors: As indicated or, if not indicated, as selected by Architect.
 - 3. Finish: Bright or matte glaze, as indicated or, if not indicated, as selected by Architect.
 - 4. Trim: Provide matching bullnose base and edges as needed for complete and unified installation.
 - 5. Trim Sizes: As directed.
 - 6. Base: Bullnose top at other than ceramic tile wall finishes, and straight top at ceramic tile walls.
 - 7. Wainscot Trim: Bullnose top and edges.

2.4 ACCESSORY MATERIALS

- A. Cementitious Underlayment: As specified in Section 03 54 13 - Gypsum Cement Underlayment.
- B. Dividing Strips and Trim: Schluter Systems, Inc., Plattsburgh, NY (800/361-4086) or equivalent product of another manufacturer in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Provide materials, types, sizes and finishes as indicated on Drawings, or if not indicated, as recommended by manufacturer for edges, corners and transitions.
- C. Marble Thresholds: Georgia Marble Company, Vermont Marble Company, or equal, ASTM C503, Group A, tight-grained, sound white marble with little or no veining, beveled edges, fine sand rubbed finish, size and shape as indicated on Drawings. If not indicated, then 2 inches by width of door jamb by 3/4-inch thick, length to suit door opening.
- D. Water: Clear, fresh, potable and free of mineral or organic matter which can affect underlayment, priming and patching products.

2.5 CRACK ISOLATION AND WATERPROOF MEMBRANES

- A. Specified Manufacturer: TEC Specialty Products, Inc., an H.B. Fuller company, Palatine, IL (847/358-9500 or 800/323-7407).
- B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Crack Isolation Membrane: TEC Crack Isolation Membrane (TA-329), two-component, acrylic modified cementitious system designed to bridge substrate cracks up to 1/8-inch prior to installation of ceramic tile.
- D. Waterproofing Membrane: TEC Triple Flex Waterproofing, Crack Isolation & Flexible Bonding Mortar (TA-324), elastomeric membrane for complete waterproofing and crack isolation and for tile setting.
- E. Floor Slab Priming and Patching Products: As recommended by manufacturer and compatible with crack isolation membrane.

2.6 TILE SETTING MORTAR

- A. Specified Manufacturer: TEC Specialty Products, Inc., an H.B. Fuller company, Palatine, IL (847/358-9500 or 800/323-7407).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Custom Building Products, Seal Beach, CA (310/598-8808; 800/282-8786).
 - 2. Bostik Construction Products, Middleton, MA, (800/726-7845).
 - 3. Laticrete International, Inc., Bethany, CT (800/243-4788).
- C. Tile Setting Mortars:
 - 1. Wall tile setting mortar: TEC Full Flex Thin Set Mortar (TA-390) latex-modified portland cement mortar plus TEC Xtraflex (TA-872) acrylic mortar additive.
 - 2. Ceramic mosaic floor tile setting mortar at crack isolation membrane: TEC Full Flex Thin Set Mortar (TA-390) plus TEC Xtraflex (TA-872) acrylic mortar additive.
 - 3. Ceramic mosaic floor tile setting mortar at waterproof membrane: TEC Full Flex Thin Set Mortar (TA-390) plus TEC Xtraflex (TA-872) acrylic mortar additive.
 - 4. Porcelain Tile Setting Mortar: TEC Medium Bed Mortar plus TEC Full Bond acrylic latex additive for additional bond and resilience, suitable for medium bed installations as thin as 1/8-inch and as thick as 3/4-inch.

2.7 TILE GROUT

- A. Specified Manufacturer: TEC Specialty Products, Inc., an H.B. Fuller company, Palatine, IL (847/358-9500 or 800/323-7407).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 -

Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

1. Custom Building Products, Seal Beach, CA (310/598-8808; 800/282-8786).
2. Bostik Construction Products, Middleton, MA, (800/726-7845).
3. Laticrete International, Inc., Bethany, CT (800/243-4788).

- C. Wall Tile Grout: TEC AccuColor (TA-620) unsanded, polymer-enhanced grout, complying with ANSI/TCA A118.4, commercially prepared mixture, integral color as indicated on the Drawings or, if not indicated, as selected by Architect. Allow for custom color.
- D. Floor Tile Grout: TEC AccuColor (TA-650) sanded, polymer-enhanced grout, complying with ANSI/TCA A118.6, commercially prepared mixture, integral color as indicated on the Drawings or, if not indicated, as selected by Architect. Allow for custom color.

2.8 JOINT SEALERS

- A. Wall and Fixture Joint Sealant: Mildew-resistant silicone sealant, white or clear as selected by Architect, as specified in Section 07 90 00 - Joint Protection.
- B. Floor Expansion Joint Sealant, Non-Traffic Areas: Single-component, non-sag, as specified in Section 07 90 00 - Joint Protection.
- C. Floor Expansion Joint Sealant, Traffic Areas: Two-component, Shore A hardness greater than 35, as specified in Section 07 90 00 - Joint Protection.

PART 3 - EXECUTION - NOT USED

END OF SECTION

09 51 00 – ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Suspended exposed t-bar metal ceiling grid systems.
- B. Mineral fiber acoustical lay-in panels.

PART 2 - PRODUCTS

2.1 SUSPENSION SYSTEM

- A. Specified Manufacturer: Chicago Metallic Corporation, Chicago, IL (708/563-4600 or 800/323-7164).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. USG Interiors, Ceiling Suspension Division (Donn), Chicago, IL (800/950-3839); DX Series with DX26 main tees and DX416 cross tees.
 - 2. Armstrong World Industries, Inc. (local distributor, Acoustical Material Services, Anaheim, CA, 714/937-8980); Prelude ML System, with 7301 main tees and 7333 and 7343 cross tees.
- C. Suspension System: Chicago Metallic Snap Grid System, with 200 main tees and 204 cross tees, exposed T-bar, electro-galvanized steel, 15/16-inch face, double web, non-rated, direct hung, heavy duty classification, suitable for specified acoustical panels.
- D. Finish, Exposed Surfaces: Factory-finished, standard low gloss white.
- E. Runners: 15/16-inch exposed bottom flange, 1-1/2-inch high web, metal thickness to suit duty classification of system.
- F. Wall Channel: 3/4-inch flange, hemmed edge, 0.020-inch metal.
- G. Braces and Supports: Galvanized steel, size and type to suit application, to rigidly support and secure acoustic ceiling system including support of integral mechanical and electrical components with maximum deflection of 1/360 and to seismically brace ceiling in accordance with applicable Code requirements.
 - 1. Hanger Rods: Mild steel, zinc coated, or protected with rust-inhibitive paint.
 - 2. Flat Hangers: Mild steel, zinc coated, or protected with rust-inhibitive paint.

3. Angle Hangers: Angles with legs not less than 7/8-inch wide, formed with 0.0365-inch-thick galvanized steel sheet complying with ASTM A446, Coating Designation G90, with bolted connections and 5/16-inch-diameter bolts.

- H. Hangers Wires: ASTM A641, soft temper, pre-stretched, Class 1 coating, sized so that stress at 3-times hanger design load (ASTM C635, Table 1, Direct Hung), will be less than yield stress of wire, but provide not less than 12 gauge (0.1055-inch diameter).

2.2 WET-FORMED MINERAL FIBER ACOUSTICAL CEILING PANELS

- A. Specified Manufacturer: Armstrong World Industries, Inc. (717/397-0611 or 800/448-1405).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision of the Contract.
 1. Celotex Building Products, Tampa, FL (813/873-1700).
 2. USG Interiors, Inc., Chicago, IL (800/950-3839).
- C. Acoustical Ceiling Panels, General: Lay-in, mineral fiber panels for exposed-T suspension system, Fed Spec SS-S118B, Type III, Class A.
- D. Wet-Formed Mineral Fiber Acoustical Ceiling Panels:
 1. Product: Armstrong Fine Fissured Second Look II, catalog no. 1729A.
 2. Material: Wet-formed mineral fiber, painted face.
 3. Nominal Sizes: 24 x 48 inches, 3/4-inch thick.
 4. Face Pattern: Fine non-directional fissured texture with single score to simulate 24 x 24-inch panels.
 5. Edges: Angled Tegular, for 15/16-inch exposed grid tee.
 6. NRC: 0.55.
 7. CAC: 35, minimum.
 8. Surface Burning Characteristics: ASTM E1264, Class A and Flame Spread 25 or under, UL listed and labeled.
 9. Finish: Manufacturer's standard White, factory-applied paint.

2.3 POLYESTER FILM-FACED CEILING PANELS

- A. Specified Manufacturer: Armstrong World Industries, Inc., Lancaster, PA (717/397-0611 or 800/448-1405).
- B. Acceptable Manufacturers: Equivalent products by USG Interiors, Inc., Chicago, IL (800/950-3839) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

- C. Polyester Film-Faced Ceiling Panels: Non-perforated mineral fiber board with factory-applied vinyl film, Armstrong VL Fire Guard, size as indicated on the Drawings.
1. Product: Armstrong VL Fire Guard.
 2. Material: Wet-formed mineral fiber panel with factory-applied vinyl film.
 3. Nominal Size: As indicated on the Drawings.
 4. Face Pattern: Non-perforated stipple finish vinyl film. Provide field (edge adhered film) and border (fully adhered film) units to suit Project conditions.
 5. Edges: Square-cut.
 6. NRC: 0.10.
 7. Color: Manufacturer's standard white.
 8. Sanitary Rating: USDA accepted for use in food service areas and complying with public health regulations of authorities having jurisdiction for restaurant use.
 9. Surface Burning Characteristics: ASTM E1264, Class A and Flame Spread 25 or under, UL listed and labeled.

PART 3 - EXECUTION - NOT USED

END OF SECTION

09 64 53 - RESILIENT WOOD FLOORING ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.
- B. Section 07 26 33 Vapor Emission Reduction System

1.2 SECTION INCLUDES

- A. Hardwood strip flooring system for Dance Practice Rooms, consisting of hardwood flooring secured to resilient sleeper/subfloor assembly.
- B. Hardwood strip flooring system for Gymnasiums, consisting of hardwood flooring secured to double plywood panel subfloor mounted on resilient cushions.
- C. Tempered hardboard flooring system for Stages, consisting of tempered hardboard panels secured to double plywood panel subfloor secured to wood sleepers on resilient cushions.
- D. Vapor retarder and installation accessories.
- E. Field finishing with colored court markings, school, district and athletic division logos.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show installation details including location and layout of each type of wood, athletic-flooring assembly and accessory. Include the following:
 - 1. Expansion provisions and trim details
 - 2. Layout, colors, widths and dimensions of game lines, markers and logos.
 - 3. Locations of athletic equipment floor anchors.
- C. Samples:
 - 1. Manufacturers color charts showing colors and glosses available for floor finish, lines, markers and logos.

1.4 QUALITY ASSURANCE:

- A. Installer Qualifications: At least 5 years of documented experience for completed wood athletic flooring similar in material, design and extent to that indicated for this Project. Completed projects must have a record of successful in-service performance.
- B. Installer's responsibilities: Installation of flooring assembly, including but not limited to the following:
 - 1. Vapor retarder.
 - 2. Sleepers.

3. Wood Finish Flooring.
4. Game lines and markers.
5. Logos.
6. Finish.
7. Accessories.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver wood flooring materials in unopened cartons or bundles.
- B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet work is complete and dry.
- C. Store wood flooring materials in a dry, warm, well-ventilated, weathertight location.
- D. Move wood flooring into spaces where it will be installed at least seven days before installation.

1.6 PROJECT CONDITIONS

- A. Conditioning: Maintain relative humidity conditions planned for building occupants, but not greater or less than the relative humidity range recommended by MFMA, and an ambient temperature between 55 and 75 degrees F in spaces to receive wood flooring for at least seven days before installation, during installation, and for at least seven days after installation. After post-installation period, maintain relative humidity conditions and ambient temperature planned for building occupants.
 1. Open sealed packages to allow wood flooring to acclimatize.
 2. Do not install flooring until it adjusts to the relative humidity of and is at the same temperature as the space where it is to be installed.
 3. Close spaces to traffic during flooring installation and for the time period after installation recommended in writing by flooring and finish manufacturer, but not less than 10 days.

1.7 MAPLE FLOORING

- A. Shall comply with the Maple Flooring Manufacturers Association, Inc. (MFMA) recommendations.

PART 2 - PRODUCTS

2.1 HARDWOOD STRIP FLOORING SYSTEMS

- A. Specified Manufacturer: Robbins Sports Surfaces, Cincinnati, OH (513/871-8988 or 800/543-1913)
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in

accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

1. Action Floor Systems, Inc., LLC, Mercer, WI (715/476-3512 or 800/746-3512).
 2. Junckers Hardwood, Inc., Anaheim, CA (714/777-6430).
- C. Hardwood Strip Flooring System for Dance Practice Room Floor: Robbins Air Channel Star XL, sleeper/subfloor system, resiliency complying with DIN 18032 Part 2.
1. Vapor retarder: As specified below.
 2. Sleepers: Factory fabricated plywood strips, including stop blocks.
 3. Resilient pads: As manufactured by flooring manufacturer to achieve floor resiliency suitable for aerobics and dance use, according to DIN 18032, Part 2.
 4. Sheathing: 15/32" load-distribution plywood produced by flooring manufacturer.
 5. Flooring: Robbins 25/32" x 2-1/4": Traditional grade Continuous Strip XL Maple.
 6. Perimeter Base: 3" x 4" vented black or brown rubber, as selected by Architect.
- D. Hardwood Strip Flooring System for Gymnasium Floor: Robbins Air-Channel® Classic wood strip flooring secured to plywood panel subfloor mounted on resilient cushions.
1. Vapor retarder: As specified below.
 2. Resilient pads: 3/8-inch thick, as manufactured by flooring manufacturer with resiliency suitable for basketball use.
 3. Sheathing: 15/16" APA rated plywood sheathing, Exposure I.
 4. Flooring: 25/32" x 2-1/4" Second and Better grade, T&G and EM, KD Northern hard maple flooring, graded according to HFMA standards.
 - a. Provide random lengths not less than 48" and not more than 72".
 - b. Third grade may be used under bleachers.
 - c. Flooring shall be factory treated with wood preservative.
 5. Perimeter base: 3" x 4" vented black or brown rubber, as selected by Architect.
 6. Thresholds: 8" wide ribbed aluminum, for transition from other flooring to wood.
 7. Perimeter base: 3" x 4" vented black or brown rubber, as selected by Architect.
- E. Wood Transitions and Miscellaneous Trim: Hardwood, fabricated in accordance with requirements specified in Section 06 20 00 - Finish Carpentry, with profiles as indicated on the Drawings and features as recommended by flooring manufacturer.
- F. Outlet Box Covers: Stainless steel hinged covers with finger/cable holes to provide smooth surface over outlet boxes.
- G. Fasteners: Type and size as recommended by flooring manufacturer, but not less than those recommended by MFMA for application indicated.
- H. Field-Applied Finishes:
1. Epoxy: Clear, epoxy based coating suitable for heavy-use (gymnasium floor) application. Coating shall be high-build, non-yellowing floor finish with high solids content and viscosity that can produce a high gloss with multiple coats and is capable of withstanding street shoe traffic without marring.

2. Specified Manufacturer: Icon by Hillyard, St. Joseph, MO (800-365-1555).
3. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
4. Markings paint: High-gloss enamel compatible with finish and recommended by finish and paint manufacturers for this purpose.

2.2 HARDBOARD PANEL FLOORING SYSTEMS

- A. Hardboard Panel Flooring System for Stage: Custom assembly of wood sleepers mounted on resilient cushions, double plywood panel subfloor and tempered hardboard wearing surface.
 1. Vapor retarder: As specified below.
 2. Sleepers: As specified above for Dance Practice Room floor, factory fabricated plywood strips, including stop blocks.
 3. Resilient pads: As specified above for Dance Practice Room floor, manufactured to achieve floor resiliency suitable for aerobics and dance use, according to DIN 18032, Part 2.
 4. Sheathing: Two layers 3/4" APA rated plywood sheathing, Exposure I.
 5. Tempered hardboard wearing surface: ANSI/AHA 135.4, interfelted lignocellulosic fibers consolidated under heat and pressure, tempered, smooth two sides, recommended by manufacturer for table and counter top use, nominal 1/4-inch thick (0.205-inch), Duron® Hardboard manufactured by Masonite Corporation.
 - a. Specified manufacturer: Masonite Corporation, Building and Industrial Products, Chicago, IL (312/750-0900 or 800/257-7885).
 - b. Acceptable manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1) ABTCO, Troy, MI (810/649-3300).
 - 2) Evanite Hardboard Corp., Corvallis, OR (503/753-1211).
 - 3) Louisiana Pacific Corp., Lake Oswego, OR (503/624-9004).
- B. Plywood Fasteners: As recommended by flooring system manufacturer.
- C. Hardboard Panel Fasteners: Flathead, countersunk wood screws.
- D. Applied Finish: Black color, acrylic floor coating as specified in Section 09 90 00 – Painting and Coating. Prime floor panels on both sides and all edges prior to installation to minimize possible moisture damage.

2.3 ACCESSORY MATERIALS

- A. Vapor Retarder: Black or white high-density polyethylene, cross-laminated, approximately 6.4 mils thick, Permalon X-100 by Permalon Division, Reef Industries, Inc., Houston, TX (800/231-2417), or equal. Unreinforced polyethylene will not be accepted. Equivalent

products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

- B. Adhesive Tape for Vapor Retarder Sheet Joint Sealing: Griffolyn Fab Tape, black double-sided asphalt based pressure-sensitive tape, produced by Reef Industries, Inc., Houston, TX (800/231-6074). Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. Adhesive Mastic: Spray-applied contact adhesive, compatible with sheet barrier and substrate materials, with excellent water-resistive qualities, Miracle Adhesives Corporation, Bellmore, NY (800/647-2253), Miracle 1330 Spray Adhesive, or equal. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- D. Temporary Protective Covering: Non-staining reinforced kraft paper (polyethylene sheeting shall not be used), overlaid with plywood or particle board sheets at traffic areas.

PART 3 - EXECUTION -

3.1 EXAMINATION

- A. With installer present, examine substrates, areas and conditions for compliance with requirements, installation tolerances, and other conditions which may affect the performance of the wood flooring assembly. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Concrete Slabs: Verify that concrete slabs comply with the requirements specified in Section 03 30 00 Cast-in-Place Concrete.
 - 1. Grind high spots and fill low spots to provide a maximum 1/8-inch deviation in any direction when checked with a 10-foot straightedge.
 - 2. Determine dryness characteristics by performing moisture tests as required by Section 07 26 33 Vapor Emission Reduction System. Do not proceed with installation if moisture emission rate exceeds 3 lbs/1000 sq. ft. in a 24-hour period, or the floor manufacturer's recommendation which ever is less. Refer to Section 07 26 33 Vapor Emission Reduction System for slabs that exceed the moisture emission rate.

3.2 INSTALLATION

- A. General: Comply with the flooring assembly manufacturer's written instructions, but not less than the recommendations of MFMA applicable to the flooring type indicated.
- B. Pattern: Lay flooring parallel with the long dimension of the space to be floored, unless otherwise indicated.
- C. Expansion Spaces: Provide as indicated, but not less than that required by the manufacturer's written instructions and MFMA's written recommendations at walls and other obstructions, and at interruptions and terminations of flooring.
 - 1. Cover expansion spaces with base molding, trim, and/or saddles.
- D. Vapor Retarder: Install with joints lapped a minimum of 6 inches and sealed.
- E. Installation Tolerances: 1/8-inch in 10 feet variance from level.

3.3 FLOATING, WOOD SLEEPER SYSTEM

- A. Attach resilient pads to wood sleepers according to manufacturer's written instructions. Install sleepers perpendicular to direction of flooring without anchoring to substrate. Stagger end joints a minimum of 24 inches.
 - 1. Space sleepers 9 inches on center.
- B. Mechanically fasten wood, strip flooring perpendicular to sleepers.

3.4 SANDING AND FINISHING

- A. Allow installed flooring to acclimate to ambient conditions for at least 10 days before sanding.
- B. Machine sand with coarse, medium and fine grades of sandpaper to achieve a level, smooth uniform surface without ridges or cups. Remove sanding dust by tack or vacuum.
- C. Finish: Apply seal and finish coats of finish system according to manufacturer's written instructions. Provide not less than four coats total and not less than two finish coats.
 - 1. Lines and Markers: Apply game-line, marker paint and logos between final seal coat and first finish coat according to paint manufacturer's written instructions. Mask flooring to provide sharp edges. Where game lines cross, break minor game line at intersection; do not overlap lines. Provide contrasting white lines or markers if game lines occur on solid painted perimeter areas.

3.5 PROTECTION

- A. Protect wood flooring during remainder of construction period to allow finish to cure and ensure that flooring and finish are without damage or deterioration at time of Substantial Completion.

END OF SECTION

09 65 00 – RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Vinyl composition tile flooring.
- B. Inlaid sheet flooring.
- C. Resilient base and accessories for use at resilient flooring and other locations as indicated on Drawings.

PART 2 - PRODUCTS

2.1 VINYL COMPOSITION TILE (VCT):

- A. Specified Manufacturer: Armstrong World Industries, Inc., Lancaster, PA (717/397-0611) or 800/292-6308); Excelon, Supreme.
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements. Equivalent products shall be subject to evaluation based on appearance and consistency with overall color scheme of the Project.
 - 1. Mannington Mills, Inc., Salem, NJ (800/241-2262); Essentials, Designer Essentials and Inspirations series.
 - 2. Mondo S.p.A.: Artigo S.p.A., 17014 Cario Montenotte (SV), Loc. Carpeneto-Italy; "New" Harmoni (3mm)
- C. Vinyl Composition Tile (VCT), General: Homogeneous through thickness, ASTM F 1066, Class 2, Through Pattern, containing no asbestos with coefficient of friction of at least 0.6 when tested according to ASTM C 1028.
- D. Size: 12 inches square, 1/8-inch nominal thick.
- E. Colors and Patterns, General:
 - 1. Color and pattern of tile shall be uniformly distributed throughout the thickness of tile.
 - 2. Variations in shades and off-pattern matches between containers will not be acceptable.
- F. Color and Pattern: As indicated on the Drawings.

- G. Fire Performance: Comply with California Building Code (CBC) Section 802 and Table 8-A for Class II, Flame Spread Index 26-75 (ASTM E 648 - Critical Radiant Flux, 0.45 or more watts/cm²).
 - H. Adhesive for Vinyl-Composition Tile: Water-resistant type recommended by manufacturer to suit resilient products, their application to substrate indicated and intended use of room.
- 2.2 INLAID SHEET VINYL:
- A. Specified Manufacturer: Mannington Mills, Inc., Salem, NJ (800/241-2262); Magna series.
 - B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements. Equivalent products shall be subject to evaluation based on appearance and consistency with overall color scheme of the Project.
 - 1. Armstrong World Industries, Inc., Lancaster, PA (717/397-0611 or 800/292-6308); Connection CORLON series
 - C. Construction
 - 1. Inlaid Sheet Flooring Width 6'
 - 2. Wearlayer Thickness 0.055
 - 3. Overall Thickness 0.080
 - 4. Average Weight 5.9 lbs / yd²
 - 5. Roll (Min. – Max.) 30 - 68 sq. yds.
 - 6. Pattern Repeat Random Repeat, Reverse Sheet for Seaming Static Load Limit 500 psi.
 - D. Color and Pattern: As indicated on the Drawings.
 - E. Fire Performance: Comply with California Building Code (CBC) Section 802 and Table 8-A for Class II, Flame Spread Index 26-75 (ASTM E 648 - Critical Radiant Flux, 0.45 or more watts/cm²).
 - F. Adhesive: Water-resistant type specified by manufacturer to suit resilient products, their application to substrate indicated and intended use of room.
 - G. Installation Adhesive V-81 / Full Spread* Chemical Seam Sealer MCS-42 with VST-96 Applicator.
 - H. Kit Heat Weld Seaming Mannington Commercial Solid Color Weld Rod.
 - I. All inlaid sheet vinyl installed must self-coved.
- 2.3 RUBBER WALL BASE
- A. Specified Manufacturer: Roppe Rubber Corp., Fostoria, OH (800/537-9527).

- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Johnsonite, Division of Duramax, Inc., Middlefield, OH (800/637-4995).
 - 2. Burke Flooring Products, Div. of Burke Industries, San Jose, CA (408/297-3500; local office, Los Angeles, CA, 213/724-0330).
 - C. Rubber Wall Base: Fed Spec SS-W-40A, Type I, surface applied, smooth finish, solid colors, with molded inside and outside corners and end stops.
 - D. Size: Height as indicated on Drawings, typically 4 inches.
 - E. Cove Toe Rubber Base: For use at resilient flooring and hard surfaces throughout.
 - F. Square Toe Rubber Base: For use at carpet.
 - G. Flame Spread: California Building Code (CBC), Maximum Flame Spread Class II, ASTM E84, 26-75 Flame Spread Index.
 - H. Colors: As indicated on the Drawings or, if not indicated, as selected by Architect.
- 2.4 RESILIENT FLOORING ACCESSORIES
- A. Specified Manufacturer: Johnsonite, Division of Duramax, Inc., Chagrin Falls, OH (800/637-4995).
 - B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Roppe Rubber Corp., Fostoria, OH (800/537-9527).
 - C. Resilient Flooring Reducer: For resilient flooring to concrete transition, Johnsonite SSR-XX-B, solid vinyl, 1-5/8-inch wide.
 - D. Resilient Flooring/Carpet Transition: For carpet to resilient flooring transition, Johnsonite CTA-XX Series, type to suit carpet thickness.
 - E. Accessories Colors: As selected by Architect from manufacturer's full selection, to complement flooring.
- 2.5 ACCESSORY PRODUCTS
- A. Leveling and Patching Compounds: Latex type as recommended by flooring manufacturer.
 - B. Primer for Concrete Floor Surfaces: As recommended by flooring manufacturer.
 - C. Crack Filler for Floors: As recommended by flooring manufacturer.
 - D. Flooring Finish Products: Products identified below are by Butcher's (800/225-9475) and are identified for bidding purposes. Verify floor finish products with Owner, to coordinate with Owner's floor maintenance program.
 - 1. Stripper: Butcher's Time Buster, no-rinse stripper.

2. Sealer: Butcher's Iron Stone, acrylic copolymer resin based, 17 percent solids.
 3. Polish: Butcher's Above, 1 percent solids, low-maintenance, slip-resistant gloss finish. Polish shall result in acceptable slip-resistant finish when tested according to ASTM D2047 (James Machine) with minimum test value of 0.6.
- E. Additional Accessories: Provide standard products of the flooring manufacturer, as required for a complete installation coordinated with adjacent flooring products.

PART 3 - EXECUTION

3.1 CLEANING AND PROTECTION

- A. Installation Clean-Up: Upon completion of installation in a room or area, clean flooring and adjacent surfaces with a neutral type cleaner to remove surplus adhesive and marks, in accordance with flooring or accessory manufacturer's instructions and recommendations.
- B. Initial Cleaning: No sooner than 5 days after installation, wash all flooring with cleaning solution in accordance with manufacturer's instructions and recommendations. Rinse thoroughly with clear, cool water (do not flood floor).
- C. Preparation for Owner's Flooring Maintenance Program: Comply with Owner's instructions.
 1. Remove factory finish from resilient flooring, using no-rinse stripper.
 2. Apply two coats of sealer.
 3. Apply three coats of finish.
- D. Protection: Lay reinforced kraft paper runners and provide barricades and signs as necessary to prevent construction traffic on completed installations. Remove and replace defects which develop such as damaged or loose sheet flooring and base. See Drawings for additional protection information.
- E. Final Cleaning: Thoroughly clean floors and accessories as part of final cleaning.

END OF SECTION

09 65 66 – RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Resilient Athletic Flooring

1.3 SUBMITTALS:

- A. General: Submit product data and samples.
- B. Shop Drawings: Submit manufacture and installation details for review.
- C. Closeout: Submit copy of the material and installation warranties as specified.

1.4 QUALITY ASSURANCE:

- A. Qualifications: Installer specializing in the work of this Section with minimum five years documented experience.
- B. The indoor resilient multipurpose surfacing supplier shall be an established firm experienced in the field and appointed as a distributor by the manufacturer of the indoor resilient multipurpose surfacing.

1.5 CERTIFICATION:

- A. Installer to submit the indoor resilient athletic surfacing manufacturers or distributors certification attesting that they are an approved installer of the indoor resilient multipurpose surfacing

1.6 QUALITY ASSURANCE

- A. Tests shall be relative for multi-purpose use with certificates from independent testing resources to be made available upon request. Test results shall be no more than 5 years old and performed according to ASTM and/or EN standard testing procedures.

PART 2 - PRODUCTS

- 2.1 Specified Manufacturer: Mondo Sport Impact rubber athletic flooring, manufactured by Mondo America Inc. S.p.A.: Artigo S.p.A., 17014 Cario Montenotte (SV), Loc. Carpeneto-Italy; Product: Sport Impact 10mm

- 2.2 Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements. Equivalent products shall be subject to evaluation based on appearance and consistency with overall color scheme of the Project.
- A. Tarkett Sports 2, rue de l'Égalité 92 Nanterre (France) Tel. : +33 (0) 1 41 20 40 40; Product: Dropdeck 10mm
- 2.3 MATERIALS
- A. Type: Sheet; thickness as shown; color selected by the Architect.
- B. Patching and Leveling Compounds: As recommended by manufacturer.
- C. Adhesive: Manufacturer's standard.

PART 3 - EXECUTION

- 3.1 EXAMINATION:
- A. Examination: Examine conditions of work in place before beginning work; report defects.
- B. Measurements: Take field measurements; report variance between plan and field dimensions.
- 3.2 PREPARATION OF SURFACES
- A. Sand the entire surface of the concrete slab.
- B. Sweep the concrete slab so as to remove all dirt and dust. If a sweeping compound is to be used it must be a sweeping compound that does not contain oil or other items that may inhibit the adhesive bond.
- C. Slab must be dust free. In the event that dust impairs adhesive bond, priming the slab prior to application of adhesive may be necessary. Follow installation guidelines.
- 3.3 MOISTURE MITIGATION
- A. For project exceeding moisture tolerances, seek professional certified moisture mitigation specialists to determine the best course of action for the remediation of the concrete slab. Silicate type systems shall not be used.
- 3.4 INSTALLATION
- A. Install in conformance with referenced standards, manufacturer's written directions.
- B. Lay parallel to long dimension of room per manufacturer's directions.
- C. Cutouts: Provide holes and necessary reinforcement for anchorage of standards and inserts as shown.

END OF SECTION

09 67 26 – QUARTZ FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Multi-color, seamless quartz aggregate polyester floor finish.

1.3 SUBMITTALS

- A. Submit Manufacturer's Application Instructions, standard color selections, test reports and samples for approval by the Architect or Owner's Representative.
- B. Colors: As selected by the Architect or Owner's Representative. After color selection, submit samples of the material specified for each color selected. Mark each sample clearly to indicate manufacturer's name and product identification

1.4 PRODUCT HANDLING

- A. Delivery and storage of materials: Deliver all materials in their original packages with seals unbroken, with manufacturer's name and product identification clearly legible on each package. Store to preclude entry of moisture or damage from any source.

1.5 ENVIRONMENTAL CONDITIONS

- A. Field Conditions: Verify actual field conditions. Inspect related work and adjacent surfaces. Report all conditions which prevent proper execution of this work to the Architect or Owner's Representative.
- B. Do not apply coatings in damp or rainy weather. Do not apply coating at temperatures below 40 degrees Fahrenheit or above 110 degrees Fahrenheit.
- C. Test on and below grade concrete slabs for moisture vapor transmission using the standard Calcium Chloride Test Procedure. Do not apply coating when moisture migration measures more the 3.0 lbs over a 1000 square foot area during a 24 hour time period.

1.6 WARRANTY

- A. Provide a two year written warranty against defects in materials and workmanship.
- B. Warrantee shall begin on date of completion of the project or occupancy, whichever occurs first.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Specified Manufacturer: Vitrocem Division of Bithell, Inc., Covina, CA (626/331-2292).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Arizona Polymer Flooring, Inc.
 - 2. Crossfield Products Corp.
 - 3. General Polymers Corp.
 - 4. Master Builders, Inc.
 - 5. Stonhard, Inc.
 - 6. TEC, Inc., an H.B. Fuller Co.

2.2 MATERIALS

- A. Seamless Quartz Aggregate Polyester Floor Coating System: Vitrocem Multi Colorquartz Polyester Floor Coating System as manufactured by Bithell, Inc., decorative-type floor surfacing system consisting of primer; topping including catalyst and ceramic color-coated quartz aggregate; and finish coat or coats; with coefficient of friction of at least 0.6 when tested according to ASTM C 1028. Provide only factory-packaged materials including aggregate for all components of floor surfacing system, including:
 - 1. Polyester floor coat.
 - 2. Quartzite granules.
 - 3. Preformed cove radius.
 - 4. Polyester top coat.
- B. Accessory Products: Trim, bonding and reinforcement materials as necessary and as recommended by flooring system manufacturer.
- C. Colors: As indicated on the Drawings, or if not otherwise indicated, as selected by Architect or Owner's Representative from manufacturer's standard colors.

2.3 SUPPLEMENTAL MATERIALS

- A. Joint Sealant: Type recommended or produced by manufacturer of polyester floor finish for type of service and joint condition indicated. Refer to Section 07 90 00 - Joint Protection for general requirements for products and installation.

PART 3 - EXECUTION

3.1 SURFACE PREPARATION

- A. Concrete preparation shall include one or both of the following methods:
 - 1. Mechanical: Use a scabblers, scarifier or shot blast machine for surface removal and etching.
 - 2. Chemical: Thoroughly scrub using manufacturer's special purpose detergent and acid etching to remove any laitance and open concrete pores.

3.2 MATERIAL PREPARATION

- A. Add catalyst just prior to use as recommended by the manufacturer. Atmospheric conditions affect the curing. Follow manufacturer's printed directions regarding catalyst concentrations at varying temperatures.

3.3 APPLICATION

- A. Apply coatings to surfaces in accordance with manufacturer's instructions.
- B. Apply cove base at joint between wall and floor.
- C. Apply the first coat of Vitrocem Polyester Primer by roller at an approximate rate of 100 square feet per gallon.
- D. While the first coat is still wet, broadcast decorative Color Quartz Aggregate in selected color to full coverage over the entire floor.
- E. After a proper cure time, sweep and vacuum excess aggregate from floor.
- F. Apply a base using a contrasting color 6" up the wall from the finish floor line.
- G. Apply a top coat of clear or pigmented Vitrocem Polyester floor coat.
- H. Allow a minimum 48-hour cure time before putting the floor in service for light use. Allow seven days for complete cure.

3.4 CLEANING

- A. As the work proceeds, and upon completion, promptly remove coating material where spilled, splashed or splattered.
- B. During progress of work, keep premises free from any unnecessary accumulation of tools, equipment, surplus materials and debris.
- C. Upon completion of work, leave premises neat and clean to the satisfaction of Architect/Engineer.

END OF SECTION

09 68 00 – CARPETING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Sheet (roll) carpet.
- B. Adhesives and accessories required for carpet installation.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Specified Manufacturer: Tandus.
- B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 CARPET

- A. Sheet Carpet: Crayon C & A.
 - 1. Type: Powerbond
 - 2. Color: #01952 Blizzard Blue (district standard)
 - 3. Pile height: Maximum 1/2-inch, in compliance with CBC Section 1124B.3.
 - 4. Primary Backing: Non-woven synthetic fiber.
 - 5. Fiber system: Dynex Nylon.
 - 6. Construction Type: Level loop.
 - 7. Gauge: 1/13 Gauge
 - 8. Stitches per inch: 8.5
- B. Performance characteristics:
 - 1. Flammability: Passes Methenamine Pill Test (DOC-FF-1-70).
 - 2. Flame spread: Rated Class I on Flooring Radiant Panel Test (ASTM E 648, glue down method).
 - 3. Smoke developed: Rated less than 450 on NBS Smoke Density Test (ASTM E 662).
 - 4. Static coefficient of friction: Passes ADA requirements when tested according to ASTM C 1028.

5. Tuft bind: 20 lbs average tuft bind, wet or dry, when tested according to ASTM D 1335.

2.3 CARPET INSTALLATION MATERIALS

- A. Adhesive: Water-resistant, mildew-resistant, non-staining type to suit products and subfloor conditions indicated and to comply with flammability requirements for installed carpet and cushion, as furnished or recommended by the carpet or cushion manufacturer, as applicable.
- B. Seam Adhesive: Use waterproof, nonflammable, and non-staining, thermosetting seam adhesive tape, as furnished or recommended by the carpet manufacturer.
- C. Resilient Edge Guards: As specified in Section 09 65 00 - Resilient Flooring. Edge guard design shall comply with CBC Section 1124B.2.
- D. Sub-Floor Filler: White premix latex cement; type recommended by carpet manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

1. Direct glue-down in compliance with CBC Section 1124B.3.

END OF SECTION

09 81 00 – ACOUSTIC INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Acoustical batt insulation in interior wall and ceiling construction.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Specified Manufacturer: Owens Corning Fiberglas Corporation (OCF), Toledo, OH (800/438-7465).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision of the Contract Documents.
 - 1. CertainTeed Corp., Valley Forge, PA.
 - 2. Manville Building Insulation, Division of Johns Manville Corp., Denver, CO (303/978-2000 or 800/654-3103).

2.2 ACOUSTICAL BATT INSULATION, GLASS-FIBER

- A. Unfaced Glass Fiber Blanket/Batt Insulation: Insulation produced by combining glass fibers with thermosetting resins to comply with ASTM C 665, Type I (blankets without membrane facing) and ASTM C 136.
 - 1. Batt insulation in wall cavities: OCF Sound Attenuation Batt Insulation (SAB), suitable for friction-fit installation.
 - 2. Blanket insulation on top of acoustical ceilings: OCF Sonobatts Insulation, suitable for exposed insulation on top of t-bar grid and lay-in acoustical ceiling panels.
- B. Surface Burning Characteristics: Tested according to ASTM E 84.
 - 1. Maximum flame spread: 10.
 - 2. Smoke developed: 10.
- C. Insulation Thickness and Width:
 - 1. Walls: Nominal 3-1/2 inches thick by framing cavity width.
 - 2. Ceilings: Nominal 3-1/2 inches thick, unless otherwise indicated. Insulation width shall be optional with Contractor.

PART 3 - EXECUTION - NOT USED

END OF SECTION

09 90 00 – PAINTING AND COATING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.
- B. Section includes:
 - 1. Surface preparation for painting.
 - 2. Priming and finish painting.

1.2 WORK TO BE PAINTED

- A. Work to be Painted, General:
 - 1. Unless specifically noted, prime and finish paint all exposed surfaces of new construction whether or not colors are indicated. Specific exceptions are noted below in Article titled, WORK NOT TO BE PAINTED.
 - 2. Unless specifically noted, prepare and repaint all existing painted surfaces whether or not colors are indicated. Specific exceptions are noted below in Article titled, WORK NOT TO BE PAINTED.
 - 3. Where products or surfaces are not specifically indicated for a specified finish, paint these the same as adjacent similar products and surfaces.
- B. Exterior Work to be Painted: Work to be painted includes the following new and existing surfaces:
 - 1. Rooftop elements, including roof hatches, pipes and vents, exposed conduit, ductwork and HVAC equipment exposed to view.
 - 2. Fascias, wood soffits, wood siding and wood trim (as applicable to Project).
 - 3. Steel door frames and steel doors.
 - 4. Wood door frames and wood doors (if applicable to Project).
 - 5. Plaster walls and soffits.
- C. Interior Work to be Painted: Work to be painted includes the following new and existing surfaces:
 - 1. Interior gypsum board [and plaster] walls, soffits and ceilings (exposed in finished construction).
 - 2. Interior concrete and masonry walls, if previously painted or specifically indicated on the Drawings to be painted.
 - 3. Wood doors, wood door frames and wood trim (as applicable to the Project), if previously painted or specifically indicated on the Drawings to be painted.

4. Wood doors, wood door frames and wood trim (as applicable to the Project), if previously stained and varnished or specifically indicated on the Drawings to be stained and varnished.

5. Existing acoustical tile, acoustical ceiling panels and acoustical ceiling grid.

D. Interior Work to be Stripped, Sanded and Varnished:

1. Existing hardwood flooring, stair treads, stair risers, stair skirts and related trim.
2. Wood doors, wood door frames and wood trim (as applicable to the Project), if previously stained and varnished or specifically indicated on the Drawings to be stained and varnished.
3. Wood casework, paneling and standing and running trim (as applicable to the Project), if previously stained and varnished or if specifically indicated on the Drawings to be stained and varnished, and not shop finished.

1.3 WORK NOT TO BE PAINTED

A. Work Not to be Painted: Painting is not required on the following:

1. New exterior galvanized steel products.
2. Concealed structural steel and steel decking, except if noted on the Drawings.
3. Prefinished items.
4. Plated metal surfaces and stainless steel.
5. Concealed surfaces.
6. Operating parts.
7. Labels.

B. Pre-Finished Items: Unless otherwise specified or noted, do not paint factory-finished components, including the following.

1. Casework and trim: Plastic-laminate covered casework and countertops; shop-finished wood casework.
2. Solid surfacing fabrications.
3. Toilet partitions.
4. Acoustic materials: Suspended acoustical t-bar grid and acoustical panels and applied acoustical tile.
5. Finished mechanical and electrical equipment.
6. Light fixtures, unless specifically noted.
7. Switchgear.
8. Distribution cabinets.

C. Concealed Surfaces: Do not paint concealed surfaces, including wall or ceiling surfaces in the following generally inaccessible areas.

1. Furred areas.
2. Utility chases and pipe spaces.

3. Duct, piping and conduit shafts.
- D. Finished Metal Surfaces: Do not paint natural metal, plated metal and factory-finished metal surfaces (except where specifically indicated), including the following:
 1. Anodized aluminum.
 2. Stainless steel.
 3. Chromium plate.
- E. Operating Parts: Do not paint operating parts, including moving parts of operating equipment such as the following.
 1. Valve and damper operators.
 2. Linkages.
 3. Sensing devices.
 4. Motor and fan shafts.
 5. Fire suppression system components (i.e. sprinklers, sensors, strobes, horns, etc.) Strictly prohibited by local, state and federal fire code.
- F. Labels: Do not paint over Underwriter's Laboratories, Inc. (UL), Factory Mutual Research Organization (FM) and other code-required labels and over equipment names, identifications, performance ratings, and nomenclature plates.

PART 2 - PRODUCTS

2.1 PAINT MATERIALS

- A. Specified Manufacturer: Sherwin-Williams, Cleveland, Ohio
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below (or others) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 1. Dunn-Edwards Corporation, Los Angeles, CA (323/771-3330 or 800/372-6470).
 2. Vista Paint Corporation, Fullerton, California (714/680-3800).
 3. ICI Dulux Paints, Los Angeles, CA (213/888-8888 or 800/339-6910).
- C. Paints, Stains and Special Coatings: See PAINT SCHEDULE at end of PART 3, below, for specific primers and finish paints, stains and special coatings. All primers, paints, stains and finishes shall comply with applicable State and regional VOC regulations. Should products not comply, provide substitute products in compliance with "or equal" provision specified in Section 01 60 00 - Product Requirements.
- D. Primers and Undercoats: Primers and other undercoat paints shall be components of published system of paint manufacturer for intended use.
- E. Gloss:
 1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
3. Semi-gloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.
4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.

2.2 MISCELLANEOUS MATERIALS

- A. Thinners, General: Use only thinners approved by paint manufacturer, and use only within recommended limits.
- B. Acrylic-based Product Thinner: Clear, potable water, free from materials detrimental to paint performance.
- C. Putty: Acrylic, fast-drying, low shrinkage.
- D. Painter's Calk: Joint filler, acrylic-based, as specified in Section 07 90 00 - Joint Protection.

2.3 COLORS

- A. Use only approved colors following existing school site color palette. If introducing new or modifying colors, it must be approved by Maintenance Department.

PART 3 - EXECUTION

3.1 PREPARATION, GENERAL

- A. Examination: Examine substrate for conditions which may adversely affect finish application durability and appearance.
 1. Do not proceed with surface preparation or paint application until defects are corrected. Proceeding will be interpreted to mean that substrate conditions were acceptable.
 2. Surfaces which cannot be prepared or painted as specified shall be immediately reported in writing to Architect and Project Inspector.
- B. Trim Removal: Remove electrical plates, hardware, light fixture trim, and fittings prior to preparing surfaces or finishing.
- C. Preparation of Previously-Painted Surfaces: [Existing paint may contain lead].
 1. Comply with Owner's instructions regarding existing paint containing lead. If existing paint contains lead, Owner will cause paint to be removed under separate hazardous material abatement contract.
 2. After removal of existing paint containing lead, further clean surfaces and prepare surfaces according to paint manufacturer's instructions and recommendations.
 3. Surfaces which cannot be prepared or painted as specified shall be immediately reported in writing to Owner's Representative, Architect and Project Inspector.
- D. Removals: Before start of preparation, remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be

painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

- E. Masking and Covering: Exercise care not to deface adjoining Work. Use suitable clean cover cloths or other approved protection materials to cover adjoining Work. Mask small items and edges to prevent and control paint coverage.

3.2 CLEANING

A. Cleaning, General:

1. Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings.
2. Remove oil and grease before cleaning.
3. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

- B. Cleaning, Impervious Surfaces: Wash surfaces with mild detergent solution. Remove mildew by scrubbing with solution of tri-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

- C. Cleaning, Aluminum Surfaces Scheduled for Paint Finish: Remove surface contamination by steam or high pressure water. Remove oxidation with acid etch and solvent washing. Apply etching primer immediately following cleaning.

- D. Cleaning, Galvanized Surfaces: Remove surface contamination and oils by wash with solvent.

3.3 SURFACE PREPARATION, GENERAL

- A. Surface Preparation, General: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.

1. Clean all interior wall surfaces of loose, peeling, and scaly paint, dirt, dust, rust, chalk and other foreign matter as required to provide a clean sound surface for the new coatings and paints.
2. Clean all exterior walls and surfaces of loose, peeling, and scaly paint, dirt, dust, rust, chalk and other foreign matter by power washing as required to provide a clean sound surface for the new coatings and paints.
3. Deteriorated or dry rotted wood shall be replaced prior to paint application. Comply with finish carpentry and woodwork specifications in Division 6 – Wood, Plastics and Composites.
4. Provide barrier coats over incompatible primers or remove and reprime.

- B. Concrete, Masonry and Plaster Surface Preparation:

1. Prepare concrete, concrete unit masonry and cement plaster surfaces to be painted.
2. Remove soiling, efflorescence, salts, alkali powder, chalk, dust, dirt, grease, oils, release agents and other foreign matter by brushing and power washing.

3. Remove oil and grease with solution of trisodium phosphate.
 4. Remove rust stains with solution of sodium metasilicate after thoroughly wetting surface with water.
 5. Flush surfaces to remove cleansing agents and allow to thoroughly dry.
 6. Roughen as necessary to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
 7. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
- C. Wood Surfaces Preparation: Clean wood surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
1. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
 2. Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and back sides of wood, including cabinets, counters, cases, and paneling.
 3. If transparent finish is required, back prime with spar varnish.
 4. Back prime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.
- D. Existing Hardwood Veneer Preparation: Clean surface, fill and repair damaged areas and level sand existing hardwood veneer casework, doors and related trim with transparent finish. Also comply with recommendations of manufacturer of sealer and finish coating to be applied to prepared hardwood surfaces.
- E. Ferrous Metals Preparation:
1. Unprimed ferrous metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC's recommendations.
 - a. Blast steel surfaces clean as recommended by paint system manufacturer and according to SSPC-SP 6/NACE No. 3.
 - b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
 - c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.
 2. Galvanized Surfaces: Clean galvanized surfaces with non-petroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

3. Previously Primed and Bare Steel Surfaces: Comply with SSPC requirements.
 - a. Sand and scrape to remove loose primer and rust.
 - b. Feather edges to make touch-up patches inconspicuous.
 - c. Clean surfaces with solvent to remove oil and grease.
 - d. Treat surfaces with phosphoric acid solution, ensuring cleaning of weld joints, bolts and nuts.
 - e. Sand each coat except not on final finish coat.
 - f. Clean surface of dust with tackrags.

3.4 SURFACE PREPARATION, SPECIFIC CONDITIONS

A. Existing Wood Floors Preparation:

1. Clean surface, sand off existing finish, fill and repair damaged areas and level sand existing hardwood flooring, stair treads, stair risers, stair skirts and related trim.
2. Comply with "Industry Recommendations for Sanding, Sealing, Court Lining, Finishing and Resurfacing of Maple Gym Floors," current edition, published by Maple Floor Manufacturers Association (MFMA), Northbrook, IL (847/480-9138) www.maplefloor.org. Also comply with recommendations of manufacturer of sealer and finish coating to be applied to prepared hardwood flooring.

B. Doors Preparation:

1. Wood doors: Seal top and bottom edges after fitting and cleaning, using additional coat of specified varnish finish at stained finish and using additional coat of primer at painted finish.
2. Steel doors: Apply additional coat of field primer at tops and bottoms of doors.

C. Gypsum Board Surfaces Preparation: Latex fill minor defects. Spot prime defects after repair.

D. Plaster Preparation: Fill hairline cracks, small holes and imperfections with latex patching plaster. Make surface level and blend texture to match surrounding finish. Wash and neutralize high alkali surfaces.

E. Patching and Sanding, General: Correct minor surface defects. Major defects shall be repaired by replacement.

1. Repair, patch and fill all surfaces as necessary to match existing surface texture and to present uniform surface appearance matching surrounding surfaces. Repair all cracks and voids greater than 1/32-inch as follows:
2. Voids, cracks and joints up to 1/16-inch wide: Repaired using a brushable grade sealant with 2-inch wide minimum seam. Seam patch shall be feathered to zero at the edges to prevent the repair from telegraphing through top coats.
3. Voids, cracks and joints exceeding 1/16-inch wide: Patched or filled using a knife grade sealant.
 - a. All exterior openings should be sealed as specified in Section 07 90 00 - Joint Protection. Deteriorated sealant shall be removed and new backing material and sealant shall be installed prior to painting.

- b. Determine compatibility between paints and joint sealers. Notify Owner's Representative of incompatibilities and other conditions which are detrimental to proper joint sealing and paint adhesion.
- 4. Cracks larger than 1/8-inch wide: Scraped and widened in a V-groove pattern to promote good penetration and adhesion of the patching material. Fill groove (crack) with suitable patching material compatible with substrate material and matching surface finish.
- 5. Putty voids and nail heads.
- F. Moisture Content: Measure moisture at surfaces using an electronic moisture meter. Do not apply finishes unless moisture is below the following maximums:
 - 1. Concrete: 15 percent.
 - 2. Interior Gypsum Wallboard: 12 percent.
 - 3. Exterior Plaster: 15 percent.

3.5 PRIMING

- A. Compatibility: Verify compatibility of primers with surfaces on which to be applied. If primer or finish coating is incompatible, follow manufacturer's recommendations.
- B. Steel: Prime all bare steel surfaces. Oil base preferred. No DTM .
- C. Galvanized Steel Substrate: If unprimed, pretreat before priming by applying coat of etching primer. Oil based preferred. No DTM.
- D. Wood: Prime all wood scheduled to receive opaque finish. Backprime all finished wood items before installation. See Section 06 20 00 - Finish Carpentry.
- E. Preprimed Surfaces: Touch up with matching primer. Reprime steel items which have been exposed to weather more than 7 days.

3.6 FINISH PAINT APPLICATION, GENERAL

- A. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
 - 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
 - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
 - 3. Use only thinners approved by paint manufacturer and only within recommended limits.
- B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
 - 1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.

2. At metal surfaces that have been shop primed and touch-up painted, omit primer if primer is suitable for finish coats.
3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.

C. Paint Application, General:

1. Apply primers, intermediate coats and finish coats of paint as scheduled below and in compliance with paint manufacturer's instructions and recommendations.
2. Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated.
3. Provide total dry film thickness of the entire system as recommended by manufacturer.

D. Prime Coat Application:

1. Before applying finish coats, apply a prime coat, as recommended by manufacturer, to material that is required to be painted or finished and that has not been shop primed or shop painted.
2. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

E. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

1. Carry finish coats to natural breaks and transitions.
2. Apply each coat to uniform film thickness, not less than and not exceeding amount to achieve recommended dry film thickness of paint manufacturer. Adjust applied thickness to suit substrate and ambient temperatures to minimize brush and roller marks.
3. Allow each coat to cure before recoating, adjusting manufacturer's minimum time between coats to accommodate Project conditions.

F. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.

G. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.

H. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

- I. Holidays and Thin Spots: Recoat and blend in. If blending is unsuccessful, sand and recoat entire surface.
 - J. Dust, Runs, Drips, Sags, Color Separation: Remove surface defects, sand and recoat entire surface.
 - K. Metal Surfaces: If brush application cannot produce a smooth surface without laps or brush marks, use spray application under dust free conditions.
 - L. Final Finish: Even, smooth color and finish with no apparent brush or roller marks.
- 3.7 FINISH PAINT APPLICATION, SPECIFIC CONDITIONS
- A. Doors: Coat tops, bottoms and edges with all coats as scheduled for faces. Coat cutouts for hinges, edges of lockset holes and strikes same as for first coat.
 - B. Access Doors, Panels, Registers and Grilles: Generally paint same color as surrounding walls and ceiling. Paint interiors of ducts showing through registers and grilles flat black.
 - C. Door Trim and Primer Coated Hinges: Paint trim to match door and paint hinges to match frame, unless hinges have plated finish.
 - D. Rooftop HVAC and Airhandler Units: Field paint color as directed, if exposed to view.
 - E. Speaker Grilles: Paint to match surrounding surfaces.
 - F. Lighting Fixture (Luminaire) Trim: Paint to match surrounding surfaces, unless otherwise directed. At acoustical panels finished in factory white color, do not paint lighting fixture trim.
- 3.8 CLEANING, TOUCH-UP AND PROTECTION
- A. Cleaning: As Work proceeds, promptly remove paint where spilled, splashed, or spattered. Remove all paint spots, oils or stains from adjacent surfaces, leaving the Work and Work area clean and ready for Substantial Completion review.
 - B. Debris and Waste: During progress of Work maintain premises free of unnecessary accumulation of tools, equipment, surplus materials, and debris. Collect cotton waste, cloths, and material which may constitute a fire hazard, place in closed metal containers and remove daily from site. Remove empty paint containers from site.
 - C. Touch-Up: At completion of Work specified in other Sections, touch-up painted and finished surfaces and restore to original condition finishes damaged or defaced.
 - D. Protection: Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings used to protect adjacent surfaces and products.
- 3.9 PAINT SCHEDULE
- A. Paint Schedule: Provide paint systems (PS) as follows and as recommended by paint manufacturer.
 - 1. Manufacturer's dry film thickness (DFT) rating and scheduled number of coats shall be minimums only. Number of finish coats listed is the minimum number of coats required. Provide additional finish coats as necessary to achieve full and complete coverage. Alter tint of each coat to facilitate evaluation of coverage.

2. The first (primer) coat of multi-coat system may be omitted on products shop or factory primed and on existing surfaces to be repainted. Spot prime and sand existing painted surfaces as recommended by paint manufacturer for repainting and as specified above.
3. Unless otherwise noted, products listed are by Dunn Edwards Paints.

PS-1 - EXTERIOR FERROUS METALS - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: B54W00151 - Pro Industrial Urethane Alkyd Enamel Extra White
Coat 2: B54W00151 - Pro Industrial Urethane Alkyd Enamel Extra White

(For exteriors steel doors, steel door and window framing and other primed and unprimed ferrous metals. Provide additional coats at deep tone finish color as necessary for full and even coverage)

PS-2 - EXTERIOR GALVANIZED METAL, FLAT(1-2% on 60 degree meter)

Primer: B71Y00001 - DTM Wash Primer Yellow-Green
Coat 1: A80W00116 - SuperPaint® Exterior Latex Flat Super White
Coat 2: A80W00116 - SuperPaint® Exterior Latex Flat Super White

(For exterior rooftop ductwork. Provide additional coats at deep tone finish color as necessary for full and even coverage)

PS-3 - EXTERIOR GALVANIZED METAL - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B71Y00001 - DTM Wash Primer Yellow-Green Yellow-Green
Coat 1: A84W00116 - SuperPaint® Latex Gloss House & Trim Paint Super White
Coat 2: A84W00116 - SuperPaint® Latex Gloss House & Trim Paint Super White
(For exterior galvanized steel products, except rooftop ductwork. Provide additional coats at deep tone finish color as necessary for full and even coverage)]

PS-4 - EXTERIOR CONCRETE - FLAT FINISH (1-2% on 60 degree meter)

Primer: A24W08300 - Loxon® Concrete & Masonry Primer, Interior/Exterior Latex White
Coat 1: A80W00116 - SuperPaint® Exterior Latex Flat Super White
Coat 2: A80W00116 - SuperPaint® Exterior Latex Flat Super White

PS-5 - EXTERIOR PORTLAND CEMENT PLASTER - FLAT FINISH (1-2% on 60 degree meter)

Primer: A24W08300 - Loxon® Concrete & Masonry Primer, Interior/Exterior Latex White
Coat 1: A80W00116 - SuperPaint® Exterior Latex Flat Super White
Coat 2: A80W00116 - SuperPaint® Exterior Latex Flat Super White

PS-6 - EXTERIOR WOOD - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B42W08041 - Exterior Latex Wood Primer White
Coat 1: K34W00200 - Duration® Gloss Exterior Latex Coating Super White
Coat 2: K34W00200 - Duration® Gloss Exterior Latex Coating Super White

PS-7 - INTERIOR CONCRETE UNIT MASONRY - EGGSHELL FINISH (27-35% on 60 degree meter)

Primer: B51W00620 - PrepRite® ProBlock® Interior/Exterior Latex Primer/Sealer White
Coat 1: B20W02651 - ProMar® 200 Zero VOC Interior Latex Eg-Shel Extra White
Coat 2: B20W02651 - ProMar® 200 Zero VOC Interior Latex Eg-Shel Extra White

PS-8 - INTERIOR CONCRETE UNIT MASONRY - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B51W00620 - PrepRite® ProBlock® Interior/Exterior Latex Primer/Sealer White
Coat 1: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White
Coat 2: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White

PS-9 - INTERIOR CONCRETE - FLAT FINISH (2-3% on 60 degree meter)

Primer: A24W08300 - Loxon® Concrete & Masonry Primer, Interior/Exterior Latex White
Coat 1: B30W02651 - ProMar® 200 Zero VOC Interior Latex Flat Extra White
Coat 2: B30W02651 - ProMar® 200 Zero VOC Interior Latex Flat Extra White

PS-10 - INTERIOR CONCRETE - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: A24W08300 - Loxon® Concrete & Masonry Primer, Interior/Exterior Latex White
Coat 1: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White
Coat 2: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White

PS-11 - INTERIOR GYPSUM BOARD - EGGSHELL LOW SHEEN FINISH (15-25% on 60 degree meter)

Primer: B51W00620 - PrepRite® ProBlock® Interior/Exterior Latex Primer/Sealer White
Coat 1: B24W02651 - ProMar® 200 Zero VOC Interior Latex Low Sheen Extra White
Coat 2: B24W02651 - ProMar® 200 Zero VOC Interior Latex Low Sheen Extra White

PS-12 - INTERIOR GYPSUM BOARD - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B51W00620 - PrepRite® ProBlock® Interior/Exterior Latex Primer/Sealer White
Coat 1: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White
Coat 2: B31W02651 - ProMar® 200 Zero VOC Interior Latex Semi-Gloss Extra White
* Note: After application, create stipple finish with roller.

PS13 - INTERIOR WOOD - OPAQUE SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B51W00620 - PrepRite® ProBlock® Interior/Exterior Latex Primer/Sealer White
Coat 1: A88W01150 - SuperPaint® Interior Latex Semi-Gloss High Reflective White
Coat 2: A88W01150 - SuperPaint® Interior Latex Semi-Gloss High Reflective White

PS-14 - INTERIOR WOOD - TRANSPARENT FINISH (gloss or semi-gloss only - 45% or higher on 60 degree meter)

Coat 1: 013333000 - Minwax® Polycrylic® Water-Based Protective Finish Satin Clear
Coat 2: 013333000 - Minwax® Polycrylic® Water-Based Protective Finish Satin Clear

PS-15 - INTERIOR FERROUS METALS - LOW SHEEN FINISH (25-35% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: A87W01151 - SuperPaint® Interior Latex Satin Extra White
Coat 2: A87W01151 - SuperPaint® Interior Latex Satin Extra White

PS-16 - INTERIOR FERROUS METALS - SEMI-GLOSS (50-60% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White
Coat 2: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White

PS-17 - INTERIOR GALVANIZED METAL - LOW SHEEN FINISH (25-35% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: A87W01151 - SuperPaint® Interior Latex Satin Extra White
Coat 2: A87W01151 - SuperPaint® Interior Latex Satin Extra White

PS-18 - INTERIOR GALVANIZED METAL - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White
Coat 2: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White

PS-19 - INTERIOR ALUMINUM - SEMI-GLOSS FINISH (50-60% on 60 degree meter)

Primer: B66W00310 - Pro Industrial Pro-Cryl® Universal Acrylic Primer Off White
Coat 1: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White
Coat 2: A88W01151 - SuperPaint® Interior Latex Semi-Gloss Extra White

END OF SECTION

09 96 23 – GRAFFITI-RESISTANT COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Anti-graffiti coatings. Anti-graffiti coatings are to be used only on exposed natural color concrete (except walking surfaces), integrally colored precision masonry units, color masonry units, brick masonry, stones and painted murals. Anti-graffiti coatings should not be used for stucco; these surfaces should be painted per specification section 09 90 00 Painting and Coating.

1.3 SUBMITTALS

- A. Product Data: Submit anti-graffiti coating manufacturer's technical data and installation instructions, recommended coverage rates for types of surfaces to be treated, and evidence that coatings conform to all requirements specified. Submit evidence of code approvals.
- B. Furnish Samples on the same materials to which coating will be applied on. Indicate gloss or flat finish. Coat one-half of each Sample, with the other half non-coated.
- C. Certificate and Summary Statement: Before Substantial Completion, submit a certificate stating that coatings applied conform to reviewed submittals and all specified requirements. Provide a summary statement setting forth the following:
 - 1. Number of square feet of each surface treated with coating, classified as to the kind of material treated, open pore or closed pore type, and whether vertical or horizontal.
 - 2. The number of gallons of each type, class, or grade of coating required to treat all involved surfaces, based on the number of square feet of each type and orientation of the material the coating was installed on.
 - 3. Total gallons of each coating type, class, or grade installed.
- D. Maintenance Instructions: Furnish manufacturer's recommended graffiti removal instructions, and recommendations for recoating. Furnish names and addresses of cleaning firms and of suppliers of maintenance materials.
- E. Maintenance Material: Furnish five -gallons of each product specified.

1.4 QUALITY ASSURANCE

- A. Manufacturer's Observation: Start coating application under the observation of the coating manufacturer's technical representative. Notify the district and coating manufacturer at least 72 hours before starting installation.
- B. Preliminary Tests: Perform tests on each kind of surface to be treated to establish the actual application rates required to provide the surfaces resistant to defacing and meet warranty requirements. Tests shall demonstrate the coating does not yellow, darken, mottle, or

discolor any treated surface and those surfaces to be treated are dry. Established application rates shall not be less than those recommended in the coating manufacturer's technical data for the kind and surface orientation of the material.

- C. Compliance with Regulations: Materials shall comply with the current rules and regulations of the local air quality management district, with the rules regarding volatile organic compounds, and with FDA rules and regulations for dangerous materials in coatings.
 - D. Qualifications: Manufacturer: Anti-graffiti coating shall be product of a manufacturer who has been regularly engaged in manufacturing anti-graffiti coatings for at least 10 years. Manufacturer shall supply references of at least 5 satisfactory installations in which anti-graffiti coating has been in service for at least 5 years.
- 1.5 DELIVERY, STORAGE AND HANDLING
- A. Deliver all coating materials to the Project site in containers bearing name and batch number of manufacturer, with seals intact.
- 1.6 PROJECT CONDITIONS
- A. Protection: Install temporary coverings and protection, and do not allow any coating to contact plastic, planting soil, plants, asphaltic paving, roofing membranes, or other materials that are likely to be damaged by coating.
 - B. Weather Conditions: Do not install coating during windy, wet, or excessively hot or dry weather conditions.
- 1.7 WARRANTY
- A. Manufacturer shall provide a 10 year material warranty.
 - B. Installer shall provide a 3 year labor warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Monopole Inc, Glendale, California
- B. Acceptable Manufacturer: Equivalent products of the manufacturers listed below (or others) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 ACCEPTABLE PRODUCTS

- A. Use one of the following products as shown on the drawings.
 - 1. Permashield Premium 5600(matte) over Permashield Base 6100, Permanent Graffiti Control, Manufactured by Monopole Inc, Glendale, California or approved equal.
 - 2. Permashield Premium 5650(gloss) over Permashield Base 6100, Permanent Graffiti Control, Manufactured by Monopole Inc, Glendale, California or approved equal.

2.3 PROPERTIES

- A. Coatings shall not darken or discolor the treated surfaces and shall be non-toxic, compatible with all standard polymer type caulking and sealing materials, conforming to AQMD 1113, and certified by manufacturer as suitable over paint finish.
- B. Colors of opaque materials shall match adjoining colors as required, or shall be as selected from manufacturer's standard and custom colors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Do not start installation of coating if conditions are present that prevent or interfere with the correct preparation of surfaces or installation of coating system.

3.2 PREPARATION

- A. Remove dust, dirt, oil, grease, other deleterious substances and stain, and efflorescence and laitance from surfaces. Repair cracks and holes over 1/16-inch size. Spot prime cracks and holes 1/16-inch size and smaller and prime all horizontal surfaces other than soffits with a heavy duty coating supplied by same coating manufacturer. Mask and protect adjoining surfaces and glass, unless coating is harmless and easily removed.

3.3 APPLICATION

- A. Install the anti-graffiti coating to surfaces as indicated on drawings.
- B. Application Rates: Apply a minimum of 3 coats or more as recommended by manufacturer published application instructions, in the quantity of coating and coverage rates per coat established by preliminary tests, except total quantity shall be not less than the rate recommended for the involved surface in manufacturer's technical data.
- C. Spray Application: Install each coat by airless spray with nominal 20 psi nozzle pressure. Obtain complete coverage of each coat. Indicate areas that are coated when application is stopped for lunch or at the end of the day.

3.4 CLEANING

- A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.5 PROTECTION

- A. Protect the Work of this section until Substantial Completion.

END OF SECTION

DIVISION 10 – SPECIALTIES

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

10 11 16 – MARKER BOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fixed and sliding porcelain enamel markerboards.
- B. Tackboards with map rails.
- C. Accessories
 - 1. Map rails
 - 2. Flag holders

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Platinum Visual Systems, Corona CA. 800 498-2990.
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Claridge Products and Equipment, Inc., Harrison, AR (Western Division, San Leandro, CA, 510/351-8183).
 - 2. ADP/Lemco, Inc., West Jordan, UT (801/280-4000).

2.2 MARKERBOARDS

- A. Fixed Porcelain Enamel Marker Boards: Platinum Visual DTS Series, wall mounted, aluminum-framed porcelain enamel markerboards, with punched and wrapped safety corners and concealed fasteners. Cut and clipped corners will not be acceptable. Sizes shall be as indicated on the Drawings.
- B. Horizontal Sliding Porcelain Enamel Marker Boards for casework: Platinum Visual THS Series, horizontal sliding porcelain enamel markerboard and tackboard assemblies, sliding panels in heavy-duty aluminum-frame with 2-inch high map rail with cork insert and two flag holders, top supported with ball bearing wheeled carriers, nylon bottom guides and continuous aluminum bottom tracks with integral tray, sizes as indicated on the Drawings, for mounting to wall with concealed fasteners, with mounted in casework as indicated on the Drawings. Provide finger pulls on sliding panels.

- C. Horizontal Sliding Porcelain Enamel Marker Boards with wall mounted aluminum housing: Platinum Visual WHS Series , horizontal sliding porcelain enamel markerboard and tackboard assemblies, sliding panels in heavy-duty aluminum-frame with 2-inch high map rail with cork insert and two flag holders, top supported with ball bearing wheeled carriers, nylon bottom guides and continuous integral aluminum bottom tracks, sizes as indicated on the Drawings, for mounting to wall with concealed fasteners. Provide finger pulls on sliding panels.
 - D. Aluminum Extrusions: Manufacturer's standard extruded aluminum sections with not less than the strength and durability properties specified in ASTM B221 for 6063-T5 alloy.
 - E. Marker Board Panels: Platinum Visual Writanium Porcelain Marker Surface, balanced, high-pressure-laminated porcelain enamel chalkboards of 3-ply construction consisting of face sheet, core material, and backing, suitable for use as projection and writing surface.
 - 1. Face Sheet: Enameling grade steel especially processed for temperatures used in coating porcelain on steel.
 - a. Fabricate fixed markerboards with 28 gauge sheet steel face sheet.
 - b. Fabricate horizontal sliding markerboards with 28 gauge sheet steel face sheet.
 - c. Exposed face and exposed edges shall be coated with a 3-coat process consisting of primer, ground coat, and color cover coat, and the concealed face with a 2-coat process consisting of primer and ground coat.
 - d. Cover and ground coats shall be fused to steel at the manufacturer's standard firing temperatures, but not less than 1200 deg F (649 deg C).
 - e. Color cover coat shall be White.
 - 2. Panel core:
 - a. Fixed markerboards: 1/2-inch thick particleboard complying with the requirements of ANSI A208.1, Grade 1-M-1 with .005 aluminum backer sheet.
 - b. Horizontal sliding markerboards: Honeycomb core with .015 aluminum backer sheet.
 - 3. Marker Board Surface: Surface shall be capable of the following:
 - a. Receiving and holding magnets and acting as a projection screen.
 - b. Being marked on with projection ink and water soluble crayons.
 - c. Being marked by semi-permanent markers for drawing graphs and other diagrams and symbols which are to remain semi-permanently.
 - d. Not require solvents for erasing.
- 2.3 TACKBOARDS
- A. Vinyl-Fabric-Faced Tackboard Panels: For installation in sliding markerboard assemblies, provide mildew-resistant, washable, vinyl fabric complying with FS CCC-W-408, Type II, weighing not less than 18 ounces per square yard, laminated to 1/4-inch-thick cork sheet.
 - 1. Fire performance: Provide fabric that has a flame spread rating of 25 or less when tested in accordance with ASTM E84.

2. Backing: Make panels rigid by factory laminating cork face sheet under pressure to 1/4-inch-thick hardboard backing.
3. Color and texture: As indicated on Drawings or, if not indicated, as selected by Architect.

2.4 ACCESSORIES

- A. Map Rail: Furnish map rail at top of each wall-mounted unit, complete with the following accessories:
 1. Display Rail: Provide continuous cork display rail approximately 1 or 2 inches wide, as indicated, integral with map rail.
 2. End Stops: Provide one end stop at each end of map rail.
 3. Map Hooks: Provide 2 map hooks with flexible metal clips for every 48 inches of map rail or fraction thereof.
- B. Flag Holder: Provide two flag holders for each room.
- C. Framing and Trim Finish: Clear anodized aluminum, AA-M12C22A31.

PART 3 - EXECUTION - NOT USED

PART 4 - DRAWINGS

4.1 SAMPLE DRAWINGS

- A. On the following pages are sample drawings and sections for construction.

THS: Specifications

WHS: Specifications

DTS: Specifications

MARKERBOARD/CHALKBOARD

TACKBOARD

END OF SECTION

10 11 23 – TACKBOARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Tackable wall panels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Chatfield-Clarke Company, Inc., Fontana, CA (909/823-4297).
- B. Acceptable Manufacturers: Equivalent products by Lamvin, Inc., San Diego, CA (800/446-6329) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

2.2 VINYL-FACED TACKBOARD PANELS

- A. Vinyl-Faced Tackboard Panels: Vinyl fabric-wrapped wood fiberboard panels manufactured for tackable wall surfacing.
 - 1. Fiberboard: Industrial wood fiber insulation board, manufactured specifically for use as substrate for vinyl-covered tackboard panels, asphalt-free, with ironed-on coating.
 - 2. Fiberboard thickness: 1/2-inch.
 - 3. Fiberboard density: 16 pcf.
 - 4. Panel width: 48 inches.
 - 5. Panel height: As indicated on the Drawings.
 - 6. Panel edges: Square.
 - 7. Fire resistance: ASTM E84, Class B; NFPA 253, Class II.
- B. Vinyl-Fabric Facing, General: Koroseal Harborweave, 18 oz. per linear yard, complying with FS CCC-W-408 and CFFA-W-101 and the following:
 - 1. Flame spread: 15 maximum.
 - 2. Smoked developed: 20 maximum.
- C. Fabric Colors: As indicated on the Drawings or, if not indicated, as selected by Architect.

- D. Trim: Extruded aluminum, clear anodized finish, produced by panel manufacturer and conforming to profiles and dimensions indicated on the Drawings.
- E. Installation Materials: As standard with panel manufacturer for adhered installation to gypsum board substrate. Adhesives shall be low-VOC and moisture-resistant.
- F. Tackable Panel Fabrication: Factory laminate vinyl fabric to wood fiberboard with water-resistant adhesive, with fabric wrapped 1-1/2 inches around edges and adhered to panel back.
 - 1. Wrap vinyl fabric around edges and adhere to panel back where panel trim is not provided or where edge is not covered by wall base or other finishes.
 - 2. Panels shall be fabricated so that vinyl fabric texture shall have same orientation and color shall match between panels.

PART 3 - EXECUTION - NOT USED

END OF SECTION

10 14 00 – SIGNAGE

PART 4 - GENERAL

4.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

4.2 SECTION INCLUDES

- A. Interior plastic plaque signage, for Room ID and Library Stack identification.
- B. Non-illuminated dimensional letters, numbers and graphics.
- C. Die-cut vinyl characters (letters and numerals) and graphics, including Code-required decals on or adjacent to wheelchair-accessible doors.
- D. Cast bronze plaques.

PART 5 - PRODUCTS

5.1 MATERIALS

- A. Cast Acrylic Sheet: Provide cast (not extruded or continuous cast) methyl methacrylate monomer plastic sheet, in sizes and thicknesses indicated, with minimum flexural strength of 16,000 psi when tested in accordance with ASTM D790, minimum allowable continuous service temperature of 175 degrees F and of the following general types:
 - 1. Transparent Sheet: Where sheet material is indicated as "clear," provide colorless sheet in non-glare matte finish, with light transmittance of 92 percent, when tested in accordance with requirements of ASTM D1003.
 - 2. White Translucent Sheet: Where sheet material is indicated as "white," provide white translucent sheet of density required to produce uniform brightness and minimum halation effects.
 - 3. Opaque Sheet: Where sheet material is indicated as "opaque," provide colored opaque acrylic sheet in colors and finishes as noted in the Drawings, or selected by Architect from manufacturer's standards.
- B. Plastic Laminate: Provide high-pressure plastic laminate engraving stock with face and core plies in contrasting colors, in finishes and color combinations indicated or, if not indicated, as selected from manufacturer's standards.
- C. Aluminum Sheet: Provide aluminum sheet of alloy and temper recommended by aluminum producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties specified in ASTM B209 for 5005-H15.
- D. Aluminum Extrusions: Provide aluminum extrusions of alloy and temper recommended by the aluminum producer or finisher for type of use and finish indicated, and with not less than strength and durability properties specified in ASTM B221 for 6063-T5.

- E. Aluminum Castings: Provide aluminum castings of alloy and temper recommended by aluminum producer and finisher for casting process used and for use and finish indicated.
 - F. Vinyl Film: Opaque non-reflective vinyl film, 0.0035-inch minimum thickness, with pressure-sensitive adhesive backing, suitable for exterior as well as interior applications.
 - G. Fasteners: Concealed, fabricated from metals that are not corrosive to sign material and mounting surface.
 - H. Anchors and Inserts: Non-ferrous metal or hot-dipped galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.
 - I. Colored Coatings for Acrylic Plastic Sheet: As recommended by acrylic manufacturers, including inks and paints for copy and background colors, for optimum adherence to acrylic surface and that are non-fading for application intended.
- 5.2 PLASTIC PLAQUE SIGNAGE
- A. Specified Manufacturer: ASI Sign Systems, Inc., Dallas, TX (214/352-9140; local representative, Culver City, CA, 310/645-1400, ex. 21).
 - B. Acceptable Manufacturers: Equivalent products by manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Karman Ltd., Canoga Park, CA (818/888-3818).
 - 2. Mohawk Sign Systems, Schenectady, NY (518/370-3433).
 - 3. Vomar Products, Inc., Sepulveda, CA (818/894-7174).
 - C. Interior Plastic Plaque Signage:
 - 1. Door, room identification and informational signs: ASI EmBoss Series, one-piece signs with embossed sign faces with subsurface graphics, for mounting to doors and walls for room identification and for information.
 - 2. Library stack signs: ASI Interior 20 Series, one-piece signs with text and graphics that can be repositioned to accommodate alphanumeric order on particular sign, for mounting to doors and walls and stack ends for room identification and directional information.
 - D. Fastening and Attachment Materials: As recommended by manufacturer to suit installation conditions, with consideration for potential of high abuse and for concealing fastenings.
 - E. Finishes: Custom colors and finishes as selected by the Architect.
 - F. Character (Letter and Number) Style: Characters as indicated on the Drawings or, if not indicated, as selected by Architect. If not indicated, assume Helvetica Medium font for bidding. Lettering shall be raised minimum 1/32-inch above sign surface.
 - G. Braille Indicators: On surface of all signs, provide Braille symbols corresponding to sign text, in compliance with CBC Section 11B-703.3. Braille symbols shall be Contracted Grade 2, with dots 1/10-inch on centers within each cell with 2/10-inch space between cells. Dots shall be raised a minimum of 1/40-inch above background.

H. Fabrication: Shop fabricate plaques, in sizes and with copy as indicated on the Drawings or, if not indicated, as directed by Architect.

1. Sizes: As indicated on Drawings.
2. Text and graphics: As indicated on Drawings. If not indicated, text and graphics will be provided by Architect.
3. Toilet Room Identification Signs:
 - a. Multiple-occupant toilet room identification signs: Plaque signs, 7 inches high, with text BOYS, GIRLS, MEN or WOMEN
 - b. Single-occupant toilet room identification signs: Plaque signs, 7 inches high, with text RESTROOM.
 - c. Accessible toilet room identification signs: International Symbol of Accessibility on the room identification sign (BOYS, GIRLS, etc.) or a separate 7" x 7" sign mounted adjacent to the room identification sign.
4. Toilet Room Door Identification Signs:
 - a. At BOYS and MEN, provide 12-inch equilateral triangle.
 - b. At GIRLS and WOMEN, provide 12-inch circle.
 - c. At RESTROOM, provide 12-inch circle, with contrasting color triangle inside.
5. Figures:
 - a. Toilet Room Identification Signs:

- b. Toilet Room Door Identification Signs:

5.3 DIMENSIONAL LETTERS AND NUMBERS

- A. Specified Manufacturer: ASI Sign Systems, Inc., Dallas, TX (214/352-9140; local representative, Culver City, CA (310/645-1400 ex. 21).

- B. Acceptable Manufacturers: As listed below. Additional manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Andco Industries Corp., Greensboro, NC (910/299-4511 or 800/476-8900).
 - 2. Vomar Products, Inc., Sepulveda, CA (818/894-7174).
 - 3. Mohawk Sign Systems, Schenectady, NY (518/370-3433).
 - 4. Karman Ltd., Canoga Park, CA (818/888-3818).
 - C. Cast Letters and Numbers: ASI LF Series, aluminum, with smooth, flat faces, sharp corners, and precisely formed lines and profiles, free from pits, scale, sand holes, or other defects. Cast lugs into back of characters and tap to receive threaded mounting studs. Comply with requirements indicated for finish, style, and size.
 - 1. Letter height: As indicated on the Drawings.
 - 2. Letter style: As indicated on the Drawings.
 - 3. Letter thickness: As recommended by manufacturer for size and style of letter; minimum of 1/2-inch.
 - 4. Mounting provision: 1 inch studs, for mounting characters flush to surface.
 - D. Finishes:
 - 1. Faces: Clear anodized aluminum.
 - 2. Returns: Painted, gloss; color as indicated on the Drawings.
- 5.4 APPLIED VINYL CHARACTERS AND SYMBOLS
- A. Specified Manufacturer: Specialized Builders Hardware (SBH), Inc., Placentia, CA (714/630-4751).
 - B. Acceptable Manufacturers: Equivalent products of Trimco Builders Hardware/Triangle Brass Mfg. Co., Inc., Los Angeles, CA (213/262-4191) will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - C. Code-Required Decals On or Adjacent to Doors: Stock, preprinted decal, complying with California Building Code (CBC) Chapter 11B requirements, with international wheelchair accessibility symbol, SBH #150, 5 inches by 5 inches, two-sided, for mounting on inside of glass and visible on both sides.
- 5.5 CAST METAL PLAQUES
- A. Cast Metal Plaques: Project commemoration plaque, as scheduled in herein at the end of PART 3 and as indicated on the Drawings. If not indicated, allow for plaque approximately 24 inches wide by 36 inches high, cast bronze with dark bronze textured background and light bronze raised edges, text and symbols.
 - 1. Castings shall be free from pits, scale, sand holes, or other defects.
 - 2. Hand-tool and buff borders and raised copy to produce the manufacturer's standard satin polished finish.

- B. Plaque Face: To be furnished by Architect during construction as camera-ready copy.
 - 1. It is intended that plaque face will feature school district logo, dedicating inscription, dedication date, and the names of persons and firms responsible for the facility.
 - 2. Lettering style and size will be provided on camera-ready copy.
- C. Mounting Provisions: Cast lugs into the back of plaque and tap to receive mounting studs for concealed mounting method.

PART 6 - EXECUTION – NOT USED

END OF SECTION

10 14 53 – PARKING AND TRAFFIC SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Traffic and parking control, plaque signage.
- B. Sign supports and foundations.

1.3 SUBMITTAL

- A. Submit shop drawings of all signs.

PART 2 - PRODUCTS

2.1 TRAFFIC AND PARKING CONTROL SIGNAGE

- A. Specified Manufacturer: Safeway Sign Company, Gardena, CA (310/321-4608). Or equal
- B. Acceptable Manufacturers: As listed below. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Western Highway Products, Inc., Stanton, CA (714/761-4811).
 - 2. Hawkins-Hawkins Co., Inc. / Hawkins Traffic Safety Supply, Berkeley, CA (510/525-4040 or CA 800/772-3995).
- C. Plaque Signs: Provide manufacturer's standard silk-screened signs, baked-on enamel applied over reflectorized backing on aluminum or galvanized steel sheet.
- D. Accessories: Provide welded galvanized steel fittings and galvanized or cadmium-plated steel bolts, nuts and washers.
- E. Fasteners: Provide tamper-proof galvanized steel fasteners, Tufnut System (714/962-5838), Allegheny Bolt (Tampruf brand; 516/568-1052) or equal.
- F. Sign Text, Traffic and Regular Parking Control: Comply with requirements of State of California, Department of Transportation (CALTRANS) and regulations of local authorities having jurisdiction.
- G. Sign Text, Accessible Parking Control: Comply with requirements of California Building Code (CBC) Section 1129B.5, in addition to requirements of State of California, Department of Transportation (CALTRANS) and regulations of local authorities having jurisdiction.

2.2 SIGN SUPPORTS AND FOUNDATION

- A. Support Posts: Galvanized tube steel, sizes and configuration as indicated on the Drawings, fabricated as specified in Section 05 50 00 - Metal Fabrications, with caps.
- B. Foundation Concrete: 2500 psi minimum concrete as specified in Section 03 30 00 – Cast-in-Place Concrete.
- C. Provide other materials as necessary for complete installation, as recommended by manufacturer and selected by Contractor, subject to review of Architect.

2.3 FABRICATION

- A. Provide signs and supports factory-prefabricated and pre-finished, ready for assembly and installation.

PART 3 - EXECUTION – NOT USED

END OF SECTION

10 21 13 – TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Solid plastic (HDPE polymer) toilet compartments and urinal screens.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Comtec Industries, Inc., Moosic, PA (570/348-0997). Legacy Polymer Products, (805) 375 6599.
- B. Acceptable Manufacturers: Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 SOLID PLASTIC TOILET COMPARTMENTS AND SCREENS

- A. Plastic Toilet Compartments: Floor-to-ceiling design, with pilasters anchored to floor and ceiling, and side panels and doors standard 55 inches high. Color: Black only. As indicated on the Drawings, for designated compartments, provide self-closing, out-swing doors with clear opening conforming to CBC Section 11B for wheelchair accessibility and dependent persons use requirements.
- B. Urinal Screens: Floor-to-ceiling end pilaster design, with 42-inch high by 24-inch deep panel.
- C. Privacy Screens: Floor-to-ceiling end pilaster design, with 55-inch high panel.
- D. Plastic Panels: SOLID High-density polyethylene (HDPE) with homogenous color throughout, containing minimum of 10 percent recycled materials; waterproof, non-absorbent. Panels shall be minimum 1 inch thick, with all edges machined to 1/4-inch radius and all surfaces smooth and free of saw marks and sharp corners. Foam Plastic Not Acceptable.
 - 1. Pilasters: 82" high.
 - 2. Doors: 55 inches high, installed 14 inches clear above finish floor.
 - a. Typical compartment: Unless otherwise indicated, provide minimum 24-inch wide in-swinging doors for typical toilet compartments.
 - b. Accessible compartment: Minimum door width at wheelchair-accessible compartments shall be 36 inches with minimum of 32 inches unobstructed

opening at front-entry compartments and 34 inches unobstructed opening at side-entry compartments when door is open 90 degrees.

3. Dividing Panels: 55 inches high, to be installed 14 inches clear above finished floor.
4. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum strip fastened to exposed bottom edges of solid-polymer components to prevent burning.
5. Fire characteristics, based on products of specified manufacturer, shall be as follows:

Property	Allowable Test Method	Required Value	Value
Self-ignition	ASTM D1929	650 degrees F	700 degrees F
Rate of burn	ASTM 635	2.0 cm/min	1.29 cm/min
Smoke density	ASTM D2843	<75	13.9
Interior Wall Finish	ASTM E-84		
Flame	>200	>200	
Smoke	>450	>450	

- E. Pattern/Color: Comtec Santana Black Paisley, Night Sky.
- F. Hardware: Hinges shall be 54" spring loaded continuous 16 gauge stainless steel, 6 ea hospital tips springs per hinge, rounded corners bolted to doors and pilasters with stainless steel torx head #14 3/4" screws.
 1. Accessible Compartment Provisions: Locate operating hardware and accessories in conformance with wheelchair accessibility and dependent persons use requirements. Mount door hardware at between +30 inches and +44 inches above finished floor.
 2. Pilaster anchors: Provide one-piece stainless steel or injection molded polymer shoe, with star-head security pin and stainless steel barrel bolts.
 3. Headrail: Provide Anti-Grip Aluminum Headrail with minimum 2" High profile sides. Attach to pilasters with Anti -Theft Through bolts.
 4. Panel anchors: Continuous extruded aluminum U-channel for full height of panel, anchored to wall with concealed stainless steel fasteners. Panels shall anchor to bracket with stainless steel sex-nut through bolts, with tamper-proof heads.
 5. Urinal screen anchors:
 - a. To wall: One full length double ear bracket, fastened with 8 wall fasteners.
 - b. To pilasters: Continuous U-channel.
 - c. To floor: Same as toilet compartment pilasters. Conceal floor anchors with shoe matching toilet compartment pilasters.
 6. Door hardware: Manufacturer's heavy-duty hardware suitable for institutional projects. Hardware at wheelchair-accessible and dependent persons use compartments shall comply with California Building Code (CBC) Chapter 11B, Section 1115B.7 Toilet Facilities.
 - a. Provide manufacturer's 54" spring loaded continuous 16 gauge stainless steel, 6 ea. hospital tips springs per hinge, rounded corners bolted to doors and pilasters with stainless steel torx head #14 3/4" screws.

- b. Provide manufacturer's heavy duty door strike, keeper and latch of extruded aluminum construction. At wheelchair-accessible and dependent persons-use compartments, provide slide-bolt type latch with U-shaped handle and provide U-shaped door pull at each side of door, located below latch. Mount latch at between +30 inches and +44 inches above finished floor.
- c. At typical compartments, provide each door with one door bumper, without coat hook.
- d. At wheelchair-accessible and dependent persons-use compartments, provide door with one door bumper and provide separate coat hook mounted +48 inches above finished floor.

G. Fasteners for Partitions Assembly:

- 1. Fasteners, general: Provide stainless steel, tamper-proof fasteners throughout. Molly-type fasteners, toggle bolts and other hollow wall anchors will not be accepted. See general requirements for fasteners specified in Section 05 05 23 – Metal Fastenings.
- 2. Concealed fasteners: Stainless steel.
- 3. Exposed fasteners: Stainless steel.

PART 3 - EXECUTION - NOT USED

END OF SECTION

10 21 23 – CUBICLE CURTAINS AND TRACK

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Cubicle Tracks.
- B. Cubicle and Shower Curtains.

PART 2 - PRODUCTS

2.1 CUBICLE TRACKS

- A. Specified Manufacturer: O.B. Masco Kirsh (800/528-1407).
- B. Acceptable Manufacturers: Equivalent products by manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. ADC Hospital Equipment, Division of Automatic Devices Company,
 - 2. Creative Healthcare Products Inc.,
 - 3. General Cubicle Company Inc.,
- C. Extruded-Aluminum Track: Ceiling mounted, Model No. 7900 series, extruded 6063-T5 aluminum, 1-3/8 inches by 3/4-inch with 0.050-inch minimum wall thickness.
 - 1. Track units: Provide track in continuous lengths except at points where straight track intersects with curved track. Scribe track at joints shall to fit.
 - 2. Curved track: Factory fabricated radius bends, minimum 14-inch radius, without deformation of track section or impeding movement of carriers.
 - 3. Finish: Satin anodized aluminum.
- D. Track Accessories: Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.
 - 1. Track ends: Positive stop to fit track extrusion.
 - 2. End Stop: Non-removable.
 - 3. Safety loading unit: Detachable hinge and lock unit, factory assembled on 60-inch section of manufacturer's extruded-aluminum track.

- 4. Locking switch unit: Spring action shuttle and coupling device for rerouting and securing cubicle curtain, with pull chain for switching track.
 - E. Curtain Carriers: Model No. 7918/061, four carriers per lineal foot of track.
 - 1. Carrier assemblies: Delrin body, self-lubricating noiseless nylon wheels with aluminum hook.
 - 2. Drop chain: 20 inches long, on each carrier.
 - F. Exposed Fasteners: Stainless steel.
 - G. Concealed Fasteners: Stainless steel.
- 2.2 CUBICLE CURTAINS AND SHOWER CURTAINS
- A. Specified Manufacturer: Carnegie, Rockville Centre, NY (800/727-6770).
 - B. Acceptable Manufacturers: Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - C. Curtains and Shower Curtains, General: Fabricated from fabrics as indicated on the Drawings. Refer to Interior Design Drawings ID-0 through ID-0.2.
 - 1. Grommets: Stainless steel or chrome plated brass, spaced no more than 6 inches apart, machined to top hem of mesh top.
 - 2. Curtain tie back: Nickel-plated brass chain, one at each end of curtain.
 - D. Cubicle Curtains: Equal to floor-to-ceiling height, with 18-inch mesh top, and minus 16 inches above finished floor at bottom
 - 1. Mesh top: Mesh design complying with Office of Statewide Health Planning and Design (OSHPD) requirements, top hem 1-1/2 inches wide, triple thickness, reinforced with integral web, and double lock stitched. Double lock stitch bottom of mesh directly to triple thickness top hem of curtain fabric.
 - 2. Top hem: 1-1/2 inches wide, triple thickness, reinforced with integral web and double lock stitched.
 - 3. Bottom hem: 1-1/2 inches wide, double thickness and double lock stitched.
 - 4. Vertical seams: 1/2-inch wide, double turned and double stitched.
 - 5. Horizontal seams: Not acceptable.
 - E. Shower Curtains: Equal to floor to ceiling height, minus 6 inches above finished floor at bottom.
 - 1. Top hem: Not less than 1 inch and not more than 1-1/2 inches wide, triple thickness, reinforced with integral web, and double lock stitched.
 - 2. Bottom hem: Not less than 1 inch and not more than 1-1/2 inches wide, double thickness and double lock stitched.
 - 3. Vertical seams: Not acceptable.
 - 4. Horizontal seams: Not acceptable.
 - F. Shower Curtain Liners: At all shower curtains, provide separate clear PVC liner.

G. Shower Curtain Rods: As specified in Section 10 28 13 - Toilet Accessories.

PART 3 - EXECUTION - NOT USED

END OF SECTION

10 22 39 – FOLDING PANEL PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Manually-operated flat panel partition systems (operable walls), with panels, tracks, supports, gasket accessories, hardware, and similar related items.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Hufcor-Airwall, Inc., Paramount, CA (310/634-3116).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Advanced Equipment Corporation, Fullerton, CA (714/635-5350).
 - 2. Modernfold, Inc., New Castle, IN (765/529-1450 or 800/869-9685).

2.2 OPERABLE PARTITIONS

- A. Operable Partition: Hufcor Model 6903M, top-supported, manually-operated, continuous-hinged panels, on continuous aluminum track, with retractable top and floor seals, anodized finish on exposed framing and trim, custom fabric facing on panels. No floor track shall be necessary.
- B. Panel Construction: Hufcor 6000 Series, one-piece welded construction with no vertical trim when partition is in extended position.
 - 1. Panel thickness: Approximately 3 inches.
 - 2. Panel weight: Approximately 8.5 psf.
 - 3. Acoustical rating: STC 51.
 - 4. Partition Size: As indicated on the Drawings.
 - 5. Faces and frame: Minimum 16 gauge steel faces fusion welded to 16 gauge steel channel perimeter frame and 14 gauge top rail, with 16 gauge internal steel stiffeners.
 - a. Acoustical insulation: Glass fiber.

- b. Panel perimeter: Approximately 0.125-inch thick aluminum, incorporating protective edge and forming tongue-and-groove meeting joint between panels.
 - c. Top and side seals: Multi-finger, fixed-variable top seals and panel intersection seals, formed from flexible PVC.
 - d. Bottom seals: Retractable, spring-loaded, internally guided, with travel range of approximately 2 inches and capable of acting as locking mechanism to fix panel in any desired location. Bottom seal system shall be self-contained in each panel with no visible mechanism or fastener on panel face. Bottom seals shall operate by a waist-high lever pivoted lever handle on trailing edge of panel.
- C. Panel Support System and Track: Hufcor Type 36 aluminum alloy track with running surfaces and panel guides, with ceiling trim and accessories as indicated on the Drawings.
 - 1. Track brackets shall interlock top flange and attach to structural support with pairs of 1/2-inch diameter threaded rods.
 - 2. Brackets shall be spaced for maximum track deflection of 0.09-inch due to applied trolley loads, with brackets at stacking area not to exceed 12 inches on center.
 - 3. Track shall utilize minimum 12-inch radius turns at all changes in track direction, for ease of operation and to prevent impacts at turns.
 - 4. Exposed track and trim shall be clear satin anodized aluminum.
 - 5. Each panel shall have two wheeled trolley assemblies running on overhead track.
 - 6. Each panel shall be attached to trolley assembly with minimum 5/8-inch diameter adjustable pendant bolt. Pendant bolt shall attach to panel through steel plate mounted internally with panel frame. Individual trolley capacity shall be not less than 800 pounds.
 - 7. Each trolley assembly shall have two horizontal counter-rotating wheels with ball bearings and thrust-type roller bearings, shielded and prelubricated. Wheels shall be independently replaceable.
 - 8. Pocket closure doors: Doors shall close opening, including pocket, when extracted or extended. Finish closure doors to match operable partition.
- D. Acoustical Performance: Tested by independent acoustical laboratory in accordance with ASTM E90, minimum Sound Transmission Class (STC) rating of 51 (laboratory test), minimum Noise Reduction Coefficient (NRC) of 0.65 and minimum NIC rating of 42.

PART 3 - EXECUTION – NOT USED

END OF SECTION

10 28 00 – TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Toilet and shower room accessories: Dispensers, grab bars, mirrors, shelves and other accessories not indicated on the Drawings as Owner-Furnished/Contractor-Installed (OFCI).
- B. Custodial room accessories not indicated on the Drawings as OFCI.
- C. Installation of toilet and custodial room accessories indicated on the Drawings as OFCI.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Bobrick Washroom Equipment, Inc., North Hollywood, CA (818/764-1000; local representative, Renco Sales, Inc., Corona, CA 92882-6929, 909/371-8848).
- B. Acceptable Manufacturer: None identified. Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
- C. NOTE: ASI PRODUCTS ARE NOT ACCEPTABLE DUE TO HIGH FAILURE RATE.

2.2 TOILET ROOM AND SHOWER ACCESSORIES

- A. Toilet Room and Shower Accessories, General: Bobrick stainless steel accessories as scheduled and noted on the Drawings.
 - 1. Accessibility compliance: Limit projection of a surface- or semi-surface mounted accessory from encroaching more than three inches from the face of the wall or partition, and no closer than one and one-half inches to the tangent point of the grab bar.
 - 2. Manufacturer and product identification: Embossed, stamped nomenclature or labels on exposed faces of units will not be accepted.
- B. Finish: Bright polished stainless steel and chrome plating, unless otherwise noted.
- C. Locks: Keyed (tumbler lock) accessories shall be keyed alike with the exception of coin receiving boxes on vending equipment.

- D. Grab Bars: Bobrick Series as scheduled and noted on the Drawings, 1-1/2 inches o.d., 18 gauge Type 304 stainless steel tubing, 1-1/2 inches clear between grab bar and mounting surface, concealed mounting with 3-inch diameter flange secured with 4 set screws.
 - 1. Provide peened, non-slip gripping surface.
 - 2. Provide grab bars in configurations indicated on the Drawings.
- 2.3 CUSTODIAL ROOM ACCESSORIES
 - A. Custodial Room Accessories: Bobrick stainless steel accessories as scheduled and noted on the Drawings.
 - B. Finish: Brushed stainless steel and satin chrome plating, unless otherwise indicated.
- 2.4 METAL-FRAMED MIRRORS
 - A. Metal Framed Mirrors: Bobrick framed mirror and framed mirror/shelf combination, series as scheduled and noted on Drawings, heavy stainless steel framed, factory-assembled mirrors, with galvanized steel wall hanger assembly.
 - B. Sizes: As scheduled and indicated on Drawings.
 - C. Metal Finish: Bright polished stainless steel, unless otherwise indicated.
 - D. Mirror Glass: ASTM C1036, Type I, Class 1 mirror glass, 1/4-inch thick, with electrolytically deposited copper plating for corrosion protection.
- 2.5 WARM AIR DRYERS
 - A. Specified Manufacture: World Dryer Corp. 5700 McDermott Drive, Berkeley, IL 60163, 800.323.0701
 - B. Acceptable Manufacturer: None identified. Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - C. Warm Air Dryers:
 - 1. Recessed Push button World Dryer Model: RA
 - 2. Recessed Touch Free World Dryer Model: XRA – ADA compliant
 - 3. Flush Mount Touch Free SLIMdri Model: L-974 – ADA Compliant

PART 3 - EXECUTION – NOT USED

END OF SECTION

10 44 00 – FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Bracket-mounted fire extinguishers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Samson Products, Inc., Pico Rivera, CA, (affiliated with JL Industries; 310/801-6226).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Larsen's Manufacturing Co., Minneapolis, MN (612/571-1181).
 - 2. Potter-Roemer Tri-Star, Inc., Santa Ana, CA (714/430-5300).

2.2 FIRE EXTINGUISHERS

- A. Fire Extinguishers, General: Provide one extinguisher at each cabinet location and at other locations indicated on the Drawings, of type specified following, fully serviced and tagged. Fire extinguishers shall comply with requirements of California State Fire Marshal and of fire authority (local Fire Marshal) having jurisdiction.
- B. Dry Chemical Extinguishers: JL Cosmic 10E, multi-purpose dry chemical, nominal 10 pounds capacity, UL Rating 4A-60BC, fully serviced and tagged.
- C. Carbon Dioxide Fire Extinguishers: For installation on brackets, in electrical rooms and other locations where indicated, JL Sentinel 10, liquid carbon dioxide under pressure, nominal capacity 10 pounds, UL Rating 10BC.
- D. Brackets: Provide bracket by fire extinguisher manufacturer to suit fire extinguisher model.
 - 1. For dry chemical fire extinguishers: JL Mark Bracket MB 808.
 - 2. For carbon dioxide fire extinguishers: JL MB 864.

PART 3 - EXECUTION – NOT USED

END OF SECTION

10 51 13 – METAL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Metal wardrobe lockers.
- B. Locker room benches.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Sheet Steel: Mild cold-rolled and leveled furniture steel, free from buckle, scale, and surface imperfections.
- B. Fasteners: Cadmium, zinc, or nickel-plated steel; exposed bolt heads, slotless type; self-locking nuts or lock washers for nuts on moving parts.
- C. Equipment: Hooks and hang rods of cadmium-plated or zinc-plated steel.

2.2 MANUFACTURER

- A. Specified Manufacturer: Republic Storage Systems Co., Inc., Canton, OH (800/477-1255).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Lyon Metal Products, Inc., Aurora, IL (708/892-8941 or 800/323-0096).
 - 2. DeBourgh-Worley Mfg Co 27505 Otero Ave, PO Box 981, La Junta, CO 81050 (800) 328-8829
 - 3. Republic Storage Systems, 1038 Belden Ave. Canton, OH 44705 800.477.1255

2.3 PHYSICAL EDUCATION DRESSING LOCKERS

- A. Physical Education Dressing Lockers: For Boys and Girls P.E. Dressing Rooms, Standard Lockers as manufactured by Republic Storage Systems, Co., Inc.
 - 1. Box lockers: 12 inches wide by 15 inches deep by 12 inches high.
 - 2. Wardrobe lockers: 12 inches wide by 15 inches deep by 36 inches high.

3. Configuration: In banks as indicated on the Drawings, with alternating rows of five-high box lockers and rows of one wardrobe locker over two box lockers.
- B. Locker Construction: Built on unit principle, each locker shall have individual door and frame, individual top, bottom and back, with common intermediate uprights separating units. Double-face lockers shall have common backs.
 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet, unless otherwise indicated.
 2. Provide fasteners, filler plates, supports, clips, and closures as required for a complete installation.
 3. Assembly fasteners shall be zinc plated, low round head, slotless, fin neck machine screws with hex nuts.
 4. Bolt and rivet heads shall not be exposed on faces of doors and frames.
- C. Locker Body: upright sheets, backs, tops, bottoms, doors, and shelves are to be 16 gauge, assembled by riveting or bolting body components together.
 1. Tops, bottoms and shelves: Flanged on all four sides.
 2. Backs: Flanged on two sides.
 3. Uprights: Offset at front and flanged at rear to provide double lapped rear corner.
 4. Fasteners: All bolts and nuts shall be zinc plated.
- D. Locker Base: None. Lockers shall be set on concrete base as indicated on the Drawings.
- E. Door Frames: 16 gauge steel formed into 1 inch wide face channel shapes with continuous vertical door strike integral with frame on both sides of door opening.
- F. Doors: Formed from 16 gauge sheet steel.
 1. Wardrobe locker doors: Formed with full channel shape on lock side to fully conceal lock bar, channel formation on hinge side and right angle formation across top and bottom, with ventilation louvers top and bottom, quantity as standard with manufacturer, for door height.
 2. Box locker doors: Formed with right angle flanges on all four sides, with ventilation louvers in each door face, quantity as standard with manufacturer.
- G. Frame Hooks and Door Silencers: Frame hooks accepting latching shall be of heavy gauge steel, set close in and welded to door frame. Continuous vertical door strike shall protect frame hooks from door slam damage. Impact caused by door closing shall be absorbed by soft rubber silencer which is securely installed on each frame hook.
- H. Door Hinges: 2 inches high, 5-knuckle design, full-loop, tight-pin style, securely welded to frame and riveted to inside of door flange.
 1. Hinges shall be attached to door with two rivets.
 2. Each door shall have two hinges.
- I. Latching, Typical Lockers:
 1. Latching for box lockers: Doors shall be equipped with padlock hasp and stainless steel strike plate with integral handle pull. Padlocks are not included in Contract.

2. Latching for wardrobe lockers: Doors shall be equipped with one-piece, pre-lubricated spring steel latch, completely contained within lock bar under tension to provide rattle-free operation.
 - a. Lock bar shall be of pre-painted, double-channel steel construction held laterally in door channel by means of non-removable self-formed retainers pierced from door.
 - b. Latch shall provide two latching points and shall have provision for padlock. Padlocks are not included in Contract.
 - J. Accessible Lockers: For use by persons with disabilities (dependent persons), complying with requirements for accessibility and use in California Building Code (CBC) Chapter 11B, designated wardrobe lockers located on bottom tier as indicated on the Drawings or, if not indicated, as directed.
 1. Provide locker manufacturer's recessed lever handle assembly with two-point locking. Handle/latch mechanism shall not require twisting, pinching or grasping to operate.
 2. Provide designated wardrobe lockers with steel shelf located 9 inches above bottom of locker.
 3. Provide accessibility symbol on outside of door of designated lockers.
 - K. Wardrobe Locker Accessories: Each wardrobe locker shall have one double-prong back hook two single-prong wall hooks. Hooks shall be steel, formed with ball points, zinc-plated and attached with two bolts or rivets.
 - L. Accessories:
 1. Locker Tops: Continuous sloping tops, fabricated from 16 gauge sheet steel, approximately 20-degree pitch, with exposed ends hipped.
 2. Finished End Panels: To cover unused penetrations and fasteners, except for perimeter fasteners, fabricated from sheet steel, gauge as standard with manufacturer.
 3. Filler Panels: Fabricated from 16 gauge steel sheet.
 4. Fasteners: Conform to requirements for anchors and fasteners to building substrates as specified in Section 05 05 23 - Metal Fastenings.
 - M. Number Plates: Polished aluminum with black numerals not less than 1/2-inch high, attached to door face with two rivets. Provide numbering as directed by Owner.
 - N. Metal Finish: Match existing lockers.
- 2.4 TEAM LOCKERS
- A. Team Lockers: For Boys and Girls Team Rooms, Heavy Duty Ventilated Lockers as manufactured by Republic Storage Systems, Co., Inc.
 1. Double tier lockers: 18 inches wide by 15 inches deep by 36 inches high.
 2. Single tier lockers: 18 inches wide by 15 inches deep by 72 inches high.
 3. Configuration: In banks of tiers as indicated on the Drawings.
 - B. Locker Construction: Built on unit principle, each locker shall have individual door and frame, individual top, bottom, back and shelves, with common intermediate uprights separating units. Double face units shall have common backs.

1. Form body panels, doors, shelves, and accessories from one-piece steel sheet, unless otherwise indicated.
 2. Provide fasteners, filler plates, supports, clips, and closures as required for a complete installation.
 3. Assembly shall be by riveting or slotless zinc-plated bolts, with washer backup, to provide shake-proof permanent fastening while still permitting fastener removal by drilling to allow future rearrangement of lockers or replacement of damaged parts.
 4. Bolt and rivet heads shall not be exposed on faces of doors and frames.
- C. Locker Body: Cold-rolled sheet steel specially formed for added strength and rigidity and to ensure tight joints at fastening points.
1. Side uprights: Formed 16 gauge steel, perforated with diamond-shaped openings 3/4-inch wide by 1-1/2 inches high for maximum ventilation.
 2. Backs: Formed from 18 gauge steel sheet with right angle flanges on each vertical side for stiffness, ease of assembly, and to provide corner rigidity.
 3. Tops, bottoms, shelves and compartment dividers: 16 gauge steel, fully-flanged on all sides for added stiffness. Shelves shall have an additional return flange on the front edge creating a channel shape to rigidize the impact surface.
- D. Locker Base: None. Lockers shall be set on concrete base as indicated on the Drawings.
- E. Door Frames: 16 gauge steel formed into 1 inch wide face channel shapes with continuous vertical door strike integral with frame on both sides of door opening. Cross frame members shall be 16 gauge channel shapes, including intermediate cross frame on double tier lockers, securely welded to vertical framing members to ensure rigidity.
- F. Doors: Formed from 14 gauge sheet steel on all four sides with face perforated for free air flow with small diamond perforations 7/16-inch wide by 15/16-inch high.
- G. Frame Hooks and Door Silencers: Frame hooks accepting latching shall be of heavy gauge steel, set close in and welded to door frame. Continuous vertical door strike shall protect frame hooks from door slam damage. Impact caused by door closing shall be absorbed by soft rubber silencer which is securely installed on each frame hook. Provide Latch Guard steel plate welded on each frame hook of tiered lockers.
- H. Door Hinges: 2 inches high, 5-knuckle design, full-loop, tight-pin style, securely welded to frame and riveted to inside of door flange.
1. Hinges shall be attached to door with two rivets.
 2. Doors 42 inches and less shall have two hinges.
 3. Doors over 42 inches shall have three hinges.
- I. Latching, Typical Lockers: Quiet latch design, one-piece, pre-lubricated spring steel latch, completely contained within lock bar under tension to provide rattle-free operation.
1. Lock bar shall be of pre-painted, double-channel steel construction held laterally in door channel by means of non-removable self-formed retainers pierced from door.
 2. Lock bar shall be securely contained in door channel by self-lubricating polyethylene guides that isolate lock bar from metal-to-metal contact with door.
 3. Lock bar travel shall be limited by resilient high-quality elastomeric cushioning devices concealed inside lock bar.

4. Latch for doors up to 42 inches high shall provide two latching points and shall have provision for padlock. Padlocks are not included in Contract.
 5. Latch for doors up to 42 inches high shall provide three latching points and shall have provision for padlock. Padlocks are not included in Contract.
 - J. Recessed Handle, Typical Lockers: Non-protruding 14 gauge steel lifting trigger and slide plate shall transfer lifting force for actuating lock bar when opening door.
 1. Exposed portion of lifting trigger shall be encased in molded ABS thermoplastic cover that provides isolation from metal-to-metal contact and shall be contained in formed 20 gauge stainless steel pocket.
 2. Stainless steel pocket shall also contain recessed area to contain padlock.
 - K. Accessible Lockers: For use by persons with disabilities (dependent persons), complying with requirements for accessibility and use in California Building Code (CBC) Chapter 11B, designated wardrobe lockers located on bottom tier as indicated on the Drawings or, if not indicated, as directed.
 1. Provide locker manufacturer's recessed lever handle assembly with two-point locking,. Handle/latch mechanism shall not require twisting, pinching or grasping to operate.
 2. Provide designated wardrobe lockers with steel shelf located 9 inches above bottom of locker.
 3. Provide designated wardrobe lockers with shelf and pole at 48 inches maximum above finish floor, where applicable.
 4. Provide accessibility symbol on outside of door of designated lockers.
 - L. Accessories:
 1. Locker Tops: Continuous sloping tops, fabricated from 16 gauge sheet steel, approximately 20-degree pitch, with exposed ends hipped.
 2. Finished End Panels: To cover unused penetrations and fasteners, except for perimeter fasteners, fabricated from sheet steel, gauge as standard with manufacturer.
 3. Filler Panels: Fabricated from 16 gauge steel sheet.
 - M. Number Plates: Polished aluminum with black numerals not less than 1/2-inch high, attached to door face with two rivets. Provide numbering as directed by Owner.
 - N. Finishing: Chemically pretreat metal with degreasing and phosphatizing process. Electrostatically apply thermosetting enamel finish to all exposed and concealed surfaces except number plates, latches and nonferrous metal. Match colors of existing lockers.
 - O. Accessories: Lockers shall be anchored to base (floor) and walls. Coordinate backing requirements with framing and backing specified in Section 06 11 11 - Wood Backing, Blocking and Curbing and Section 09 22 16 - Non-Structural Metal Framing.
- 2.5 LOCKER ROOM BENCHES
- A. Bench Tops: Manufacturer's standard 1-piece units, with rounded corners and edges, extruded aluminum with clear anodic finish, 1-1/4 inches thick.
 1. Typical benches: Minimum 9-1/2 inches wide by length indicated on the Drawings.

- 2. Benches at accessible lockers: Minimum 24 inches wide by minimum 48 inches long. See Drawings for length.
- B. Bench Pedestals: Manufacturer's standard heavy-duty pedestal with top flange and post, for grouted floor anchorage. Apply manufacturer's standard baked-enamel finish to pedestals, to match lockers.
- C. Grout: Non-shrink, non-metallic anchoring grout as specified in Section 05 05 23 – Metal Fastenings.

PART 3 - EXECUTION – NOT USED

END OF SECTION

10 51 14 – METAL LOCKER REFURBISHMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Preparation and repainting of existing steel lockers.
- B. Preparation and repainting of locker room bench supports.
- C. New locker room wood benches with metal supports.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified manufacturer: International Protective Coatings Corp., Hatfield, PA (215/362-9020 or 800/334-8796; distributed by Dunn-Edwards Corp., Los Angeles, CA, 213/771-3330 or 800/372-6470).
- B. Acceptable manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Ameron Protective Coatings, Brea, CA (714/529-1951 or 800/344-0025).
 - 2. Carboline Company, St. Louis, MO (800/848-4645).
 - 3. Tnemec Company, Inc., Kansas City, MO (local representative, TPC Consultants, Inc., Manhattan Beach, CA, 310/643-5191).

2.2 PAINT PRODUCTS

- A. Paints and Coatings, General: Comply with applicable regulations of South Coast Air Quality Management District (AQMD) for volatile organic compounds (VOCs).
- B. Primer Paint: Intergard 270 Water Borne Epoxy, two-component, fast drying, water borne, anti-corrosive epoxy primer, pigmented with zinc phosphate.
- C. Finish Paint: Intergard 735 Water Borne Epoxy, two-component, low VOC, water borne epoxy high-gloss finish.
 - 1. Colors: As indicated on the Drawings or, if not indicated, as directed by Architect. Allow for custom colors and distinct colors in each room or space.
 - 2. Color combinations: Single color per room or space.

- D. Metal Filler: Automotive type body filler, with primer/filler as necessary to achieve smooth, blemish-free surface.
 - E. Locker Components: Provide replacement locker components, including hinges, latch assemblies and hooks to match existing.
 - 1. Fabricate and install new metal shelf at each locker designated as "accessible." See Drawings for locations. Shelf shall be located in bottom tier locker, 9 inches above bottom of locker.
 - 2. Provide new locker door at each accessible locker, with new recessed lever handle assembly with two-point locking, complying with CBC Chapter 11B. Handle/latch mechanism will not require twisting, pinching or grasping to operate. Door face shall match adjacent lockers.
 - 3. Provide new decal of accessibility symbol on outside of door after painting.
- 2.3 LOCKER ROOM BENCHES
- A. New Locker Room Benches: As specified in Section 10 51 13 - Metal Lockers.
 - B. New Bench Pedestals: As specified in Section 10 51 13 - Metal Lockers.
 - C. Existing Bench Pedestals: Intended to remain in place and be refinished. Prepare surfaces and prime and finish paint existing bench pedestals to match refinished lockers.

PART 3 - EXECUTION

3.1 LOCKER PREPARATION

- A. Component Replacement:
 - 1. Remove all latch assemblies, inspect and clean. Repair existing latch assemblies to like-new function. Clean and polish exposed surfaces to like-new condition. Provide new, matching latch assemblies where existing latch assemblies cannot be restore to like-new function and appearance.
 - 2. Where doors and panels cannot be repaired, provide new doors and panels, including patch panels in locker bottoms and sides.
 - 3. Remove existing number plates and either refinish to like-new condition or provide new, matching number plates. Color on number plates shall be as directed by Architect.
 - 4. Replace all loose, missing and damaged fasteners with new fasteners of galvanized steel or stainless steel. Exposed fasteners shall be tamper-resistant. Use pop-rivets where feasible.
 - 5. Metal Preparation: Prepare exterior and interior of existing lockers, including side, top and end closures, panels and trim.
 - 6. Clean all surfaces of soiling and other contaminants. Degrease surfaces according to SSPC-SP 1.
 - 7. Clean all metal surfaces, removing all rust, staining and scale. Comply with SSPC-SP 2 or SSPC-SP 3 typically and SSPC-SP 11 where bare metal is exposed.

8. Repair all dented and warped panels and doors. Hammer out dents and fill remaining depressions and all pitting with body filler putty not more than 1/32-inch deep.
9. Where doors and panels cannot be repaired, provide new doors and patch panels.
10. Spot fill, sand and prime surfaces where existing paint is removed, feathering to existing remaining paint.
11. Sand all surfaces, using progressively finer sandpaper to achieve surface suitable for specified primer.
12. Immediately spot prime all bare metal.

3.2 PAINTING

- A. Painting Preparation: Mask and cover all adjacent surfaces. Seal all air ductwork and cover all light fixtures. Provide slip-resistant floor coverings. Seal door and window openings to prevent spread of odors and overspray.
 - B. Primer and Paint Application, General:
 1. Comply with paint manufacturer's instructions and recommendations for mixing, handling and application.
 2. Mechanically mix all paint. Comply with manufacturer's mixing and waiting times. Do not exceed pot life of paint before application, at multi-component coatings.
 3. Spray apply primer and paint, using low-pressure cup gun. High-pressure spray equipment shall not be used.
 - C. Surface Cleaning: Wipe down all surfaces with suitable solvent and clean rags, to dust-free condition prior to primer and finish paint applications.
 - D. Primer Application: Apply to prepared surfaces in compliance with manufacturer's instructions and recommendations, for not less than dry-film thickness (DFT) of 3.0 mils (75 microns).
- 3.3 Finish Paint Application: After curing of primer coat, apply two finish coats to prepared surfaces in compliance with manufacturer's instructions and recommendations, for not less dry-film thickness (DFT) of 2.0 to 3.0 mils (50 to 75 microns) per coat.

3.4 COMPONENT REPLACEMENT

- A. Component Replacements, General Provide new components where existing components are missing or damaged beyond repair to like-new condition. Replaced components shall be entirely compatible with existing locker units and shall match existing metal gauges, finishes, fastenings and action.
- B. Latch Assemblies: Reinstall refurbished existing latch assemblies and install new latch assemblies where necessary.
- C. Number Plates: Reinstall refurbished existing number plates and install new number plates where necessary.

3.5 LOCKER ROOM BENCHES INSTALLATION

- A. New Locker Room Benches Installation: As specified in Section 10 51 13 - Metal Lockers.

B. Existing Locker Room Benches Refinishing:

1. Strip, fill and sand existing wood benches as specified in Section 09 90 00 – Painting and Coating, using clear urethane finish as specified for wood flooring.
2. Reinstall existing benches using new fasteners. Fasteners shall be galvanized steel or stainless steel and shall be tamper-resistant.
3. Install new bench tops on existing pedestals, as specified in Section 10 51 13 - Metal Lockers. Provide new pedestals where existing pedestals are beyond satisfactory repair. Remove existing pedestals.

3.6 CLEANING AND PROTECTION

- A. Initial Cleaning: Remove all labels and protective coverings from completed installation. Clean surfaces of adhesives and soiling.
- B. Adjustments: Upon completion of installation, inspect lockers and adjust as necessary for proper door and locking mechanism operation. Touch up scratches and abrasions to match original finish. If touch-ups that are determined to be unsatisfactory by Architect, replace components with matching new components.
- C. Protection: Provide protective covers over completed installation until cleaning for Substantial Completion review, to prevent soiling and marring.
- D. Final Cleaning: Clean lockers, inside and out to dust free condition at time of Substantial Completion review.

END OF SECTION

10 56 13 – METAL STORAGE SHELVING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fixed, metal storage shelving for storerooms.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Penco Products, Inc., Oaks, PA (800/562-1000).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Lyon Metal Products, LLC, Aurora, IL (630/892-2232 or 800/323-0096).
 - 2. Republic Storage Systems Co., Canton, OH (30/438-5800 or 800/477-1255).
 - 3. Richards-Wilcox, Aurora, IL (630/897-6951 or 800/253-5668).

2.2 METAL STORAGE SHELVING

- A. Modular Steel Storage Shelving: Provide medium-duty rated, open shelving units consisting of four upright corner pilasters, slotted to receive clips clipped together with shelves as indicated. Provide cross-braces laterally and at ends as required for stability with intended load. Shelves adjustable 1-1/2 inches on center.
 - 1. Shelving unit size: Provide 36 inches wide by 84 inches high units, with 5 shelves, unless otherwise indicated on Drawings.
 - 2. Standard Upright Assembly: Provide complete unit equipped with four uprights; shelves and top designed to stand independently.
 - 3. Starter/Adder Assembly: Provide first unit of each bank with four uprights; shelves and top to stand independently. Provide each succeeding unit with two uprights; shelves and top to allow attachment to preceding unit. Provide one upright assembly at the end of each bank.
- B. Finish Color: As indicated on the Drawings or, if not indicated, as selected by Architect from manufacturer's standard production colors.

PART 3 - EXECUTION- NOT USED

END OF SECTION

10 75 00 – FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Metal groundset flagpoles.
- B. Flagpole fittings and accessories.
- C. Setting sleeves.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: American Flagpole, a Division of Kearney-National, Inc., Abington, VA (276/628-4188 or 800/368-7171).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Baartol Company, Inc., Kenton, OH (419/673-0753 or 800/537-4143).
 - 2. Concord Industries, Inc., Addison, TX (214/380-8186).
 - 3. EMC Flagpoles, Division of Eder Manufacturing Corporation, Milwaukee, WI (414/355-2010 or 800/558-9620).
 - 4. Morgan-Francis Flagpoles, Division of Original Tractor Cab Co., Inc., Arlington, IN.
- C. Aluminum Flagpole: American Flagpole Catalog No. ESR30D61-AB, one piece groundset design, with shaft of conical tapered aluminum, for 30 feet exposed height and single external revolving halyard.
 - 1. Flagpole height: 30 feet nominal maximum. If there is a conflict between the drawings and specifications the contractor must verify the required height with the Architect or District Representative. Written approval from the Maintenance Department is required for flagpoles that exceed 30 feet in height.
 - 2. Fabricate pole from seamless, extruded aluminum tubing complying with ASTM B 221, alloy 6063-T6, having tensile strength not less than 30,000 psi with yield point of 25,000 psi.
 - 3. Heat-treat and age-harden pole after fabrication, in compliance with ASTM B 597, temper T6.

4. Provide cone-tapered flagpoles, per manufacturer's standard rate of taper.
 5. Provide 6-inch minimum butt diameter and 0.1875-inch minimum base wall thickness.
 - D. Pole (Shaft) Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide Aluminum Association color anodized finish AA M32-C22-A42, Light Bronze (#311).
 - E. Finial Ball: Manufacturer's standard flush seam ball, sized as indicated or, if not indicated, to match pole butt diameter, 0.063-inch (1.6-mm) spun aluminum with gold anodized finish.
 - F. Halyard: External type, ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16-inch (8-mm) diameter, braided polypropylene halyard and 9-inch (228-mm) cast-metal cleats with fasteners.
 1. Provide one halyard and one 9-inch cast metal cleat at each flagpole.
 2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.
 3. Finish exposed metal surfaces to match flagpole.
 - G. Halyard Flag Snaps: Provide two bronze swivel snap hooks per halyard. Include neoprene or vinyl covers on snaps.
 - H. Flagpole Mounting: Manufacturer's standard base system for the type of flagpole installation required.
 1. Provide Fiberglass foundation sleeve, made to fit flagpole, for casting into concrete foundation.
 2. Provide grounding protection for flagpole.
 3. Provide flashing collar of same material and finish as flagpole.
- 2.2 CONCRETE MATERIALS
- A. Pole Base Reinforcement: As indicated on the Drawings and as specified in Section 03 20 00 – Concrete Reinforcing.
 - B. Concrete for Pole Foundations: As specified in Section 03 30 00 – Cast-in-Place Concrete, with minimum 3000 psi compressive strength at 28 days.
 - C. Curing Materials: Use products and procedures as specified in Section 03 30 00 – Cast-in-Place Concrete
- 2.3 FLAGS
- A. Flags for Flagpole: Nylon, provide one each, size 5' by 8', of United States and State of California.
- 2.4 FABRICATION
- A. Fabrication, General: Provide each flagpole as a complete unit fabricated by a single manufacturer, including base, anchorage devices, fittings, and accessories as necessary for proper installation.
 1. Fabricate flagpole and ship to site in one piece if possible.

2. If more than one piece is required, provide self-aligning internal sleeve composed of metal compatible with shaft metal.
 3. Fabricate sleeve and shaft to provide snug-fitting, weathertight, hairline field joint.
- B. Flagpole Diameter and Wall Thickness: Wall thickness of shaft and ratio of top diameter to butt diameter shall be appropriate for metal or alloy used and for length of flagpole.
- C. Flagpole Length: Provide flagpole of sufficient overall length to allow setting depth which is not less than 10 percent of exposed length.
- D. Joints and Seams: Form joints and seams which are inconspicuous. Grind exposed welds smooth. Finish welds to match flagpole shaft.

PART 3 - EXECUTION- NOT USED

END OF SECTION

DIVISION 11 – EQUIPMENT

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

11 30 13 – RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Residential-grade kitchen appliances.

PART 2 - A PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturers:
 - 1. General Electric Company (GE), Louisville, KY (800/626-2000).
 - 2. Broan-Nutone LLC, Hartford, WI (800/558-1711).
 - 3. ASKO, Inc., Richardson, TX (972/644-8595).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Amana Refrigeration, Inc., Amana, IA (319/622-5511 or 800/843-0304).
 - 2. Whirlpool Corp., Benton Harbor, MI (616/926-5000).
 - 3. Sears Contract Sales (Kenmore brand), Hoffman Estates, IL (708/286-2994).

2.2 RESIDENTIAL KITCHEN EQUIPMENT

- A. Side-by-Side Refrigerator/Freezer: GE Profile Arctica, model no. PSS29NHMWW, 28.7 cubic feet capacity, white-on-white finish.
- B. Freestanding Gas Range: GE Spectra, model no. JGBP35WEAWW, 30 inches wide, white-on-white finish.
- C. Slide-In Gas Range: GE Profile, model no. JGSP44WEYWW, 30 inches wide, white-on-white finish.
- D. Freestanding Electric Range with Convection Oven: GE Profile Spectra, model no. JBP95TFWW, 30 inches wide, white finish.
- E. Slide-In Electric Range: GE Profile, model no. JSP57WFWW, 30 inches wide, white-on-white finish.

- F. Under-Cabinet Rangehood: Broan model no. QT230WW, nominal 30 inches wide, 200 cfm vertical discharge fan, low noise design, variable speed control, ducted design, removable filters, two 40-watt lamps, white finish. Provide ducted roof penetration and hood, in compliance with requirements specified in Division 23 - Mechanical for complete, weathertight installation.
- G. Island Rangehood: Broan model no. 637004, 39-3/8 inches wide, 900 cfm centrifugal blower, free-hanging design, stainless steel construction, seamless corners, concealed three-speed control, four 20 watt halogen lamps, telescoping flue to suit ceiling condition, removable stainless steel grease filters and flue with extension cover to suit installation conditions. Provide ducted roof penetration and hood, in compliance with requirements specified in Division 23 - Mechanical for complete, weathertight installation.
- H. Accessible Undercounter Dishwasher: ASKO Model D1716, suitable for installation under accessible countertop height, quiet design, seven wash programs, six-way wash system, two wash water temperatures, white with trim package to allow plastic laminate insert to match adjacent millwork.
- I. Garbage Disposer: 3/4 hp.

PART 3 - EXECUTION – NOT USED

END OF SECTION

11 40 00 – FOOD SERVICE EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Food storage, preparation, serving and reprocessing equipment, as scheduled and indicated on Drawings.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stainless Steel: AISI Type 304, No. 4 polished finish at exposed surfaces. Provide non-magnetic sheets, free of buckles, waves, and surface imperfections.
- B. Galvanized Sheet Steel: ASTM A526, except ASTM A527 for extensive forming; ASTM A525, G90 zinc coating, chemical treatment.
- C. Sheet Steel: ASTM A569 hot-rolled carbon steel.
- D. Stainless Steel Tube: ASTM A554, Type 304 with No. 4 polished finish.
- E. Aluminum: ASTM B209 sheet and plate, ASTM B221 extrusions, 0.40-mil clear anodized finish where exposed, unless otherwise indicated.
- F. White Metal: Corrosion-resistant metal containing not less than 21 percent nickel. Make castings free from pit marks, runs, checks, burrs, and other imperfections; rough grind, polish, and buff to bright luster.
 - 1. In lieu of white metal castings, 18-8 stainless steel die-cast or stamped may be used.
- G. Plastic Laminate: NEMA LD3, general-purpose high-pressure type, 0.05-inch thick except 0.042-inch thick for flatwork and post-forming, smooth texture, and color white unless otherwise indicated.
- H. Plastic Materials and Components: Except for plastic laminate, provide plastic materials and components that comply with NSF 51.
- I. Hardwood Work Surfaces: Laminated edge-grained hard maple (*Acer saccharum*), NHLA First Grade with knots, holes, and other blemishes culled out, kiln dried at 8 percent or less moisture, waterproof glue, machined, sanded, and finished with NSF-approved oil sealer.
- J. Sound Deadening: Heavy-bodied resinous coating, filled with granulated cork or other resilient material, compounded for permanent, non-flaking adhesion to metal in 1/8-inch-thick coating. Provide coating of sound deadening material at underside of tops, drainboards, dishtables, and sinks.

- K. Sealants: ASTM C920; Type S, Grade NS, Class 25, Use NT. Provide sealant that when fully cured and washed meets requirements of Food and Drug Administration Regulation 21 CFR 177.2600 for use in areas where sealant comes in contact with food.
 - 1. Color: Clear.
 - 2. Backer Rod: Closed-cell polyethylene rod stock, larger than joint width.
 - L. Gaskets: Solid or hollow (not cellular) neoprene or PVC; light gray, minimum 40 Shore A hardness, self-adhesive or prepared for either adhesive application or mechanical anchorage.
- 2.2 FOOD SERVICE EQUIPMENT
- A. Food Service Equipment:
 - 1. Provide food service equipment and other products as indicated on the Drawings. .
 - 2. Refer to Section 01 60 00 - Product Requirements for conditions for acceptance of products by other manufacturers and for substitutions. Unless specifically noted, no substitutions will be considered.
 - B. Connection Terminals: Provide equipment complete with connection terminals as standardized by equipment manufacturers for connections to plumbing, fuel gas, steam, ventilation, electrical, and refrigeration services as specified in Division 15- Mechanical, Division 16 - Electrical, as applicable. Provide quick-disconnect connections for equipment as specified.
- 2.3 ELECTRICAL PROVISIONS
- A. Electrical Requirements: Confirm available electrical services with requirements of food service equipment, such as actual voltages available, number of phases and number of wires in the system, before submitting product data and placing orders.
 - 1. Should requirements indicated on Drawings or in Specifications be of larger sizes or higher standards than are required by manufacturer or governing authorities having jurisdiction regulations, such as conductor sizes, comply with requirements indicated on Drawings and in Specifications shall govern.
 - 2. Should requirements indicated on Drawings and in Specifications be less than as required or recommended by manufacturer or required by governing authorities having jurisdiction, comply with requirements or recommendations of manufacturer and requirements of governing authorities having jurisdiction.
 - 3. All costs for compliance with requirements of manufacturer and governing authorities having jurisdiction shall be included in Contract Sum. Rulings and interpretations of Code enforcing agencies shall be included in such requirements.
 - B. Starters, Switches and Controls: Provide starters, motor controls, switches, remote controls, and transformers as necessary.
 - 1. All switches shall be located out of the heat zone. If ambient temperature will be above 100 degrees F, provide for adequate ventilation.
 - 2. Provide electrical controls, switches or other components being furnished loose by manufacturer. Each motor driven appliance or electrical heating unit shall have a heavy duty control switch, magnetic contractor or starter.

3. Provide starters for across-the-line start, with thermal overload protection and manual overload reset. Push button stations shall be mounted in starter covers, except where necessary for starters to be mounted in a remote location.
- C. Convenience and Power Outlets: Where indicated, provide cut-outs with appropriate outlet box and device built into fabricated food service equipment, with necessary conduit extended to junction box or pull box of building electrical system specified in Division 16 - Electrical. Provide outlets devices, cover plate, and service fittings as necessary.
 1. Outlets having different voltage for single purpose applications shall be of such design that plugs on various appliances cannot be plugged into incorrect outlets.
 2. Verify matching appliance plugs with outlets as indicated on Electrical Drawings and specified in Division 16 - Electrical, including replacement of cords and plugs if necessary.
 3. Electrical outlet devices shall be NEMA Specification Grade and manufactured by Hubbell, Square D, Bryant, General Electric, Pass and Seymour, Arrowhart or equal.
- D. Cords and Plugs: Provide UL-listed cords and plugs for stock manufactured and fabricated equipment.
 1. Cords: Rubber-covered, three-wire cord of appropriate current capacity and appropriate length to suit use.
 2. Plugs: Three-prong, ground type for appropriate NEMA configuration for electrical characteristics of equipment and serving outlet.
- E. Light Fixtures: Where light fixtures are indicated as integral with equipment, provide sockets, lamps and ballasts as appropriate. For fluorescent fixtures, provide DeLuxe Warm White lamps, unless otherwise indicated.
- F. Wiring:
 1. Exposed electrical conduit in wet area applications: Except for flexible connections, provide rigid galvanized steel conduit. Thin wall conduit (EMT) shall not be used for wet areas. Exposed outlet boxes shall be cadmium-plated, cast steel with threaded hubs.
 2. Exposed flexible steel conduit on kitchen equipment: Neoprene-jacket, Seal-Tite Flex conduit, Anaconda Type UA or equal, complete with approved liquid-tight contactors on each end, designed to provide electrical grounding continuity.
 3. Wiring for built-in strip heaters and immersion type elements: In heat zone, UL-listed insulation, not less than 300 volt rated, with listed nickel wire. Extend connection wiring in raceway or conduit to junction or pull box, with not less than 600-volt rated insulated wire.
 4. Wiring for fabricated refrigerator and freezer cabinets: Provide in conduit as necessary to run from exterior junction box to internal components, and as follows.
 - a. Internal wiring shall be UL-listed, rubber-covered 600-volt rated conductor, except for door heaters which shall be chrome wire with silicone braided jacket having resistance of 10.4 watts per lineal foot.
 - b. For freezer applications, provide wiring in rigid or flexible Seal-Tite Flex or approved equal EMT.

5. Outlets: Mount all convenience outlets, lighting receptacles (rubber or porcelain) and door switches approved boxes. Convenience outlets for evaporators shall be twist lock type. Solid connections for freezer evaporators shall be vapor tight.
6. Door switches: Hinge door type switches shall be Arrowhart No. 4039 or equal. For sliding doors, provide UL-listed toggle switches.
7. Heating element controls: For fabricated equipment, such as custom fabricated plate warmers, provide heating controls as follows.
 - a. Uninsulated cabinets with or without doors: 3-level switch.
 - b. Open front cabinets with or without insulation: Variable controller.
 - c. Insulated cabinets with doors: Thermostat.

G. Circuits and Rough-In:

1. Coordinate connections to building electrical service for each appliance or device built into fabricated equipment.
2. Permanent connections to building electrical service shall be made in accordance with requirements specified in Division 16 - Electrical and comply with California Electrical Code (CEC) (NFPA 70 - National Electric Code (NEC) with State of California Amendments).
3. Make connections only at junction box, by conductors in metallic conduit. Minimum size of junction boxes (unless otherwise indicated) shall be 4-11/16-inch square and 1-1/2 inches deep, with 1/2-inch and 3/4-inch knock outs.
4. Utility chase areas accommodating junction and pull boxes shall be a minimum of 18 inches square.
5. Coordinate exact locations, types and quantities of conductors and sealing of fittings with electrical Work specified in Division 16 - Electrical.
6. In cases where equipment is directly connected, provide a length of flexible metallic neoprene jacketed Seal-Tite conduit, Anaconda Type UA or equal, from the junction box. Make input connection as short as possible, not exceeding 36 inches, and complete with approved liquid-tight connectors.
7. Provide proper and complete grounding of all metallic food service equipment.
8. Final connections of equipment to junction box and all electric Work from panel board shall be as specified in Division 16 - Electrical.

H. Internal Wiring of Fixtures and Equipment: If the design of a specific fixture calls for internal wiring of components, comply with the following.

1. Obtain and pay for all permits and fees for inspection and approval of electrical Work built into fabricated fixtures and equipment, for which a permit is required. Proof of inspection shall be attached to, and visible on, fixture.
2. Provide all internal wiring built into or forming an integral part of unit of food service fixtures and equipment completely wired to junction built into equipment, ready for final connection to building electrical system as specified above.
3. All internal wiring of fixtures and equipment shall be performed by licensed electricians.

2.4 HEATING EQUIPMENT PROVISIONS

- A. Gas Heating Appliances: All gas-operated and -heated equipment shall conform to applicable American Gas Association (AGA) standards and all requirements of governing authorities having jurisdiction.
- B. Heating Equipment Controls: Wherever gas, electric, or steam heating equipment, or thermostatic controls for equipment are indicated or necessary, provide controls complete and of materials, size, or rating as required.
- C. Cleaning Provisions: Provide heating equipment readily removable for cleaning.

2.5 MANUFACTURED PRODUCTS

- A. Manufactured Products, General: Comply with the following unless otherwise indicated.
 - 1. Unless otherwise indicated, provide manufacturer's standard materials and equipment as scheduled or otherwise identified, complete with all necessary and recommended fittings, fixtures and accessories for intended use.
 - 2. Comply with all applicable rules and regulations pertaining to adequate protection and guarding of moving parts of otherwise hazardous equipment.
 - 3. Manufactured items shall conform to applicable standards published by the National Sanitation Foundation (NSF), Ann Arbor, Michigan and all applicable local and State health regulations.
 - 4. Electric-operated and -heated equipment shall conform to standards of the National Electric Manufacturers Association (NEMA) and be listed and labeled by Underwriters Laboratories, Inc. (UL).
 - 5. Gas-burning appliances shall be manufactured in compliance with applicable standards of the American Gas Association (AGA) and bear the AGA label. Burners for gas-heated equipment shall be equipped with automatic lighters. Oven burners and other concealed burners shall have automatic safety pilots.
 - 6. Provide pressure regulators for all gas equipment as recommended by manufacturer and to suit service pressures.
- B. Refrigerator Hardware: Heavy-duty die-cast zinc, chrome-plated and polished.
 - 1. Hinges: Edge mounted, self-closing type.
 - 2. Latches: Edge mounted, arranged for locking devices.
- C. Handles and Pulls: Provide stainless steel handles with No. 4 finish, or die-cast zinc with polished chrome-plated finish. Provide die-stamped stainless steel pulls, recessed rectangular type, with beveled edge frame.
- D. Hinges: Provide stainless steel hinges, continuous type or butt type as indicated.
- E. Locks: Manufacturer's standard brass 5-pin cabinet-type lock. Provide two keys for each lock, keyed separately.
- F. Lever Drains: Provide 2-inch, heavy cast-bronze body, removable flat stainless steel strainer, twist handle waste outlet, and one-piece connected chrome-plated brass overflow.
- G. Casters: Unless otherwise indicated, heavy-duty rated casters, NSF-approved, sealed wheel and swivel ball-bearings, solid or disc wheel, with greaseproof rubber, neoprene or polyurethane tire, and bright chrome plated finish on steel.

1. Wheel diameter: 5-inch, minimum.
2. Tread width: 1-3/16-inch, minimum.
3. Capacity per caster: 250 pounds, minimum.
4. Include stainless steel rotating wheel guard.

2.6 FABRICATED FIXTURES AND EQUIPMENT

- A. Fabricated Food Service Fixtures and Equipment: Fabricate products in conformance to all applicable standards of the National Sanitation Foundation (NSF) and local and State health regulations. All fabrications shall bear NSF label.
- B. Fasteners: No exposed screw or bolt heads will be acceptable. Rivets, if specified, shall be countersunk and ground flush, and of the same material as the pieces joined together. Butt joints made by riveting straps under seams and then filled with solder will not be accepted.
- C. Rolled Edges: Approximately 1-1/2-inch diameter, with corners bullnosed, ground and polished.
- D. Corners: All dishtables, drain tables, splashbacks and turned-up edges shall have radius bends in all horizontal and vertical corners, coved at intersections. Rounded and coved corners or radius bends shall be 1/2-inch radius or larger.
- E. Metal Tops: Fabricated of 14-gauge stainless steel, with exposed edges rolled and with corners bullnosed.
 1. Where tops are adjacent to walls or adjoining equipment, turn up 6 inches and back 1 inch on 45-degree angle, unless otherwise indicated.
 2. Provide backsplashes with cove horizontal and vertical corners.
 3. Fabricate metal tops of one-piece welded construction, reinforced on underside with galvanized steel channels welded in place so tops can support heavy weights without deflection. Provide cross braces at not more than 30 inches on center.
 4. Make field joints in stainless steel tops sanitary, tight and without open seams, by means of welding or by properly designed draw fastening, trim strip, or commercial joint material to suit the purpose required.
- F. Dishtables and Drainboards: Fabricate of 14-gauge stainless steel, with exposed edges formed into 1-1/2-inch by 190-degree rolled rim approximately 3 inches high.
 1. Provide built-in pitch of 1/2-inch minimum.
 2. Provide 10-inch-high backsplashes with 2-inch return on 45-degree angle or 1-1/2-inch diameter rolled rim, as indicated.
 3. Construct front rim and backsplash on drainboards with continuous level plane with sink it adjoins.
 4. Support drainboards up to 36 inches in length by 1 inch-diameter stainless steel tube welded to underside of drainboard and leg gusset.
 5. Support drainboards 36 inches and longer with legs.
 6. Cove horizontal and vertical corners with not less than 3/4-inch radius.

- G. Framing: Mount tops on 1-1/2-inch by 1-1/2-inch by 1/8-inch galvanized angle iron, or 4-inch wide by 12-gauge galvanized channels. Mount dishtables and drainboards on 4-inch wide by 14-gauge stainless steel channels.
1. Run framework around entire perimeter of unit, and cross brace on 30-inch centers.
 2. For dishtables and drainboards, run framing from front to back at each leg location, and run additional channel lengthwise, located at center of table width and welded to leg channels.
 3. Fasten framing to underside of top surfaces with 1/4-inch studs welded at approximately 12-inch centers.
 4. Provide each stud with suitable chrome-plated lockwashers and capnuts, and make stud lengths such that cap nuts can be made up tight bringing top down snugly to framing.
- H. Legs and Cross Rails: 1-5/8-inch OD, 16 gauge stainless steel tubing unless otherwise noted.
1. Construct legs with fully-enclosed stainless steel bullet shaped adjustable foot of Type 302 or Type 304 stainless steel exterior, not less than 1-1/2 inches in diameter, threaded for adjustment of 1 inch up or down without any threads showing.
 2. Make all welds at cross rails continuous and ground smooth. Tack welds will not be acceptable.
 3. Fasten legs to 4-inch high stainless steel gusset with top completely sealed by means of stainless steel plate.
 4. Fasten legs to sinks by means of enclosed gussets welded in place, sanitary type, stainless steel, reinforced with bushings and have set screws for securing legs.
 5. Fasten legs to metal tops and dishtables with enclosed gussets, as above, welded to stainless steel channels 14 gauge or heavier.
 6. Weld gussets continuously to bottom of unit framing.
- I. Casters: Unless otherwise indicated, heavy-duty rated casters, NSF-approved, sealed wheel and swivel ball-bearings, solid or disc wheel, with greaseproof rubber, neoprene or polyurethane tire, and bright chrome plated finish on steel.
1. Wheel diameter: 5-inch, minimum.
 2. Tread width: 1-3/16-inch, minimum.
 3. Capacity per caster: 250 pounds, minimum.
 4. Include stainless steel rotating wheel guard.
- J. Cabinet Bodies: Fabricate of 18-gauge stainless steel, with end panels formed with round corners for free-standing units, and square corners for fixtures that adjoin walls or other fixtures.
1. Provide 90-degree retentions on end panels at front and rear, turned in toward body of cabinet and welded for reinforcement.
 2. For cabinets with open shelving, provide double-wall inner panels.
 3. Weld ends to horizontal angle or channel members to form integral cabinet base.

4. Provide backs of same material as ends, with vertical edges turned in to match edges of ends.
 5. Weld making flush joint.
- K. Drawers: Lift-out type drawer body, one-piece construction, die stamped of 18-gauge stainless steel, with inside radiused corners.
1. Construct front of 16-gauge die-stamped stainless steel.
 2. Size: 20 inches by 20 inches by 5 inches deep.
 3. Provide lock for each drawer.
 4. Fasten drawer suspension guides to 18-gauge stainless steel housing suspended from angle framing under fixed top.
 5. Mount drawers on fabricated 14 gauge stainless steel interlocking channel supports with large-size, quiet ball bearing wheel suspension and stops to prevent drawers from being pulled out of fixture.
 6. Construct support slides so that drawers may be pulled out minimum of two-thirds of drawer length and support heavy loads without deflection. Drawers shall be easily removable without the use of tools.
- L. Doors, General:
1. Fabricate doors of double-cased stainless steel, unless otherwise indicated, with edges formed into channel extending around all sides, forming doors 7/8-inch 3/4-inch thick.
 2. Fabricate outer pans of 18-gauge 20-gauge stainless steel with corners welded, ground smooth, and polished.
 3. Include wood fiber sound deadening material in door.
 4. Fabricate inner pans of minimum 20-gauge stainless steel, fitted tightly into outer pan.
 5. Tack-weld pans together, and solder seams.
 6. Where single pan type doors are indicated, fabricate of 18-gauge stainless steel, reinforced and stiffened with closed hat sections to prevent flexing.
- M. Sliding Doors:
1. Mount doors on large ball-bearing, quiet rollers in 14 gauge stainless overhead tracks. Provide resilient stops.
 2. Sliding doors shall be mounted on and be removable without the use of tools.
 3. Construct sliding doors to be removable without use of tools, for cleaning purposes.
 4. Provide on each door, recessed stainless steel pulls.
 5. Where indicated, provide doors with locks.
- N. Hinged Doors:
1. Mount hinged doors on stainless steel, continuous-type hinges.
 2. Construct hinged doors so that face is flush with cabinet body.
 3. Provide each door with stainless steel surface door pull and magnetic catches.
 4. Where indicated, provide doors with locks.

- O. Shelves: Constructed of 16-gauge stainless steel.
1. **Bottom Shelves:** Extend forward and turn down at front so as to be flush with front facing of cabinet.
 2. **Fixed Intermediate Shelves:** Weld to front stiles and to 14-gauge stainless steel brackets so that shelf is 1 inch away from back and ends of cabinet.
 3. **Adjustable Shelves:** Channel on all 4 sides, weld corners, and mount on removable stainless steel standards.
 4. In fixtures with enclosed bases, provide shelves turned up at back and sides and feathered slightly to insure a tight fit to enclosure panels.
 5. In fixtures with open bases, provide shelves notched a full 90 degrees and welded tightly to legs, with tight joints at all intersections of shelf and leg.
- P. Open Base Shelving: Constructed of 14-gauge stainless steel with edges rolled down on open sides, and 2-inch turn-up with 3/4-inch radius on rear and ends where adjacent to walls and other equipment.
1. Neatly notch corners and weld to legs.
 2. Reinforce shelving longitudinally with 14-gauge formed channel welded to underside.
 3. Construct removable shelves as above, but fit over cross rails.
 4. Do not exceed shelving sections of 30 inches long; where one section abuts another, turn down edges 1 inch.
- Q. Wall Shelves: Constructed of 14-gauge stainless steel with 1-1/2-inch roll on front and exposed ends, and with 2-inch turn-up on back and ends where adjacent to walls or other fixtures.
1. Weld all corners.
 2. Construct wall brackets of 14-gauge stainless steel with 1-1/2-inch flange at wall and completely welded to underside of shelf.
 3. Fasten each bracket to wall with minimum of two 1/2-inch bolts anchored to wall.
 4. Fasten shelf to wall bracket by means of studs welded to shelf, and secure with lockwasher and chrome-plated cap nuts.
 5. Install so that shelf sets 1-1/2-inch away from wall.
- R. Overshelves: Set shelves mounted over equipment not adjacent to walls on 1 inch by 14-gauge stainless steel tubular standards fitted with stainless steel base flanges.
1. Completely weld top of tubular standards to 14-gauge stainless support channels, run channels full width of overshelf.
 2. Run 1/2-inch steel tension rods through counter-tops and reinforcing angle framing, secure with nuts and lockwashers to assure stable sway-free structure.
 3. Where shelves are mounted over drainboards or dishtables, mount on upturned rolled edges omitting flanges, and scribe lower end of tube to match contour of roll.
- S. Sinks: Fabricate from 14-gauge stainless steel, with interior corners rounded to 1 inch radius, both horizontally and vertically, forming cove in bottom.

1. Inset sink in stainless steel countertops, with butt-edge joints welded, ground smooth and polished so joint is imperceptible.
2. Finish sinks to match stainless steel top. Where sink bowls are exposed below countertop, finish sink exterior match top.
3. Divide multiple compartment sinks with double-wall, 14-gauge stainless steel partitions rounded to 1/2-inch radius on top and having corners rounded same as other corners in sinks. Provide multiple compartment sinks with continuous face at exposed front.
4. Provide back, bottom, and front of one continuous piece with no overlapping joints or open spaces between compartments.
5. Pitch bottom of each compartment, and crease to die-stamped recess to receive lever-type drain, without use of solder, rivets, or welding.
6. Finish front and exposed ends of sink countertop with 1-1/2-inch, 190-degree rolled edge.
7. Finish back and ends adjacent to walls or other fixtures with splashback.
8. Punch splashback to receive wall-mounted faucets.
9. For sinks in worktops, construct as above but omit roll edges and splashbacks. Fabricate bowl to be flush with work surface.

T. Drains, Wastes and Faucets:

1. Provide 3-1/2-inch crumb cup waste outlets in all die-drawn inset type sinks.
2. Provide all other custom fabricated sinks with rotary type waste outlets, without connected overflows, as manufactured by Atlantic Brass Works, Inc., or Fisher Brass Foundry., or equal. Valves shall be 2-inch size with 1-1/2-inch threaded adapter, unless otherwise indicated.
3. Faucets: As scheduled, as manufactured by Fisher, T & S, or Chicago, or equal.
4. Dipperwells: Fisher Model 3041, or equal.

U. Formed stainless steel, at all fixtures, splashbacks and shelves, to close and finish entire rear or ends flush to walls or adjoining fixtures.

2.7 FABRICATED EXHAUST HOODS

1. Fabricated Exhaust Hoods: Comply with NFPA 96, including Appendix A.
2. Grease Removal: Provide removable grease filters, with drip-channel gutters, drains, and collection basins.
3. Light Fixtures: Provide incandescent fixtures, with vapor-tight sealed lens, and stainless steel conduit where exposed for wiring.
4. Exhaust Duct: Stainless steel with finish to match hood finish where exposed; galvanized steel where concealed.

PART 3 - EXECUTION- NOT USED

END OF SECTION

11 51 00 – LIBRARY EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Book detection system, complete with detection strips.
- B. Express self-service check-out station system.
- C. Under cabinetry depressible book truck.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: 3M Library Systems (1-800-328-0067).
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

2.2 LIBRARY MATERIALS FLOW MANAGEMENT SYSTEM

- A. Library Materials Flow Management System: 3M Library Security System, consisting of detection system, staff workstation, resensitizing and desensitizing accessories, selfcheck system, print staff workstation, resensitizing and desensitizing accessories, selfcheck system, print media security strips, CD strips with overlays and magnetic media strips with cover-up labels.
 - 1. Detection unit: Model 3501 detection unit, 36-inch single-corridor, buried-cable installation. Provide 2 units.
 - 2. Staff workstation: Model 995 staff workstation, in-counter installation. Provide 2 units.
 - 3. Resensitizer:
 - a. Model 764 print media resensitizer. Provide 2 units.
 - b. Model 2011 magnetic media resensitizer. Provide 2 units.
 - 4. Desensitizers:
 - a. Model 930 print media desensitizer. Provide 4 units.
 - b. Model 763 magnetic media desensitizer. Provide 4 units.
 - 5. Security strips: Multi-media security strips with overlays and cover-up labels, as needed. Provide County with 82,000 strips as follows, unless informed otherwise.

- a. B2 print media detection strips: Provide 70,000 each.
 - b. DCD-2 strips with overlays for CD's and CDROM's: Provide 4,000 each.
 - c. DVM-1 strips with cover-up labels for videocassettes: Provide 3,000 each.
 - d. DAC-1 strips with cover-up labels for audiocassettes: Provide 5,000 each.
6. Self-service, check-out station: Model 6210 selfcheck system with integrated print media, CD and video checkout; two languages, with option for a third and fourth language; state-of-the-art laser scanner with visible scan line to help patrons orient items correctly; intuitive graphical user interface; LCD color monitor; integrated receipt thermal printer; TCP/IP or serial connection; audible signals; multiple-book and item-substitution detection and 3M internal software.

2.3 PROGRAMMABLE DETECTION STRIPS

A. Programmable Detection Strips: Detection Strips shall meet the following criteria:

1. Length shall not be less than 6-1/2 inches. Thickness of the strip with adhesive shall not exceed .014-inch. To facilitate easy insertion, width shall not exceed 0.17-inch nor be less than 0.12-inch.
2. The detection strips shall be one-piece, flexible, thin non-rusting nickel cobalt polynoid metallic alloy coated with an adhesive film. The film shall not discolor or lose its adhesive or cohesive strength with age. The strips shall require no moisture, heat, or additional glue or adhesive for affixing to the spine or between pages of a book or periodical. They must be capable of protecting books, periodicals or pamphlets.
3. The strip shall be completely concealable when placed in printed materials in the library collection. It shall not be obvious by its presence or absence in a book or periodical. Its concealability in library materials shall not be dependent upon use of "add-on" or "cover-" items such as book pockets, end papers, dust cover flaps or tip-in process. The system shall not require the use of aluminum foil or de-tuner inserts to shield the strip signal of properly charged out library materials.
4. The strip shall not lose its sensitivity or a portion of its sensitivity due to normal environmental surroundings in the library. Strip status reliability shall be such that it is unaltered by equipment other than the book check unit. The strip shall not be vulnerable to compromise by electrical tools, coils, etc. Status of the strip shall not be affected by a magnetic field or up to 80 oersteds either AC or DC. Strip shall not be sensitized or desensitized by its proximity to a detection system lattice.
5. Programmable strips shall utilize keepers of a non-rusting alloy which make the strip dual status. Strips shall not rust, bleed or discolor library materials.

2.4 SENSING UNIT - DETECTION MONITORS

- A. System Description: The System shall use a magnetic detection principle to control the passage of sensitized library materials through the inspection area, or detection device. Existing patrons shall activate the detection system by interrupting the photo cell light beam. Exiting patrons cannot defeat the system simply by avoiding interrogation.
- B. Alarm: When sensitized library materials are detected, an audible alarm shall sound.

2.5 SENSITIZER/DESENSITIZER (FOR FULL CIRCULATION SYSTEM)

- A. Sensitizer/Desensitizer Units: Units shall provide magnetic fields with sufficient strength and wave shape to be able to fully magnetize and completely demagnetize keeper elements on the strips. The coercive field of these keeper elements shall be 180 - 230 oersteds.
- B. Equipment and Material Control: All equipment and materials used to properly circulate library books to patrons/students must be maintained within the library proper and in control of the library staff at all times.
- C. Criteria: Sensitizer/Desensitizer shall meet either or both of the following specifications:
 - 1. Provide resensitizer unit:
 - a. Resensitizer unit shall be portable for use at circulation desk, at book return area or on portable truck for use anywhere in Library.
 - b. Each resensitizer unit shall resensitize strips in spine or between pages of library materials regardless of thickness, length or size of library materials.
 - 2. Provide desensitizer unit:
 - a. Desensitizer unit shall be portable for use at circulation desk, at book return area or on portable truck for use anywhere in Library.
 - b. Each unit shall desensitize strips in spine or between pages of library materials regardless of thickness, length or size of library materials.

2.6 WALL-MOUNTED BOOK RETURN FACEPLATE

- A. Wall-Mounted Book Return Faceplate: Provide one wall-mounted book return faceplate and chute as manufactured by Kinsley Companies (800/376-7209), Model #0019, or approved equal. Color and finish shall be as indicated on the Drawings.

2.7 BOOK CARTS

- A. Depressible Book Cart (Exterior Book Returns): Provide four depression book carts as manufactured by Kingsley Companies (800/376-7209), Model #0240, or approved equal. Cart shall have capacity of 150 to 200 books, with heavy duty casters and foot brakes. Color and finish shall be as indicated on the Drawings.
- B. Depressible Book Cart (Interior Book Return): Provide two depressible book carts as Continuum - 6E Series catalog # 60-915, depressible book trucks manufactured by Kingsley Companies (800/376-7209), Model #0230, or approved equal.

PART 3 - EXECUTION – NOT USED

END OF SECTION

11 51 23 – LIBRARY STACK SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Library shelving systems.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Sheet Steel: ASTM A 366 (ASTM A 366M), cold-rolled carbon steel sheet, commercial quality, stretcher leveled, Class 1, matte finish. Provide in minimum gauges as specified below by component.
- B. Plastic Laminate: NEMA LD-3, high-pressure, decorative laminate, Grade GP-50 0.050-inch thick.
 - 1. Horizontal surfaces: NEMA General Purpose Type, nominal 0.050-inch thick.
 - 2. Vertical surfaces: NEMA Vertical Surface Type, nominal 0.028-inch thick.
- C. Fasteners: Cadmium-plated or zinc plated steel, size and grade as determined by manufacturer to suit loads and Project conditions.

2.2 LIBRARY SHELVING SYSTEMS

- A. Acceptable Manufacturers: Products of the manufacturers listed below, which comply with specified requirements, will be acceptable. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Montel Aetnastak, Inc., Melbourne, FL (407/726-9777 or 800/772-7562).
 - 2. Burroughs Manufacturing Company.
 - 3. M.J. Industries.
- B. Library Shelving Systems: Single-unit welded frame type where adjustable shelves of varying types are cantilevered from central upright columns. Units shall not require starter or adder units or case-type shelving.
 - 1. Provide metal library bookshelf systems which use unitized construction, such that an individual bookshelf unit or shelf can be removed from range without disturbing or altering stability of adjacent units.
 - 2. Provide shelving and base units in sizes as indicated on the Drawings or, if not indicated, provide units of standard 36-inch nominal width, for nominal 12-inch deep

shelves in nominal 13-1/2-inch deep base. Provide shelving unit height as indicated on the Drawings.

3. Shelf heights adjustable in 1 inch increments; components, joints, and shelves designed to withstand most severe possible book loading condition with normal factor of safety.
4. Shelf Quantities: Except where other shelf arrangements are shown or scheduled, provide the following number of adjustable bracketed shelves for each face of each unit.
 - a. Ceiling high units: 7 shelves (plus base).
 - b. 90-inch high units: 6 shelves (plus base).
 - c. 66-inch high units: 4 shelves (plus base).
 - d. 42-inch high units: 2 shelves (plus base).
- C. Upright Posts: Tubular or back-to-back channel design; size, gauge, and reinforcement as required for loading, but not less than 16 gauge. Perforate each post full height on both faces with a row of slots spaced as specified for shelving adjustments. Provide two upright posts for each shelving section of a range, to provide modular shelving.
- D. Bottom Spreader: 16 gauge, minimum, channel shape, minimum 1 inch by 1-3/4 inches, welded to upright post.
- E. Top Spreader: 16 gauge, minimum, tubular fanned shape with minimum 1 inch by 2-inch cross-section.
- F. Base Brackets: 16 gauge, minimum, with 90-degree flange formed at bottom. Provide adjustable leveling device at each corner of unit with resilient pad or metal glide for carpeted areas. Profile of shelf bracket shall be similar to shelf end bracket with all edges flanged 1/4-inch at 90-degrees.
- G. Closed Base Shelves: Formed of not less than 19 gauge steel into one-piece construction. Front height shall not exceed 3 inches; open ends shall have stiffening flanges. Shelf shall be notched to fit around upright columns and base brackets without fasteners.
- H. Shelf End Brackets: Designed with 15-degree sloped front edge and shall be formed of not less than 16 gauge steel with top, front and bottom edges flanged out 1/4-inch on a 90-degree bend with two hooks and positioning tab. Brackets shall be designed for easy shelf relocation without disturbing adjacent shelves.
- I. Adjustable Shelves: Formed of not less than 19 gauge steel, with front and rear edges formed 3/4-inch high and box formed with minimum 90-degree bends with provisions to receive wire book supports and label holders.
 1. Adjustable integral back shelves shall be formed with front face formed 3/4-inch high and box formed with no less than four 90-degree bends (down 3/4-inch, return 1/2-inch, return 3/4-inch, and return 1/4-inch). Rear of shelf shall be formed up 1-3/8-inch high with a 5/16-inch return forming a rail that will receive a sliding book support.
 2. Shelving shall present a smooth, closed appearance on both faces, inside as well as outside, with all sharp edges eliminated, yet so arranged as to receive book supports and label holders.
 3. Adjustable book shelves shall be designed for book loads of 50 pounds per square foot, with deflection not exceeding 3/16-inch.

- J. Backstops: Formed of 20 gauge steel, 3 inches high with return stiffening flanges and hooks for engaging upright post slots. Backstop shall be independent of shelves and brackets.
- K. End Panels: 1-3/16-inch thick wood particleboard, with high pressure plastic laminate on front, back and all edges. Panels shall extend full height and width of shelving units and shall cover all metal parts when viewed from outside face of end panel.
 - 1. End panels shall be sized to suit various shelving depths indicated, with minimum width 1/2-inch greater than largest dimension of shelf or base width, whichever is greater.
 - 2. Provide single end panels for full width of shelving unit.
- L. Top Canopies: Formed of not less than 18 gauge steel, with minimum 1-1/2-inch front edge. Canopies shall extend full width and depth of the unit base and shall be supported by 12 gauge brackets fastened to or engaged with the frame uprights. Provide top canopies at all bookshelves unless otherwise indicated.
- M. Accessories:
 - 1. Wire Book Supports: 0.235-inch diameter, zinc plated tempered steel mounted in formed ABS clips, black color, nominal 1-3/4-inch long by nominal 1-1/4-inch high, with molded rectangular clip which engages into rear of adjustable integral back shelf. Wire shall be and shall extend 7-1/2 inches over the shelf to support books. Provide two per shelf.
 - 2. Filler assemblies: Painted steel, to match bookshelf units, forme to completely fill spaces between shelving assemblies and walls. Provide corner fillers at all corners with shelves at 90 degrees to each other.
 - 3. Label holders: Extruded clear plastic, relocatable, to clip under lip of face of shelf, sized to hold 5/8-inch by 5-inch card. Provide one label holder per 36-inch shelving unit.
- N. Plastic Laminate Finish: Satin, color as indicated on the Drawings or, if not indicated, as selected by Architect from full range of available solid colors by one of the following manufacturers:
 - 1. Formica: Formica Corporation, Cincinnati, OH (513/786-3400 or 800/367-6422).
 - 2. Laminart: Laminart, Elk Grove Village, IL (708/860-4300 or 800/323-7624).
 - 3. Micarta: Westinghouse Specialty Materials, Hampton, SC (803/943-2311 or 800/845-4793).
 - 4. Nevamar: Nevamar Corp., Odenton, MD (410/551-5000).
 - 5. Pionite: Pioneer Plastics Corp., Auburn, ME (207/784-9111 or 800/777-9113).
 - 6. WilsonArt: WilsonArt International, Temple, TX (817/778-2711 or 800/433-3222; local distributor, Santa Fe Springs, CA, 213/771-8141, 310/921-7426 or 714/523-1200).
- O. Metal Finish: Manufacturer's standard electrostatically-applied, thermosetting enamel finish, minimum of 14 mils dry film thickness. Color shall be black.

PART 3 - EXECUTION– NOT USED

END OF SECTION

11 52 13 – PROJECTION SCREENS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Wall-mounted, manual roll-down front projection screen.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Da-Lite Screen Company, Inc., Warsaw, IN (219/267-8101 or 800/622-3737; local representative, Anaheim, CA, 714/520-9599 or 800/622-3737).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Draper Shade and Screen Company, Inc., Spiceland, IN (317/987-7999).
 - 2. Bretford Manufacturing, Inc., Franklin Park, IL (847/678-2545 or 800/343-1779).

2.2 PROJECTION SCREENS

- A. Manual Roll-Down Projection Screens: Da-Lite Model C Roller-Type Screen, with CSR (Controlled Screen Return) feature.
- B. Screen Size: Standard format, 70 inches high by 70 inches wide.
- C. Viewing Surface: Glass bead coated, optical-quality flexible fabric, with standard black masking borders, with black extra drop fabric, fire retardant and mildew resistant.
- D. Roller: 3-inch diameter rigid steel spring roller.
- E. Case: 22 gauge steel enclosure.
- F. Brackets: Da-Lite Model No. 11 Extension Bracket, 10-inch by 14-inch legs for 10- or 14-inch installation of screen from wall.
- G. Fire Rating: Screens shall be UL listed as fire retardant in accordance with all applicable Codes, ordinances and standards, and shall be listed by the State Fire Marshal for use in schools.

PART 3 - EXECUTION – NOT USED

END OF SECTION

11 53 13– LABORATORY FUME HOODS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Laboratory chemical fume hoods.
- B. Piping and wiring within fume hoods for service fittings, light fixtures, blower switches, and other electrical devices.

1.3 SOURCE QUALITY CONTROL

- A. Source Quality Control: Demonstrate fume hood performance before shipment by testing one fume hood for each type required, according to ASHRAE 110. Provide testing facility, instruments, equipment, and materials needed for tests.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Kewaunee Scientific Corp., Statesville, NC (704/873-7202).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Collegedale Casework, LLC, Collegedale, TN (423/238-4131).
 - 2. Fisher Hamilton L.L.C., Two Rivers, WI (920/793-1121).

2.2 MATERIALS

- A. Steel Sheet: Cold-rolled commercial steel sheet, complying with ASTM A 1008/A 1008M; matte finish; suitable for exposed applications.
- B. Stainless-Steel Sheet: ASTM A 666, Type 304; stretcher-leveled standard of flatness.
- C. Glass-Fiber-Reinforced Polyester: Polyester laminate complying with ASTM D 4357, with a chemical-resistant gel coat on the exposed face, and having a flame-spread index of 25 or less per ASTM E 84.
- D. Glass-Fiber Cement Board: ASTM C 1186.
- E. Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality q3.

- F. Laminated Safety Glass: ASTM C 1172, Kind LT, Condition A, Type I, Class I, Quality q3 with clear, polyvinyl butyral interlayer.
- G. Fasteners: Provide stainless-steel fasteners where exposed to fumes.

2.3 RESTRICTED BYPASS FUME HOODS

- A. Restricted Bypass Fume Hoods: A-Airflow Supreme-Kemliner manufactured by Kewaunee Scientific Corp.
 - 1. Provide fume hoods with partial compensating bypass above sash, which opens after sash is closed to less than 40 percent open.
 - 2. Design partial bypass to maintain sufficient exhaust air volume through hood to adequately dilute hazardous fumes regardless of sash position.
- B. Variable-Air-Volume Control: Equip fume hoods with electronic control unit with a sensing device that monitors face velocity, and a motorized damper on the exhaust connection that maintains a constant face velocity by controlling air volume in response to control unit. Equip units with manual override switch that opens motorized damper to provide maximum exhaust capacity regardless of sash position.
 - 1. Provide electronic control unit that also monitors sash position and anticipates changes in face velocity caused by abrupt changes in sash position.
 - 2. Provide output transmitter on electronic control unit that produces 0- to 10-V dc signal proportional to fume hood exhaust volume for interface with building's HVAC control system.

2.4 FABRICATION

- A. Fabrication, General: Preassemble fume hoods in factory to greatest extent possible. Disassemble fume hoods only as necessary for shipping and handling limitations. Fume hoods shall be capable of being partly disassembled as necessary to permit movement through a 35-by-79-inch (889-by-2007-mm) door opening.
- B. Steel Exterior: Fabricate from steel sheet, not less than 0.0478-inch thick, with component parts screwed together to allow removal of end panels, front fascia, and airfoil and to allow access to plumbing lines and service fittings. Apply chemical-resistant finish to interior and exterior surfaces of component parts before assembly.
- C. Ends: Fabricate with double-wall end panels without projecting corner posts or other obstructions to interfere with smooth, even airflow. Close area between double walls at front of fume hood and as needed to house sash counterbalance weights, utility lines, and remote-control valves.
- D. Tops and Sides: Splay top and sides of face opening to provide an aerodynamic shape to ensure smooth, even flow of air into fume hood.
- E. Interior Lining: Provide steel sheet, not less than 0.0428-inch thick, with white epoxy coating.
- F. Lining Assembly: Unless otherwise indicated, assemble with stainless-steel fasteners or epoxy adhesive, concealed where possible. Seal joints by filling with chemical-resistant sealant during assembly.

1. Fasten lining components to a rigid frame assembly fabricated from stainless steel and to which exterior panels are attached.
 2. Punch fume hood lining side panels to receive service fittings and remote controls. Provide removable plug buttons for holes not used for indicated fittings.
- G. Rear Baffle: Provide baffle, of same material as fume hood lining, at rear of hood with openings at top and bottom for airflow through hood. Secure baffle to cleats at rear of hood with stainless-steel screws. Fabricate baffle for easy removal for cleaning behind baffle.
1. Provide preset baffles, unless otherwise indicated.
- H. Exhaust Plenum: Full width of fume hood and with adequate volume to provide uniform airflow from hood, of same material as hood lining, and with duct stub for exhaust connection.
1. Duct-Stub Material: Epoxy-coated steel, or stainless steel, unless otherwise indicated.
 2. Duct-Stub Material for Radioisotope Hoods: Stainless steel.
- I. Bypass Grilles: Provide grilles at bypass openings of bypass and restricted bypass fume hoods.
- J. Sashes: Provide operable sashes of type indicated.
1. Fabricate from 0.0478-inch minimum thickness steel sheet, with chemical-resistant finish. Form into four-sided frame with bottom corners welded and finished smooth. Make top member removable for glazing replacement. Set glazing in chemical-resistant, U-shaped gaskets.
 2. Glaze with laminated safety glass, with 3-mm-thick plies.
 3. Counterbalance vertical sliding sash with sash weight and stainless-steel cable system. Provide ball-bearing sheaves, plastic glides in stainless-steel guides, and stainless-steel lift handles. Provide rubber bumpers at top and bottom of each sash unit.
 4. Provide sash opening height of 27 to 30 inches, unless otherwise indicated.
- K. Airfoil: Provide airfoil at bottom of sash opening to direct airflow across countertop from 1 inch space between airfoil and countertop.
1. Fabricate airfoil from stainless steel coated with PTFE or PVDF.
- L. Light Fixtures: Provide vaporproof, two-tube, rapid-start, fluorescent light fixtures, of longest practicable length; complete with tubes at each fume hood. Shield tubes from hood interior with 1/4-inch-thick laminated glass, sealed into hood with chemical-resistant rubber gaskets. Provide units with fluorescent tubes easily replaceable from outside of fume hood.
1. Provide fluorescent tubes with color temperature of 3500 K and minimum color-rendering index of 85.
 2. Provide vaporproof, acid-resistant, incandescent light fixtures complete with 100-W, Type A, long life bulbs instead of fluorescent fixtures at radioisotope fume hoods. Provide 2 fixtures for hoods up to 60 inches long and 1 fixture for each 24 inches of length for longer hoods.
- M. Base Cabinets: As specified in Section 12 35 53 Laboratory Casework.
- N. Countertops: Epoxy composition countertops as specified in Section 12 36 53 - Laboratory Countertops.

- O. Filler Strips: Provide as needed to close spaces between fume hoods and adjacent casework and building construction. Fabricate from same material and with same finish as fume hoods.
- P. Piping and Prewiring: Comply with requirements in Divisions 22, 23 and 26 Sections for installing water and laboratory gas service fittings, piping, electrical devices, and wiring. Install according to reviewed shop drawings. Securely anchor fittings, piping, and conduit to fume hoods, unless otherwise indicated.

2.5 CHEMICAL-RESISTANT FINISH

- A. Preparation: Clean steel surfaces, other than stainless steel, of mill scale, rust, oil, and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
- B. Chemical-Resistant Finish: Immediately after cleaning and pretreating, apply fume hood manufacturer's standard two-coat, chemical-resistant, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.
 - 1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.
 - 2. Fume Hood Finish: as indicated on the Drawings.

2.6 ACCESSORIES

- A. Service Fittings: Comply with requirements as specified in Section 12 36 53 - Laboratory Countertops. Provide service fittings with exposed surfaces, including fittings, escutcheons, and trim, finished with acid- and solvent-resistant, baked-on plastic coating in manufacturer's standard color as approved by Architect.
- B. Airflow Indicator: Provide fume hoods with thermal anemometer that measures fume hood face velocity and displays data as digital readout.
- C. Airflow Alarm: Provide fume hoods with audible and visual alarm that activates when airflow sensor reading is outside of preset range.
 - 1. Provide with thermal-anemometer airflow sensor.
 - 2. Provide with test switch.
 - 3. Provide with switch that silences audible alarm and automatically resets when airflow returns to within preset range.
- D. Sash Alarm: Provide fume hoods with audible and visual alarm that activates when sash is opened beyond preset position.
 - 1. Provide with silence and test switches.
- E. Sash Stops: Provide fume hoods with sash stops to limit hood opening to 50 percent of sash height. Sash stops can be manually released to open sash fully for cleaning fume hood and for placing large apparatus within fume hood.
- F. Bypass Grille Blank-off Panel: Provide fume hoods with blank-off panel on bypass grille designed for use with sash stops to reduce exhaust air volume and provide design face velocity with sash at 50 percent open position.

PART 3 - EXECUTION – NOT USED

END OF SECTION

11 66 23 – GYMNASIUM EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Gymnasium basketball backstops.
- B. Gymnasium divider curtains.
- C. Volleyball nets and accessories.
- D. Gymnasium wall pads.
- E. Electronic scoreboards and shot timers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturers:
 - 1. Backstops, divider curtains, volleyball net systems and wall pads: Porter Athletic Equipment Company, Broadview, IL (708/338-2000 or 800/947-6783).
 - 2. Scoreboards and shot timers: Trans-Lux Fair-Play, Inc., Des Moines, IA (515/265-5305 or 800/247-0265).
- B. Acceptable Manufacturers: As listed below. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
 - 1. Backstops, divider curtains, volleyball net systems and wall pads:
 - a. ADP Lemco, Inc., West Jordan, UT (801/280-4000 or 800/575-3626).
 - b. Draper, Inc., Spiceland, IN (765/987-7999 or 800/238-7999).
 - c. Performance Sports Systems, Inc., Pendleton, IN (765/778-3110 or 800/848-8034).
 - 2. Scoreboards and shot timers:
 - a. Nevco Scoreboard Company, Greenville, IL (618/664-0360).
 - b. Daktronics, Inc., Brookings, SD (605/697-4000 or 800/843-9878).

2.2 GYMNASIUM BASKETBALL BACKSTOPS, MAIN COURTS

- A. Gymnasium Basketball Backstops, Main Courts: Porter No. 950, front-braced/forward-fold structure, overhead supported backstop with fully-welded vertical front frame assembly.

1. Frame assembly shall consist of main center mast of 6-5/8-inch O.D. heavy wall structural steel tube with diagonal side sway braces of 2-1/2-inch by 1-1/2-inch structural tube.
 2. Top horizontal mast hinge spreader shall be constructed of heavy 4-inch structural channel to form rigid back-to-back triangle design.
 3. Backstop shall be supported from 3-1/2-inch O.D. pipe anchored to overhead framing members by means of heavy formed steel support fittings. Superstructure pipes shall be reinforced with bridging or bracing when truss centers exceed spans of 14'-0". All pipe ends when exposed shall be capped.
 4. Goal shall mount directly through backboard and into a heavy structural steel weldment ("Center-Strut").
 5. Center-Strut shall be clamped to the vertical 6-5/8-inch O.D. center support to eliminate strain on backboard. This direct-mount feature shall conform to the NCAA unit design recommendation minimizing stress on backboard.
 6. Assembly shall be factory primed and field finish painted as specified in Section 09 90 00 – Painting and Coating. Finish color shall be as indicated on the Drawings.
- B. Frame Assembly: Main frame assembly shall be suspended by adjustable hangers (with 2 inches of vertical adjustment) to provide for precise plumbing of frame during installation.
1. Support hangers shall be offset 2 inches from center line of main center mast to properly weight lock unit in playing position.
 2. Frame assembly shall be factory primed and field finish painted as specified in Section 09 90 00 – Painting and Coating. Finish color shall be as indicated on the Drawings.
- C. Backboard: Porter No. 00208-000 rectangular shape, 72 inches wide by 42 inches high, 1/2-inch thick clear tempered glass cushioned in unitized steel tubing frame with glare free aluminum perimeter.
1. Provide standard white borders and target area, fired permanently into glass.
 2. Provide manufacturer's Limited Lifetime Warranty against breakage.
 3. Backstop shall operate with 1-7/8-inch O.D. front brace assembly with folding knee joint. Knee joint shall lock backboard into playing position, by means of a torsion spring within the hinge assembly. Hoist cable shall disengage knee joint allowing front brace to fold easily.
- D. Basketball Goals: Porter No. 00245-500 Ultra-Flex Goal, incorporating positive-lock, pressure-release mechanism to automatically release and pivot goal downward when static force of 230 pounds is placed on top of goal ring at point most distant from backboard, in compliance with latest NBA, NCAA, NFSHSA, and FIBA specifications for movable goals. Breakaway goals with plastic pivot bearings will not be acceptable.
1. Goal shall be spring-loaded to automatically and instantaneously return to playing position.
 2. Pressure release mechanism shall be preset at factory with capability for field adjustment to comply with NCAA recommendation to test goals for rebound elasticity.
 3. Pressure release adjustment shall be accomplished without removing mechanism cover.

4. Rim shall be rigidly braced by means of 3/16-inch thick steel formed and die cut steel brace welded in position on underside of rim for maximum support.
5. Rim shall attach directly to "Center-Strut" of backstop.
6. Rim shall be provided with unique "tube-tie" net attachment system to eliminate conventional wire-formed type net locks.
7. Goal shall be easily mounted to backboard with special slotted direct mounting system without removing housing cover.
8. Goal shall be finished in durable official orange powder coat.
9. Provide one nylon anti-whip net with each goal.
- E. Backboard Padding: Porter No. 326 Pro Pad Bolt-On Backboard Padding, along bottom of backboard and up 15 inches on each side meeting NCAA/NFSHSA rules.
 1. Pads shall be 2 inches thick molded form 9 lb. density polyurethane foam with integral skin.
 2. Provide color as selected by Architect from manufacturer's standard colors.
 3. Provide manufacturer's 8 year warranty.
- F. Operator: Remote-controlled, heavy-duty electric winch, designed to hold units at any position when raising or lowering.
 1. Units shall be individually operated by 1/2 hp (9 amp) capacitor type, 60 Hz, 115 VAC single phase electric motor with automatic thermal overload protection manufactured to NEMA specifications.
 2. Winch shall include fully-enclosed gear set. Gear set shall be set in oil bath and sealed at factory to eliminate need for lubrication. The gear shaft shall connect directly to drum hoist without use of chain.
 3. Electric winch shall incorporate a special rotary limit switch.
 4. Provide hoist cable of sufficient length and 1/4-inch diameter, galvanized aircraft type (minimum of 7,000 pounds, ultimate).
- G. Safety Lock: Porter No. 10797-100 Saf-Strap lock, for protection against possibility of folding backstop accidentally falling during raising or lowering cycle or in storage.
 1. Unit shall not be affected by impact of basketballs and other objects.
 2. Lock shall be inertia-sensitive to automatically lock basketball backstop in position at any time in storage or during raising or lowering cycle due to sudden surge of speed created by possible malfunction of hoisting apparatus.
 3. Unit shall incorporate fully-automatic reset requiring no poles, ropes, levers or buttons.
- H. Retractor Reel: Porter No. 798, for retract both hoist cable and safety lock strap from play area when backstop is in down position.
- I. Backstop Operating Control: All backstops shall operate from Gymnasium Control Center, specified below.

2.3 GYMNASIUM BASKETBALL BACKSTOPS, OUTSIDE PRACTICE COURTS

- A. Gymnasium Basketball Backstops, Outside Practice Courts: Porter No. 923 Series Backward Fold overhead supported backstop.
 - 1. Frame assembly shall be fully-welded vertical front frame assembly, consisting of main center mast of 6-5/8-inch O.D. heavy-wall structural steel tube with diagonal side sway braces of 2-1/2-inch by 1-1/2-inch structural tube.
 - 2. Top horizontal mast hinge spreader shall be fabricated of heavy 4-inch structural steel channel to form rigid back-to-back triangle design.
 - 3. Backstop shall be supported from 3-1/2-inch O.D. pipe anchored to overhead framing members by means of heavy formed steel support fittings.
 - 4. Superstructure pipes shall be reinforced with bridging or bracing when truss centers exceed spans of 14'-0". All pipe ends when exposed shall be capped.
 - 5. Goal shall mount directly through backboard into heavy structural steel weldment ("Center-Strut"). Center-Strut shall be clamped to vertical 6-5/8-inch O.D. center support to eliminate strain on backboard, in conformance to NCAA unit design recommendation, minimizing stress on backboard.
 - 6. Assembly shall be factory primed and field finish painted as specified in Section 09 90 00 – Painting and Coating. Finish color shall be as indicated on the Drawings.
- B. Frame Assembly: Main frame assembly shall be suspended by adjustable hangers (with 2 inches of vertical adjustment) to provide for precise plumbing of frame during installation.
 - 1. Support hangers shall be offset 2 inches from center line of main center mast to properly weight lock unit in playing position.
 - 2. Frame assembly shall be factory primed and field finish painted as specified in Section 09 90 00 – Painting and Coating. Finish color shall be as indicated on the Drawings.
- C. Backstop: Porter No. 228-300 Dura-Lam rectangular wood backboard, 72 inches by 42 inches by 1-9/16 inches thick, high-density wood composite core with 1/32-inch thick, smooth, satin-finished white polyethylene faces laminated to front and backside, with regulation perimeter striping and target markings in official orange as an integral part of the laminate on playing face of backboard.
 - 1. Wood core shall be 1-1/2 inches thick, 55 lb./cf density particle board.
 - 2. Provide threaded inserts (3/8" - 16) on backside for mounting.
- D. Basketball Goals: Porter No. 00225-000 Super Goal, fabricated from 5/8-inch diameter high strength cold drawn alloy steel.
 - 1. Rim shall be rigidly braced by means of a 5/8-inch diameter cold-drawn alloy steel, round formed and welded in position for maximum support.
 - 2. Goal assembly shall be capable of supporting up to 800 pound load on outer edge of rim and under extreme dynamic loading shall flex downward up to 2-3/4 inches without permanent set or deformation.
 - 3. Goal shall be finished in durable official orange powder coat finish.
 - 4. Provide plated mounting hardware.
 - 5. Provide one high-quality braided white cotton net with each goal.

- E. Backboard Padding: Porter No. 326 Pro Pad Bolt-On Backboard Padding, along bottom of backboard and up 15 inches on each side meeting NCAA/NFSHSA rules.
 - 1. Pads shall be 2 inches thick molded form 9 lb. density polyurethane foam with integral skin.
 - 2. Provide color as indicated on the Drawings from manufacturer's full selection of colors.
 - 3. Provide manufacturer's 8 year warranty.
- F. Operator: Remote-controlled, heavy-duty electric winch, designed to hold units at any position when raising or lowering.
 - 1. Units shall be individually operated by 1/2 hp (9 amp) capacitor type, 60 Hz, 115 VAC single phase electric motor with automatic thermal overload protection manufactured to NEMA specifications.
 - 2. Winch shall include fully-enclosed gear set. Gear set shall be set in oil bath and sealed at factory to eliminate need for lubrication. The gear shaft shall connect directly to drum hoist without use of chain.
 - 3. Electric winch shall incorporate a special rotary limit switch.
 - 4. Provide hoist cable of sufficient length and 1/4-inch diameter, galvanized aircraft type (minimum of 7,000 pounds, ultimate).
- G. Height Adjusters: Provide at each practice backstops height adjustment unit for adjusting goal height to any position between 8 feet and 10 feet above floor. All backboards mounted on height adjustment unit shall be provided with limited lifetime warranty against breakage.
 - 1. Height adjustment unit shall include Center-Strut direct goal attachment to eliminate strain on backboard.
 - 2. Height adjustment shall be provided with height scale located on side of unit to visually determine height settings.
 - 3. Unit shall be fabricated with dual 2-3/16" square heavy wall, zinc plated heavy duty slide tubes. Tubes shall be welded to upper and lower clamps that attach securely to 6-5/8-inch diameter backstop mast. Tubes shall support heavy formed steel center channel which shall support the backboard and be drilled for direct goal attachment.
 - 4. Provide height adjustment with compact 115 volt, 60 Hz, electric gear motor type linear actuator providing 600 pound thrust capacity to raise and lower unit. Provide integral limit switches to automatically shut off when goal height reaches 8'-0" and 10'-0".
- H. Backstop Operating Control: All backstops shall operate from Gymnasium Control Center, specified below, including height adjusters.
- I. Safety Lock: Porter No. 10797-100 Saf-Strap lock, for protection against possibility of folding backstop accidentally falling during raising or lowering cycle or in storage.
 - 1. Unit shall not be affected by impact of basketballs and other objects.
 - 2. Lock shall be inertia-sensitive to automatically lock basketball backstop in position at any time in storage or during raising or lowering cycle due to sudden surge of speed created by possible malfunction of hoisting apparatus.
 - 3. Unit shall incorporate fully-automatic reset requiring no poles, ropes, levers or buttons.

- J. Retractor Reel: Porter No. 798, for retract both hoist cable and safety lock strap from play area when backstop is in down position.
 - K. Backstop Operating Control: All backstops shall operate from Gymnasium Control Center, specified below.
- 2.4 GYMNASIUM BASKETBALL BACKSTOPS, INSIDE PRACTICE COURTS
- A. Gymnasium Basketball Backstops, Inside Practice Courts: Porter No. 955, overhead-supported backstop vertical frame assembly.
 - 1. Frame assembly shall consist of main vertical support of 6-5/8-inch O.D. heavy wall structural tube with rear diagonal brace of 1-7/8-inch O.D. structural pipe.
 - 2. Top horizontal mast hinge spreader to be of heavy-wall 3-1/2-inch O.D. tubing, to form rigid triangular design.
 - 3. Backstop shall be supported from 3-1/2" O.D. pipe anchored to overhead framing members by means of heavy formed steel support fittings. Superstructure pipes shall be reinforced with bridging or bracing when truss centers exceed spans of 14'-0". All pipe ends when exposed shall be capped.
 - 4. Vertical frame assembly shall be suspended by adjustable hangers (with 2-inch adjustment) to provide for precise plumbing of frame during installation.
 - 5. Goal shall mount directly through backboard and into heavy structural steel weldment which shall be clamped to vertical 6-5/8" O.D. center support to eliminate strain should player hang on front-mounted goal. This direct mount feature shall conform to the NCAA recommendation which states that design of unit shall transfer load on goal directly to backboard support ("Center-Strut") so as to minimize stress to backboard.
 - 6. Backstop shall operate with 1-7/8" O.D. side brace assembly for proper adjustment during installation.
 - 7. Knee joint shall lock backboard in playing position by means of torsion spring within hinge assembly and shall be easily disengaged by upward force of hoist cable.
 - 8. Mounting frame assembly shall be factory primed and field finish painted as specified in Section 09 90 00 – Painting and Coating. Finish color shall be as indicated on the Drawings.
 - B. Backstop: Porter No. 208-300 Dura-Lam rectangular wood backboard, 72 inches by 42 inches by 1-9/16 inches thick, high-density wood composite core with 1/32-inch thick, smooth, satin-finished white polyethylene faces laminated to front and backside, with regulation perimeter striping and target markings in official orange as an integral part of the laminate on playing face of backboard.
 - 1. Wood core shall be 1-1/2 inches thick, 55 lb./cf density particle board.
 - 2. Provide threaded inserts (3/8" - 16) on backside for mounting.
 - C. Basketball Goals: Porter No. 00225-000 Super Goal, fabricated from 5/8-inch diameter high strength cold drawn alloy steel.
 - 1. Rim shall be rigidly braced by means of a 5/8-inch diameter cold-drawn alloy steel, round formed and welded in position for maximum support.

2. Goal assembly shall be capable of supporting up to 800 pound load on outer edge of rim and under extreme dynamic loading shall flex downward up to 2-3/4 inches without permanent set or deformation.
 3. Goal shall be finished in durable official orange powder coat finish.
 4. Provide plated mounting hardware.
 5. Provide one high-quality braided white cotton net with each goal.
- D. Backboard Padding: Porter No. 326 Pro Pad□ Bolt-On Backboard Padding, along bottom of backboard and up 15 inches on each side meeting NCAA/NFSHSA rules.
1. Pads shall be 2 inches thick molded form 9 lb. density polyurethane foam with integral skin.
 2. Provide color as selected by Architect from manufacturer's standard colors.
 3. Provide manufacturer's 8 year warranty.
- E. Operator: Remote-controlled, heavy-duty electric winch, designed to hold units at any position when raising or lowering.
1. Units shall be individually operated by 1/2 H.P. (9 AMP) capacitor type, 60 Hz, 115 VAC single phase electric motor with automatic thermal overload protection manufactured to NEMA specifications.
 2. Winch shall include fully-enclosed gear set. Gear set shall be set in oil bath and sealed at factory to eliminate need for lubrication. The gear shaft shall connect directly to drum hoist without use of chain.
 3. Electric winch shall incorporate a special rotary limit switch.
 4. Provide hoist cable of sufficient length and 1/4-inch diameter, galvanized aircraft type (minimum of 7,000 pounds, ultimate).
- F. Height Adjusters: Provide at each practice backstops height adjustment unit for adjusting goal height to any position between 8 feet and 10 feet above floor. All backboards mounted on height adjustment unit shall be provided with limited lifetime warranty against breakage.
1. Height adjustment unit shall include Center-Strut direct goal attachment to eliminate strain on backboard.
 2. Height adjustment shall be provided with height scale located on side of unit to visually determine height settings.
 3. Unit shall be fabricated with dual 2-3/16" square heavy wall, zinc plated heavy duty slide tubes. Tubes shall be welded to upper and lower clamps that attach securely to 6-5/8-inch diameter backstop mast. Tubes shall support heavy formed steel center channel which shall support the backboard and be drilled for direct goal attachment.
 4. Provide height adjustment with compact 115 volt, 60 Hz, electric gear motor type linear actuator providing 600 pound thrust capacity to raise and lower unit. Provide integral limit switches to automatically shut off when goal height reaches 8'-0" and 10'-0".
- G. Backstop Operating Control: All backstops shall operate from Gymnasium Control Center, specified below, including height adjusters.
- H. Safety Lock: Porter No. 10797-100 Saf-Strap lock, for protection against possibility of folding backstop accidentally falling during raising or lowering cycle or in storage.

1. Unit shall not be affected by impact of basketballs and other objects.
 2. Lock shall be inertia-sensitive to automatically lock basketball backstop in position at any time in storage or during raising or lowering cycle due to sudden surge of speed created by possible malfunction of hoisting apparatus.
 3. Unit shall incorporate fully-automatic reset requiring no poles, ropes, levers or buttons.
- I. Retractor Reel: Porter No. 798, for retract both hoist cable and safety lock strap from play area when backstop is in down position.

2.5 GYMNASIUM DIVIDER CURTAIN

- A. Gymnasium Center Divider Curtain: Porter Model 92082-100, Center-Roll□ Divider Curtain, width and height to suit installation condition indicated on the Drawings.
1. Divider curtain shall compactly store to dimension not to exceed 14 inches (35.56 cm) below structural attachment support without using cables or straps.
 2. Storage of nested curtain shall fit within 12-inch wide slot where necessary.
 3. Products having straps, wires or rollers touching the material as it unwinds will be unacceptable.
 4. Divider curtain shall roll neatly and compactly on grooved anodized aluminum batten tube, 3-inch diameter, specifically fabricated for this purpose.
 - a. Roll tube shall be located at exactly one-half total height of curtain material.
 - b. As roll tube rotates, it shall climb up to upper portion of curtain, rolling up top and bottom sections simultaneously.
- B. Curtain:
1. One-half of curtain shall be Porter Flexivide, heavy vinyl coated polyester material with weight of 19 oz. per square yard.
 - a. Material shall be flame-retardant, complying with standards of State of California Fire Marshall, UL214 and NFPA 701.
 - b. Color shall be as selected by Architect from manufacturer's full color selection.
 2. Other half of curtain shall be Porter Flexinet, durable, polyvinyl chloride coated, 7 x 5, 1000 denier polyester base fabric.
 - a. Mesh material shall be 80 to 85 percent open to provide air transfer in gymnasium.
 - b. Mesh color shall be as selected by Architect from manufacturer's full color selection.
 3. Upper and lower curtain sections shall roll flat and compact to overhead storage position by means of dual tubular-type motors (110 volt, 10 amp, single phase), gear reducer, break mechanism concealed inside horizontal batten tube.
 - a. Motors shall be equipped with UP and DOWN, push-button type limit switches complete with automatic reset and thermal overload protection.
 - b. Electrical power to each motor shall be accomplished by means of self-retracting cable reel system.

- c. Torque reaction of motors shall be contained in special, cantilevered-type tension strap mechanism that automatically retracts as curtain is raised to storage position.
- 4. Bottom of curtain shall have padded bottom support tube.
- 5. Curtain shall be equipped with safety strap units.
 - a. Safety straps units shall be inertia-sensitive to automatically lock curtain in position at stored position and at intermediate position during raising or lowering cycle due to sudden surge of speed created by possible malfunction of hoisting apparatus.
 - b. Safety strap units shall incorporate fully-automatic reset requiring no poles, ropes, levers or buttons.
- C. Divider Curtain Operating Controls: Curtain shall operate from Gymnasium Operating Control Center, specified below.
- D. Finish on Divider Curtain Metal Components: Factory primed for field finish painting as specified in Section 09 90 00 – Painting and Coating. Color shall be as indicated on the Drawings.

2.6 GYMNASIUM OPERATING CONTROL CENTER

- A. Gymnasium Operating Control Center: Porter No. 02500-000 Powr-Touch□ Control System, flush-mounted 3-position key pad assembly to operate all basketball backstops, gymnasium divider curtain and lighting.
 - 1. Control center shall include relay panels, each of which shall be capable of operating eight momentary controlled-type (up and down) equipment and two maintained relays for operation of lighting and other components.
 - 2. Powr-Touch keypads shall be designed to require constant pressure on pad button to control gymnasium operating components. Control of auxiliary equipment shall be accomplished by single touch of appropriate button.
 - 3. Coordinate control system with lighting controls specified in Division 26 - Electrical.
 - 4. Control system shall feature 4-digit programmable security code that allows use only be authorized individuals only.
 - a. Keypad security code may be easily reprogrammed at any time as desired to prevent unauthorized usage.
 - b. Keypad will automatically revert back to the secure mode if any button is not used within ten-second period.
 - 5. Provide conduits, outlet and junction boxes and conductors for fully-functioning remote control operation of electrically-operated gymnasium equipment.
- B. Control Center Mounting: Flush-mounted in standard two-gang electrical box with 12-volt control circuit to relay panels strategically located on walls or roof framing structure to minimize power conduit runs and electrical wiring.
 - 1. Size of each relay panel enclosure shall be 4 inches by 12 inches by 15 inches.
 - 2. Units shall be linked together and have minimum of 2 keypads for independent control of motors and lighting on each side of divider curtain.

3. Locate control center where indicated on the Drawings or, if not indicated, as directed.

2.7 VOLLEYBALL NETS AND ACCESSORIES

- A. Volleyball Nets and Accessories, General: Provide complete systems for multiple and single court arrangements, as indicated on the Drawings.
- B. Floor Sleeve and Cover Assemblies: Porter No. 873-200 sleeve-cover assembly, designed for use in movable/floating type wood flooring system, consisting of flush-type mounting frame with integral cover plate which is secured flush in playing floor by means of special adjustable-type, snap-in latch mechanism, to be anchored into concrete slab substrate and pass through wood flooring without imposing any load on wood flooring.
 1. Sleeve shall be 3-3/4 -inch OD heavy wall steel tubing, with bottom of sleeve capped with 4-inch diameter steel disk, extending 9 inches into grouted footing.
 2. Over assembly shall be special die-cast zinc material with durable, sealed brass-plated finish.
 3. Equip cover with heavy-duty, swivel-type retainer and special swivel retainer pin in collar to prevent theft. Provide special cover removal keys.
 4. Provide four neoprene pads between cover plate and mounting frame to eliminate vibration and undue sound from ball impact.
 5. Floor sleeve system shall be designed for installation after finished flooring is in place.
- C. Volleyball System: Porter No. 01991-000 "Powr-Line" competition volleyball system, consisting of winch post, end post, tensioning winch, markings and net. At multiple court arrangement, include center standard. Systems shall comply with USAV, NCAA, NFSHSA and NAGWS requirements.
 1. Standards: Telescoping type that does not extend above net or impede official's vision. Weight of each standard shall not exceed 41 pounds for the reel post and 37 pounds for the end standard.
 - a. Standards shall be constructed of 3-1/2-inch diameter 6063T6 type aluminum extrusion and finished with plastic molded foot to protect against gym floor damage.
 - b. Upper portion of telescoping standard shall have special rectangular configuration to eliminate rotation and shall be extruded from same aluminum alloy as bottom portion of standard.
 - c. Upper end of standard shall be equipped with integral 2-1/3-inch diameter steel pulley to reduce cable drag and unnecessary tension.
 - d. Upper telescoping portion of standard shall be micro-adjustable for net heights from 6'-1" to 7'-11-5/8" by means of special pressure locking T-handle mechanism.
 - e. Telescoping standard shall be internally counterbalanced to reduce possibility of standard accidentally falling or causing finger injuries while making height adjustments.
 - f. Bottom of standard and telescoping portion of standard shall be finished with durable clear anodized finish.
 - g. Standards shall include height-marking labels for ease in set-up.

2. Tensioning winch: Standards shall be equipped with Porter Powr Winch□ tensioning winch, self-locking ratchet mechanism with compression, disc-brake type release mechanism to eliminate danger of suddenly released cable tension when removing net.
 - a. Tensioning winch shall be furnished with 1-3/4-inch wide high-tensile nylon strap and durable snap hook.
 - b. Tensioning winch shall be furnished complete with removable handle to prevent unauthorized use.
- D. Volleyball Nets: Porter No. 02295-420 volleyball net, 32 feet by 39 inches with integral top cable.
 1. End hems shall be 6 inches wide to allow for durability and strength.
 2. Each end hem shall be equipped with three 1 inch wide polypropylene tensioning straps and 1/2-inch fiberglass dowels.
- E. Net Antenna: Porter No. 02296-100 net antenna with clamp, one pair per net assembly, with accompanying Porter No. 02297-000 Volleyball Net Boundary Markers.
 1. Net antenna shall incorporate antenna clamps as one complete unit. Clamps shall snap easily and securely into place.
 2. Net antenna shall be 3/8-inch by 6 feet long fiberglass dowels, alternately marked red and white.
 3. Net boundary markers shall be 2 inches (5.1 cm) wide durable white polyester-reinforced vinyl material with white Velcro attachment strip sewn in place, securing to volleyball net.
- F. Protective Padding: Porter No. 00839-000 Official Standard Pads. Padding shall extend to a height of 6 feet, 0 inches and shall comply with all current competition requirements as prescribed by the USAV, NFSHSA and NAGWS for player protection and safety
 1. Padding shall be constructed of firm, 1-1/4-inch thick closed cell (Ethafom) filler and covered in durable vinyl reinforced fabric.
 2. Courtside portion of each pad shall be furnished with 2-inch by 29-inch opening at top inside for attaching pad after net has been installed and properly height-adjusted and tensioned.
 3. Each pad shall be tailored with four vertical, miter-type hinge arrangements to fold around upright.
 4. When installed on uprights, pads shall provide a narrow profile of 7-1/2 inches by 11-1/4 inches to provide for maximum visibility for judges and spectators.
 5. Padding color shall be as indicated on the Drawings from manufacturer's full selection of colors.
- G. Net Storage System: Porter No. 00823-100 Triple Sidewinder□ Net Storage System.
 1. Description: System shall be designed to wrap and store three volleyball net on a free standing transportable rack to keep net clean and to minimize tangles while in storage.
 - a. Rack assembly shall rotate on support system to grasp headband of net and store net in compact cylindrical shape.
 - b. Rack shall pivot on steel shaft with a nylon thrust washer for ease of operation.

- c. Rack shall be rotated for compact net storage by means of a removable, socket-type handle.
 - 2. Construction: Heavy steel construction, finished with blue powder coat.
 - a. Rack assembly shall be supported by an off set type support assembly of 1 inch diameter heavy wall square steel tubing.
 - b. Base of unit shall be of heavy wall, 1 inch diameter square steel tubing with four non-marking 4-inch diameter swivel casters for ease of movement to and from storage areas.
 - H. Volleyball Storage/Transport System: Porter No. 00956-100 Volleyball Storage/Transport system.
 - 1. Heavy-duty steel transport frame shall be designed to store and transport six sleeve-type volleyball standards, one judge's stand with pads, three nets including antennae and three sets of upright pads.
 - 2. Construct frame constructed of heavy wall 2-1/2-inch by 1-1/2-inch rectangular steel tubing.
 - 3. Provide heavy formed steel hooks on side diagonal frame members for storage of standards. Hooks shall be covered in vinyl material to protect finish on upright posts.
 - 4. Provide large vinyl net storage pouch, with tunnel loops and Velcro flaps for attaching to transport volleyball storage/transport system.
 - 5. Equip bottom of transport with 20-inch by 48-inch vinyl-covered storage shelf for upright pads.
 - 6. Entire unit shall roll on four 3-1/2-inch diameter heavy-duty swivel casters.
 - 7. Overall size of unit shall be 4'- 0-3/8" in length, 3'- 2-1/4" in height and 2'- 6-1/4" in width, to allow transporter to pass through typical 3' wide doorway.
- 2.8 GYMNASIUM WALL PADS
- A. Gymnasium Wall Padding: Porter FR-SAFPAD No. 00345, certified fire-retardant wall padding wainscot panels.
 - 1. Backing: 7/16-inch thick oriented strand wood board.
 - 2. Foam padding: 2-inch thick open cell neoprene foam filler with density of 5.5 lb./ft and Indentation Force Deflection (IFD) of 25-45 lbs, factory bonded with approved adhesive to backing board.
 - 3. Facing fabric: Heavy (14-oz.) fire-retardant vinyl laminated, high tensile, polyester base fabric material with leather-like embossed finish.
 - 4. Adhesive: Type as recommended by manufacturer, with high flexibility factor, water-resistant, heat- and cold-resistant and with high bonding factor to products adhered.
 - B. Fire Characteristics: Entire pad, vinyl covering, foam padding and backing board, shall be certified by independent laboratory testing acceptable to authorities having jurisdiction including California State Fire Marshal, to comply with requirements for Class A flame spread and smoke density. Each panel shall have certification label attached to backside.
 - 1. Flame spread index: 25 or less, when tested according to ASTM E 84.

2. Smoke developed index: 300 or less, when tested according to ASTM E 84.

- C. Attachment: Porter No. 00345-100 wall attachment clip and Porter No. 00345-200 Z-clip channel mounting systems. Mounting systems shall permit individual panels to be removed for repair or replacement. Provide cutouts for switches, outlets, controls and other penetrating items.
- D. Wall Padding Fabrication: Factory-fabricated, 2'-0" wide by 6'-0" high, with 1 inch nailing margin top and bottom for securing panels to the wall. Entire face of panel, including 1 inch nailing margins, shall be covered with facing fabric. Provide cutouts in panels as necessary for outlets and switches and to suit Project conditions.

2.9 ELECTRONIC SCOREBOARDS

- A. Electronic Scoreboard: Fair-Play Model BB1610-4, indoor rated, all-purpose scoreboard, adaptable to basketball, volleyball and wrestling, with LED digit displays, UL-listed and -labeled, complete with mounting brackets.
 - 1. Size: 9 feet wide by 5 feet high by 8 inches deep.
 - 2. Approximate weight: 101 pounds.
 - 3. Electronics: Packaged in low-voltage, plug-in processor.
 - 4. Displays: Time (minutes, seconds and tenths of seconds), team scores, period, bonus, jump ball, "next possession", and changeable captions for basketball, volleyball and wrestling.
 - 5. Display digits: Made up of seven bar-type segments evenly illuminated by epoxy encapsulated LEDs. Digits shall be colored amber for game clock; red and green for other information and protected by an acrylic faceplate. Digit colors shall be determined exclusively by LED light to maximize color saturation. Non-illuminated areas on faceplate shall be screened with black, non-reflective paint to provide maximum contrast.
 - 6. Digit height: 12 inches for game clock and team scores and 10 inches for other display information.
 - a. Game clock: Display capacity up to "99:59".
 - b. Team scores: To "199".
 - c. Period: To "9".
 - d. Team fouls: To "99".
 - e. Personal fouls: To "9".
 - f. Player number (or Time Advantage Clock): "99".
 - g. Bonus or Double Bonus: Indicated by two arrows for each team.
 - 7. Captions: Adhesive-backed white vinyl permanently attached to cabinet as follows:
 - a. Home and Visitor: 6 inches high.
 - b. Bonus, Period, Fouls and Player: 4 inches high.
 - c. Possession: 3 inches high.

- d. Changeable captions: For volleyball and wrestling, same vinyl on aluminum plaques and shall be 4 inches high.
- 8. Accessories for scoreboard:
 - a. Fair-Play #350 electronic horn rated at 100dB at 10'-0".
 - b. One set Fair-Play ST-1410-4 Shot Timers.
- 9. Color: As selected by Architect from manufacturer's full selection, with appropriate trim colors.
- B. Remote Control Cable: Provide one length of two wire-shielded cable to connect from the control receptacle junction box to the top center of the scoreboard cabinet.
- C. Shot Clocks: Fair-Play Model ST-1400-2, for mounting on main court basketball backstop supports, with LED digit display.
 - 1. Cabinet size: 20 inches wide by 17 inches high by 6-1/2 inches deep.
 - 2. Mounting: Include hangers for mounting on basketball backstops.
 - 3. Cabinet color: Black.
 - 4. Weight: Approximately 35 lbs. each.
 - 5. Digit displays: Made up of seven bar-type segments evenly illuminated by epoxy encapsulated LEDs.
 - a. Digits shall be red in color and protected by acrylic faceplate.
 - b. Digit colors shall be determined exclusively by LED light to maximize color saturation.
 - 6. Faceplate: Non-illuminated areas shall be screened with black, non-reflective paint to provide maximum contrast.
 - a. Digit height: 12 inches.
 - b. Display capacity: To "99".
 - 7. Electronics: Packaged in low-voltage, plug-in processors accessible from the front of each cabinet.
 - 8. Power: 30 watts maximum, 120 VAC, 60 Hz for two displays.
 - 9. Controls: Fair-Play ST-70 Control exclusively for shot clock operation.
 - 10. Remote control cable: One length of two-wire shielded cable to connect from control receptacle junction box to each shot clock cabinet.
- D. Control Center: Manufacturer's standard microprocessor-based, 100 percent solid state wireless operator's control, to control all functions of scoreboard and with keyboard for input to alpha-numeric dot matrix LED displays.
 - 1. Provide one additional HC-70 or HH-70 Clock Handswitch for second operator.
 - 2. Provide one duplicate MP-70 Control allowing independent operation of two scoreboard system and providing a backup unit.
- E. Power and Signal Wiring: Provide floor jacks with engraved, polished brass faceplates to coordinate with power and audio equipment located in floor as necessary and in compliance

with applicable Code requirements. Refer to Division 26 - Electrical for basic electrical materials and methods requirements.

- F. Warranty: Manufacturer's 5 year warranty.

PART 3 - EXECUTION – NOT USED

END OF SECTION

DIVISION 12 – FURNISHINGS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

12 35 53 – LABORATORY CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Stock laboratory casework units with hardwood veneer finish.
- B. Accessories.

1.3 RELATED SECTIONS

- A. Section 12 36 53 Laboratory Countertops.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturers:
 - 1. Fisher Hamilton, Inc., Two Rivers, WI (920/793-1121, distributed by ISEC, Inc., Los Alamitos, CA 714/761-4010).
 - 2. Sheldon Laboratory Systems: Crystal Springs, MS (601/892-2731).
 - 3. Collegedale Casework, LLC, Collegedale, TN (423/238-4131)>
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Kewaunee Scientific Corp., Statesville, NC (704/873-7202).
 - 2. CampbellRhea, Paris, TN (901/642-4251) as distributed by SLI Laboratory Equipment, Inc., Brea, CA (714/671-0958).

2.2 HARDWOOD VENEER LABORATORY CASEWORK

- A. Specified Manufacturers: Fisher Hamilton, Inc., Two Rivers, WI (920/793-1121, distributed by ISEC, Inc., Los Alamitos, CA 714/761-4010).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

1. Kewaunee Scientific Corp., Statesville, NC (704/873-7202).
 2. CampbellRhea, Paris, TN (901/642-4251) as distributed by SLI Laboratory Equipment, Inc., Brea, CA (714/671-0958).
- C. Hardwood Veneer Laboratory Casework, General:
1. Maximum Moisture Content for Lumber: 7 percent for hardwood and 12 percent for softwood.
 2. Hardwood Plywood: HPVA HP-1, either veneer core or particle core, unless otherwise indicated.
 3. Plastic Laminate: High-pressure decorative laminate complying with NEMA LD 3.
 4. Edgebanding for Wood-Veneered Construction: Minimum 1/8-inch- thick, solid wood of same species as face veneer.
- D. Exposed Materials: Provide materials that are selected and arranged for compatible grain and color. Do not use materials adjacent to one another that are noticeably dissimilar in color, grain, figure, or natural character markings.
1. Wood Species and Veneer Cut: White oak, rift cut.
 2. Stain Colors and Finishes: As selected by Architect from manufacturer's full range.
 3. Solid Wood: Clear hardwood lumber.
 4. Plywood: Hardwood plywood; Grade A exposed faces at least 1/50-inch thick, Grade J crossbands, and backs of same species as faces.
- E. Semi-Exposed Materials:
1. Solid Wood: Sound hardwood lumber, selected to eliminate appearance defects, of same species as exposed solid wood.
 2. Plywood: Hardwood plywood of same species as exposed plywood. Grade B faces, Grade J crossbands, and backs of same species as faces. Semiexposed backs of plywood with exposed faces shall be same species as faces.
 3. Metal for Steel Drawer Pans: Cold-rolled, carbon-steel sheet complying with ASTM A 1008/A 1008M; matte finish; suitable for exposed applications.
- F. Concealed Materials:
1. Solid Wood: Any hardwood or softwood species, with no defects affecting strength or utility.
 2. Plywood: Hardwood plywood. Concealed backs of plywood with exposed or semiexposed faces shall be same species as faces.
 3. Particleboard: Not permitted.
 4. Medium-Density Fiberboard: ANSI A208.2, Grade MD.
 5. Hardboard: AHA A135.4, Class 1 tempered.
- G. Glass for Glazed Doors: Clear tempered glass complying with ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality q3; not less than 5.5 mm thick.

2.3 LABORATORY CASEWORK FABRICATION

- A. Construction: Provide wood-faced laboratory casework conforming to or exceeding minimum requirements of Woodwork Institute of California (WIC) Laboratory Grade.
 - 1. Style: Flush overlay with radiused edges.
 - 2. Veneer grain direction: Vertical on both doors and drawer fronts.
 - 3. Bottoms and Ends of Cabinets, Shelves, and Tops of Wall Cabinets and Tall Cabinets: 3/4-inch thick plywood.
 - 4. Base Cabinet Top Frames: 3/4-by-2-inch solid wood with mortise and tenon or doweled connections, glued and pinned or screwed.
 - 5. Base Cabinet Stretchers: 3/4-by-4-1/2-inch panel product strips or solid wood boards at front and back of cabinet, glued and pinned or screwed.
 - 6. Base Cabinet Subtops: 3/4-inch thick panel product glued and pinned or screwed.
 - 7. Backs of Cabinets: 3/4-inch thick plywood where exposed, 1/2-inch-thick plywood dadoed into sides, bottoms, and tops where not exposed.
 - 8. Drawer Fronts: 3/4-inch thick plywood or solid hardwood.
 - 9. Drawer Bodies: Steel drawer pans formed from 0.0359-inch-thick metal, metallic phosphate treated, and finished with manufacturer's standard 2-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat with a minimum dry film thickness of 1 mil for topcoat and 2 mils for system.
 - 10. Doors 48 inches or Less in Height: 3/4-inch thick, with medium-density fiberboard cores and hardwood face veneers and crossbands.
 - 11. Doors More Than 48 inches in Height: 1-1/8 inches thick, with medium-density fiberboard cores and hardwood face veneers and crossbands.
 - 12. Stiles and Rails of Glazed Doors: 3/4-inch-thick solid hardwood.
- B. Leg Shoes: Vinyl or rubber, black, open-bottom type.
- C. Utility-Space Framing (If Applicable): Laboratory casework manufacturer's standard steel framing units consisting of 2 steel slotted channels complying with MFMA-2, not less than 1-5/8 inches square by 0.0966-inch thick, and connected together at top and bottom by U-shaped brackets made from 1-1/4-by-1/4-inch steel flat bars. Framing units may be made by welding specified channel material into rectangular frames instead of using U-shaped brackets.
- D. Base Molding: ASTM F 1861, Type TS (rubber, vulcanized thermoset) black, 4 inches in height. Provide on fronts and exposed sides of floor-mounted laboratory casework.
 - 1. Style: B, cove with top-set toe.
- E. Filler Strips and Utility-Space Closure Panels: Provide as needed to close spaces between cabinets and walls, ceilings, and indicated equipment. Fabricate from same material and with same finish as cabinet fronts.

2.4 HARDWOOD FINISH

- A. Preparation: Sand lumber and plywood for laboratory casework construction before assembling. Sand edges of doors, drawer fronts, and molded shapes with profile-edge

sander. Sand casework after assembling for uniform smoothness at least equivalent to that produced by 220 grit sanding and without machine marks, cross sanding, or other surface blemishes.

- B. Staining: Remove fibers and dust and apply stain to exposed and semiexposed surfaces as necessary to match approved Samples. Apply stain in a manner that will produce a consistent appearance. Apply wash-coat sealer before applying stain to closed-grain wood species.
- C. Chemical-Resistant Finish: Apply laboratory casework manufacturer's standard three-coat, chemical-resistant, transparent finish consisting of sealer and catalyzed topcoat(s). Sand and wipe clean between coats. Topcoat(s) may be omitted on concealed surfaces.
 - 1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.

2.5 CASEWORK HARDWARE

- A. Casework Hardware, General: Provide laboratory casework manufacturer's standard satin-finish, commercial-quality, heavy-duty hardware complying with requirements indicated for each type.
- B. Hinges: Stainless-steel, 5-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide 2 for doors 48 inches or less in height; 3 for doors more than 48 inches in height.
- C. Pulls: Stainless steel, U-shaped rod, 4 inches center-to-center, or chrome-plated brass; fastened from back with two screws. For sliding doors, provide stainless-steel or chrome-plated recessed flush pulls. Provide 2 pulls for drawers more than 24 inches in width. Pulls shall comply with California Building Code (CBC), Chapter 11B accessibility requirements.
- D. Door Catches: Nylon-roller spring catch or dual, self-aligning, permanent magnet catch. Provide 2 catches on doors more than 48 inches in height.
- E. Drawer Slides: Powder-coated, full-extension, self-closing, heavy-duty drawer slides; designed to prevent rebound when drawers are closed; with nylon-tired, ball-bearing rollers; and complying with BHMA A156.9, Type B05091, and rated for minimum 100 lbf (440 N) for drawers 4 inches and less depth and 120 lbf (530 N) for drawers over 4 inches in depth.
- F. Label Holders: Stainless steel, aluminum, or chrome plated; sized to receive standard label cards approximately 1 by 2 inches attached with screws or rivets. Provide on all drawers.
- G. Locks: R-1 Key way only (5 or 6 pin) to district Standard Master Key 4T23495 using .095 diameter brass pins. Master Keyed by site Keyed Alike by room in US26D as manufactured by either: Olympus Lock Co 500DR(door), 600DW(drawer), 400SD(sliding door), or Corbin Cabinet Lock 0737(door), 0738(drawer), 02292(sliding door)
- H. Provide minimum of three keys per keyed alike lock and three master keys.
- I. Sliding-Door Hardware Sets: Laboratory casework manufacturer's standard, to suit type and size of sliding-door units.
- J. Adjustable Shelf Supports: Mortise-type, powder-coated steel standards and shelf rests complying with BHMA A156.9, Types B04071 and B04091.

2.6 ACCESSORIES

A. Safety Glasses/Goggles Monitor:

1. Specified Manufacturer: CampbellRhea, Paris, TN (901/642-4251) as distributed by SLI Laboratory Equipment, Inc., Brea, CA (714/671-0958).
2. Acceptable Manufacturer: None identified. Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
3. Description: Model #6784 as manufactured by Campbell/Rhea, wall mounted, 24-1/2 inches wide by 32 inches high by 9-1/2 inches deep, steel cabinet with white enamel finish, locking double doors, built-in germicidal lamp with timer.

PART 3 - EXECUTION – NOT USED

END OF SECTION

12 36 53 – LABORATORY COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Molded, chemical-resistant laboratory countertops.
- B. Sinks, Troughs, Reagent Racks and Accessories.
- C. Mechanical service fittings.
- D. Electrical service fittings.

1.3 RELATED SECTIONS

- A. Section 12 35 53 Laboratory Casework.

PART 2 - PRODUCTS

2.1 LABORATORY COUNTERTOPS

- A. Tops, Box Curbs, Splash Rim: Provide smooth, clean exposed tops and edges in uniform plane free of defects. Make exposed edges and corners uniformly rounded.
- B. Top Thickness: 1 inch thickness, with tolerance not exceeding plus or minus 1/32-inch. Provide front and end overhang of 1 inch over base cabinets, formed with continuous drip groove on under surface 1/2-inch from edge.
- C. Cast Epoxy Resin Laboratory Countertops: Factory-molded tops of modified epoxy resin formulation, uniform mixture throughout full thickness. Provide in smooth, nonspecular finish of color indicated.
 - 1. Color: Black.
 - 2. Physical Properties: Comply with the following minimum requirements:
 - a. Flexural strength: 15,000 psi.
 - b. Compressive strength: 35,000 psi.
 - c. Hardness (Rockwell M): 100.
 - d. Water absorption (24 hrs): 0.02 percent (maximum).
 - e. Heat distortion point: 350 degrees F.
 - f. Thermal shock resistance: Highly resistant.

3. Chemical Resistance: Spot test with the following reagents in standard laboratory concentrations, in contact with finished top for 24 hours; top shall be entirely unaffected or show only slight dulling of finish:
 - a. Glacial acetic acid, nitric acid, sulfuric acid, ammonium hydroxide, sodium hydroxide, amyl acetate, benzene, ethyl acetate, ethyl ether, hydrogen peroxide, methyl ethyl ketone, phenol, trichloroethylene, zinc chloride, hydrochloric acid, phosphoric acid, chromic acid, calcium hypochlorite, acetone, aqua regia, butyl alcohol, ethyl alcohol, formaldehyde, methyl alcohol, kerosene, silver nitrate, xylene.
4. Workmanship: Cast surfaces very smooth, with factory cutouts for sinks and drip grooves. Fabricate plain butt-type joints assembled with epoxy adhesive and prefitted, concealed metal spline.

2.2 SINKS, TROUGHS, REAGENT RACKS AND ACCESSORIES

- A. Integral Sinks in Laboratory Countertops: Provide cast epoxy resin sinks, color to match countertops, molded in one piece with surfaces smooth, corners coved and bottom sloped to outlet.
 1. Sinks shall have minimum physical properties and chemical resistance as specified for cast epoxy resin tops.
 2. Provide 1/2-inch minimum thickness.
 3. Provide sizes as indicated or manufacturer's closest stock size of equal or greater volume, as acceptable to Architect.
- B. Outlets: 1-1/2-inch diameter, 6-inch minimum length, fabricated of silicon iron, cast epoxy resin, stainless steel, glass, or lead; of same material as sink wherever possible, or as otherwise acceptable to Architect/Engineer.
- C. Overflows: For each sink, except cup sinks, provide overflow of standard beehive or open top design and with separate strainer. Height 2 inches less than sink depth. Provide in same material as sink.
- D. Troughs: Cast epoxy resin, soapstone, or stainless steel, as indicated. Conform to requirements for materials and construction as specified for tops or sinks, or provide units as recommended by manufacturer and as acceptable to Architect/Engineer. Pitch to drains not less than 1/8-inch per foot.
- E. Reagent Racks: Single-faced or double-faced units as required, fabricated of manufacturer's standard design to suit type and composition of top units.
- F. Upright Rod Assembly and Metal Crossbar: Aluminum or stainless steel. Two vertical rods and one horizontal cross bar, 3/4-inch diameter and 36 inches long, unless otherwise shown; two flush-socket receptacles and two crossbar clamps. Taper ends of vertical rods to fit flush plates; all other rod ends rounded.
- G. Burette Rods: Aluminum or stainless steel rods, 1/2-inch diameter and 18 inches long, threaded on one end to suit tapered plug.
- H. Greenlaw Arm Assembly: Aluminum or stainless steel vertical rod, tapered on one end to suit flush socket receptacle. Adjustable crossbar of hardwood with black, acid-resistant finish, secured to upright with adjustable clamp.

2.3 MECHANICAL SERVICE FITTINGS

- A. Service Fittings: Provide units complete with washers, locknuts, unions, nipples and other accessories for positive mounting to supporting laboratory units. Include wall and deck flanges, escutcheons, handle extension rods, remote valves, and similar items required. Fabricate units to withstand test pressure of 100 psig.
- B. Material and Finish: Fabricate service fittings from cast or forged red brass containing a minimum of 85 percent copper. Provide exposed surfaces, including fittings, escutcheons, and trim, with a polished chrome-plated finish.
- C. Service Outlets Identification: Provide colored plastic index discs with embossed identification letters at each service fitting handle or knob. Secure discs to fitting handles to be virtually tamperproof. Color code discs as follows:

	<u>Service</u>	<u>Color</u>	<u>Code</u>	<u>Letter Color</u>
1.	Air	Orange	Air	Black
2.	Gas	Dark blue	Gas	White
3.	Vacuum	Yellow	Vac	Black
4.	Hot water	Red	HW	White
5.	Cold water	Dark green	CW	White
6.	Oxygen	Light green	Oxy	Black
7.	Hydrogen	Pink	Hyd	Black
8.	Nitrogen	Brown	Nit	White
9.	Special gases	Light blue	(as required)	Black

- D. Ground-Key-Type Hose Cocks: Tapered core and handle of one-piece forged brass, ground and lapped, held in place under constant spring pressure.
- E. Handles: Provide 3-arm or 4-arm forged brass handles for valves, stops, faucets, remote controls, and cocks, except for ground-key cocks, steam valves, and micro-adjustable needle cocks.
- F. Needle Valves: Provide units with renewable self-centering floating cones and renewable seats of stainless steel or monel metal.
- G. Water Valves and Faucets: Provide units with renewable barrel locked in valve body. Barrel shall contain all wearing parts, with renewable discs.
- H. Remote Control Valves: Although straight-through type are indicated, use angle valves wherever required.
- I. Hand of Fittings: Furnish right-hand fittings except where "L" is indicated on drawing symbol identification.
- J. Self-Closing Cocks: Wherever drawing symbols are followed by "SC," provide self-closing valves.
- K. Vacuum Breakers: Provide vacuum breakers on all water fittings (hot and cold).

2.4 ELECTRICAL SERVICE FITTINGS

- A. Service Fittings: Provide units complete with metal housing or box; necessary receptacles, terminals, switches, pilot lights, and device plates; and fittings and gaskets required for mounting on casework. All fittings UL labeled. Provide ground-fault circuit interrupters (GFCI) for fittings where indicated and when located in units containing water supplies or sinks.
- B. Pedestal Type Fittings: Cast aluminum housing complete with cover plates, neoprene gasket under base, and with receptacles or other devices as indicated. Fabricate units with sloped single face or double face, as indicated, and concealed mounting holes in base for attaching to casework. Provide holes tapped for conduits.
- C. Line-Type Fittings: Cast metal box with threaded holes for mounting on rigid steel conduit, complete with cover plates and with receptacles or other devices indicated.
- D. Recessed-Type Fittings: Galvanized steel outlet box, size as required, complete with cover plate and receptacles or other devices as indicated.
- E. Cover Plates: Provide stainless steel cover plates for AC outlets and devices, and laminated plastic plates for DC or combination AC/DC outlets and devices.
 - 1. Stainless steel, Type 302, satin finish, with formed beveled edges.
 - 2. Laminated plastic, 0.050-inch thick, with white core and black outer laminations.
- F. Cover Plate Identification: Identify cover plates at receptacles, switches, terminal posts and other locations as indicated. Provide 1/4-inch-high letters unless otherwise indicated.
 - 1. In addition, identify the following devices whether indicated on Drawings or not.
 - a. AC receptacles, other than standard 125 volt duplex, grounding type. Indicate voltage and phase.
 - b. Switches and thermal overload switches. Indicate equipment being controlled (e.g., "FUME HOOD FAN").
 - c. Pilot lights when located remotely from associated equipment or switch, where function is not obvious. Indicate equipment or circuit being energized.
 - 2. On laminated plastic, etch letters through outer lamination to white core.
 - 3. On stainless steel, either etch directly on plate or apply laminated plastic nameplates. Fill etched letters on cover plates with black enamel. Etch laminated plastic strips to provide white lettering on black background and securely fasten to cover plate with noncorrosive fasteners or epoxy adhesive.
- G. Finishes for Service Fitting Components: Furnish housings or boxes for pedestal-type and line-type fittings with manufacturer's standard finish.
 - 1. For painted surfaces, provide baked-on, chemical-resistant enamel in color as selected by Architect from manufacturer's standard.
 - 2. Provide galvanized finish on ferrous fittings.
 - 3. Provide ivory or brown colored receptacle and switch cores as selected by Architect.
- H. DC Receptacles and Terminal and Other Special Outlets: Provide as indicated on Drawings.
- I. Switches: As indicated on Drawings and specified in Division 26 - Electrical. Provide color to match receptacles.

PART 3 - EXECUTION – NOT USED

END OF SECTION

12 53 83 – PERFORMING ARTS CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Factory-manufactured musical instrument cabinet system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Wenger Corporation, Owatonna, MN (507/455-4100).
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.

2.2 MATERIALS

- A. Cabinet Wall Panels: 3/4-inch thick industrial (cabinet) grade medium density wood fiberboard, minimum 48 pcf with thermoset polyester cabinet liner (melamine not acceptable) laminated on both sides for totally finished construction. No backer sheets or unfinished surfaces may be used on unexposed sides. Color: Oyster.
- B. Cabinet Shelving:
 - 1. Cabinets up to 27 inches wide: One-piece high molecular blow-molded polyethylene with 1-3/8-inch radius front edge (Patented). Mount to cabinet walls with one-piece molded rigid ST nylon clip. Shelf is replaceable without damage to adjacent surfaces. Doweled shelves will not be permitted.
 - 2. Cabinets over 27 inches wide: One-piece high molecular formed polyethylene with radius front edge and 3/16-inch wall thickness. Ribbed for structural integrity. Supported by four structural tubular members 1-1/2 inches by 1 inch x 16 gauge wall thickness with 14 gauge welded end plates.
- C. Door Options:
 - 1. Wood doors: Same construction as cabinet wall panels except finish shall be as selected by Architect. Hinges shall be 5-knuckle institutional type hinge, supplied by ISO 9002 vendor.
 - a. Hinge will support 315 lbs. dynamic vertical load.
 - b. Hinge pin shall be 2-3/4-inch long.

- c. Fastened to cabinet and door with through-bolt construction; attachment by wood screws not acceptable.
 - d. Finish: Oyster powder-coated paint.
 - e. Provide two hinges on compartment doors and four on full height doors.
- 2. Grille doors: Welded steel grille construction with powder-coat finish, Oyster color. Welds at T-joints shall be 360 degrees. Hinges shall be 5-knuckle institutional type hinge, supplied by ISO 9002 vendor.
 - a. Hinge shall support 315 lbs. dynamic vertical load.
 - b. Hinge pin shall be 2-3/4 inches long.
 - c. Hinge shall be welded to door frame in five places.
 - d. Hinge shall be fastened to cabinet with through-bolt construction. Attachment by wood screws will not be acceptable.
 - e. Finish: Oyster powder-coated paint.
 - f. Provide two hinges on compartment doors and four on full height doors.
- 3. Locking slide-bolt: All doors shall be factory provided with locking slide-bolt designed for padlocks, with formed steel strike plate through-bolt connected to cabinet end panel; 12 gauge steel. Provide clear plastic label holder for identification card insert. Finish shall be powder-coated paint coating, Oyster color.
- D. Edging: Heat bonded 3mm beveled PVC edge-banding, machine applied using hot-melt adhesives, edges and corners machine profiled for safety, integral Oyster color.
- E. Finish Hardware:
 - 1. Joinery Hardware: 2-inch, 1/4-20 panel connectors with 15 mm head diameter, and steel thread inserts shall be utilized to join desired cabinets side-to-side; use factory jigged and drilled joinery holes. Finish shall be powder-coated paint, Oyster color.
 - 2. Cabinet levelers: Structural levelers each cabinet, accessible from within the unit when desired, concealed in complete installation; glides with minimum 3/8-inch diameter threaded rod mounted in steel corner brackets. Provide minimum four glides per cabinet, six glides for cabinets with divider panels.
- F. Cabinet Back Panel: Standard cabinet back to be 1/4-inch thick prefinished hardboard, Oyster color to match interior of side and top panels.

2.3 CLOSURE OPTIONS

- A. Vertical Closure Kit: Provide visual closure between wall and cabinet, constructed of 3/4-inch thick thermoset polyester composite wood to match cabinet side panels, Oyster color. Closure shall fit 3/4-inch to 30 inches wide openings.
- B. Horizontal Closure Kit: Provide visual closure between top of cabinet and soffit, constructed of 3/4-inch thick thermoset polyester composite wood to match cabinet side panels, Oyster color. Closure shall fit 3/4-inch to 30 inches high openings.
- C. Top Back Filler Kit: Provide visual closure between back wall and top panel of cabinet, constructed of 3/4-inch thick thermoset polyester composite wood to match cabinet top panels, Oyster color. Filler shall fit 10-inch and 20-inch deep openings.

- D. Finished Back Panel: Provide panel to attach to exposed cabinet backs, constructed of 1/2-inch thick thermoset polyester composite wood to match cabinet, Oyster color.

2.4 FABRICATION

- A. FFabricate and package all components in the factory and ship fully assembled or ready to assemble

PART 3 - EXECUTION – NOT USED

END OF SECTION

DIVISION 13 – SPECIAL CONSTRUCTION

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

13 31 00 – FABRIC STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Fabric structures.
- B. Anchors, Fasteners and Accessory Materials.
- C. Steel Structure Fabrication.
- D. Fabric Fabrication.

PART 2 - PRODUCTS

2.1 FABRIC STRUCTURES

- A. Specified Manufacturer: Sun Ports International, Inc., Dallas TX (800/966-5005).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. Shade Structures, Inc., Irvine, CA (949/250-9551 or 800/507-4233).
 - 2. Shade Sails, LLC, Huntington Beach, CA (714/969-374-8925).
- C. Cast in Place Concrete: Minimum 3000 psi 28 day compressive strength and complying with requirements specified in Section 03 10 00 - Concrete Forming and Accessories, Section 03 20 00 - Concrete Reinforcing and Section 03 30 00 - Cast-in-Place Concrete.
- D. Structural Design: By fabric structure manufacturer.
 - 1. Conform to requirements of California Building Code (CBC), Chapter 22A, including special inspection provisions.
 - 2. Design and detailing of structural steel shall comply with American Institute of Steel Construction (AISC) - Specification for the Design, Fabrication and Erection of Structural Steel for Buildings (Including Commentary and Supplements) and AISC - Code of Standard Practice for Steel Buildings and Bridges.
- E. Structural Steel:
 - 1. Steel shapes, bars and plates: ASTM A 36.
 - 2. Structural steel pipe: ASTM A53, Grade B, Type E or S.

3. Slip fittings: Manufactured using drawn-over-mandrel steel with a minimum yield strength of 70 ksi and a minimum tensile strength of 80 ksi.
 4. Steel telescoped sleeves shall not have more than 1/16-inch tolerance, with no less than 4-inch overlap at all sleeves.
 5. Internal fittings: Welded on one side.
- F. Anchor Bolts: Conform to ASTM A 307, Grade C. Provide non-headed type, bent, with ASTM A 563 Grade A hexagonal nuts, unless indicated on the Contract Drawings.
- G. Standard Threaded Fasteners:
1. Standard bolts: ASTM A 307, Grade A.
 2. Plain washers: ASTM F 844 plain (flat) unhardened steel washers.
 3. Nuts: ASTM A 563, Heavy Hex, Grade B, plain (non-zinc coated).
- H. High-Strength Threaded Fasteners:
1. Heavy hex structural bolts: ASTM A 325, Type 1, Supplementary Requirements S.1, with threads included in shear plane and marked "A 325 T," unless otherwise noted on Contract Drawings.
 - a. Conform to the provisions of California Building Code (CBC), Chapter 22A, Division IV.
 - b. Manufacture with identifying mark placed on top of the head.
 2. Washers:
 - a. Hardened Type: ASTM F 436, Type 1, style as required.
 - b. Direct Tension Load Indicating Type: ASTM F 959 Type 325 or Type 490.
 3. Nuts: ASTM A 563, Heavy Hex, Grade C, plain (non-zinc coated).
- I. Welding Materials: AWS D1.1, type as required for materials being welded. Provide electrodes as indicated on reviewed shop drawings.
- J. Wire Rope: Nominal 1/4-inch diameter, stainless steel, 7 strand, 19 wires per strand (minimum), with minimum nominal tensile strength of 9,000 pounds.
- K. Hardware: Cable fittings, connectors and attachments as standard with manufacturer, marine grade stainless steel, according to reviewed shop drawings.
- L. Fabric: Woven high-density polyethylene shade cloth with UV stabilizers, monofilament and tape construction for stable material, Raschel-knitted to ensure material will not unravel if cut, with coatings of DuPont Teflon polytetrafluoroethylene (PTFE).
1. Thickness: As determined by fabric structure manufacturer for design loads and warranty criteria.
 2. Color: As indicated on the Drawings or, if not indicated, as selected by Architect.
 3. Fire characteristics: Rated flame-resistant, approved by California State Fire Marshal for intended use, with independent certification according to NFPA 701 - Fire Tests for Flame-Resistant Textiles and Fabrics.
- M. Thread: High-strength, low-shrinkage PTFE (Teflon) treated thread, as standard with fabric structure manufacturer, suitable for wide temperature range, flex- and abrasion-resistant

and immune to UV radiation. Thread shall be unaffected by cleaning agents, acid rain, mildew, rot, chlorine, saltwater and industrial pollutants.

1. Lockstitch thread: 1200 Denier.
2. Chainstitch thread: 2400 Denier.

- N. Grout: Non-shrink type, 7000 psi minimum compressive strength, as specified in Section 05 05 23 - Metal Fastenings.

2.2 ANCHORS, FASTENERS AND ACCESSORY MATERIALS

- A. Anchors and Fasteners, General: Provide tamper-proof fasteners. Fasteners shall be galvanized steel or stainless steel. Comply with general requirements for anchors and fasteners specified in Section 05 05 23 – Metal Fastenings.
- B. Type, Size and Spacing: Unless otherwise indicated, provide fasteners of type, grade and class required for intended use and sized and spaced as required for loads and substrate.
- C. Concrete Anchors: Expansion-type, as specified in Section 05 05 23 – Metal Fastenings, size as recommended by manufacturer for Project conditions.
1. Provide stainless steel fasteners typically.
 2. Provide expansion type anchors into concrete. Powder-actuated driven fasteners will not be acceptable.
- D. Grout: Non-shrink, non-metallic type, as specified in Section 05 05 23 – Metal Fastenings.

2.3 STEEL STRUCTURE FABRICATION

- A. Structural Steel Fabrication and Assembly: Fabricate structural steel in accordance with the AISC Specification and California Building Code (CBC) Chapter 22A, Division IX, Section 2251, Chapter M. Special inspection of structural steel fabrication is required unless approved fabricator, as described in California Building Code (CBC) Chapter 17A, Section 1701A.7, is employed and determined to be acceptable by Division of the State Architect (DSA), Structural Safety Section.
- B. Holes: Provide holes in structural steel as necessary for securing fabric structure components other Work to be secured to or pass through structural steel framing.
1. Cut, drill, or punch holes perpendicular to metal surfaces.
 2. Do not flame-cut holes or enlarge holes by burning.
- C. Shop Connections: Make shop connections by welding unless specifically noted on Structural Contract Drawings. Assemble and weld built-up sections by methods that will maintain true alignment of axes without warp.
1. General connections: Make welded connections by shielded-arc method in accordance with AWS D1.1.
 - a. Welding shall be done in the shop unless otherwise shown or specified.
 - b. Prior to welding, preheat members in accordance with AISC Section J2.7.
 - c. Welds exposed in the finished work shall be ground and dressed smooth to preserve the shape and profile of the welded item.

- d. All welds not otherwise identified shall be continuous fillet welds, with size based on AISC standards for thicker part being joined.
 - 2. Welding of structural steel: Verify that weld sizes, fabrication sequence, and equipment used for architecturally exposed structural steel will limit distortions to allowable tolerances. Prevent surface bleeding of back-side welding on exposed steel surfaces. Grind smooth exposed fillet welds 1/2-inch and larger. Grind flush butt welds. Dress exposed welds. All steel shall be welded shut at terminations to prevent internal leakage.
 - 3. Inspection: All shop welding shall be continuously inspected by AWS Certified Welding Inspector (CWI) employed by testing and inspection agency.
 - D. Field Connections: Provide bolted connections, except where welded connections are indicated on Structural Contract Drawings.
 - E. Weld Finishing: Grind and dress smooth all welds exposed in finished Work to preserve shape and profile of structural framing member.
- 2.4 FABRIC FABRICATION
- A. Cut shade fabric to suit configuration of fabric structure, allowing for stretch and shrinkage, for fabric panels with wrinkling and other deformities.
 - B. Fabricate fabric panels with stainless steel cable double lock-stitched into perimeter.
 - C. Strengthen all corners strengthened with 16 oz. non-tear vinyl material.
 - D. Sew protective webbing into all areas where steel cable enters/ exits cloth pockets.

PART 3 - EXECUTION – NOT USED

END OF SECTION

DIVISION 14 – CONVEYING EQUIPMENT

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

14 42 00 – WHEELCHAIR LIFTS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Electric-powered, interior platform (wheelchair) lift.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Concord Elevator, Inc., Brampton, Ontario, Canada (905/791-5555 or 800/661-5112).
- B. Acceptable Manufacturers: Equivalent products of the manufacturers listed below will be acceptable in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.
 - 1. American Stair-Glide Division, Access Industries, Inc., Grandview, MO (816/763-3100 or 800/825-1220).
 - 2. National Wheel-O-Vator Co., Inc., Roanoke, IL (800/551-9095).

2.2 WHEELCHAIR LIFTS

- A. Platform (Wheelchair) Lift: Concord P.A.L-S, complying with all applicable provisions of ANSI A17.1, State of California Division of Industrial Safety regulations and wheelchair accessibility and dependent persons use requirements of California Building Code (CBC).
- B. Lift Capacity: 750 pounds, minimum.
- C. Rated Travel Speed: 15 feet per minute minimum.
- D. Lifting Height: As indicated on the Drawings.
- E. Landings: Provide 60-inch by 60-inch clear landings at each level in compliance with California Building Code (CBC) Section 1116B.2.4.1.
- F. Platform: Exit/entry configuration as indicated on the Drawings, with non-skid surface.
 - 1. Straight-through access: Provide minimum clear platform dimensions of 36 inches wide by 48 inches deep.
 - 2. Side access: Minimum clear platform dimensions of 42 inches wide by 60 inches deep.

- 3. Ramp: Design shall not require ramp. Provide depressed floor area (pit) at wheelchair lift so platform stops flush with adjoining finish floor surface at bottom landing.
- G. Enclosure Panels: 42 inches high, smooth and solid sheet metal, with configuration to suit conditions indicated on the Drawings.
- H. Motor: As standard with manufacturer for specified capacity and travel speed. Provide electrical power characteristics to suit available power. See electrical Drawings for additional information.
- I. Drive: 1:2 cable hydraulic drive system.
- J. Components: Provide the following:
 - 1. Re-leveling device.
 - 2. Automatic, spring-activated, electrically-released brake, mounted to ball screw shaft.
 - 3. Grounded electrical system with upper, lower and final limit switches and 24-volt AC operating controls.
 - 4. Obstruction sensor mounted on platform underpanel.
 - 5. 42-inch high self-closing doors, on platform and at top landing.
 - a. Provide 36-inch wide doors at straight-access lift.
 - b. Provide 44-inch wide doors at side-access lift.
 - c. Provide lever handles at doors and gates.
- K. Safety Devices: Provide the following:
 - 1. Electro-mechanical interlocks which allow platform movement only when doors and gates are closed and locked.
 - 2. Emergency stop and alarm devices to preventing uncontrolled downward movement and to stop downward travel if an obstruction is encountered.
 - 3. Emergency stop switch which shuts off power to lift.
 - 4. Safety pan cover and shut-off.
 - 5. Battery back-up for lowering platform in event of power or component failure, in compliance with the California Building Code (CBC).
- L. Controls: Comply with DSA Policy 95-05.
 - 1. Platform controls: Paddle switch, capable of being operated by hand, arm or elbow. Imprint paddle-switches UP and DOWN. Provide controls accessible from both sides of platform.
 - 2. Terminal controls: Manufacturer's standard call switches at upper and lower terminals.
- M. Finish: Factory paint finish, custom off-white or gray color, to match sample furnished by Architect.
- N. Signage: Comply with California Elevator Safety Construction Code, Article 7-15, Section 7-3094.2(i), including indications of the following:
 - 1. International symbol for accessibility.
 - 2. Lift shall not be used to transport materials or equipment.

3. Lift capacity.
4. Telephone number to call in case of emergency.

PART 3 - EXECUTION – NOT USED

END OF SECTION

DIVISION 22 – PLUMBING

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

22 00 00 – PLUMBING

PART 4 - GENERAL

4.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

4.2 SECTION INCLUDES:

- A. Furnish, install, test, and guarantee a completely operable and approved Plumbing system, which is in full compliance with all Contract Documents, as indicated on the drawings, described herein, and as otherwise required.
- B. This section describes interior and exterior plumbing systems.
- C. Provide Plumbing Submittals and Shop drawings.
- D. A complete system of sanitary sewer piping and venting.
- E. Roof drains, overflow drains and rainwater piping systems.
- F. A complete domestic hot and cold water piping distribution system, including provisions for all plumbing fixtures and equipment. Provide connections to fixtures and equipment. Provide disinfection.
- G. Condensate system for HVAC equipment.
- H. Natural gas piping systems.
- I. A complete system of acid waste including neutralization tanks and monitors.
- J. Pipe hangers and other necessary support items.
- K. Plumbing equipment such as water booster pumps, circulating pumps, water heaters and sump pumps.
- L. Excavating and backfilling.
- M. All Testing required and provide certificates.
- N. Record Drawings.

PART 5 - PRODUCTS

5.1 SYSTEMS

- A. Sanitary Sewer and Vent Systems
 - 1. Above Grade - Concealed and Within Building - Hubless service weight cast iron pipe and fittings, coated inside and outside per ASTM A-74. Joints shall be made with Mission Bands Model #C220hw, #C-564 neoprene rubber, #A240A band (80 lb.) or Husky heavy weight bands. Heavy weight bands shall be sleeve type assemblies of neoprene inner gaskets and 304 stainless steel multiple clamps and outer shield 304 stainless

steel. Above ground vents can have 301 stainless steel bands. All pipe and fittings to comply with California Plumbing Code 1998.

2. Below Grade - Under Building and to Site System - Hub and spigot service weight cast iron pipe and fittings per ASTM A-74, coated inside and outside, and joints made with "Ty-Seal" neoprene compression type gasket or Hubless service weight cast iron pipe and fittings with cast iron pipe couplings equal to MG Piping Products Co.

B. Rainwater Drainage Systems

1. Above Grade - Concealed and Within Building - Hubless service weight cast iron pipe and fittings, coated inside and outside per ASTM A-74. Joints shall be made with Mission Bands Model #C220hw, #C-564 neoprene rubber, #A240A band (80 lb.) or Husky heavy weight bands. Heavy weight bands shall be sleeve type assemblies of neoprene inner gaskets and 304 stainless steel multiple clamps and outer shield 304 stainless steel. Above ground vents can have 301 stainless steel bands. All pipe and fittings to comply with California Plumbing Code 1998.
2. Above Grade - Exposed or on the Outside of the Building - Galvanized iron pipe and fittings, coated inside and outside per ASTM A-74. Joints shall be made with threaded joints. All pipe and fittings to comply with California Plumbing Code. All exterior pipe shall be primed with primer paint. A second coat of enamel paint shall be applied over the primer. The color of the second coat of paint shall match the color of the exterior wall.
3. Below Grade - Under Building and to Site System - Hub and spigot service weight cast iron pipe and fittings per ASTM A-74, coated inside and outside, and joints made with "Ty-Seal" neoprene compression type gasket or Hubless service weight cast iron pipe and fittings with cast iron pipe couplings equal to MG Piping Products Co.

C. Domestic Water System

1. Above Grade Piping System - Type "L" hard temper seamless copper tubing per ASTM B-88, and wrought solder joint: fittings per ANSI B16.22, or cast bronze solder joint fittings per ANSI B16.18. Use 95-5 tin-antimony solder. All exterior water pipe shall be primed with primer paint. A second coat of enamel paint shall be applied over the primer. The color of the second coat of paint shall match the color of the exterior wall.
2. Below Grade Piping System - From Building to Site System: Type "K" hard temper seamless copper tubing per ASTM B-88. Fittings shall be wrought solder joint per ANSI B16.22, or cast bronze solder joint per ANSI B16.18. Use 1000oF silver solder.
3. Above Grade Valves - 3/4" pipe size and smaller - water shut off valves shall be Nibco T-595-y-66 or equal. Above ground 1" pipe size and greater - water shut off valves shall be Nibco 585 or Hammond 567 valves.
4. Below Grade Valves 2" size and smaller shall be Ford Ball Valve type with F.I.P. threads on both sides. Ford Ball Valve shall be heavy cast bronze with 300 PSI working pressure. Underground water service valves 2 1/2" size shall be Jones Tee head type with F.I.P. threads on both sides. Underground water service valves 3" size and larger shall be Mueller keyed head resilient wedge gate valves Model #2360 or Clow 6100 water keyed valve. Both Mueller and Clow valve shall be certified to NSF61 and both shall meet AWWA Standard C509. Gate valves shall not be installed in water services below 2 1/2".

D. Natural Gas System

1. Above Grade Piping System - Within Building - Schedule 40 black steel with 150-PSI malleable iron screwed or flanged fittings.
2. Above Grade Piping System - Outside of Building - Galvanized Schedule 40 steel with 150-PSI malleable iron screwed or flanged fittings. All exterior pipe shall be primed with primer paint. A second coat of enamel paint shall be applied over the primer. The color of the second coat of paint shall match the color of the exterior wall.
3. Below Grade Site Piping System - Site system shall extend from gas meter's transition riser to pressure regulator's transition riser. Piping and fittings - Polyethylene (PE) pipe shall comply with PE 2406 from the Plastics Pipe Institute Material Designation and shall comply with ASTM D2513 and ASTM D3261. PE pipe shall be rated for internal pressure of 76 PSI (3" and below) at 73 degrees F. Acceptable manufacture shall be Driscopipe 6500 from Phillips 66 and Poly Pipe PE2406. Provide only butt heat fusion joining of pipe and fittings. Sidewall fusion or tapping tees are not acceptable.
4. Transition Riser - Below Grade to Above Grade - Provide one-piece natural gas transition riser from PE pipe to steel pipe. The schedule 80 steel section of the riser shall be epoxy coated. The transition riser shall meet NFPA-58-1992 and ASTM-D2513. Transition Riser (from Polyethylene pipe to galvanized steel) - Special one-piece transition riser from polyethylene pipe to epoxy coated galvanized steel pipe shall be used where the gas piping extends from below grade to above grade. Epoxy coated pipe riser shall extend to a minimum of 8" above grade.
5. All underground plastic pipe shall have a 14 gauge insulated tracer wire wrapped around pipe and fittings and extend to ends of pipe run. The tracer wire shall extend 6 inches above grade at the ends of the piping systems. Provide warning tape a12" above pipe.
6. Pressure Regulators - Gas pressure regulators from 5 lbs. to 7 inches of water shall be American 1813 C.
7. Gas shut off valves for 5 lbs. and greater shall be Nordstrom B142. Gas shut off valves below 5 lbs. shall be McDonald valves with pressure rating of 5lbs.

E. Condensate System

1. Above Grade - Type "M" hard temper seamless copper tubing. Wrought solder Type "M" fittings. Use 95-5 tin-antimony solder. Maintain a minimum slope of an 1/8" per foot.

F. Acid - Waste System

1. Above and Below Grade Piping - Through and in Non-Rated Walls
 - a. Polypropylene Piping System Manufacturer: Orion
 - b. Product type: Blueline Polypropylene Schedule 40 "Proxylene".
 - c. Piping systems including piping, sink arms, traps, fittings, etc. shall be fire retardant, thermoplastic material with resistance to most common organic and mineral acids, their salts, strong and weak alkalies and most organic chemicals. Proxylene qualifies for UL certification of V-2 when tested under UL Subject 94 in thickness of .150 and over. Based on parameters under ASTM D635, Proxylene also meets established industry criteria for self-extinguishing. Proxylene qualifies under ASTM D2843 smoke chamber test with a maximum value less than 50.

2. Above Grade Piping - Through and in Rated Walls
 - a. Polyvinylidene Fluoride Piping System Manufacturer: Orion
 - b. Product type: Kynar brand Polyvinylidene Fluoride (PVDF).
 - c. Piping systems including piping, sink arms, traps, fittings, etc. shall be certified to meet ASTM E-84 and UL 723 Standards for flame spread and smoke generation. PVDF shall be resistant to most common organic and mineral acids, their salts, strong and weak alkalies and most organic chemicals.
3. Above Grade Fittings - Non-rated walls
 - a. Polypropylene Piping System Manufacturer: Orion
 - b. Product type: Blueline Polypropylene Schedule 40 "Proxylene".
 - c. Joints shall be mechanical type.
4. Above Grade Fittings - Rated walls
 - a. Polyvinylidene Fluoride Piping System Manufacturer: Orion
 - b. Product type: Kynar brand Polyvinylidene Fluoride (PVDF).
 - c. Joints shall be mechanical type.
5. Below Grade Fittings
 - a. Polyvinylidene Fluoride Piping System Manufacturer: Orion
 - b. Product type: Kynar brand Polyvinylidene Fluoride (PVDF).
 - c. Joints shall be electric fuse type, "Rionfuse".
6. Acid Waste Monitoring System
 - a. Provide an Orion pH Monitor II with associated accessories. Provide conduit and cable from neutralization tank to Orion pH Monitor II. Orion pH Monitor II shall have a pH analyzer, low and high pH alarm light, audible alarm and silence button, NEMA 4X recessed enclosure. Provide pH probe with 35 feet of shield cable.

G. Yard Boxes

1. Provide yard boxes for all below grade valves and regulators.
2. Yard boxes shall be manufactured by Associated Concrete Products, Inc. (ACP). Yard boxes shall be "Quikset" type and be constructed of "Type 2" cement. Provide adjustment rings as necessary to keep cover level with grade. Provide top ring and "TE-1000" traffic cover. Traffic cover shall be galvanized. The top of the cover shall be labeled with the type of system it is being used for.

5.2 PIPE SUPPORTS

- A. Hangers shall be Clevis type equal to B-Line B3100 Standard Clevis Hanger.
- B. Pipe Clamp shall be Bolt and Clamp type equal to B-Line B3140 Bolt Pipe Clamp.
- C. Complete hanger system shall comply with be B-Line Seismic Restraints or equal.

- D. Roof pipe supports shall be Pipe Pier, flexible resilient closed-cell polyethylene foam (ETHAFOAM brand - trade mark of the Dow Chemical Company), with strut system built into foam block.

5.3 PLUMBING FIXTURES AND COMPONENTS

A. General

- 1. All water closets, urinals, lavatories and service sinks shall be of the same manufacturer. All stainless steel sinks shall be of the same manufacturer. All floor sinks and floor drains shall be of the same manufacturer. All flush valves shall be of the same manufacturer. All faucets shall be of the same manufacturer. All accessible plumbing fixtures shall comply with all of the requirements of CBC Section 1115B. Heights and location of all fixtures shall be according to CBC Table 1115B-1. Fixture controls shall comply with CBC Section 1118B.
- 2. No motion actuated fixtures/sensors flush valves, faucets, wash sinks, showers, solenoids

B. Water Closets

- 1. Vitreous China - Comparable fixtures manufactured by Kohler, American Standard, and Eljer are acceptable. Fixtures shall be white, unless otherwise specified. Water closet seats manufactured by Beneke and Olsonite are acceptable. Flush valves manufactured by Zurn are acceptable.
- 2. Vitreous china siphon jet elongated bowl, top spud flush valve. White heavy duty, solid plastic, open front seat with stainless steel hinge posts and concealed check.
- 3. Provide appropriate carriers, coordinated with pipe chase and fitting type requirements.

C. Urinals

- 1. Vitreous China - Comparable fixtures manufactured by Kohler, American Standard, and Eljer are acceptable. Fixtures shall be white, unless otherwise specified. Flush valves manufactured by Zurn are acceptable.
- 2. Urinals shall have brass nipples for dirty arms. No equals.
- 3. Vitreous china urinal with top spud flush valve, and strainer with china grate.
- 4. Provide appropriate carriers, coordinated with pipe chase and fitting type requirements.

D. Lavatories

- 1. Vitreous China - Comparable fixtures manufactured by Kohler, American Standard, and Eljer are acceptable. Fixtures shall be white, unless otherwise specified. Faucets manufactured by Chicago are acceptable.
- 2. Countertop - Vitreous china, self-rimming oval lavatory with faucet.
- 3. Wall Hung - Vitreous china lavatory with faucet and wall carriers.
- 4. Modified Acrylic / Polymer Solid Surface - Comparable fixtures manufactured by Willoughby Industries or Bradley. Faucets shall be integral with the lavatory.

- E. Stainless Steel Sinks - Comparable fixtures manufactured by Elkay or Just. All stainless steel sinks are to minimum of 18-gauge. Faucets for stainless steel sinks shall be manufactured Chicago, Elkay or Just.
 - 1. Countertop - self-rimming stainless steel sink with faucet.
- F. Showers
 - 1. Standard and ADA compliant with tile enclosure. Provide stainless steel showerhead with 2.2 GPM spray, chrome plated shower arm and chrome plated escutcheon. Provide pressure balance mixing valve and floor drain with chrome-plated strainer. For ADA showers provide showerhead on flex hose and slide bar. Manufactures shall be Chicago or Elkay.
 - 2. Emergency Shower and eye wash. Showerhead and eye wash shall be made of ABS colored plastic. Rigid stainless steel pull rod. Galvanized metal support pipe and floor flange. Manufactures shall be Bradley or Haws.
- G. Emergency Eye Wash
 - 1. Emergency eyewash shall be made of ABS colored plastic. Countertop swing-away type. Manufactures shall be Bradley or Haws.
- H. Drinking Fountains - Wall mounted drinking fountains shall be stainless steel type. Exterior pedestal mounted drinking fountains shall be exposed aggregate reinforced concrete type. Comparable fixtures shall be manufactured by Haws or Elkay.
- I. Roof and Overflow Drains - Comparable items manufactured by J.R. Smith and Zurn are acceptable.
 - 1. Roof Drains - Cast iron drains with flashing collar and cast iron dome. Furnish extension for insulated roofs. Under-deck clamp for all but poured-in-place installations. Outlet connection type shall be compatible with piping system. Provide lead flashing for all roof drains.
 - 2. Overflow Roof Drains - Cast iron drains with flashing collar and cast iron dome. Provide 2" high water dam. Installation of the drain assembly, the top of the dam shall be a minimum of 2" above the adjacent finished roof surface. Furnish extension for insulated roofs. Under-deck clamp for all but poured-in-place installations. Outlet connection type shall be compatible with piping system. Provide lead flashing for all roof drains.
- J. Floor Drains - Comparable items manufactured by J.R. Smith and Zurn are acceptable.
 - 1. Duco cast iron drain body with adjustable nickel bronze strainer. Provide trap primer connection as required per drawings. Provide no-hub outlet connection.
- K. Floor Sinks - Comparable items manufactured by J.R. Smith and Zurn are acceptable.
 - 1. Cast iron flanged receptor, acid resistant coated interior, aluminum dome bottom strainer; 1/2 grate nickel bronze top when specified on drawings.
- L. Trap Primers - Comparable items manufactured by J.R. Smith or PPP are acceptable.
 - 1. Trap primers shall be cast bronze. Provide ball shut off valve and union before trap primer connection. Provide 14" X 14" access panels for removal.

- M. Cleanouts - Comparable items manufactured by J.R. Smith and Zurn are acceptable.
1. Floor Clean Outs "FCO" (Concrete and Tile Floors) - Duco cast iron cleanout with round adjustable scoriated secured nickel bronze top. Secure plate with countersunk head. Bronze plug. Spigot outlet. FCO shall be equal to JR Smith 4023S.
 2. Wall Cleanouts "WCO" - Cast iron branch cleanout tee, with threaded bronze plug, and polished stainless steel cover plate with center, counter-sunk head securing screw. WCO shall be equal to JR Smith 4532S.
 3. Grade Clean Outs "GCO"
 - a. Finished Concrete Areas - Duco cast iron cleanout with round adjustable scoriated secured nickel bronze top. Secure plate with countersunk head. Bronze plug. Spigot outlet. GCO shall be equal to JR Smith 4023S.
 - b. ii) Dirt, Grass, Asphalt and other exterior areas - Duco cast iron cleanout. Bronze plug. Spigot outlet. GCO shall be equal to JR Smith 4023S. Provide precast concrete vault box with heavy-duty cast iron cover. Cover shall state "SEWER". Concrete vault shall be larger enough to get tools into box and remove bronze plug.
- N. Hose Bibb - Comparable items manufactured by J.R. Smith and Acorn are acceptable.
1. Provide vacuum breaker.
 2. Mount at 24" A.F.F. unless otherwise noted.
- O. Water Pressure Reducing Valve - Comparable items manufactured by Watts or Wilkens are acceptable.
1. Provide separate stainless steel strainer for each water pressure-reducing valve. Connections shall be threaded. Set pressure to maximum of 80 P.S.I. Provide pre-cast concrete yard box for water pressure reducing valves below grade.
- P. Water Hammer Arresters - Comparable items manufactured by J.R. Smith and Zurn are acceptable.
1. Stainless steel completely sealed water hammer arresters. Installed on cold waterlines in an upright position at all quick closing valves, solenoids, and plumbing fixtures. Locate and size in accordance with Plumbing and Drainage Institute Standard No. WH201. Provide 14" X 14" access panels for removal. WHA shall be equal to JR Smith 5005 for fixture units 1-11, JR Smith 5010 for fixture units 12-32, JR Smith 5020 for fixture units 33-60, JR Smith 5030 for fixture units 61-113 and JR Smith 5040 for fixture units 114-154.
- Q. Plumbing Fixture Components
1. Traps above floor, exposed or in cabinets, shall be a minimum of 17 gauge chrome plated brass, adjustable with cleanout plug, installed with escutcheon with set screw; all chrome plated. Provide chrome plated slip nuts. No die cast metal allowed.
 2. Exposed angle stops shall be loose key (requires 1/8" Allen Key) Aquaflo V-609-AB angle brass. Inlet = 1/2" F.I.P. Outlet = Hose Thread 1/2".
 3. Supply tubes shall be Brasscraft stainless speedi-plum.
 4. All water line nipples above and below grade shall be brass type. No galvanized or black steel type will be allowed.

5.4 PLUMBING EQUIPMENT

- A. Domestic Hot Water Circulating Pump - Comparable items manufactured by Armstrong or Bell and Gosset are acceptable.
 - 1. Provide all bronze or stainless steel in-line circulating pump of size and capacity as scheduled on the drawings. Pump to have integral thermal overload protection and "Aquastat" (pipe line heat sensitive thermostat) for on/off operation.
- B. Domestic Water Heaters - Comparable items manufactured by A.O.Smith or Lockenvar are acceptable. Make and model number of water heater to be on the State of California approved list for energy efficiencies.

PART 6 - EXECUTION

6.1 PIPE INSTALLATION

- A. Cast Iron Soil Pipe Institute Pamphlet #100 and the I.A.P.M.O. IS 6 75.
- B. Cast iron pipe shall be installed per California Plumbing Code.
- C. Joints in copper tubing shall be made by first thoroughly reaming, removing all burrs, and cleaning the surface of the pipe and fittings; applying flux and sweating with lead free solder.
- D. All piping shall be isolated from other piping, any part of the building, framing conduit, etc., with 2-inch wide strips of hair felt with sticky back.
- E. Flush out all water mains and sanitary drains with water so as to obtain free flow.
- F. Unions shall be installed after each screw type valve, connections for all equipment, appliances and as required for erection and maintenance. No unions shall be installed in concealed location.
- G. Sleeves for piping through masonry walls or floors shall extend completely through the walls or floors. Sleeves shall finish flush on both sides. Provide risers clamps at all floor penetrations.
- H. Unions shall be installed after each screw type valve, connections for all equipment, appliances and as required for erection and maintenance. No unions shall be installed in concealed location.
- I. All condensate drains to have clean-outs at each horizontal run. Clean-outs shall be F.I.P. thread brass plugs.
- J. All sanitary sewers and waste lines shall be graded at a minimum of 1/4" per foot unless otherwise noted on the drawings. The sections of the pipe shall be laid and fitted so when completed the sewer will have smooth and uniform invert.
- K. Site natural gas piping shall have a minimum of 30" of cover or be 30" below finished floor.

6.2 VALVE INSTALLATION

- A. Provide adequate access around valve and valve handle for maintenance.
- B. Underground valves shall be installed with SA 316 stainless steel bolts, nuts and washers.

- C. Underground water service valves shall have Bit-50 applied to the valve, bolts, nuts and washers. All underground water service valves shall be wrapped with 8-mil clear plastic. The 8 mil clear plastic shall be attached to the valve with 2 wraps of 10-mil tape or one wrap of 20-mil tape.
- D. Underground water service valves shall have the shut off within 18" of finish grade. Steel valve stem extensions shall be provided with valve. Valve stem extensions to be used shall be from Pipeline Products - Model #SX900 with galvanized shafts and fixed center ring.

6.3 PRESSURE REGULATORS

- A. Domestic Water: A reduced pressure regulator device with a strainer shall be installed per local code requirements as indicated on the drawings. There shall be a Nibco T-595-Y-66 shut valve before the pressure regulator. Provide 150 lb. cast brass companion flanges each side of the regulator with stainless steel bolts. As noted on drawings provide all items in a pre-cast concrete yard box with a reinforced steel lid. The lid shall have the word "WATER" on it.
- B. Natural Gas: Provide "medium to low" pressure natural gas regulators at all buildings being served by natural gas. Gas vent for regulator shall be installed with the vent pointing down. Provide a natural gas shut off valve before each pressure regulator. Provide two galvanized unions, one on each side of the pressure regulator. All pressure regulators shall be outside of buildings and mounted to the wall. Size natural gas regulator based on natural gas quantities listed on the drawings.

6.4 CLEANOUTS

- A. Cleanouts shall be installed where shown on plans and where required by code. Cleanouts shall be accessible in all cases and shall be brought to surface on "Y" branches. All cleanouts shall be provided with removable floor or wall plate as specified.

6.5 PIPE HANGERS and roof SUPPORTS

- A. Piping shall be firmly held in place by galvanized hangers, supports and pipe rests, located adjacent fittings at each offset or change of direction, at the ends of branches over 5' long, at riser pipes and along piping where necessary to prevent sags, bends, or vibration. All hangers and supports shall be designed to support the weight of pipe, fluid and insulation.
- B. Lateral bracing shall be provided at every fourth hanger where hanger rods are more than 18 inches in length.
- C. Hanger Spacing
 - 1. Domestic Water, Condensate and other copper piping:
 - a. 1/2" to 2" pipe every 6' 0" or less.
 - b. 2" and larger pipe every 8' 0" or less.
 - 2. Soil, Waste, Vent, Rain Water Leaders and other cast iron horizontal installations shall be provided with a hanger for at least every joint except that when the developed length between hangers is less than 4 feet they shall be provided at every other joint. Hangers shall also be provided at each horizontal branch connection.
 - 3. Refer to B-Line Seismic Restraints manual approved by California Office of Statewide Health Planning and Development for other spacing and support conditions.

- D. Pipe Supports on Roof:
 - 1. Roof pipe supports shall be Pipe Pier, flexible resilient closed-cell polyethylene foam (ETHAFOAM brand - trademark of the Dow Chemical Company), with strut system built into foam block.
 - 2. Foam block size:
 - a. 4" high X 4" wide for 1/2" to 2" pipe diameter pipe
 - b. 4" high X 6" wide for 2" and larger pipe diameter
 - E. Pipe Support Spacing on Roof
 - 1. Copper pipe: 1/2" to 2" pipe every 6' 0" or less.
 - 2. Copper pipe: 2" and larger pipe every 8' 0" or less.
- 6.6 FIXTURE INSTALLATION
- A. All fixture piping shall be flushed-out in the presence of the School District's Representative prior to connecting any fixtures.
 - B. Water piping and drain connections shall not be smaller than the sizes allowed by the plumbing code.
 - C. Furnish all fixtures complete with supplies, individual stops, traps, escutcheons, trim and all other accessories to provide a complete fixture. Fixtures shall be set in place and secured to walls. Provide trap and piping wrap at lavatories and sinks per ADA requirements.
 - D. All plumbing fixtures shall be bedded and caulked along joint at walls, countertops, and other intersecting surfaces with DAP Kwik-Seal Tub and Tile adhesive caulk. DAP package code number shall be 18001 white caulk.
 - E. Caulk around the bases of vitreous china toilets, urinals and sinks.
 - F. All faucets to be installed using "Plumber Putty" under the base of the faucet for a watertight seal.
 - G. Plumbing fixture trim and exposed supplies and waste shall be brass with polished chrome plated finish. Polished chrome plated piping, fittings, and valves shall not bear tool marks.
 - H. Provide backing for each plumbing fixture requiring same, at the time roughing in is done.
 - I. After the fixture installation is complete, cover and protect the rims, front, and all exposed parts until the completion of the construction phase. The plumbing contractor shall be responsible for all damage to fixtures, and shall assume all related costs.
- 6.7 CLEANING EQUIPMENT AND PREMISES
- A. Thoroughly clean all parts of piping, fixtures and equipment.
- 6.8 STERILIZATION OF DOMESTIC WATER SYSTEMS
- A. All domestic water piping systems shall be cleaned, flushed and sterilized with chorine in accordance with the standards of the county health department or other governing codes. During the flushing period, all valves and faucets shall be opened and closed several times. Provide chlorination certificate to Architect.

6.9 TESTS AND ADJUSTMENTS

- A. No piping work, fixtures, or equipment shall be concealed or covered until they have been inspected and approved by the School District's Representative who shall be notified when the work is ready for inspection. All work shall be completely installed, tested as required by this section and the State Ordinances and State Safety Orders, and shall be leak tight before inspections requested. All tests shall be repeated upon request to the satisfaction of those making the inspection.
- B. Before testing, remove or otherwise protect from damage components that are not designated to withstand the test pressures.
- C. Provide all necessary water, electric power, and other service and instruments required to perform tests.
- D. Plumbing fixture fittings and valves shall be operated to assure acceptable performance without leaks. All systems and equipment: shall be adjusted to eliminate excessive noise and vibration.
- E. Make necessary adjustments, repairs and alterations to satisfy specified testing requirements, correct defects disclosed by tests or inspections, and replace defective parts. Completely remake defective pipe joints.
- F. Repeat tests on defective portions of the work until compliance with testing requirements has been proven.
- G. Bear the cost of repairs and restoration of work of other Contractors, which were damaged by the testing procedures.
- H. Provide tests on all equipment and fixtures. Comply with all manufacturers' instructions for start-up, operating and maintaining of all equipment and fixtures.
- I. Perform oiling, lubrication, greasing etc. as required.
- J. Piping tests shall be made with the medium and under pressure listed below.
 - 1. Soil, Waste, Vent, Rainwater Leaders, and Condensate:
 - a. Gauge Pressure and test medium - Minimum of 10-foot head of each joint for duration of check with water.
 - 2. Domestic Water:
 - a. Gauge Pressure and test medium - 125 PSI with water
 - 3. Natural Gas:
 - a. Gauge Pressure and test medium - 50 PSI with Air
 - 4. Test period length four (4) hours each system.

END OF SECTION

22 07 00 – PLUMBING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Provide labor, equipment and materials, and perform all operations necessary for the installation of insulation as indicated. This section includes thermal insulation for piping and equipment.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Acceptable manufacturers for insulation are Manville Corporation, Owens-Corning and Knauf.
- B. Acceptable manufacturers in addition to insulation manufacturers for adhesives, sealants and coatings are Foster and Childers Product Co.
- C. Duct tape is not an approved sealer tape and shall not be used on this project.

2.2 PIPING SYSTEM INSULATION

- A. Glass Fiber: Manville Micro-Lok meeting ASTM C547 or equal; rigid molded, noncombustible, Class 1 not to exceed 25 flame spread and 50 smoke developed.
 - 1. 'K' ('KSI') Value: 0.23 at 75 degrees F.
 - 2. Maximum Service Temperature: 850 degrees F.
 - 3. Vapor Retarder Jacket: AP-T PLUS White kraft paper reinforced with glass fiber yarn and bonded to aluminum foil, secure with self sealing longitudinal laps and butt strips or AP Jacket with outward clinch expanding staples or vapor barrier mastic as needed. All insulation and jacket material shall be plenum rated.
 - 4. Provide 18 gauge galvanized metal insulation shields at pipe hangers. Insulation shields shall provide an expanded surface area to carrier the weight of the piping without distorting or damage to insulation.
- B. Elastomeric Foam: Rubatex R-180-FS/R-1800-FS meeting ASTM C534 or equal; flexible, cellular elastomeric, molded or sheet, Class 1 not to exceed 25 flame spread and 50 smoke developed:
 - 1. 'K' ('KSI') Value: 0.28 at 75 degrees F.
 - 2. Maximum Service Temperature of 220 degrees F.

3. Connection: Waterproof vapor retarder adhesive, as needed; RUBATEX R-373 Adhesive.
4. UV-Protection: Outdoor protective coating; Rubatex 374 Coating.
5. Provide 18 gauge galvanized metal insulation shields at pipe hangers. Insulation shields shall provide an expanded surface area to carrier the weight of the piping without distorting or damage to insulation.

2.3 FIRE STOPPING INSULATION

- A. Fire stop insulation shall be ceramic fiber blanket equal to Schuller "Cerablanket" or USG Therma-fiber 6 lb. density. Class 1 not to exceed 25-flame spread and 50 smoke developed.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Verify that ductwork has been pressure tested for leakage in accordance with SMACNA standards before applying insulation materials.
- B. Verify that all surfaces are clean, dry and free of foreign material. Apply insulation on clean, dry surfaces free of any foreign matter and only after tests and approvals required by the specifications have been completed.

3.2 GENERAL INSTALLATION

- A. Install materials in accordance with manufacturer's recommendations, building codes and industry standards.
- B. Continue insulation vapor barrier through penetrations except where prohibited by code.
- C. Insulation shall be installed by workmen regularly en gauged in this kind of work in accordance with the manufacturer's recommendations.
- D. All exposed raw edges shall be finished with finishing cement.
- E. If staples are used, all must be coated with adhesive to maintain vapor barrier integrity. Thickness per ASHRAE Standards Table.

3.3 PIPING SYSTEM INSULATION INSTALLATION AND SCHEDULE

- A. Pipe insulation shall be continuous through walls and floor openings except where walls and floors are required to be fire stopped or required to have a fire resistance rating. Where this occurs, the open space remaining between the sleeve and pipe shall be filled with fire stop insulation.
- B. Insulation on piping indicated must be applied with a continuous, unbroken vapor seal. Supports, anchors, etc., that are secured directly to cold surfaces must be adequately insulated and vapor sealed to prevent condensation.
- C. Insulated pipes shall be insulated continuously through hangers. Rigid insulation inserts and metal shields are to be provided at all pipe hangers and supports. Pipe insulation shall abut the rigid insulation insert. Apply a wet coat of vapor barrier lap cement on all butt joints and seal the joints with 3" wide vapor barrier tape or band.

- D. Butt all joints firmly together and smoothly, secure all jacket laps and joint strips with lap adhesive.
- E. Factory premolded one-piece insulated fitting covers are to be used; the proper factory precut insulation shall be applied to the fitting. The ends of the insulation shall be tucked snugly into the throat of the fitting and the edges adjacent to the pipe covering, tufted and tucked in, fully insulating the pipefitting. Covers shall overlap the adjoining pipe insulation and jackets and on cold pipes shall be sealed at all seam edges with vapor barrier adhesive. The circumferential edges of all covers shall be sealed with pressure sensitive vinyl tape. The tape shall overlap the jacket and the cover at least one inch.
- F. Valves may be insulated with sections of Fiberglass pipe insulation complete with service jacket. Raw ends shall be coated with vinyl acrylic mastic CP-11 for hot piping or shall be coated with vapor barrier mastic (CP-30 or Fosters 30-35) for cold piping.
- G. Locate insulation and cover seams in least visible locations.
- H. Neatly finish insulation at supports, protrusions, and interruptions.
- I. Provide insulated pipes conveying fluids below ambient temperature with vapor retardant jackets with self-sealing laps. Insulate complete system.
- J. For insulated pipes conveying fluids above ambient temperature, secure jackets with self-sealing lap or outward clinched, expanded staples. Bevel and seal ends of insulation at equipment, flanges, and unions.
- K. Provide shield between isolation inserts and hanger supports. Shields shall be minimum of 20-gauge galvanized metal. Fabricate of Manville Thermo-12 or other heavy density insulating material suitable for temperature. Insulation inserts shall not be less than the following lengths;
 - 1. 1/2" to 2 1/2" pipe size 10" long
 - 2. 3" to 6" pipe size 12" long
 - 3. 8" to 10" pipe size 16" long
 - 4. 12" and over 22" long
- L. For pipe exposed in equipment rooms or unfinished spaces provide field applied aluminum jacket.
- M. For exterior piping applications (refrigeration suction piping), provide field applied protection jacket or coating. Insulated pipe, fittings, joints, and valves shall be covered with field applied aluminum jacket. Jacket seams shall located on bottom side of horizontal piping.
- N. For return air plenum areas provide non-combustible jacket.
- O. Fittings and valves shall be covered with premolded one-piece insulated covers.
- P. Piping Insulation Schedule
 - 1. Fiber Glass Insulation
 - a. Domestic Hot Water (supply and return piping):
 - 1) pipe: up to 2" 1 inch thick
 - 2) pipe: 2 1/2" to 4" 1-1/2-inch thick

- b. Condensate piping system
 - 1) pipe: up to 2" 3/4-inch thick
- 2. Elastomeric Foam
 - a. Refrigerant Suction
 - 1) all sizes 1 inch thick
 - b. Refrigerant Hot Gas
 - 1) all sizes 3/4-inch thick

Q. The above listed insulation thickness and finish are required. If however, the thickness, density and finish are more restrictive in the current edition of the California Mechanical Code Section 1005 Table No. 10-D and Table 2-53D of the Building Energy Efficiency Standards these values shall be used.

END OF SECTION

DIVISION 23 – HEATING, VENTILATING AND AIR CONDITIONING

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

23 00 00 – COMMISSIONING OF HVAC

PART 1 - GENERAL

- 1.1 This section covers testing and balancing of environmental systems including air distribution systems, and the equipment and apparatus connected thereto. The testing and balancing of all environmental systems shall be the responsibility of one Testing, Balancing and Adjusting (TBA) firm. The minimal standards to be met are those set forth in Chapter 40 in the latest edition of the ASHRAE Systems Handbook.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

- 3.1 The balancing, testing and adjustments of the complete mechanical systems shall be the direct responsibility of the Contractor and he shall engage the services of an independent firm specializing in this work. The definition of independent shall mean the firm is not associated with any contracting or manufacturing firm and derives its income solely from testing, adjusting and balancing mechanical systems. Acceptable testing, adjusting and balancing firms are those that are AABC certified. NEBB firms must also be AABC certified.
- 3.2 The balancing work shall be performed by the same firm having total professional responsibility for the final testing, adjusting, and balancing of the entire system.
- 3.3 Testing and balancing work shall be directly supervised and the results confirmed by a Registered Professional Mechanical Engineer who shall represent the TBA firm in progress meetings as requested, and shall be available for interpreting all material found in the balance report.
- 3.4 The balancing firm shall provide all tools, equipment and instruments required and shall take all readings, and make all necessary adjustments.
- 3.5 After all adjustments are made, prepare a detailed written report and submit for review. Report shall bear the Registered Professional Mechanical Engineer's Stamp of the person supervising the work. Final acceptance of this project will not be made until a satisfactory report is received.
- 3.6 Verify the following conditions before proceeding with work:
- A. Conduct site observations during construction to determine the location of required balancing devices and confirm that they are properly located and installed. Submit a written report of these observations to the Architect.
 - B. Installation of the designated system is complete and in full operation.

- C. Outside temperature conditions, occupant loads, lighting loads, special equipment requiring extra sensible or ventilation requirements, and solar conditions are within a reasonable range relative to design conditions or provide for acceptable simulation of loads and conditions that will result in a properly balanced system.
- 3.7 All thermal overload protection shall be observed and noted on the data sheets. If the starter equipment is furnished and installed by the Contractor and thermal overload protection is incorrect, such information shall be tabulated, including required size thermal overloads, and included in the report. If thermal overload protection is incorrect, it shall be the responsibility of the Contractor to see that proper overload protection is installed.
- 3.8 Measure and set any special conditions such as minimum outside air quantities; check and adjust outside and return air intakes so that the system will deliver substantially the same volume on either; make tests and record data as required in the "Balancing Report" section. All balancing devices such as dampers and valves shall be clearly marked as to the final balanced position. Plug all test holes, replace access doors and belt guards.
- 3.9 Provide temperature recorders for spaces as necessary to verify acceptable space temperature conditions.
- 3.10 Upon request of the Mechanical Engineer or School District's Representative, a representative of the balancing firm performing the work shall demonstrate fluid flow quantities shown in the report by re-measuring outlets or terminals selected at random by the Mechanical Engineer or School District's Representative to verify accuracy of settings.
- 3.11 Requirements for balancing air systems are as follows:
 - A. Before any adjustments are made; the major items of equipment shall have been checked to assure all bearings have proper lubrication; all belt drives shall have been adjusted for proper alignment and tension; and the systems shall have been checked for such items as dirty filters, duct leakage, filter leakage, damper leakage, equipment vibrations, correct damper operations, etc.
 - B. Adjust fan systems, major duct sections, registers, diffusers, etc., to deliver design air quantities within plus or minus 5%. Individual air outlets, when more than one serves a space, may have a tolerance of 10% from the average. Design CFM is based on filters being approximately 50% loaded. Pressure drop across filters during balancing shall be simulated to that condition. After balancing is completed, verify that motor is not overloaded with the filters clean.
 - C. Check and adjust CFM settings.
 - D. Adjust distribution systems to obtain uniform space temperatures free from objectionable drafts and noise within the capabilities of the system.
 - E. Exchange and pay for sheaves and/or belts as required to adjust the rpm of fans to handle specified air quantity.
- 3.12 Provide four copies of a "Balancing Report" to the Architect. The Mechanical Engineer and School District's Owner' Representative shall review this report. This report shall contain a general information sheet listing instruments used, method of balancing, altitude correction

calculations, manufacturer's grille, register, and diffuser data. Report shall contain the following additional data.

- A. Equipment data sheets listing make, size, serial number, rating, operating data, etc., of all mechanical equipment including fans, motors, starters, and drives. Operating data shall include rotational speed, inlet and outlet pressures, pressure drop across filters, coils and other system components, and measured motor current and voltage.
 - B. Balancing data sheets listing the required and actual CFM of all supply, return, and exhaust outlets or inlets, and totals summarized by systems.
 - C. A reduced set of contract drawings with outlets marked thereon for easy identification of the designation used in the data sheets.
 - D. Listing of any abnormal or notable conditions not covered in the above.
- 3.13 Even though it is the responsibility of the balancing firm to check the physical operation of each operating piece of equipment, the control contractor must assure the balancing firm that all controls are accurately calibrated and must cooperate with him during the balancing work period.
- 3.14 The agency performing the system balance and performance test, shall personally verify that all system control functions and interlocking do in fact provide the desired results as stated. The agency shall provide a written statement within the air balance report verifying this fact.

END OF SECTION

23 07 00 – HVAC INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES:

- A. Provide labor, equipment and materials, and perform all operations necessary for the installation of insulation as indicated. This section includes thermal and acoustic insulation applied to ductwork and air handling devices.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Acceptable manufacturers for insulation are Manville Corporation, Owens-Corning and Knauf.
- B. Acceptable manufacturers in addition to insulation manufacturers for adhesives, sealants and coatings are Foster and Childers Product Co.
- C. Duct tape is not an approved sealer tape and shall not be used on this project.

2.2 DUCT WORK INSULATION

- A. Flexible Fiberglass Blanket: Manville Microlite Type 75 meeting ASTM C553 or equal, Type 1, Class B-2; flexible blanket not to exceed 25 flame spread and 50 smoke developed.
 - 1. 'K' ('KSI') Value: 0.27 at 75 degrees F installed.
 - 2. Density: .75 LB/CU FT.
 - 3. Vapor Barrier Jacket: FSK, Aluminum foil reinforced with fiberglass yarn and laminated to fire-resistant kraft, secured with UL listed pressure sensitive tape and/or outward clinched expanded staples and vapor barrier mastic as needed. All insulation and jacket material shall be plenum rated.
- B. Duct Liner: Manville Linacoustic Mat Faced or Permacote meeting ASTM C1071 or equal; flexible blanket.
 - 1. 'K' ('KSI') Value: ASTM C518, 0.25 at 75 degrees F.
 - 2. Noise Reduction Coefficient: .65 or higher based on "Type A mounting". Comply with ASTM C423A Absorption Coefficients, ASTM 84, UL 723 and NFPA 228.
 - 3. Maximum Velocity on Mat or Coated Air Side: 4,000 ft/min.
 - 4. Adhesive: UL listed waterproof type.
 - 5. Fasteners: Duct liner galvanized steel pins, welded or mechanically fastened.

- 6. Absolute roughness of exposed surface not to exceed 0.0013 coated.
- C. Round Duct Liner: Manville Spiracoustic, meeting ASTM C427 or equal; rigid.
 - 1. 'K' ('KSI') Value: ASTM C518, 0.23 at 75 degrees F.
 - 2. Noise Reduction Coefficient of .70 as per ASTM C427 (Type A mounting).
 - 3. Maximum Velocity: 4000 ft/min.
- D. Duct Liner shall comply with the requirements of NFPA 90A and the "duct liner materials standard" of the Thermal Insulation Manufacturers Association. Duct liner shall be glass fiber insulation with exposed surface coated to prevent fiber erosion at air velocities up to 4000 fpm. Duct sizes for lined duct show the clear dimension inside the lining.
- E. All external insulation shall have foil back jacket.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Verify that ductwork has been pressure tested for leakage in accordance with SMACNA standards before applying insulation materials.
- B. Verify that all surfaces are clean, dry and free of foreign material. Apply insulation on clean, dry surfaces free of any foreign matter and only after tests and approvals required by the specifications have been completed.

3.2 GENERAL INSTALLATION

- A. Install materials in accordance with manufacturer's recommendations, building codes and industry standards.
- B. Continue insulation vapor barrier through penetrations except where prohibited by code.
- C. Insulation shall be installed by workmen regularly engaged in this kind of work in accordance with the manufacturer's recommendations.
- D. All exposed raw edges shall be finished with finishing cement.
- E. If staples are used, all must be coated with adhesive to maintain vapor barrier integrity. Thickness per ASHRAE Standards Table.

3.3 EXTERNAL DUCT WORK INSULATION INSTALLATION AND SCHEDULE

- A. All insulation shall be applied with edges tightly butted with facing overlapping all joints at least 2". All external insulation shall have foil backed vapor seal. Joints shall be sealed with fire retardant adhesive. The insulation shall be secure to the duct with approximately 4" wide strips at 8" O.C. of fire retardant adhesive. Where the duct width exceeds 30", the underside insulation shall be additionally held in place with mechanical fasteners on about 18" maximum centers.
- B. All breaks and punctures shall be sealed with vapor barrier tape and fire retardant adhesive.
- C. Provide all insulated ductwork conveying air with foil-backed jacket. Seal all jacket seams and penetrations with UL listed tapes or vapor retardant adhesive. Where service access is required, bevel and seal ends of insulation.

- D. Continue insulation through walls, sleeves, hangers, and other duct penetrations except where prohibited by code.
 - E. The underside of duct work 24" or greater shall be secured with mechanical fasteners and speed clips spaced approximately 18" on center. The protruding ends of the fasteners should be cut off flush after the speed clips are installed, and then, when required, sealed with the same tape as specified above.
 - F. For ductwork exposed to physical abuse in mechanical equipment rooms or in finished spaces, finish with Manville Zeston 2000 PVC jacket or aluminum jacket.
 - G. External Insulation Schedule
 - 1. Flexible Fiber Glass
 - a. Supply and Return Ducts @ HVAC units:

1)	1 inch thick	Foil Back
----	--------------	-----------
 - H. The above listed insulation thickness and finish are required. If however, the thickness, density and finish are more restrictive in the current edition of the California Mechanical Code Section 1005 Table No. 10-D and Table 2-53D of the Building Energy Efficiency Standards these values shall be used.
- 3.4 DUCT LINER INSULATION INSTALLATION AND SCHEDULE
- A. Duct liner shall be used in all weather-exposed locations or outside of building. Duct liner shall be installed in all supply and return plenums for sound reduction and thermal insulation. Supply and return plenums occur at each air-moving piece of equipment. Duct liner shall also be installed where indicated on the drawings.
 - B. Duct linings shall be interrupted at fire dampers and fire doors so as not to interfere with their operation. Duct coverings and linings shall also be interrupted at the immediate area of operation of heat sources in a duct system involving electric resistance or fuel burning heaters.
 - C. All portions of duct designed to receive duct liner shall be completely lined on the interior with acoustical lining as specified herein. Transverse joints shall be neatly butted and there shall be no interruptions or gaps.
 - D. The coated surface of the lining shall face the airstream.
 - E. The lining shall be adhered to the sheet metal with 100% coverage of adhesive, and all exposed leading edges and all transverse joints coated with adhesive.
 - F. The lining shall be additionally secured with mechanical fasteners that shall compress the duct liner sufficiently to hold it firmly in place.
 - G. The lining shall be cut to assure overlapped and compressed longitudinal corner joints.
 - H. Duct dimensions indicated are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.
 - I. Sizes noted on drawings are clear cross-section area (inside the lining).
 - J. For velocities up to 2,000 fpm, duct liner shall be applied with 100% coverage of fire retardant adhesive. Duct liner shall be cut to assure snug corner joints. The coated or most dense surface of the liner shall face the air stream. The liner shall be additionally secured with mechanical fasteners that shall compress the duct liner sufficiently to hold it firmly in

place. They shall start within 3" of the leading edge of each duct section (and any line transverse joints within the duct section) and shall be spaced no more than 12" O.C. around the perimeter of the duct, except that they need to be no closer than 9" to a corner break. Elsewhere, they shall be a maximum of 18" O.C., except that they shall be placed not more than 6" from a cut edge nor 12" from a corner break. All exposed edges and the leading edge of all cross-joints of the liner shall be coated with the same adhesive used to secure the duct liner to the metal surface. For velocities between 2,000 and 4,000 fpm, installation shall be same except that mechanical fasteners shall be spaced no more than 6" O.C. around the perimeter of the duct, except that they need be no closer than 6" to a corner break. Elsewhere, they shall be a maximum of 10" O.C., except that they shall be placed not more than 6" from a cut edge nor 12" from a corner break.

- K. Adhesive shall conform to Adhesive and Sealant Council Standards for Adhesives for Duct Liner; ASC-A700K-1972.
- L. Mechanical fasteners shall conform to Mechanical Fastener Standard MF-1-1971, available from SMACNA.
- M. Adhere insulation to sheet metal with full coverage of a UL listed adhesive.
- N. Secure insulation with mechanical liner fasteners as indicated by SMACNA or manufacturer. Pin length should be as recommended by the liner manufacturer.
- O. All exposed edges of the liner must be factory or field coated. For systems operating at 4000 fpm or higher a metal nosing must be installed in all liner leading edges.
- P. Repair liner surface penetrations with UL listed adhesive.
- Q. Duct Liner Insulation Schedule - Rigid Fiber Glass
 - 1. Supply and Return Ducts as noted on drawings
 - a. 1 inch thick LINACOUSTIC PERMACOTE or equal
 - 2. Supply and Return Plenums @ HVAC units:
 - a. 1-1/2-inch thick LINACOUSTIC PERMACOTE or equal
- R. The above listed insulation thickness and finish are required. If however, the thickness, density and finish are more restrictive in the current edition of the California Mechanical Code Section 1005 Table No. 10-D and Table 2-53D of the Building Energy Efficiency Standards these values shall be used.

END OF SECTION

23 09 23 – DIRECT-DIGITAL CONTROL SYSTEMS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish all labor, materials, equipment, and service necessary for a complete and operating Temperature Control System (TCS), utilizing Direct Digital Controls as shown on the drawings and as described herein. Drawings are diagrammatic only.
- B. All labor, material, equipment and software not specifically referred to herein or on the plans, that is required to meet the functional intent of this specification, shall be provided without additional cost to the Owner.
- C. The Owner shall be the named license holder of all software associated with any and all incremental work on the project(s).

1.2 SYSTEM DESCRIPTION

- A. The entire Temperature Control System (TCS) shall be comprised of a network of interoperable, stand-alone digital controllers communicating via LonMark/LonTalk communication protocols to a Network Area Controller (NAC). Temperature Control System products shall be manufactured by Honeywell. (Sweetwater UHSD Board Approved proprietary system) LonWorks products must be approved in writing by the consulting Engineer and be submitted for approval ten (10) days prior to the date of the bid submittal.
- B. The Temperature Control System (TCS) as provided in this Division shall be based on the Honeywell WEBs System incorporating the Niagara Framework™. Systems not developed on the Niagara Framework platform are unacceptable.

1.3 SUBMITTAL

- A. Eight copies of shop drawings of the components and devices for the entire control system shall be submitted and shall consist of a complete list of equipment and materials, including manufacturers catalog data sheets and installation instructions for all controllers, valves, dampers, sensors, routers, etc. Shop drawings shall also contain complete wiring and schematic diagrams, software descriptions, calculations, and any other details required to demonstrate that the system has been coordinated and will properly function as a system. Terminal identification for all control wiring shall be shown on the shop drawings. A complete written Sequence of Operation shall also be included with the submittal package.
- B. Submittal shall also include a trunk cable schematic diagram depicting operator workstations, control panel locations and a description of the communication type, media and protocol.
- C. Submittal shall also include a complete point list of all points to be connected to the TCS. Temperature Controls Contractor shall provide necessary point lists, protocol documentation, and factory support information for systems provided.
- D. Submittal shall also include a copy of each of the graphics developed for the Graphic User Interface including a flowchart (site map) indicating how the graphics are to be linked to

one another for system navigation. The graphics are intended to be 80% - 90% complete at this stage with the only remaining changes to be based on review comments from the A/E design team and/or Owner.

- E. Include the following display graphics for each of the sites:
 - 1. Site plan view of entire campus identifying each building – include the display of outside air temperature & humidity.
 - 2. Individual buildings, including room layout with display of all space temperatures and occupied mode, outside air temperature & humidity.
 - 3. Mechanical equipment display for each AC unit to include space temperature, heating and cooling setpoints, supply air temperature, fan status, occupied mode, outside temperature & humidity.
 - 4. Boiler and hot water pumps showing all related points.
 - 5. Page showing all room temperatures, room temperature setpoints, occupied mode, AC unit fan status and AC unit mode (heating or cooling).
 - 6. Page showing all other miscellaneous points.
- F. Upon completion of the work, provide a complete set of 'as-built' drawings and application software on compact disk. Drawings shall be provided as AutoCAD™ or Visio™ compatible files. Eight copies of the 'as-built' drawings shall be provided in addition to the documents on compact disk. Temperature Controls Contractor shall provide as-builts for their portions of work.

1.4 SPECIFICATION NOMENCLATURE

- A. Acronyms used in this specification are as follows:
 - 1. TCS Temperature Control System
 - 2. NAC Network Area Controller
 - 3. IDC Interoperable Digital Controller
 - 4. IBC Interoperable BACnet Controller
 - 5. GUI Graphical User Interface
 - 6. WBI Web Browser Interface
 - 7. POT Portable Operator's Terminal
 - 8. PMI Power Measurement Interface
 - 9. DDC Direct Digital Controls
 - 10. LAN Local Area Network
 - 11. WAN Wide Area Network
 - 12. OOT Object Oriented Technology
 - 13. PICS Product Interoperability Compliance Statement

1.5 AGENCY AND CODE APPROVALS

- A. All products of the TCS shall be provided with the following agency approvals. Verification that the approvals exist for all submitted products shall be provided with the submittal package. Systems or products not currently offering the following approvals are not acceptable.
 - 1. UL-916; Energy Management Systems
 - 2. C-UL listed to Canadian Standards Association C22.2 No. 205-M1983 "signal Equipment"
 - 3. CE
 - 4. FCC, Part 15, Subpart J, Class A Computing Devices

1.6 SOFTWARE LICENSE AGREEMENT

- A. The Owner shall agree to the manufacturer's standard software and firmware licensing agreement as a condition of this contract. Such license shall grant use of all programs and application software to Owner as defined by the manufacturer's license agreement, but shall protect manufacturer's rights to disclosure of trade secrets contained within such software.
- B. The Owner shall be the named license holder of all software associated with any and all incremental work on the project(s). In addition, the Owner shall receive ownership of all job specific configuration documentation, data files, and application-level software developed for the project. This shall include all custom, job specific software code and documentation for all configuration and programming that is generated for a given project and/or configured for use with the Server(s), and any related LAN / WAN / Intranet and Internet connected routers and devices. Any and all required IDs and passwords for access to any component or software program shall be provided to the owner. The owner shall determine which organizations to be named in the SI organization ID ("orgid") of all software licenses. Owner shall be free to direct the modification of the "orgid" in any software license, regardless of supplier.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Provide factory-shipping cartons for each piece of equipment and control device. Maintain cartons through shipping, storage, and handling as required to prevent equipment damage. Store equipment and materials inside and protected from weather.

1.8 JOB CONDITIONS

- A. Cooperation with Other Trades: Coordinate the Work of this section with that of other sections to ensure that the Work will be carried out in an orderly fashion. It shall be this Contractor's responsibility to check the Contract Documents for possible conflicts between his Work and that of other crafts in equipment location, pipe, duct and conduit runs, electrical outlets and fixtures, air diffusers, and structural and architectural features.

PART 2 - PRODUCTS

2.1 ACCEPTABLE CONTROL MANUFACTURER/CONTRACTOR

- A. Honeywell "Authorized Controls Integrator" –
R & R Controls Inc.
4564 B Alvarado Canyon Road
San Diego, CA 92120
Ph: 619-516-1880
Fax: 619 516-1881

2.2 GENERAL

- A. The Temperature Control System (TCS) shall be comprised of a network of interoperable, stand-alone digital controllers, a computer system, graphical user interface software, printers, network devices, valves, dampers, sensors, and other devices as specified herein. All systems and software within TCS shall be Year 2000 compliant and shall be supported by compliance documentation from the manufacturer.
- B. The installed system shall provide secure password access to all features, functions and data contained in the overall TCS.

2.3 OPEN, INTEROPERABLE, INTEGRATED ARCHITECTURES

- A. The intent of this specification is to provide a peer-to-peer networked, stand-alone, distributed control system with the capability to integrate ANSI/ASHRAE Standard 135-2001 BACnet, LonWorks technology, MODBUS, OPC, and other open and proprietary communication protocols in one open, interoperable system.
- B. The supplied computer software shall employ object-oriented technology (OOT) for representation of all data and control devices within the system. In addition, adherence to industry standards including ANSI / ASHRAE™ Standard 135-2001, BACnet and LonMark to assure interoperability between all system components is required. For each LonWorks device that does not have LonMark certification, the device supplier must provide an XIF file and a resource file for the device. For each BACnet device, the device supplier must provide a PICS document showing the installed device's compliance level. Minimum compliance is Level 3; with the ability to support data read and write functionality. Physical connection of BACnet devices shall be via Ethernet (BACnet Ethernet/IP,) and/or RS-485 (BACnet MSTP) as specified.
- C. All components and controllers supplied under this Division shall be true "peer-to-peer" communicating devices. Components or controllers requiring "polling" by a host to pass data shall not be acceptable.
- D. The supplied system must incorporate the ability to access all data using standard Web browsers without requiring proprietary operator interface and configuration programs. An Open Database Connectivity (ODBC) or Structured Query Language (SQL) compliant server database is required for all system database parameter storage. This data shall reside on a supplier-installed server for all database access. Systems requiring proprietary database and user interface programs shall not be acceptable.
- E. A hierarchical topology is required to assure reasonable system response times and to manage the flow and sharing of data without unduly burdening the customer's internal

Intranet network. Systems employing a “flat” single tiered architecture shall not be acceptable.

1. Maximum acceptable response time from any alarm occurrence (at the point of origin) to the point of annunciation shall not exceed 5 seconds for network connected user interfaces.
2. Maximum acceptable response time from any alarm occurrence (at the point of origin) to the point of annunciation shall not exceed 60 seconds for remote or dial-up connected user interfaces.

2.4 NETWORKS

- A. The Local Area Network (LAN) shall be a 100 Megabits/sec Ethernet network supporting BACnet, Java, XML, HTTP, and SOAP for maximum flexibility for integration of building data with enterprise information systems and providing support for multiple Network Area Controllers (NACs), user workstations and, if specified, a local server.
- B. Local area network minimum physical and media access requirements:
 1. Ethernet; IEEE standard 802.3
 2. Cable; 100 Base-T, UTP-8 wire, category 5
 3. Minimum throughput; 100 Mbps.

2.5 NETWORK ACCESS

- A. Remote Access. For Local Area Network installations, provide access to the LAN from a remote location, via the Internet. The Owner shall provide a connection to the Internet to enable this access via high-speed cable modem, asynchronous digital subscriber line (ADSL) modem, ISDN line, T1 Line or via the customer’s Intranet to a corporate server providing access to an Internet Service Provider (ISP). Customer agrees to pay monthly access charges for connection and ISP.

2.6 NETWORK AREA CONTROLLER (NAC)

- A. The Network Area Controller (NAC) shall provide the interface between the LAN or WAN and the field control devices, and provide global supervisory control functions over the control devices connected to the NAC. It shall be capable of executing application control programs to provide:
 1. Calendar functions
 2. Scheduling
 3. Trending
 4. Alarm monitoring and routing
 5. Time synchronization
 6. Integration of LonWorks controller data and BACnet controller data
 7. Network Management functions for all LonWorks based devices
- B. The Network Area Controller must provide the following hardware features as a minimum:
 1. One Ethernet Port – 10/100 Mbps

2. One RS-232 port
 3. One LonWorks Interface Port – 78KB FTT-10A
 4. One RS-485 ports
 5. Battery Backup
 6. Flash memory for long term data backup (If battery backup or flash memory is not supplied, the controller must contain a hard disk with at least 1 gigabyte storage capacity)
 7. The NAC must be capable of operation over a temperature range of 32 to 122°F
 8. The NAC must be capable of withstanding storage temperatures of between 0 and 158°F
 9. The NAC must be capable of operation over a humidity range of 5 to 95% RH, non-condensing
- C. The NAC shall provide multiple user access to the system and support for ODBC or SQL. A database resident on the NAC shall be an ODBC-compliant database or must provide an ODBC data access mechanism to read and write data stored within it.
- D. The NAC shall support standard Web browser access via the Intranet/Internet. It shall support a minimum of 32 simultaneous users.
- E. Event Alarm Notification and actions
1. The NAC shall provide alarm recognition, storage; routing, management, and analysis to supplement distributed capabilities of equipment or application specific controllers.
 2. The NAC shall be able to route any alarm condition to any defined user location whether connected to a local network or remote via dial-up telephone connection, or wide-area network.
 3. Alarm generation shall be selectable for annunciation type and acknowledgement requirements including but limited to:
 - a. To alarm
 - b. Return to normal
 - c. To fault
 - d. Provide for the creation of a minimum of eight of alarm classes for the purpose of routing types and or classes of alarms, i.e.: Security, HVAC, Fire, etc.
 4. Provide timed (schedule) routing of alarms by class, object, group, or node.
 5. Provide alarm generation from binary object “runtime” and /or event counts for equipment maintenance. The user shall be able to reset runtime or event count values with appropriate password control.
- F. Control equipment and network failures shall be treated as alarms and annunciated.
- G. Alarms shall be annunciated in any of the following manners as defined by the user:
1. Screen message text

2. Email of the complete alarm message to multiple recipients. Provide the ability to route and email alarms based on:
 - a. Day of week
 - b. Time of day
 - c. Recipient
3. Pagers via paging services that initiate a page on receipt of email message
4. Graphic with flashing alarm object(s)
5. Printed message, routed directly to a dedicated alarm printer
- H. The following shall be recorded by the NAC for each alarm (at a minimum):
 1. Time and date
 2. Location (building, floor, zone, office number, etc.)
 3. Equipment (air handler #, access way, etc.)
 4. Acknowledge time, date, and user who issued acknowledgement.
 5. Number of occurrences since last acknowledgement.
- I. Alarm actions may be initiated by user defined programmable objects created for that purpose.
- J. Defined users shall be given proper access to acknowledge any alarm, or specific types or classes of alarms defined by the user.
- K. A log of all alarms shall be maintained by the NAC and/or a server (if configured in the system) and shall be available for review by the user.
- L. Provide a "query" feature to allow review of specific alarms by user-defined parameters.
- M. A separate log for system alerts (controller failures, network failures, etc.) shall be provided and available for review by the user.
- N. An Error Log to record invalid property changes or commands shall be provided and available for review by the user.
- O. Data Collection and Storage
 1. The NAC shall have the ability to collect data for any property of any object and store this data for future use.
 2. The data collection shall be performed by log objects, resident in the NAC that shall have, at a minimum, the following configurable properties:
 - a. Designating the log as interval or deviation.
 - b. For interval logs, the object shall be configured for time of day, day of week and the sample collection interval.
 - c. For deviation logs, the object shall be configured for the deviation of a variable to a fixed value. This value, when reached, will initiate logging of the object.
 - d. For all logs, provide the ability to set the maximum number of data stores for the log and to set whether the log will stop collecting when full, or rollover the data on a first-in, first- out basis.

- e. Each log shall have the ability to have its data cleared on a time-based event or by a user-defined event or action.
- 3. All log data shall be stored in a relational database in the NAC and the data shall be accessed from a server (if the system is so configured) or a standard Web browser.
- 4. All log data, when accessed from a server, shall be capable of being manipulated using standard SQL statements.
- 5. All log data shall be available to the user in the following data formats:
 - a. HTML
 - b. XML
 - c. Plain Text
 - d. Comma or tab separated values
- 6. Systems that do not provide log data in HTML and XML formats at a minimum shall not be acceptable.
- 7. The NAC shall have the ability to archive its log data either locally (to itself), or remotely to a server or other NAC on the network. Provide the ability to configure the following archiving properties, at a minimum:
 - a. Archive on time of day
 - b. Archive on user-defined number of data stores in the log (buffer size)
 - c. Archive when log has reached its user-defined capacity of data stores
 - d. Provide ability to clear logs once archived

2.7 AUDIT LOG

- A. Provide and maintain an Audit Log that tracks all activities performed on the NAC. Provide the ability to specify a buffer size for the log and the ability to archive log based on time or when the log has reached its user-defined buffer size. Provide the ability to archive the log locally (to the NAC), to another NAC on the network, or to a server. For each log entry, provide the following data:
 - 1. Time and date
 - 2. User ID
 - 3. Change or activity: i.e., Change setpoint, add or delete objects, commands, etc.

2.8 DATABASE BACKUP AND STORAGE

- A. The NAC shall have the ability to automatically backup its database. The database shall be backed up based on a user-defined time interval.
- B. Copies of the current database and, at the most recently saved database shall be stored in the NAC. The age of the most recently saved database is dependent on the user-defined database save interval.
- C. The NAC database shall be stored, at a minimum, in XML format to allow for user viewing and editing, if desired. Other formats are acceptable as well, as long as XML format is supported.

2.9 INTEROPERABLE DIGITAL CONTROLLER (IDC)

- A. Controls shall be Honeywell Excel 10 microprocessor based Interoperable LonWorks Controllers (IDC) or approved equal. Where possible, all Interoperable Digital Controllers shall bear the applicable LonMark interoperability logo on each product delivered.
- B. HVAC control shall be accomplished using LonMark™ based devices where the application has a LonMark profile defined. Where LonMark devices are not available for a particular application, devices based on LonWorks shall be acceptable. For each LonWorks device that does not have LonMark certification, the device supplier must provide an XIF file for the device. Publicly available specifications for the Applications Programming Interface (API) must be provided for each LonWorks / LonMark controller defining the programming or setup of each device. The Temperature Controls Contractor shall provide all programming, documentation and programming tools necessary to set up and configure the supplied devices per the specified sequences of operation.
- C. The Temperature Controls Contractor shall run the LonWorks network trunk to the nearest Network Area Controller (NAC). Coordinate locations of the NAC to ensure that maximum network wiring distances, as specified by the LonWorks wiring guidelines, are not exceeded. A maximum of 126 devices may occupy any one LonWorks trunk and must be installed using the appropriate trunk termination device. All LonWorks and LonMark devices must be supplied using FTT-10A LonWorks communications transceivers.
- D. The Network Area Controller (NAC) will provide all scheduling, alarming, trending, and network management for the LonMark / LonWorks based devices.
- E. The IDCs shall communicate with the NAC at a baud rate of not less than 78.8K baud. The IDC shall provide LED indication of communication and controller performance to the technician, without cover removal.
- F. All IDCs shall be fully application programmable and shall at all times maintain their LONMARK certification, if so certified. Controllers offering application selection only (non-programmable), require a 10% spare point capacity to be provided for all applications. All control sequences within or programmed into the IDC shall be stored in non-volatile memory, which is not dependent upon the presence of a battery, to be retained.
- G. The Temperature Controls Contractor supplying the IDC's shall provide documentation for each device, with the following information at a minimum:
 - 1. Network Variable Inputs (nvi's); name and type
 - 2. Network Variable Outputs (nvo's); name and type
 - 3. Network configuration parameters (nci, nco); name and type
- H. It is the responsibility of the Division 15 contractor to ensure that the proper Network Variable Inputs and Outputs (nvi and nvo) are provided in each IDC, as required by the point charts.
- I. The supplier of any programmable IDC shall provide one copy of the manufacturer's programming tool, with documentation, to the owner.

2.10 GRAPHICAL USER INTERFACE (GUI) SOFTWARE

- A. Operating System: WEBSTATION-AX™
 - 1. The GUI shall run on Microsoft Windows XP Professional.

- B. The GUI shall employ browser-like functionality for ease of navigation. It shall include a tree view (similar to Windows Explorer) for quick viewing of, and access to, the hierarchical structure of the database. In addition, menu-pull downs, and toolbars shall employ buttons, commands and navigation to permit the operator to perform tasks with a minimum knowledge of the HVAC Control System and basic computing skills. These shall include, but are not limited to, forward/backward buttons, home button, and a context sensitive locator line (similar to a URL line), that displays the location and the selected object identification.
- C. Real-Time Displays. The GUI, shall at a minimum, support the following graphical features and functions:
 - 1. Graphic screens shall be developed using any drawing package capable of generating a GIF, BMP, or JPG file format. Use of proprietary graphic file formats shall not be acceptable. In addition to, or in lieu of a graphic background, the GUI shall support the use of scanned pictures.
 - 2. Graphic screens shall have the capability to contain objects for text, real-time values, animation, color spectrum objects, logs, graphs, HTML or XML document links, schedule objects, hyperlinks to other URL's, and links to other graphic screens.
 - 3. Graphics shall support layering and each graphic object shall be configurable for assignment to a layer. A minimum of six layers shall be supported.
 - 4. Modifying common application objects, such as schedules, calendars, and set points shall be accomplished in a graphical manner.
 - a. Schedule times will be adjusted using a graphical slider, without requiring any keyboard entry from the operator.
 - b. Holidays shall be set by using a graphical calendar without requiring any keyboard entry from the operator.
 - 5. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop-up menu. No entry of text shall be required.
 - 6. Adjustments to analog objects, such as set points, shall be done by right-clicking the selected object and using a graphical slider to adjust the value. No entry of text shall be required.
- D. System Configuration. At a minimum, the GUI shall permit the operator to perform the following tasks, with proper password access:
 - 1. Create, delete or modify control strategies.
 - 2. Add/delete objects to the system.
 - 3. Tune control loops through the adjustment of control loop parameters.
 - 4. Enable or disable control strategies.
 - 5. Generate hard copy records or control strategies on a printer.
 - 6. Select points to be alarmable and define the alarm state.
 - 7. Select points to be trended over a period of time and initiate the recording of values automatically.
- E. On-Line Help. Provide a context sensitive, on-line help system to assist the operator in operation and editing of the system. On-line help shall be available for all applications and

shall provide the relevant data for that particular screen. Additional help information shall be available through the use of hypertext. All system documentation and help files shall be in HTML format.

- F. Security. Each operator shall be required to log on to that system with a user name and password in order to view, edit, add, or delete data. System security shall be selectable for each operator. The system administrator shall have the ability to set passwords and security levels for all other operators. Each operator password shall be able to restrict the operators' access for viewing and/or changing each system application, full screen editor, and object. Each operator shall automatically be logged off of the system if no keyboard or mouse activity is detected. This auto log-off time shall be set per operator password. All system security data shall be stored in an encrypted format.
- G. System Diagnostics. The system shall automatically monitor the operation of all workstations, printers, modems, network connections, building management panels, and controllers. The failure of any device shall be annunciated to the operator.
- H. Alarm Console
 - 1. The system will be provided with a dedicated alarm window or console. This window will notify the operator of an alarm condition, and allow the operator to view details of the alarm and acknowledge the alarm. The use of the Alarm Console can be enabled or disabled by the system administrator.
 - 2. When the Alarm Console is enabled, a separate alarm notification window will supersede all other windows on the desktop and shall not be capable of being minimized or closed by the operator. This window will notify the operator of new alarms and un-acknowledged alarms. Alarm notification windows or banners that can be minimized or closed by the operator shall not be acceptable.

2.11 WEB BROWSER CLIENTS

- A. The system shall be capable of supporting an unlimited number of clients using a standard Web browser such as Internet Explorer™ or Netscape Navigator™. Systems requiring additional software (to enable a standard Web browser) to be resident on the client machine, or manufacture-specific browsers shall not be acceptable.
- B. The Web browser software shall run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., in order to allow the Web browser to function with the FMCS, shall not be acceptable.
- C. The Web browser shall provide the same view of the system, in terms of graphics, schedules, calendars, logs, etc., and provide the same interface methodology as is provided by the Graphical User Interface. Systems that require different views or that require different means of interacting with objects such as schedules, or logs, shall not be permitted.
- D. The Web browser client shall support at a minimum, the following functions:
 - 1. User log-on identification and password shall be required. If an unauthorized user attempts access, a blank web page shall be displayed. Security using Java authentication and encryption techniques to prevent unauthorized access shall be implemented.

2. Graphical screens developed for the GUI shall be the same screens used for the Web browser client. Any animated graphical objects supported by the GUI shall be supported by the Web browser interface.
3. HTML programming shall not be required to display system graphics or data on a Web page. HTML editing of the Web page shall be allowed if the user desires a specific look or format.
4. Storage of the graphical screens shall be in the Network Area Controller (NAC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.
5. Real-time values displayed on a Web page shall update automatically without requiring a manual "refresh" of the Web page.
6. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:
 - a. Modify common application objects, such as schedules, calendars, and set points in a graphical manner.
 - b. Schedule times will be adjusted using a graphical slider, without requiring any keyboard entry from the operator.
 - c. Holidays shall be set by using a graphical calendar, without requiring any keyboard entry from the operator.
 - d. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop-up menu. No entry of text shall be required.
 - e. View logs and charts
 - f. View and acknowledge alarms
 - g. Setup and execute SQL queries on log and archive information
7. The system shall provide the capability to specify a user's (as determined by the log-on user identification) home page. Provide the ability to limit a specific user to just their defined home page. From the home page, links to other views, or pages in the system shall be possible, if allowed by the system administrator.
8. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.

2.12 SERVER FUNCTIONS AND HARDWARE

- A. A central server, located at the District's Maintenance Office, shall be provided. The server shall support all Network Area Controllers (NAC) connected to the customer's network whether local or remote.
- B. Local connections shall be via an Ethernet LAN. Remote connections can be via ISDN, ADSL, T1 or dial-up connection.
- C. It shall be possible to provide access to all Network Area Controllers via a single connection to the server. In this configuration, each Network Area Controller can be accessed from a remote Graphical User Interface (GUI) or from a standard Web browser (WBI) by connecting to the server.

- D. The server shall provide the following functions, at a minimum:
1. Global Data Access: The server shall provide complete access to distributed data defined anywhere in the system.
 2. Distributed Control: The server shall provide the ability to execute global control strategies based on control and data objects in any NAC in the network, local or remote.
 3. The server shall include a master clock service for its subsystems and provide time synchronization for all Network Area Controllers (NAC).
 4. The server shall accept time synchronization messages from trusted precision Atomic Clock Internet sites and update its master clock based on this data.
 5. The server shall provide scheduling for all Network Area Controllers and their underlying field control devices.
 6. The server shall provide demand limiting that operates across all Network Area Controllers. The server must be capable of multiple demand programs for sites with multiple meters and or multiple sources of energy. Each demand program shall be capable of supporting separate demand shed lists for effective demand control.
 7. The server shall implement the BACnet Command Prioritization scheme (16 levels) for safe and effective contention resolution of all commands issued to Network Area Controllers. Systems not employing this prioritization shall not be accepted.
 8. Each Network Area Controller supported by the server shall have the ability to archive its log data, alarm data and database to the server, automatically. Archiving options shall be user-defined including archive time and archive frequency.
 9. The server shall provide central alarm management for all Network Area Controllers supported by the server. Alarm management shall include:
 - a. Routing of alarms to display, printer, email and pagers
 - b. View and acknowledge alarms
 - c. Query alarm logs based on user-defined parameters
 10. The server shall provide central management of log data for all Network Area Controllers supported by the server. Log data shall include process logs, runtime and event counter logs, audit logs and error logs. Log data management shall include:
 - a. Viewing and printing log data
 - b. Exporting log data to other software applications
 - c. Query log data based on user-defined parameters
 11. Server Hardware Requirements: The server hardware platform shall have the following requirements:
 - a. The computer shall be an Intel Pentium IV based computer (minimum processing speed of 3.0 GHz with 2 GB RAM and a 100-gigabyte minimum hard drive). It shall include a DVD-ROM/CD-RW Combination Drive, 2-parallel ports, 2-asynchronous serial ports and 2-USB ports. A minimum 19" flat panel color monitor, 1280 x 1024 optimal preset resolution, 25 ms response time shall also be included.

- b. The server operating system shall be Microsoft Windows XP Professional. Include Microsoft Internet Explorer 6.0 or later.
- c. Connection to the TCS network shall be via an Ethernet network interface card, 100 Mbps.
- d. A system printer shall be provided. Printer shall be laser type with a minimum 600 x 600-dpi resolution and rated for 60-PPM print speed minimum.
- e. For dedicated alarm printing, provide a dot matrix printer, either 80 or 132 column width. The printer shall have a parallel port interface.

2.13 SYSTEM PROGRAMMING

- A. The Graphical User Interface software (GUI) shall provide the ability to perform system programming and graphic display engineering as part of a complete software package. Access to the programming functions and features of the GUI shall be through password access as assigned by the system administrator.
- B. A library of control, application, and graphic objects shall be provided to enable the creation of all applications and user interface screens. Applications are to be created by selecting the desired control objects from the library, dragging or pasting them on the screen, and linking them together using a built in graphical connection tool. Completed applications may be stored in the library for future use. Graphical User Interface screens shall be created in the same fashion. Data for the user displays is obtained by graphically linking the user display objects to the application objects to provide "real-time" data updates. Any real-time data value or object property may be connected to display its current value on a user display. Systems requiring separate software tools or processes to create applications and user interface displays shall not be acceptable.
- C. Programming Methods
 - 1. Provide the capability to copy objects from the supplied libraries, or from a user-defined library to the user's application. Objects shall be linked by a graphical linking scheme by dragging a link from one object to another. Object links will support one-to-one, many-to-one, or one-to-many relationships. Linked objects shall maintain their connections to other objects regardless of where they are positioned on the page and shall show link identification for links to objects on other pages for easy identification. Links will vary in color depending on the type of link; i.e., internal, external, hardware, etc.
 - 2. Configuration of each object will be done through the object's property sheet using fill-in the blank fields, list boxes, and selection buttons. Use of custom programming, scripting language, or a manufacturer-specific procedural language for configuration will not be accepted.
 - 3. The software shall provide the ability to view the logic in a monitor mode. When on-line, the monitor mode shall provide the ability to view the logic in real time for easy diagnosis of the logic execution. When off-line (debug), the monitor mode shall allow the user to set values to inputs and monitor the logic for diagnosing execution before it is applied to the system.
 - 4. All programming shall be done in real-time. Systems requiring the uploading, editing, and downloading of database objects shall not be allowed.

5. The system shall support object duplication within a customer's database. An application, once configured, can be copied and pasted for easy re-use and duplication. All links, other than to the hardware, shall be maintained during duplication.

2.14 LONWORKS NETWORK MANAGEMENT

- A. The Graphical User Interface software (GUI) shall provide a complete set of integrated LonWorks network management tools for working with LonWorks networks. These tools shall manage a database for all LonWorks devices by type and revision, and shall provide a software mechanism for identifying each device on the network. These tools shall also be capable of defining network data connections between LonWorks devices, known as "binding". Systems requiring the use of third party LonWorks network management tools shall not be accepted.
- B. Network management shall include the following services: device identification, device installation, device configuration, device diagnostics, device maintenance and network variable binding.
- C. The network configuration tool shall also provide diagnostics to identify devices on the network, to reset devices, and to view health and status counters within devices.
- D. These tools shall provide the ability to "learn" an existing LonWorks network, regardless of what network management tool(s) were used to install the existing network, so that existing LonWorks devices and newly added devices are part of a single network management database.
- E. The network management database shall be resident in the Network Area Controller (NAC), ensuring that anyone with proper authorization has access to the network management database at all times. Systems employing network management databases that are not resident, at all times, within the control system, shall not be accepted.

2.15 OBJECT LIBRARIES

- A. A standard library of objects shall be included for development and setup of application logic, user interface displays, system services, and communication networks.
- B. The objects in this library shall be capable of being copied and pasted into the user's database and shall be organized according to their function. In addition, the user shall have the capability to group objects created in their application and store the new instances of these objects in a user-defined library.
- C. In addition to the standard libraries specified here, the supplier of the system shall maintain an on-line accessible (over the Internet) library, available to all registered users to provide new or updated objects and applications as they are developed.
- D. All control objects shall conform to the control objects specified in the BACnet specification.
- E. The library shall include applications or objects for the following functions, at a minimum:
 1. Scheduling Object. The schedule must conform to the schedule object as defined in the BACnet specification, providing 7-day plus holiday & temporary scheduling features and a minimum of 10 on/off events per day. Data entry to be by graphical sliders to speed creation and selection of on-off events.
 2. Calendar Object. . The calendar must conform to the calendar object as defined in the BACnet specification, providing 12-month calendar features to allow for holiday or

special event data entry. Data entry to be by graphical "point-and-click" selection. This object must be "linkable" to any or all scheduling objects for effective event control.

3. Duty Cycling Object. Provide a universal duty cycle object to allow repetitive on/off time control of equipment as an energy conserving measure. Any number of these objects may be created to control equipment at varying intervals.
 4. Temperature Override Object. Provide a temperature override object that is capable of overriding equipment turned off by other energy saving programs (scheduling, duty cycling etc.) to maintain occupant comfort or for equipment freeze protection.
 5. Start-Stop Time Optimization Object. Provide a start-stop time optimization object to provide the capability of starting equipment just early enough to bring space conditions to desired conditions by the scheduled occupancy time. Also, allow equipment to be stopped before the scheduled un-occupancy time just far enough ahead to take advantage of the building's "flywheel" effect for energy savings. Provide automatic tuning of all start / stop time object properties based on the previous day's performance.
 6. Demand Limiting Object. Provide a comprehensive demand-limiting object that is capable of controlling demand for any selected energy utility (electric, oil, and gas). The object shall provide the capability of monitoring a demand value and predicting (by use of a sliding window prediction algorithm) the demand at the end of the user defined interval period (1-60 minutes). This object shall also accommodate a utility meter time sync pulse for fixed interval demand control. Upon a prediction that will exceed the user defined demand limit (supply a minimum of 6 per day), the demand limiting object shall issue shed commands to either turn off user specified loads or modify equipment set points to effect the desired energy reduction. If the list of sheddable equipment is not enough to reduce the demand to below the set point, a message shall be displayed on the users screen (as an alarm) instructing the user to take manual actions to maintain the desired demand. The shed lists are specified by the user and shall be selectable to be shed in either a fixed or rotating order to control which equipment is shed the most often. Upon suitable reductions in demand, the demand-limiting object shall restore the equipment that was shed in the reverse order in which it was shed. Each sheddable object shall have a minimum and maximum shed time property to effect both equipment protection and occupant comfort.
- F. The library shall include control objects for the following functions. All control objects shall conform to the objects as specified in the BACnet specification.
1. Analog Input Object - Minimum requirement is to comply with the BACnet standard for data sharing. Allow high, low and failure limits to be assigned for alarming. Also, provide a time delay filter property to prevent nuisance alarms caused by temporary excursions above or below the user defined alarm limits.
 2. Analog Output Object - Minimum requirement is to comply with the BACnet standard for data sharing.
 3. Binary Input Object - Minimum requirement is to comply with the BACnet standard for data sharing. The user must be able to specify either input condition for alarming. This object must also include the capability to record equipment run-time by counting the amount of time the hardware input is in an "on" condition. The user must be able to specify either input condition as the "on" condition.
 4. Binary Output Object - Minimum requirement is to comply with the BACnet standard for data sharing. Properties to enable minimum on and off times for equipment

protection as well as interstart delay must be provided. The BACnet Command Prioritization priority scheme shall be incorporated to allow multiple control applications to execute commands on this object with the highest priority command being invoked. Provide sixteen levels of priority as a minimum. Systems not employing the BACnet method of contention resolution shall not be acceptable.

5. PID Control Loop Object - Minimum requirement is to comply with the BACnet standard for data sharing. Each individual property must be adjustable as well as to be disabled to allow proportional control only, or proportional with integral control, as well as proportional, integral and derivative control.
6. Comparison Object - Allow a minimum of two analog objects to be compared to select either the highest, lowest, or equality between the two linked inputs. Also, allow limits to be applied to the output value for alarm generation.
7. Math Object - Allow a minimum of four analog objects to be tested for the minimum or maximum, or the sum, difference, or average of linked objects. Also, allow limits to be applied to the output value for alarm generation.
8. Custom Programming Objects - Provide a blank object template for the creation of new custom objects to meet specific user application requirements. This object must provide a simple BASIC-like programming language that is used to define object behavior. Provide a library of functions including math and logic functions, string manipulation, and e-mail as a minimum. Also, provide a comprehensive on-line debug tool to allow complete testing of the new object. Allow new objects to be stored in the library for re- use.
9. Interlock Object - Provide an interlock object that provides a means of coordination of objects within a piece of equipment such as an Air Handler or other similar types of equipment. An example is to link the return fan to the supply fan such that when the supply fan is started, the return fan object is also started automatically without the user having to issue separate commands or to link each object to a schedule object. In addition, the control loops, damper objects, and alarm monitoring (such as return air, supply air, and mixed air temperature objects) will be inhibited from alarming during a user-defined period after startup to allow for stabilization. When the air handler is stopped, the interlocked return fan is also stopped, the outside air damper is closed, and other related objects within the air handler unit are inhibited from alarming thereby eliminating nuisance alarms during the off period.
10. Temperature Override Object - Provide an object whose purpose is to provide the capability of overriding a binary output to an "On" state in the event a user specified high or low limit value is exceeded. This object is to be linked to the desired binary output object as well as to an analog object for temperature monitoring, to cause the override to be enabled. This object will execute a Start command at the Temperature Override level of start/stop command priority unless changed by the user.
11. Composite Object - Provide a container object that allows a collection of objects representing an application to be encapsulated to protect the application from tampering, or to more easily represent large applications. This object must have the ability to allow the user to select the appropriate parameters of the "contained" application that are represented on the graphical shell of this container.

- G. The object library shall include objects to support the integration of devices connected to the Network Area Controller (NAC). At a minimum, provide the following as part of the standard library included with the programming software:
1. LonMark/LonWorks devices. These devices shall include, but not be limited to, devices for control of HVAC, lighting, access, and metering. Provide LonMark manufacturer-specific objects to facilitate simple integration of these devices. All network variables defined in the LonMark profile shall be supported. Information (type and function) regarding network variables not defined in the LonMark profile shall be provided by the device manufacturer.
 2. For devices not conforming to the LonMark standard, provide a dynamic object that can be assigned to the device based on network variable information provided by the device manufacturer. Device manufacturer shall provide an XIF file, resource file and documentation for the device to facilitate device integration.
 3. For BACnet devices, provide the following objects at a minimum:
 - a. Analog In
 - b. Analog Out
 - c. Analog Value
 - d. Binary
 - e. Binary In
 - f. Binary Out
 - g. Binary Value
 - h. Multi-State In
 - i. Multi-State Out
 - j. Multi-State Value
 - k. Schedule Export
 - l. Calendar Export
 - m. Trend Export
 - n. Device
 4. For each BACnet object, provide the ability to assign the object a BACnet device and object instance number.
 - a. For BACnet devices, provide the following support at a minimum
 - b. Segmentation
 - c. Segmented Request
 - d. Segmented Response
 - e. Application Services
 - f. Read Property
 - g. Read Property Multiple
 - h. Write Property

- i. Write Property Multiple
- j. Confirmed Event Notification
- k. Unconfirmed Event Notification
- l. Acknowledge Alarm
- m. Get Alarm Summary
- n. Who-has
- o. I-have
- p. Who-is
- q. I-am
- r. Subscribe COV
- s. Confirmed COV notification
- t. Unconfirmed COV notification
- u. Media Types
- v. Ethernet
- w. BACnet IP Annex J
- x. MSTP
- y. BACnet Broadcast Management Device (BBMD) function
- z. Routing

2.16 MODBUS SYSTEM INTEGRATION

- A. The Network Area Controller shall support the integration of device data from Modbus RTU, ASCII, or TCP control system devices. The connection to the Modbus system shall be via an RS-232, RS485, or Ethernet IP as required by the device.
- B. Provide the required objects in the library, included with the Graphical User Interface programming software, to support the integration of the Modbus system data into the FPMS. Objects provided shall include at a minimum:
 - 1. Read/Write Modbus AI Registers
 - 2. Read/Write Modbus AO Registers
 - 3. Read/Write Modbus BI Registers
 - 4. Read/Write Modbus BO Registers
- C. The Network Area Controller shall perform all scheduling, alarming, logging and global supervisory control functions, of the Modbus system devices.
- D. The Temperature Controls Contractor shall provide a Modbus system communications driver. The equipment system vendor that provided the equipment utilizing Modbus shall provide documentation of the system's Modbus interface and shall provide factory support at no charge during system commissioning

2.17 OTHER CONTROL SYSTEM HARDWARE

- A. Space Temperature Wall Module. Wall Module shall be Honeywell or equivalent.
 - 1. Wall module shall have a 20K Ohm NTC thermistor temperature sensor with operating range of 45 to 99 F under a locking cover/enclosure with UL 916 listing designed for mounting on a standard electrical switch box.
 - 2. Space temperature sensors shall be accurate to plus or minus one F degree.
 - 3. Where specified, space temperature sensors shall have a setpoint knob calibrated for warmer-cooler adjustments
 - 4. Where specified, wall module shall also have an after-hours override pushbutton and LED override indicator.
 - 5. Insulating foam shall be installed on the back of all space temperature wall modules to prevent air infiltration from wall opening.
- B. Duct Mount and Outside Air Temperature Sensors: Temperature sensors with an accuracy of +0.3° F. Temperature sensors shall be Honeywell or equivalent.
 - 1. Outside air sensors shall include an integral sun shield.
 - 2. Duct sensors shall have sensor approximately in center of the duct, and shall have selectable lengths of 6, 12, and 18 inches.
 - 3. Multipoint averaging element sensors shall be provided where specified and shall have a minimum of one foot of sensor length for each square foot of duct area (provide multiple sensors if necessary).
 - 4. Pipe mount sensors shall have copper, or stainless steel separable wells.
- C. Current Sensitive Switches: Solid state, split core current switch that operates when the current level (sensed by the internal current transformer) exceeds the adjustable trip point shall be provided where specified. Current switches shall include an integral LED for indication of trip condition and a current level below trip set point.
- D. Humidity Sensors. Humidity sensors shall be Honeywell or equivalent.
 - 1. Duct and room sensors shall have a sensing range of 5% to 95%.
 - 2. Duct sensors shall be provided with a sampling chamber.
 - 3. Outdoor air humidity sensors shall have a sensing range of 20% to 95% RH. They shall have a compensated ambient temperature range of -40°F to 170° F.
- E. Temperature Control Panels: Furnish temperature control panels of code gauge steel with locking doors for mounting all devices as shown. Control panels shall meet all requirements of Title 24, California Administrative Code. All external wiring shall be connected to terminal strips mounted within the panel. A complete set of 'as-built' control drawings (relating to the controls within that panel) shall be furnished within each control panel.

2.18 SEQUENCE OF OPERATION

- A. Constant Volume Air Handling Unit, 1-Stage Cooling, 1-Stage Heating, with Economizer Enabled from Outside Air Dry Bulb Temperature. Constant Volume HVAC Unit Controller Software. The constant volume unit controller shall be configurable for air handlers with staged or analog heating and cooling, minimum or modulating economizer outside or mixing

damper dampers, and enthalpy or dry bulb economizer changeover. Controller shall comply with LonMark HVAC profile #8030.

1. Fan Off. Anytime the fan is off, all system heating and cooling shall be off, and the mixing dampers shall be positioned closed to the outside air.
2. Fan and Mode Control. System fan and heating/cooling temperature setpoints shall normally be placed in the occupied, standby, or unoccupied mode of operation and control via a system scheduler unique seven-day schedule. Prior to scheduled occupied periods, the unoccupied temperature setpoint shall be ramped up to the occupied setpoint over a time period proportional to the temperature difference between the room temperature and the occupied temperature setpoint such that at occupancy time the occupied temperature is reached. During unoccupied and standby periods the outside air damper shall be closed and the fan shall remain off until heating or cooling is demanded to satisfy the unoccupied and standby temperature setpoints. The standby mode of operation is for periods of temporary vacancy such as the lunch hour, and shall use owner determined temperature setpoints a degree or two away from the occupied comfort settings. System shall automatically revert to the proper mode of operation after restoration of power after a power failure. Units shall restart at a random staggered time interval after power restoration.
3. Occupant Schedule Override Control. When any room HVAC system is operating in a mode other than OCCUPIED, each room temperature sensor wall module schedule override button shall provide the room occupant with ability to place the system in the occupied mode of operation for 60 (180 default, user programmable) minutes by pressing the module override button. Via the button, the occupant shall also have the ability to cancel the override command, or to place the system in the unoccupied mode when operating in the occupied mode. Via the module LED, the occupant shall have the ability to note the status of the system overrides as being in the override mode, override unoccupied mode, continuously occupied mode via a network command, or in the normal mode of operation (LED off).
4. Fan Fail Alarm. Any time the fan is commanded on and the fan differential pressure switch piped across the fan, or a fan current sensor, does not prove air flow or fan operation, a fan-failed alarm shall be presented to the operator station. This alarm check shall be delayed upon fan start for 10 seconds (adjustable) to give the system time to prove flow prior to creating a false alarm.
5. Temperature Control, Occupied Periods. Heating control shall operate with 6 cycles per hour, and cooling control shall operate with 4 cycles per hour unless the equipment manufacturer dictates other parameters. If the scheduler commands the fan to stop during periods of electric duct heating, the heater shall be de-energized and the fan shall continue to run for 60 seconds to dissipate the residual heater heat prior to stopping airflow. A staging PID algorithm with heating and cooling anticipation features shall be employed for all staging control. Upon a drop in space temperature below the heating setpoint, the lead duct heater shall be energized, the on time proportional to the heating load. After the lead heater stage becomes full on, a further increase in the heating load shall cause the lag heating stage to be cycled, the on time proportional to the increasing load. The reverse of this shall happen on a decrease in heating load. Upon a rise in space temperature above the cooling setpoint, the lead compressor/coil shall be energized, the on time proportional to the cooling load. After the lead cooling stage becomes full on, a further increase in the cooling load shall cause the lag compressor/coil stage to be cycled, the on time proportional to the increasing load. The reverse of this shall happen on a decrease in cooling load.

6. If the space temperature drops or rises to either the heating or cooling unoccupied temperature setpoint during unoccupied periods, the system shall start and operate in the heating or cooling mode until the unoccupied temperature setpoints have been satisfied. The same operation shall occur for the standby mode of operation where specified.
7. Discharge Low Limit. If at any time the discharge airdrops below the user defined discharge air temperature low limit, an alarm shall be issued and the mixing dampers shall be driven closed to the outside air. As the temperature rises, the dampers shall modulate open to the minimum ventilation position and the alarm shall clear.
8. Wall Sensor Module. Wall temperature sensor module shall be located where shown on the plans, and shall include the temperature sensor, the occupied/unoccupied override selection push button with override status LED (where specified), a warmer-cooler setpoint adjustment knob (where specified), and a jack for connecting to the LonTalk communication network. The system owner determines the normal heating and cooling room temperature setpoints for all wall module sensors (such as 73F & 77F). The warmer-cooler adjustment knob on the wall module shall give room occupants the ability to vary these values by an owner determined increment, such as two degrees, by rotating the setpoint knob. The setpoint knob shall not affect Setpoints in use when the room is unoccupied.
9. Master Override Button. Provide a Master Override Button for each of the school sites at the District's WEBSTATION-AX central server to lockout all of the classroom AC unit compressors when commanded.

2.19 POINT LISTS

- A. The points in the following table shall be accessible from the Graphical User Interface (GUI) and/or the Web browser interface (WBI). The supplier of the IDC and IBC devices shall ensure that the points listed in this table are accessible on their respective networks, by the Network Area Controller (NAC).
- B. The following abbreviations apply to the point table to indicate what level of functionality must be provided:

D = Display only

M = Modify value

A = Alarm

L = Log

S = Schedule

GC = Global supervisory control routine such as demand limiting

PART 3 - EXECUTION

3.1 INSTALLATION

- A. All work described in this section shall be performed by a Honeywell "Authorized Controls Integrator" that has a successful history in the design and installation of integrated control systems using Niagara Framework. The installing contractor shall have a local office located within 20 miles from Sweetwater Union High School District and a minimum of ten years of integration experience installing Honeywell DDC control systems and shall provide documentation in the submittal package verifying the company's experience.

- B. The Temperature Controls Contractor shall have employees at the local branch that are fully trained and certified for the Honeywell WEBs Systems incorporating Niagara Framework. Copies of the employees Niagara Training Certificates shall be included in the submittals.
- C. Install system and materials in accordance with manufacturer's instructions, and as detailed on the project drawing set.
- D. Drawings of the TCS network are diagrammatic only and any apparatus not shown, but required to make the system operative to the complete satisfaction of the Owner shall be furnished and installed without additional cost.
- E. Line and low voltage electrical connections to control equipment shown specified or shown on the control diagrams shall be furnished and installed by this contractor in accordance with these specifications.
- F. Temperature Controls Contractors shall have a C-10 License in good standing in the state of California.

3.2 WIRING

- A. All electrical control wiring and power wiring to the control panels, NAC, computers and network components shall be installed in conduit and be the responsibility of the Temperature Controls Contractor.
- B. All wiring shall be in accordance with the National Electrical Code and any applicable local codes. All TCS wiring shall be installed in the conduit types allowed by the National Electrical Code or applicable local codes. Where TCS plenum rated cable wiring is allowed it shall be run parallel to or at right angles to the structure, properly supported and installed in a neat and workmanlike manner.
- C. Echelon Compliant Direct Burial Cable shall be used for all underground communication bus wiring between buildings to prevent damage from moisture. The existing underground conduit systems are not watertight.

3.3 WARRANTY

- A. Equipment, materials and workmanship incorporated into the work shall be warranted for a period of two years from the time of system acceptance.
- B. Within this period, upon notice by the Owner, any defects in the work provided under this section due to faulty materials, methods of installation or workmanship shall be promptly (within 48 hours after receipt of notice) repaired or replaced by this contractor at no expense to the Owner.

3.4 WARRANTY ACCESS

- A. The Owner shall grant to this contractor, reasonable access to the TCS during the warranty period.
- B. The owner shall allow the contractor to access the TCS from a remote location for the purpose of diagnostics and troubleshooting, via the Internet, during the warranty period.

3.5 SOFTWARE LICENSE

- A. The Owner shall be the named license holder of all software associated with any and all incremental work on the project(s). The owner, or his appointed agent, shall determine which organizations to be named in the "orgid" of all Niagara Framework software licenses.
- B. The owner, or his appointed agent, shall be free to direct the modification of the "orgid" in any Niagara Framework software license, regardless of supplier.
- C. The owner, or his appointed agent, shall receive ownership of all job specific software configuration documentation, data files, and application-level software developed for the project. This shall include all custom, job specific software code and documentation for all configuration and programming that is generated for a given project and /or configured for use within Niagara Framework (Niagara) based controllers and/or servers and any related LAN / WAN / Intranet and Internet connected routers and devices. Any and all required Ids and passwords for access to any component or software program shall be provided to the owner.

3.6 ACCEPTANCE TESTING

- A. Upon completion of the installation, this contractor shall load all system software and start-up the system. This contractor shall perform all necessary calibration, testing and debugging and perform all required operational checks to insure that the system is functioning in full accordance with these specifications.
- B. This contractor shall perform tests to verify proper performance of components, routines, and points. Repeat tests until proper performance results. This testing shall include a point-by-point log to validate 100% of the input and output points of the DDC system operation.
- C. Upon completion of the performance tests described above, repeat these tests, point by point as described in the validation log above in presence of Owner's Representative, as required. Properly schedule these tests so testing is complete at a time directed by the Owner's Representative. Do not delay tests so as to prevent delay of occupancy permits or building occupancy.
- D. System Acceptance: Satisfactory completion is when this contractor have performed successfully all the required testing to show performance compliance with the requirements of the Contract Documents to the satisfaction of the Owner's Representative. System acceptance shall be contingent upon completion and review of all corrected deficiencies.

3.7 OPERATOR INSTRUCTION, TRAINING

- A. During system commissioning and at such time acceptable performance of the TCS hardware and software has been established this contractor shall provide both off-site and on-site operator instruction to the owner's operating personnel. Operator instruction shall be done during normal working hours and shall be performed by factory-trained personal that are familiar with the system hardware, software and accessories.
- B. This contractor shall provide 40 hours of instruction to the owner's designated personnel on the operation of the TCS and describe its intended use with respect to the programmed functions specified. Operator orientation of the systems shall include, but not be limited to; the overall operation program, equipment functions (both individually and as part of the total integrated system), commands, systems generation, advisories, and appropriate operator intervention required in responding to the System's operation. Contractor to provide local training facility that will accommodate up to 12 school district employees.

- C. The training shall be in three 8-Hour sessions as follows:
1. First Training Session: 8 Hours of classroom training after system is started up and at least one week before first acceptance test. Manual shall have been submitted at least two weeks prior to training so that the owners' personnel can start to familiarize themselves with the system before classroom instruction begins.
 2. Second Training Session: 8 Hours of classroom training approximately two weeks after initial training, and before Formal Acceptance. These sessions will deal with more advanced topics and answer questions.
 3. Third Training Session: 8 Hours of classroom training to be scheduled at the request of the owner during the first six-month period. These sessions shall cover topics as requested by the owner such as: how to add additional points, create and gather data for trends, graphic screen generation or modification of control routines.

END OF SECTION

23 20 00 – HVAC PIPING

PART 1 - GENERAL

- 1.1 Section Includes
 - A. Refrigeration System Piping
 - B. Piping Supports

PART 2 - PRODUCTS

- 2.1 Piping: Type ACR L Hard Copper. Joints: Solder for copper using 95% tin - 5% antimony. Provide wrought copper fittings.
- 2.2 Fittings: Provide wrought copper fittings.
- 2.3 Refrigeration Specialties: Provide in line filter driers at all condensing units in suction piping. Provide shut off valves at each condensing unit. Provide suction line accumulators.
- 2.4 Hangers:
 - A. Copper pipe: horizontal - insulated and uninsulated: Adjustable steel clevis of sufficient size to fit outside of insulation.
 - B. Copper pipe: vertical - insulated and uninsulated: Tubing riser clamp carbon steel with copper finish; or figure with plastic coating on formed portion.
 - C. Hanger Spacing:
 - D. Copper pipe: 1/2" to 2" pipe every 6'- 0" or less.
 - E. Copper pipe: 2" and larger pipe every 8'- 0" or less.
 - F. Pipe Supports on Roof: Roof pipe supports shall be Dura-Block™ by Eaton's B-Line Business 509 West Monroe Street, Highland, IL 62249, in size and quantity to meet manufactures specifications for rated loads.
 - G. Provide seismic motion restraints as required by California Mechanical 1997 and California Building Codes 1998.

PART 3 - EXECUTION

- 3.1 Supports shall secure pipes in place, shall prevent pipe vibration and maintain required grading of proper adjustment, and shall provide for expansion and contraction.
- 3.2 Hangers and roof supports shall be located near or at changes in piping direction and at concentrated loads and shall provide vertical adjustment to maintain pitch required. All piping mechanically attached to metal studs or bracing shall be attached with approved

isolator devices. These isolation devices are for the avoidance of excessive noise or vibration in the building due to the operation of equipment, and/or due to interconnected piping, ductwork or conduit.

- 3.3 Hangers and roof supports shall be of strength and rigidity to suit loading and service and in a manner which will not unduly stress the building construction. Hangers and roof supports shall be of adequate size to fit outside the insulation.

3.4 REFRIGERATION PIPING INSTALLATION

- A. All piping shall be concealed in walls, furred spaces, pipe spaces, or above suspended ceilings. Piping shall be grouped wherever practical and shall be installed uniformly in straight parallel lines in either vertical or horizontal positions and at right angles with beams, walls, ceilings or other building lines. Install all exposed piping as close as practical to walls, columns or overhead construction to provide maximum headroom and minimum interference with usable building space. Where interference develops in the field, piping shall be offset or routed as required.
- B. Pipe shall be installed to eliminate sagging.
- C. All pipe, fittings and valves shall bear manufacturer's name and trademark, and valves shall have service and pressure rating cast in bodies.
- D. Copper piping passing through poured concrete floors shall be sleeved and wrapped with plastic foam or fire stop material as appropriate with 50% overlap.

3.5 PIPE TESTING

- A. All piping system shall be tested and proven tight prior to concealment.
- B. Insure that the test pressure which might damage equipment does not reach such units by valving them off or otherwise isolating them during the test.
- C. All air tests shall be held for a minimum of four hours without loss of pressure.

END OF SECTION

23 31 00 - HVAC DUCTS AND CASINGS

PART 1 - GENERAL

- 1.1 Section Includes
 - A. Metal Ducts
 - B. Nonmetal Ducts
 - C. HVAC Casings
- 1.2 Quality Assurance
 - A. Installation Standards
 - 1. NFPA 90A.
 - 2. NFPA 90B.
 - 3. SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 4. California Mechanical Code.

PART 2 - PRODUCTS

- 2.1 SHEET METAL
 - A. Unless otherwise specified, sheet metal used for duct and plenum construction shall be G60 coated galvanized steel of lock forming grade conforming to ASTM standards A-525 and A-527. All duct work and supports shall be galvanized. All sheet metal round duct shall be round spiral lock-seam construction. "Knock down" (KD) duct is not acceptable.
 - B. The gauge of the duct and its construction shall be based on low pressure or medium pressure or low or medium velocity. The velocities can be obtained by the duct size and CFM values listed on the drawings. The static pressure for various systems is listed on the mechanical equipment schedule. Refer to the SMACNA standards for the correct duct construction based on the velocities and static pressures involved.
 - C. Sealing of Duct Work: All supply and return duct work from mechanical units, all exhaust duct work and all outside air duct work shall have a high pressure Class A seal per SMACNA.
 - D. Alumiflex type duct will not be permitted. All ducts are to be rigid galvanized sheet metal.
 - E. Exposed round ductwork shall be equal to United McGill Round Uni-Light spiral duct, manufactured from G 60 galvanized sheet steel meeting ASTM A-527-71 (lock forming quality). The duct and fittings shall be assembled with United Uni-Ramp joints, using sheet metal screws.
 - F. All ductwork exposed on roofs must be dog house design to prevent ponding.
 - G. Ductwork fittings, transitions, and hangers exposed to view shall be painted. Provide primer and final coat on all exposed to view ductwork. The color of the final coat of paint shall be selected by the Architect.

- H. All fittings shall be standard design fittings of the same manufacturer as the duct. Branch takeoffs shall be set at 45 degrees to the trunk duct in the direction of the air flow, with factory made fittings. All reductions in duct size shall be made in factory fabricated reducing fittings. Elbows with heel taps are not acceptable.
- I. All factory fabricated fittings and joints must be joined using sheet metal screws and duct sealing compound. Ducts made up with sealer shall have a minimum of 2" overlap and sealed with duct sealing compound applied to both parts for the full length of the overlap.
- J. Concealed and exposed to view fume exhaust ducts shall be 16-gauge 316 stainless steel duct and fittings. All seams and connections shall be welded. All exposed to view fume exhaust ductwork, fittings, transitions, and hangers shall be painted. Provide primer and final coat of paint on all ductwork, fittings, transitions, and hangers. The color of the final coat of paint shall be selected by the Architect or Owner's District's Representative.
- K. Clothes dryer exhaust ducts to be constructed of galvanized steel duct. Clothes dryer exhaust ducts shall not have fasteners or other projections into the air stream.

2.2 FLEXIBLE DUCT

- A. Flexible duct shall only be permitted in concealed tee bar ceilings and at the end of duct runouts to diffusers or grills. No flex duct shall be exposed to view. The maximum flex length shall be 7 feet.
- B. Provide flexible connections at inlet and discharge connections of fans and air handling equipment to prevent mechanical noises from being transmitted to connecting ductwork.
- C. Acceptable manufacturers are Vent fabrics, Inc and Duro Dyne MFG. UL listed, fire-retardant, Flexible Duct Connector, Metal - Fab® 3x3x3 Grip Loc MBX333 (#10159) or equal, to NFPA 90A and crimped into metal edging strip.
 - 1. Ventglas shall be used for flexible duct connections when not exposed to the weather.
 - 2. Ventlon shall be used for flexible duct connections exposed to the weather.
- D. Flexible ducts shall be installed in as straight a manner as possible. Avoid bends with inside radius of less than one duct diameter. Cut ducts to length required, rather than using bends to take up slack.
- E. Flexible duct shall comply with the Class I requirements of the NFPA Bulletin No. 90-A with a flame spread rating 25 or less and smoke developed rating not higher than 50.
- F. All flexible ducts shall be insulated unless otherwise specified. Insulation shall be 1" thick (min.) fiberglass with "R" value at 75 degrees F.
- G. Acoustical Flexible Ductwork - Flexible duct in sound sensitive spaces shall be UL 181 Class 1 acoustical flexible duct or equal of Casco Silentflex II or AP (R or F) by JP Lamborn Co. Duct shall be factory made and consist of an interior liner that is sound transparent. Interior liner material to be spun nylon or similar spun-bonded, nonwoven fabric. Interior liner shall not be air or watertight. Acoustic insertion loss shall not be less than 3 dB per foot of straight duct at 500 hertz based on 6-inch duct at 2,500 feet per minute.

2.3 ROUND DUCT TAKE-OFF FITTINGS

- A. Take-off fittings for all rigid round ducts shall be at 45-degree angles to the main duct or use bellmouth fitting. Provide quadrant damper at duct take-off fitting unless otherwise specified.

2.4 DUCT SEALANT

- A. Acceptable manufacturer is Chicago Mastic Corp. and Sealing System by Hardcast, Inc.
- B. Duct sealer shall be a mineral impregnated fiberglass or metal-to-metal air pressure sealant that is flexible and self-curing.
- C. Sealant shall be fire resistive when dry.

PART 3 - EXECUTION

3.1 GENERAL

- A. Ductwork construction and installation including sheet metal gauges, reinforcement, joint sealing, air leakage and details not specifically shown on the drawings shall be in accordance with SMACNA Publication "HVAC Duct Construction Standards - Metal and Flexible" Second Edition and SMACNA Publication "Seismic Restraint Manual: Guidelines for mechanical systems 2nd Edition, 1998".
- B. Use Ductmate Duct Connection System for all transverse joints in ducts.
- C. Seal seams, joints, duct connections, elbow gores with Hardcast high pressure Class A SMACNA sealant.
- D. Radius elbows shall have a centerline radius equal to 1-1/2 times the duct width. Square throats will not be permitted on radius elbows. Square elbows shall have double thick turning vanes. Job fabricated turning vanes will not be accepted without prior acceptance.
- E. Provide all necessary dampers as required for proper adjustment and control of air distribution. All dampers shall have rigid bearings and locking quadrants that allow no rattling. All damper rods shall be marked to indicate the relative position of the damper blade with respect to the rod. Install fire dampers in accordance with their UL listing and the manufacturers recommendations.
- F. All grilles, registers, and diffusers shall be set flush and true to the wall or ceilings to prevent air leakage around the edges. Provide plaster frames for all outlets in plaster or gypsum board.
- G. Provide 1" angle collars for all exposed ducts passing through roofs, ceilings, floors and walls. Anchor collars in position after installation is complete.
- H. At all places where inside of duct will be visible through return air grilles, louvers, etc., paint normally visible inside portion of duct with flat black paint.
- I. Install hinged doors on ductwork and housing to provide access to all parts of every automatic damper, fire damper and all other items requiring maintenance or inspection.
- J. Transitions in ductwork, in changing shapes and sizes, shall be made with angles not exceeding 15 degrees wherever possible. Maximum divergence upstream of equipment shall be 30 degrees and maximum convergence downstream shall be 45 degrees.
- K. Where horizontal ducts pass through walls and vertical ducts pass through roof or floors, supporting angles shall be rigidly attached to ducts and to the wall, roof or floor. Angles shall be galvanized and of approved sizes to properly support the ductwork. The supporting angles shall be placed on at least two sides of the duct.

- L. Where horizontal ducts pass through walls and vertical ducts pass through roof or floors, the openings shall be tightly sealed off so as to provide an air and sound tight seal between duct and opening.
 - M. Contractor shall not provide holes in the duct systems for the installation of hangers, conduits, etc. Coordinate work of all other trades so this will not be necessary.
 - N. Ensure that interior of ducting is kept clean during building construction. Install plastic film over exposed duct openings as soon as ducts are installed.
 - O. Locate duct with sufficient space around equipment to allow normal operating and maintenance activities.
 - P. All supply air, return air, outside air and exhaust air ductwork joints and seams to be sealed through their entirety with high pressure Class A SMACNA duct sealant.
 - Q. Complete metal ducts within themselves with no single partition between ducts. Where width of duct exceeds 18 inches, cross break for rigidity. Open corners are not acceptable.
 - R. Lap metal ducts in direction of air flow. Hammer down edges and slips to leave smooth duct interior.
 - S. Construct tees, bends and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible and where rectangular elbows are used, provide approved type airfoil turning vanes.
 - T. Clothes dryer exhaust ducts shall be fabricated with no screws or other penetrations into the air stream.
- 3.2 FLEXIBLE DUCTWORK
- A. Connect flexible ducts to metal ducts with metal draw bands plus sheet metal screws. Use crimp joints with bead for joining round duct sizes with crimp in direction of airflow.
- 3.3 FLEXIBLE CONNECTIONS
- A. Provide flexible connections at inlet and discharge connections of fans and air handling equipment to prevent mechanical noises from being transmitted to connecting ductwork. Align sheet metal duct with fan or fan casing opening in all three dimensions prior to installation of flexible connection, so that duct opening nearly coincides and are almost equally spaced from one another all around. Do not install flexible connection until above requirements are met. Fans or fan casings and ducts shall be able to move 1" in any direction relative to each other without short-circuiting metal to metal or stretching taut the flexible connection.

END OF SECTION

23 33 00 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 Section Includes

- A. Backdraft and pressure relief dampers.
- B. Barometric relief dampers.
- C. Manual volume dampers.
- D. Control dampers.
- E. Fire dampers.
- F. Ceiling radiation dampers.
- G. Smoke dampers.
- H. Combination fire and smoke dampers.
- I. Flange connectors.
- J. Duct silencers.
- K. Turning vanes.
- L. Remote damper operators.
- M. Duct-mounted access doors.
- N. Flexible connectors.
- O. Flexible ducts.
- P. Duct accessory hardware.

1.2 Submittals

- A. Product Data: For each type of product indicated.
 - 1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
- B. Shop Drawings.

1.3 Quality Assurance

- A. Installation Standards
 - 1. NFPA 90A.
 - 2. NFPA 90B.
 - 3. SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 4. California Mechanical Code.

PART 2 - PRODUCTS

- 2.1 Provide airfoil blade dampers for applications over 1500 fpm.
- 2.2 Backdraft and Pressure Relief Dampers: Multiple blade, parallel action, gravity balanced with return springs.
- 2.3 Gravity backdraft dampers shall be fabricated multi blade, parallel action, gravity balanced backdraft dampers of galvanized steel or extruded aluminum, with center pivoted blades linked together; with sealed edges, steel ball bearings, and plated steel pivot pin.
- 2.4 Barometric Relief Dampers: Horizontal or vertical mounting; multiple blade, parallel action, gravity balanced with return springs.
- 2.5 Manual Volume Dampers: Multiple and single blade, parallel- and opposed-blade design, with linkage outside airstream.
 - A. Standard, steel, manual volume dampers.
 - B. Standard, aluminum, manual volume dampers.
 - C. Low-leak, steel, manual volume dampers.
 - D. Low-leak, aluminum, manual volume dampers.
 - E. Acceptable manufacturer are Penn Ventilator Co., Metal Form Manufacturing Co. and Durodyne MFG.
 - F. Provide tight close-off dampers at locations indicated on drawings or as needed for control of the air distribution system.
 - G. Dampers shall have air loss (leakage), when closed, less than 1% of the full flow rate (based on approach velocity of 2,000 fpm) with a pressure differential across damper 4" static pressure or less.
 - H. Construction shall be of No. 22 gauge galvanized blades.
- 2.6 All control rods for volume dampers shall be continuous throughout blade and duct work. Provide locking quadrants and bronze bushings.
- 2.7 Control Dampers: Parallel or Opposed-blade design; galvanized-steel, stainless-steel, or aluminum frame and blades.
- 2.8 Fire Dampers: Static and dynamic, replaceable electric heat-responsive device.
- 2.9 Ceiling Radiation Dampers: Replaceable heat-responsive device.
- 2.10 Smoke Dampers
 - A. Multiple-blade type Curtain type with blades outside airstream except when located behind grille, where blades may be inside airstream.

- B. Leakage: Class II.
- 2.11 Combination Fire and Smoke Dampers: Static and dynamic, replaceable electric heat-responsive device.
- A. Acceptable manufacturers are Pottorff, Ruskin, Air Balance Inc. or Greenheck.
 - B. Provide combination fire/smoke dampers where shown on the drawings.
 - C. WALL AND CONCRETE FLOOR INSTALLATIONS
 - 1. TYPE 1: SMOKE CLOSURE "MOTOR", FIRE CLOSURE "FUSIBLE LINK"
 - a. Combination fire/smoke dampers will be louver bladed type. Dampers must be tested and listed under both UL 555 and UL 555S. Units must be factory-supplied assemblies that consist of damper, sleeve and 1-cycle/year actuator. Dampers must have a minimum class II leakage and dynamic closure rating under UL 555S. Provide units as power-open unless otherwise noted. Actuators to have a min. operating temperature of 350° F. Seals should be metal-to-metal without the use of synthetic gasket. Fusible links shall be rated for 212° F, unless otherwise noted. Install in accordance with manufacture's installation instructions provided with units. Provide suitable access for inspection and servicing of each damper. Provide integrated CSFM listed duct smoke detector model 2151 or DH-100 AC/DC.
 - 1) Motor actuators must be by ISO 9000 recognized control manufacturer and certified by ETL laboratories for 1-year continuous power applications such as Invensys, Siemens and Honeywell. Inexpensive stall motors will not be accepted.
 - 2) Provide units with dual position indicator switches for remote annunciation. Pottorff model FSD 142, CSFM No. 3225-0368:110 & 3230-368: 111.
 - 2. TYPE 2: FIRE/SMOKE CLOSURE "MOTOR W/ BIMETAL LINKS"
 - a. Combination fire/smoke dampers will be louver bladed type. Dampers must be tested and listed under both UL 555 and UL 555S. Units must be factory-supplied assemblies that consist of damper, sleeve and 1 cycle/year actuator. Dampers must have a minimum class II leakage and dynamic closure rating under UL 555S. Provide units as power-open unless otherwise noted. Actuators to have a minimum operating temperature of 350° F. Seals should be metal to metal without the use of synthetic gasket. Dual temperature thermal switches (DRS-30) rated for 212° F & 350° F, unless otherwise noted. Install in accordance with manufacture's installation instructions provided with units. Provide suitable access for inspection and servicing of each damper. Provide integrated CSFM listed duct smoke detector model 2151 or DH-100 AC/DC.
 - b. Motor actuators must be by ISO 9000 recognized control manufacturer and certified by ETL laboratories for 1-year continuous power applications such as Invensys, Siemens and Honeywell. Inexpensive stall motors will not be accepted. Dual temperature thermal switches shall be equipped with auxiliary contacts for remote annunciation. Pottorff model FSD 142, CSFM No. 3225-0368:110 & 3230-368: 111.

D. FOR CORRIDOR CEILING APPLICATIONS

1. Dampers shall be of similar construction to those above except, in tunnel corridor construction where the ceiling construction is similar to that of the wall provide dampers that have been specifically tested and listed for horizontal mounting as corridor dampers under UL 555 and 555S. Pottorff model FSD 172, CSFM No. 3225-0368:110 & 3230-0368:111.
2. Dampers that are installed in corridor ceilings where the construction is (floor/ceiling or roof/ceiling assemblies) that require radiation protection will be radiation dampers that have been tested and listed under both UL 555 and UL 555S. The dampers will have a minimum class II leakage rating. The dampers will be activated by a bimetal, electric link that responds to a signal from a smoke detector, and shall require manual reset. Pottorff model 5680/5660FG, CSFM No. 3225-0368:006 & 3230-0368:106.
 - a. Each combination fire/smoke damper shall meet all requirements specified for fire dampers and additionally shall include an operating shaft which, when rotated 90 degrees, causes damper to operate between closed and open. Operating shaft and damper combination shall be suitable for linking to an operation by any standard low voltage electric damper operator having sufficient torque characteristics.
 - b. Install a duct smoke detector and provide control wiring and conduit for each combination fire/smoke damper per California Building Code requirements.

2.12 Duct Silencers: Factory fabricated and tested, round or rectangular.

- A. Acceptable Manufacturer: Vibro-Acoustics as Basis of Design or equal by Industrial Acoustics Co. (IAC).
- B. Materials and Construction
 1. Outer Casing Construction: Outer casings of rectangular duct silencers shall be made of 22 gauge galvanized steel in accordance with ASHRAE and SMACNA standards for the pressure and velocity classification specified for the air distribution system in which it is installed. The silencers shall not fail structurally when subjected to a differential air pressure of 8 inches water gauge. Casings shall be lock-formed and sealed to provide leakage-resistant construction. Airtight construction shall be achieved by use of a duct-sealing compound supplied and installed by the contractor at the job site.
 2. Interior Construction: Interior construction for rectangular duct silencers shall be made of not less than 26-gauge galvanized perforated steel. All perforated steel shall be adequately stiffened to insure flatness and form. All spot welds shall be painted.
 3. Sound Absorbing Fill Material: Fill material shall be of inorganic glass fiber of a density sufficient to obtain the specified acoustic performance. Glass fiber shall be packed with a minimum of 15% compression during silencer assembly. Media shall be bacteria and fungus resistant. It shall be resilient such that it will not crumble or break. It shall conform to irregular surfaces. Media shall not cause or accelerate corrosion of aluminum or steel.
 4. Combustion Rating: Filler shall not be less than the following when tested in accordance with ASTM-E-84, NFPA Standard 255 or UL No.723. Flamespread Classification - 15. Smoke Development Rating - 50.

- 2.13 Turning Vanes: Double-blade, galvanized sheet steel.
- A. Acceptable manufacturers are Tuttle & Bailey, Barber-Colman and Aero/Dyne.
 - B. Turning vanes shall be double-walled and formed to assure that any point on one blade is equidistant from the same point on an adjacent blade.
- 2.14 Duct-Mounted Access Doors: Double wall, rectangular, galvanized sheet steel with insulation.
- A. Acceptable manufacturers are Vent fabrics, Inc., C. E. Sparrow Co. and Elmdor MFG.
 - B. Access panels in sheet metal work shall consist of three one-piece stampings: the doorframe, the door itself and the pan. Space between door and pan shall be filled with 1" thick insulation. The door shall be hung with loose pin hinges.
 - C. Access panel sizes shall be as follows unless otherwise specified on drawings:

Size of Duct to be Accessed	Panel Size	Metal Gauges of:		
		Frame	Door	Pan
6" - 8"	6" x 8"	24	26	28
10" - 12"	10" x 12"	22	24	28
12" - 16"	12" x 16"	20	24	28
18" and over	16" x 24"	20	22	28

- D. Access doors shall be fabricated in accordance with the details in the SMACNA Duct Construction Standards. Latches and hinges shall be equal to Ventlok of appropriate type and size.

PART 3 - EXECUTION

- 3.1 Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- 3.2 ACCESS DOORS
- A. Provide access doors as specified for inspection and cleaning before and after coils, at fire dampers, at smoke dampers, at volume dampers, and elsewhere as indicated or as required. Review locations prior to fabrication.
 - B. Locate access doors for easy access. Doors should be located above accessible ceilings, whenever possible. Where access is required above gypsum board ceilings, coordinate location of access panel with Contractor. Coordinate location of access doors with other trades such that conduit and pipe does not prevent or interfere with access to ductwork.

3.3 FIRE DAMPERS

- A. Provide fire dampers at locations shown, where ducts and outlets pass through fire rated components where ducts enter and leave all duct shafts serving more than one floor, and where required by authorities having jurisdiction.
- B. Fire dampers shall be complete with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings, and hinges.
- C. Install fire dampers in accordance with California Mechanical Code 1997 and California form Building Code 1998 requirements, manufacturer's recommendations and State Fire Marshal recommendations.

3.4 FIRE/SMOKE DAMPERS

- A. Install fire/smoke dampers in accordance with California Mechanical Code 1997 and California Building Code 1998 requirements, manufacturer's recommendations and State Fire Marshal recommendations.
- B. Provide a smoke detector up stream of the fire/smoke dampers that will upon detection of smoke close the fire/smoke damper.
- C. Provide control wiring and conduit from smoke detector to fire/smoke damper.

3.5 DUCT SILENCERS

- A. Install where shown on Drawings in accordance with the manufacturer's recommendations to obtain the published acoustical and air flow performance.
- B. Duct silencer acoustical and aerodynamic performance shall be determined in accordance with the latest edition of ASTM Standard E477 Standard Test Method for Measuring Acoustical and Airflow Performance of Duct Liner Materials and Prefabricated Silencers. All tests shall be conducted by a laboratory that is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP) to conduct the test. Where test data is obtained in the manufacturer's laboratory, the facility shall be available for inspection and witnessed testing by the architect, mechanical engineer and acoustical consultant in order to verify compliance with the latest revision of ASTM Standard E477. The architect or project acoustical consultant shall be the final arbiter in determining compliance.
- C. The manufacturer shall supply certified test data for each scheduled silencer. The data shall include dynamic insertion loss, generated noise and pressure drop for forward or reverse flow, matching the project's air distribution system requirement. All ratings shall be conducted in the same facility and shall utilize the same silencer.
- D. Test facilities and test reports shall be open to inspection upon request from the Engineer. Silencer performance must have been substantiated by laboratory testing according to ASTM E477-96 and so certified when submitted for approval. The aero-acoustic laboratory must be NVLAP accredited for the ASTM E477-96 test standard. A copy of the accreditation certificate must be included with the submittals. Data from non-NVLAP accredited test facilities will not be accepted.
- E. Acoustical and Aerodynamic Performance:
 - 1. All silencer ratings shall be determined in a duct-to-reverberant room test facility that provides for airflow in both directions through the test silencer in accordance with the ASTM E-477-96 test standard. The test set-up, procedure and facility shall eliminate all

effects due to flanking, directivity, end reflection, standing waves and reverberation room absorption.

2. Silencer pressure drops shall not exceed those listed in the silencer schedule. Silencer pressure drop measurements shall be made in accordance with the ASTM E-477-96 test standard. Tests shall be conducted and reported on the identical units for which acoustical data is presented.
- F. Sound trap baffles should be oriented so as to be parallel to the plane of the turn if the sound trap is located in a position less than 3 duct diameters in distance from the elbow. The duct diameter shall be based upon the maximum duct cross sectional dimension of the sound trap.
 - G. If the sound trap is located greater than 3 duct diameters away from an elbow, the orientation is not critical.
 - H. With the exception of elbow silencers, locate no rectangular sound attenuators within one duct diameter from elbows, fan suction or discharge openings, takeoffs, etc. unless indicated on the drawings.

END OF SECTION

23 37 00 - AIR OUTLETS AND INLETS

PART 1 - GENERAL

1.1 Section Includes

- A. Diffusers, registers and grilles.

PART 2 - PRODUCTS

2.1 Acceptable manufacturers are Krueger, Titus or Carnes.

2.2 All units must be factory finished. Provide white color finish. Unit ratings shall be approved by ADC.

2.3 Supply Air Distribution - Provide the sizes listed below unless otherwise noted on the drawings.

- A. Supply Diffuser - 24" X 24" Lay in Tee-Bar and Modular Core Type. Exposed blades with 4 modular cores that can be removed and repositioned to provide one-way to four-way blow pattern. Square neck type. Krueger Model Number 1240 Series with frame style 23. Cores shall be put in four-way blow pattern unless otherwise noted. Include square to round transition for duct connection. Standard white color.

CFM	FACE SIZE	NECK SIZE
0 - 100	24" X 24"	6" x 6"
101 - 175	24" X 24"	8" X 8"
176 - 250	24" X 24"	10" X 10"
251 - 400	24" X 24"	12" X 12"
401 - 500	24" X 24"	14" X 14"
501 - 700	24" X 24"	16" X 16"
701 - 850	24" X 24"	18" X 18"

- B. Supply Diffuser - 24" X 24" Surface Mounted and Modular Core Type. Exposed blades with 4 modular cores that can be removed and repositioned to provide one-way to four-way blow pattern. Square neck type. Krueger Model Number 1240 Series with frame style 22. Cores shall be put in four-way blow pattern unless otherwise noted. Include square to round transition for duct connection. Standard white color.

<u>CFM</u>	<u>FACE SIZE</u>	<u>NECK SIZE</u>

451 - 600	25 3/4" X 13 3/4"	24" X 12"

- D. Exhaust Grills shall be the same model and size as return grills.

PART 3 - EXECUTION

- 3.1 Air flow tests and sound level measurement shall be made in accordance with applicable ADC equipment test codes and ASHRAE standards. Manufacturer shall certify catalogued performances and ensure correct application of air outlet types.
- 3.2 Positions indicated are approximate only. Check location of supply, return and exhaust grilles and make necessary adjustments in position to conform with architectural features, symmetry and lighting arrangement. See architectural reflected ceiling plans and interior elevations for additional information.

END OF SECTION

23 40 00 - HVAC AIR CLEANING DEVICES

PART 1 - GENERAL

- 1.1 Section Includes
 - A. Air Filters

PART 2 - PRODUCTS

- 2.1 Acceptable manufacturers are Farr Co. or American Air Filter.
- 2.2 Air filters for rooftop HVAC and HV units, fan coils or furnace units shall be equal to Farr 30/30 2" medium efficiency pleated, disposable type filters.
- 2.3 Each filter shall consist of a non-woven cotton fabric media support grid and enclosing frame. Provide Farr Holding Frames factory fabricated of 16 gauge galvanized steel and be equipped with gaskets and four heavy-duty positive sealing fasteners. Each fastener shall be capable of withstanding 25 lbs. pressure without deflection. They shall be capable of being attached or removed without the use of tools. Filters shall be capable of being installed or removed without any movement of equipment or duct work.
- 2.4 Filters shall have a composite fire hazard rating as tested by ASTM E-84, NFPA 255, or UL 723 not to exceed 25 flame spread and 50 smoke developed. Materials labeled accordingly.
- 2.5 Air Filters shall be a California State Fire Marshal approved and listed type. Preformed filters having combustible framing shall be tested as a complete assembly. Air filters in all occupancies shall be Class 2 or better (as shown in the State Fire Marshal Listing). Air filters shall be accessible for cleaning or replacement.
- 2.6 Filters shall conform to ASHRAE 90A-1980 and NFPA 90.

PART 3 - EXECUTION

- 3.1 Provide two sets of air filters for each HVAC, HV and fan coil unit.
 - A. The first set of air filters shall be installed during construction and used during the air balance portion of the project.
 - B. The second set of air filters shall be installed after the air balance portion of the project is finished and prior to the mechanical final punch list site visit.

END OF SECTION

23 80 00 - DECENTRALIZED HVAC EQUIPMENT

PART 1 - GENERAL

1.1 Section Includes

- A. Rooftop package units
- B. Fan coil units
- C. Condensing units
- D. Exhaust Fans

1.2 Related sections:

- A. All units that provide heat and/or air conditioning shall be equipped for and shall interface with DDC (Direct Digital Controls) controls systems. See 23 09 23 - DIRECT-DIGITAL CONTROL SYSTEMS FOR HVAC.

PART 2 - PRODUCTS

2.1 ROOFTOP PACKAGE UNITS

- A. Acceptable manufacturers for HVAC units are Carrier or Trane.
- B. Acceptable manufacturers for heat and ventilation units are Reznor or Sterling.
- C. Provide full perimeter spring vibration isolation rails or neoprene pads for rooftop package HVAC and Heat and Vent equipment as called for on the mechanical schedule (3-ton and smaller units do not need vibration isolation rails). Provide seismic motion restraints as required by California Mechanical and Building Codes.
- D. Provide a minimum of 16-gauge custom pitched roof curb for each rooftop unit. The roof curb shall be a single type pitched curb with the slope of the roof curb field measured. The roof curb shall be supported by roof structural support members. Align the roof curb with these support members. The roof curb shall provide a level surface for the installation of the rooftop unit.
- E. The casing shall be constructed of coated steel meeting SMACNA or ASHRAE Standards. Internal insulation shall meet the requirements of NFPA Bulletin 90-A and UL 181.

2.2 FAN COIL UNITS

- A. Acceptable manufacturers are Carrier or Trane.
- B. Provide factory assembled and tested fan coil unit of draw-through blow-through design with insulated casing, blower, motor, coils, drain pan and accessories indicated. Drain pan shall extend below valves and fittings at coil connections.
- C. Casing shall be 16-gauge galvanized steel with 1" insulation, supply and return collars, and access panels as indicated.

- D. Coils shall be copper tubing mechanically expanded in aluminum fins, manual air vent and insulated condensate drain pan under coil and headers. ARI rated capacities.
- E. Blower shall be belt drive.
- F. Motor shall be permanent split capacitor, resilient mounts, with oilers and internal thermal protection. Provide adjustable motor sheave on belt drive units to permit a minimum of 10% field adjustment or fan speed.
- G. Units shall be suspended and provided with neoprene rubber-in-shear vibration isolators and hanger units. Provide seismic motion restraints as required by California Mechanical and Building Codes. This isolation equipment is for the avoidance of excessive noise or vibration in the building due to the operation of equipment, and due to interconnected piping, ductwork and conduit.
- H. Hanger assembly shall accommodate 3/8" maximum diameter threaded hanger rod for units up to 450 lbs. operating weight and 1/2" diameter threaded hanger for the units 450 to 1000 lbs. The required hanger rods shall be furnished by the installer. Hanger brackets shall be mechanically secured to the fan coil unit. All hanger rods shall have double nuts.

2.3 CONDENSING UNITS

- A. Acceptable manufacturer is Carrier or Trane.
- B. Provide 1" thick neoprene pads for the isolation of mechanical equipment. This isolation equipment is for the avoidance of excessive noise or vibration in the building due to the operation of equipment.
- C. Provide seismic motion restraints as required by California Mechanical and Building Codes.

2.4 EXHAUST FANS

- A. Acceptable manufacturers are Greenheck, Cook or Penn. Exhaust fans shall meet AMCA standards.
- B. Provide a custom pitched roof curb for all roof mounted exhaust fans. The roof curb shall be a single type pitched curb with the slope of the roof curb field measured. The roof curb shall be supported by roof structural support members. Align the roof curb with these support members. The roof curb shall provide a level surface for the installation of the roof mounted exhaust fans. Roof mounted exhaust fans and motors shall be designed for outdoor duty.
- C. Provide neoprene rubber-in-shear vibration isolators for all ceiling hung and attic suspended units. Provide seismic motion restraints as required by California Mechanical and Building Codes. This isolation equipment is for the avoidance of excessive noise or vibration in the building due to the operation of equipment, and due to interconnected ductwork and conduit.
- D. Provide and flex connections on exhaust inlet and outlet for the isolation of exhaust fans. These flex connections are for the avoidance of excessive noise or vibration in the building due to the operation of equipment.
- E. The casing shall be constructed of coated steel meeting SMACNA and ASHRAE Standards.

PART 3 - EXECUTION

3.1 HVAC UNITS, HEAT AND VENT UNITS AND EXHAUST FANS

- A. Install equipment in accordance with manufacturer's recommendations, good industry standards and SMACNA Installation Standards for Heating, Air Conditioning and Solar systems.
- B. Provide high-pressure air seal around ducts and units.
- C. Coordinate with other work, including ductwork, floor construction, and electrical work as necessary to interface installation of air handling equipment with other work.
- D. Ensure equipment is wired properly, with rotation in direction indicated and intended for proper performance. If there is no rotation arrow supplied by the manufacturer, install a correct rotation arrow.
- E. Inlet and outlet connections to all equipment shall be made with neoprene coated glass fabric flexible connection not less than four inches full length with one-inch slack. Weather exposed connections shall be same as above except to be hypalon coated in lieu of neoprene.

3.2 ROOFTOP PACKAGE UNITS

- A. The unit manufacturer shall furnish, when requested, certified sound power levels for both discharge sound and casing radiated sound, tested in accordance with ASHRAE Standard 36-72.
- B. Arrangement and configuration as indicated on drawings and as described on the equipment schedule. Condensing section shall be designed for outdoor duty. Performance shall be certified in accordance with Air Conditioning and Refrigeration institute (ARI) Standard for rooftop HVAC units. Fans to be rated by AMCA.
- C. Provide and flex connections on supply and return duct plenums for the isolation of mechanical equipment. These flex connections are for the avoidance of excessive noise or vibration in the building due to the operation of equipment.

3.3 FAN COIL UNITS

- A. Provide and flex connections on supply and return duct plenums for the isolation of mechanical equipment. These flex connections are for the avoidance of excessive noise or vibration in the building due to the operation of equipment.

3.4 CONDENSING UNITS

- A. Arrangement and configuration as indicated on drawings and as described on the equipment schedule. Condensing units shall be weatherized for outdoor duty. Condensing unit performance shall be certified in accordance with Air Conditioning and Refrigeration institute (ARI) Standards.

3.5 EXHAUST FANS

- A. The exhaust fan's manufacturer shall furnish, when requested, certified sound power levels for both discharge sound and casing radiated sound, tested in accordance with ASHRAE Standard 36-72.
- B. Arrangement and configuration as indicated on drawings and as described on the equipment schedule. Performance shall be certified in accordance with Air Conditioning and Refrigeration Institute (ARI) Standard for rooftop HVAC units. Fans to be rated by AMCA.

END OF SECTION

DIVISION 26 – ELECTRICAL

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

26 05 00 – GENERAL ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. This specification shall apply to all phases of Work hereinafter specified, shown on Drawings, or as required to provide a complete installation of electrical systems for this Project. Work required under this specification, is not limited to just the Electrical Drawings - refer to Architectural, Structural, Landscape, and Mechanical / Plumbing Drawings, as well as all other drawings applicable to this project, which designate the scope of work to be accomplished. The intent of the Drawings and Specifications is to provide a complete and operable electrical system that includes all documents that are a part of the Contract.
 - 1. Work Included. Furnish labor, material, services and skilled supervision necessary for the construction, erection, installation, connections, testing, and adjustment of all circuits and electrical equipment specified herein, or shown or noted on Drawings, and its delivery to the Owner complete in all respects ready for use.
 - 2. The electrical Work includes installation or connection of certain materials and equipment furnished by others. Verify installation details, installation and rough-in locations from the actual equipment or from the equipment shop drawings.
- B. Electrical Drawings. Electrical Drawings are diagrammatic, and are intended to convey the scope of work, indicating intended general arrangement of equipment, conduit and outlets. Follow Drawings in laying out Work and verify spaces for installation of materials and equipment based on actual dimensions of equipment furnished.

PART 2 - PRODUCTS

2.1 General

- A. Materials and Equipment: All electrical materials and equipment shall be new and shall be listed by Underwriter's Laboratories and bear their label, or listed and certified by a nationally recognized testing authority where UL does not have an approval. Custom made equipment must have complete test data submitted by the manufacturer attesting to its safety.

2.2 Switchboards / Distribution Boards:

- A. Provide switchboard with rating, components and features as indicated on the Drawings. All sections shall be constructed of code gauge sheet metal. See drawings for more information. Switchboard and switchboard components shall be as manufactured by Square D or approved equal Cutler Hammer or Siemens.
- B. Busbars shall be rectangular cross-section with silver-plated joints, full-height in each vertical section with horizontal cross busbars between sections. Bus bracing shall not be less than short-circuit indicated on the Drawings or utility requirements. Provide all lugs suitable for copper conductors. Neutral busbar shall be 100% rated unless otherwise noted on drawings and shall have terminals for all active, spare, or inactive circuits. Ground busbar shall be full length with provisions for future length extension.

2.3 Panelboards - Branch Circuit:

- A. Branch circuit panelboards shall be of the dead front safety type equipped with thermal-magnetic bolt-on type 40 deg C. circuit breakers. Panels shall be minimum 20" wide and 5-3/4" deep unless otherwise noted on plan. All branch circuit panelboards shall be 42 circuit bus provided with main circuit breaker and branch circuit breakers of the rating indicated on the panel schedule. See panel schedules and panel schedule notes on drawings for additional requirements.
- B. Trims shall have doors equipped with flush type combination lock and catch, two milled type keys supplied with each panel. All locks shall be keyed alike and each door shall have a plastic covered directory frame with a typed identification card of all circuit and panel numbers for branch circuit panelboards.
- C. Neutral and Ground bus bars shall be full size, and rectangular in cross section.

2.4 Transformers:

- A. See drawings for transformer schedule and additional specifications. Transformers shall be self-cooled type with Class H insulation and a temperature rise of 115°C in 40°C ambient under continuous full load conditions, kilovolt ampere ratings shall be as shown on the Drawings. Design, construction, and operational characteristics shall be in accordance with ASA, AIEE, and NEMA standards. All insulating materials shall be in accordance with NEMA ST20-1972 Standards for a 220°C, UL component recognized insulation system. Windings shall be of the fire-resistant type, designed for natural convection cooling through air circulation. Coils with exposed wire shall not be accepted. Core mounting frame and enclosures shall be of the welded and bolted construction, seismic rated, with sufficient mechanical rigidity and strengths to withstand shipping, erection and short circuit stresses. Enclosure shall be suitable for outdoor installation and shall have suitable ventilating openings with rodent-proof screens. Transformers shall be furnished complete with mounting channel and mounting bolts. Enclosures shall be provided with lifting lugs and jacking plates as required. Noise level shall be guaranteed by the manufacturer not to exceed 45 decibels for transformers up to and including 50 KVA, 50 decibels up to and including 112-1/2KVA, 55 decibels up to and including 300KVA as measured by NEMA Standards.
- B. Each Transformer Must Receive the Following Commercial Tests: Ratio, Polarity, Exciting Current, No-Load Loss, Resistance, Copper Loss, Impedance, Induced and Applied Potential Test. Approval shall be granted unless certified test reports covering commercial tests are made available for each unit with shop drawing submittal.
- C. Each transformer shall be furnished with a manufacturer's nameplate located on the front of the unit. The nameplate shall be anodized aluminum with the following information etched or stenciled on the face: Voltage, KVA Rating; Phase; dB Rating; tap adjustments and wiring diagrams.

2.5 Lighting Fixtures: See Section 26 51 00 Lighting Fixtures.

2.6 Wiring Devices:

- A. Provide wiring devices indicated per plan. Devices shall be specification grade. Acceptable manufactures are Leviton, Pass & Seymour and Hubbell. Provide all similar devices of same manufacturer, unless indicated otherwise. Final color selection subject to change by architect during submittal review process.

Wiring Devices (Decora)

- | | |
|-------------------------------|---------------------|
| 1. Convenience Receptacle | #16252- WHITE |
| 2. Dedicated Receptacle | #16352- WHITE |
| 3. Isolated Ground Receptacle | #16262-IG- WHITE |
| 4. G.F.C.I. Receptacle | #6599- WHITE |
| 5. Single Pole Switch | #5691-2- WHITE |
| 6. Double Pole Switch | #5692-2- WHITE |
| 7. Three Way Switch | #5623-2- WHITE |
| 8. Four Way Switch | #5624-2- WHITE |
| 9. Pilot Light Switch "On" | #5628-2- WHITE |
| 10. Pilot Light Switch "Off" | #5631-2- WHITE |
| 11. Projection Screen Switch | #5657-2- WHITE |
| 12. Keyed Switch | #1221-2KL-STAINLESS |

- B. Receptacles on generator and/or UPS power shall be red.
- C. I.G. receptacle bodies shall be of a basic color specified above with an orange triangle to symbolize isolated ground.
- D. Receptacles located in wood finished areas shall generally be black unless otherwise indicated by the architect. The contractor shall obtain written approval of the architect regarding final receptacle color selection prior to ordering receptacles.
- E. Plate colors shall match device.
- F. The following device plates shall be engraved: key operated switches, switches with Pilot Lights and Switches for the control of motors, heaters and ventilators.
- G. Weatherproof Outlet Covers/Assemblies. All Receptacles identified as weatherproof on the drawings shall be GFCI type and equipped as follows:
 - 1. Subscript WP-A: Recessed wall box, 6" x 6"x 3-1/2" deep, with a hinged, lockable, cast aluminum, self-closing, gasket-equipped door. C.W. Cole TL-310 Series with an interior metal plate suitable for a GFCI receptacle in one compartment separated from a second compartment with a metal separation barrier. The second compartment shall have a blank metal plate suitable for field installation of power, AV or communications devices. This compartment shall have a minimum 3/4" C.O. with pull string routed from the box to the facility telephone backboard unless otherwise note on the drawings. Provide 1 key minimum per device to the Owner's project manager upon completion of project.
 - 2. Subscript WP-B: Raintight while "in use", one gang GFCI receptacle, key and lockable cover. Taymac 20310 series. Unit shall comply with NEC/CEC article 410-57(b).
 - 3. Subscript WP-C: Weatherproof cover for use with portable tools or equipment, complying with CEC article 410-57(b). Leviton 6196-V or equal by Hubbell.
 - 4. Subscript WP- D: BK Lighting Square Star Style "path Star" with hinged weatherproof cover housing a G.F.C.I. receptacle. Color by Architect. Mount housing to BK Lighting "power pipe" underground junction box. See drawings for additional details.

2.7 Motor Controllers / Starters: See drawings for specifications.

2.8 Circuit Breakers:

- A. Provide molded plastic case, air circuit breakers conforming to UL 489. Provide breakers with thermal magnetic trip units, and a common trip bar for two- or three-pole breakers, connected internally to each pole so tripping of one pole will automatically trip all poles of each breaker. Provide breakers of trip-free and trip-indicating bolt-on type, with quick-make, quick-break contacts. Provide single two- or three-pole breaker interchangeability. Provide padlocking device for circuit breakers as shown on the Drawings.
- B. Ground Fault Interrupting Breakers. Provide where shown molded plastic case, air circuit breakers, similar to above with ground fault circuit interrupt capability, conforming to UL Class A, Group 1.
- C. Tandem or half-sized circuit breakers are not permitted.
- D. Series Rated Breakers. UL listed series rated combinations of breakers can be used to obtain panelboard interrupting ratings listed below or shown on Drawings. If series rated breakers are used, panelboards shall be appropriately labeled to indicate the use of series rated breakers. Shop drawing submittal shall include chart of U.L. listed devices which coordinate to provide series rating.
- E. Circuit breakers shall be standard interrupting construction. Panelboard shall accept standard circuit breakers up to 225 amperes. Provide HACR ratings for all circuit breakers serving motor loads.
- F. Circuit breaker handle accessories shall provide provisions for locking handle in the on or off position.
- G. Breakers 100 AMP through 400 AMP frame shall be thermal-magnetic trip with inverse time current characteristics and ground fault protection as indicated on the Drawings. Breakers 225 AMP through 400 AMP shall have continuously adjustable magnetic pick-ups of approximately 5 to 10 times trip rating.
- H. Breakers 400 AMP frame and above shall be 100% rated and have solid-state trip unit with minimum seven function complete with built-in current transformers. Breakers shall have easily changed trip rating plugs with trip ratings as indicated on the Drawings. Rating plugs shall be interlocked so they are not interchangeable between frames and interlocked such that breaker cannot be latched with rating plug removed. Breaker shall have built-in test points for testing long delay and instantaneous, and ground fault (where shown) functions of the breaker by means of a 120-volt operated test kit. Provide one test kit capable of testing all breakers 400 AMP and above. Solid-state trip shall be with long time rating, long and short time delay, independently adjustable long and short time pick-up, and adjustable instantaneous pick-up.
- I. Where indicated circuit breakers shall be current limiting and consist of a thermal magnetic circuit breaker and an independently operating limiter section within a molded case. Coordinate current limiting circuit breakers (CLCB) ratings as required to protect electrical system components on the load side of the CLCB to include, but not limited to, protecting automatic transfer switches, panel boards and lighting control panels.

2.9 Disconnect Switches:

- A. Non-fusible or fusible, externally operated horsepower-rated, 600V A.C. Provide NEMA 3R, lockable enclosures for all switches located on roof tops, in wet or damp areas and in any area exposed to the elements.
- B. Fusible switches shall be Class "R".
- C. Amperage, Horsepower, Voltage and number of pole per drawings. All of which shall be clearly marked on the switch nameplate.
- D. Provide the Owner's project manager with one spare set of fuses and two sets of fuse clips/fuse for every set of fuses on the project.

2.10 Fuses:

- A. Provide fuses at all locations shown on the Drawings and as required for supplemental protection.
 - 1. Fuses manufactured by Bussman Manufacturing Division, McGraw-Edison Company are specified herein to establish minimum general requirements.
 - 2. All fuses shall be the product of a single manufacturer.
- B. Main and Feeder Protection.
 - 1. Where rating of protective device is greater than 600A, provide Bussman Hi-Cap fuses, Class L, current limiting, having an interrupting rating of 200,000A RMS.
 - 2. Where rating of protective device is 600A or less, provide Bussman Class R fuses, Class RKI current limiting fuses, having an interrupting rating of 200,000A RMS.
- C. Motor Protection.
 - 1. Class RKI Dual-element, current limiting fuses having an interrupting rating of 200,000A RMS.
 - 2. Where rating of protective device is 600A or less, provide Bussman Fusetron Dual-Element fuses, Class RK5, having an interrupting rating of 200,000A RMS.
 - 3. Where fuses feeding motors are indicated but not sized, it shall be the responsibility of the Contractor to coordinate the fuse size with the motor to provide proper motor running protection.
 - 4. When rejection type fuses are specified (Class RK1 or RK5) the fuse holder of all switches (specified in other Sections) shall be suitable for the fuses provided.

2.11 Cable Tray: See drawings for specifications.

2.12 Power Distribution Units (PDU): See drawings for specifications.

2.13 Generator Systems: See drawings for specifications.

2.14 Transfer Switches: See drawings for specifications.

2.15 Lighting Control Systems: See drawings for specifications.

2.16 Dimming Systems: See drawings for specifications.

2.17 Fire Alarm System: See drawings for specifications.

2.18 Conduit:

- A. Galvanized Rigid Conduit (GRC) shall be full weight threaded type steel. Steel conduit shall be protected by overall zinc coating to inside and outside surfaces, applied by the hot dip, metallizing, or sherardizing process.
- B. Intermediate Metal Conduit (IMC), shall be hot-dipped galvanized in accordance with UL 1242 and meeting Federal Specification WWC-581 (latest revision).
- C. Electrical Metallic Tubing (EMT) shall be zinc-coated steel with baked enamel or plastic finish on inside surfaces. EMT shall be dipped in a chromic acid bath to chemically form a corrosion-resistant protective coating of zinc chromate over galvanized surface.
- D. Flexible metal conduit shall be constructed of aluminum or hot-dipped galvanized steel strips wound spirally with interlocking edges to provide greatest flexibility with maximum strength. Interior surfaces shall be smooth and offer minimum drag to pulling in conductors. Used only as directed by the Engineer.
- E. Liquid-tight conduit (Seal-Tite) shall be galvanized steel flexible conduit as above except with moisture and oil-proof jacket, pre-cut lengths and factory-installed fittings. For outdoor installations and motor connection.
- F. Metal Clad (MC) Cable shall be used.
- G. Nonmetallic Flexible Tubing (ENT) shall not be used.
- H. Non-Metallic Conduit:
 - 1. Polyvinyl chloride (PVC) rigid conduit, Schedule 40, Type II for underground installation only with solvent welded joints, conforming to Underwriters Laboratories, Inc. (U.L.) requirements, listed for exposed and direct burial application.
 - 2. Conduit and fittings shall be produced by the same manufacturer.

2.19 Fittings:

- A. Condulet type fittings shall be smooth inside and out, taper threaded with integral insulating bushing and of the shapes, sizes and types required to facilitate installation or removal of wires and cables from the conduit and tubing system. These fitting shall be of metal, smooth inside and out, thoroughly galvanized, and sherardized cadmium plated.
- B. Metallic condulet covers shall have the same finish as the fitting and shall be provided for the opening of each fitting where conductors do not pass through the cover.
- C. Connector, coupling, locknut, bushings and caps used with rigid conduit shall be steel, threaded and thoroughly galvanized. Bushings shall be insulated.
- D. EMT fittings, connectors and couplings, shall be steel, zinc or cadmium plated, raintight, threadless, compression or tap-on multiple point, steel locking ring type with insulated throat.
- E. Flexible steel conduit connectors shall be or malleable iron clamp or squeeze type or steel twist-in type with insulated throat. The finish shall be zinc or cadmium plating.

- F. Die cast, set screw or indenter type fittings are not acceptable.
 - G. Conduit unions shall be "Erickson" couplings, or approved equal. The use of running threads will not be permitted.
- 2.20 600 Volt Conductors - Wire and Cable:
- A. All conductors shall be copper.
 - B. Type THHN/THWN thermoplastic, 600 volt, UL approved, dry and wet locations, for conductor sizes up to and including #4 AWG.
 - C. Type XHHW cross-linked synthetic polymer, 600 volt, UL approved, for dry and wet locations, for conductor sizes #2 AWG and above.
 - D. Cross-linked synthetic polymer, XHHW, 600 volts, UL approved, for installation underground, in concrete or masonry.
 - E. Wire and cable shall be new, manufactured not more than six (6) months prior to installation, shall have size, type of insulation, voltage rating and manufacturer's name permanently marked on outer covering at regular intervals.
 - F. Wire and cable shall be factory color-coded by integral pigmentation with a separate color for each phase and neutral. Each system shall be color-coded and it shall be maintained throughout.
 - G. Systems Conductor Color Coding:
 - 1. Power 208/120V, 3PH, 4W:
 - a. Phase A = Black
 - b. Phase B = Red
 - c. Phase C = Blue
 - d. Neutral = White
 - 2. Power 480/277V, 3PH, 4W:
 - a. Phase A = Brown
 - b. Phase B = Orange
 - c. Phase C = Yellow
 - d. Neutral = White
 - 3. Grounding Conductors: Green
 - 4. Fire Alarm System: As recommended by the manufacturer.
 - H. All color-coding for #8 conductors and above shall be as identified above, utilizing phase tape at each termination.
 - I. No conductors carrying 120 volt or more shall be smaller than #12 AWG.
 - J. Aluminum conductor shall not be used.
 - K. Wire-pulling compounds used as lubricants in installing conductors in raceways shall only be "Polywater J". No oil, grease, graphite, or similar substances may be used. Pulling of No.

1/0 or larger conductors shall be done with an approved cable pull machine. Other methods; e.g. using vehicles, and block and tackle to install conductors are not acceptable.

2.21 Junction and Pullboxes:

- A. For interior dry locations, boxes shall be galvanized one-piece drawn steel, knockout type, with removable, machine screw secured covers.
- B. For outside, damp or surface locations, boxes shall be heavy cast aluminum or cast iron with removable, gasketed, non-ferrous machine screw secured covers.
- C. All boxes shall be sized for the number and sizes of conductors and conduits entering the box and equipped with plaster rings where required. Each conductor shall be terminated at an insulated, barriered terminal connector and completely identified with an engraved fiber identification marker, Electrovert or Underwriter's Safety Device Company.

2.22 Outlet Boxes:

- A. For fixtures, boxes shall be galvanized, one-piece drawn steel, knockout type equipped with 3/8" fixture studs and plaster rings where required.
- B. For convenience outlets, wall switches, or other devices, outlet boxes shall be galvanized one-piece drawn steel, knockout type 4" x 4"x 1-1/2" minimum size with plaster rings as required.
- C. For locations where standard boxes are not suitable due to number and size of conduit to be terminated, special boxes shall be designed to fit space or meet other requirements and submitted for approval.
- D. For exposure to weather, damp locations, or surface mounting, outlet boxes shall be heavy cast aluminum or cast iron with threaded hubs; covers shall be watertight with gaskets and non-ferrous screws.
- E. See drawings for floor box installation notes and specifications on drawings.

2.23 Plywood Backboards:

- A. Where indicated for telephone or communications system terminals or other equipment assemblies, provide backboards of size indicated. Use Douglas Fir Plywood, fire rated, exterior grade, finished one side and prime coat painted on all surfaces with finish coat of gray enamel leaving 1 fire-rating stamp/sheet exposed for inspection. Unless otherwise indicated, use 3/4" thick plywood.

2.24 Terminal Cabinets:

- A. Terminal cabinets shall be fabricated of hot dipped galvanized code gauge sheet metal for flush or surface mounting, complete with barriered sections, a door for each vertically barriered section and sizes as indicated on plan. Doors shall be hinged and lockable. Locks shall be keyed to match the branch circuit panelboards. Terminal cabinet trims shall match the branch circuit panels.
- B. Provide each terminal cabinet with a full size plywood backboard and terminal blocks (minimum 25% or 12 spare terminal blocks). All wires terminating on the terminal blocks shall be identified with an engraved fiber tag.

- C. Terminal cabinets shall be installed complete with full-length skirts of the same construction and finish as the terminal cabinet.
 - D. Where mounted outdoors, terminal cabinets shall be NEMA 3R, weatherproof complete with gaskets and required sealant to prevent moisture from entering the terminal cabinet.
- 2.25 Painting:
- A. Terminal cabinets, panels, junction boxes, pull boxes, etc., and conduit installed outdoors and in public view shall be painted with colors selected by the Architect to match the subject exterior surface. Refer to painting section of the specifications for additional requirements.
- 2.26 Seismic Design and Anchoring of Electrical Equipment:
- A. Seismic Protection Criteria: All Electrical and Mechanical machinery installations provided, as part of this contract located in any Seismic Risk Zone of the Uniform Building Code Seismic Risk Map shall be protected from earthquakes in accordance with the Uniform Building Code and, as applicable, the state and local building codes and regulations. Protection criteria for these zones shall be a Horizontal Force Factor as prescribed by the CBC multiplied by the machinery weight considered passing through the machinery center of gravity in any horizontal direction. Unless vibration isolation is required to protect machinery against unacceptable structure transmitted noise and/or vibration, machinery shall be protected from earthquakes by rigid structurally sound attachment to the load supporting structure. The force factor and anchorage shall be determined by calculations performed and submitted to the Architect by a registered California professional engineer (civil or structural) hired by the contractor. The Contractor shall be responsible for the design of seismic restraint systems for all pieces of equipment weighing over 100 pounds including but not limited to the following:
 - 1. Switchgear
 - 2. Conduits/Conduit support trapezes
 - 3. Transformers
 - 4. Panels
 - 5. Light Fixtures
 - 6. UPS, PDU and Generator Equipment
 - 7. Cable Tray and Bus Duct
 - B. Seismic protection, labor, materials and design shall be included in the Contract sum.
- 2.27 Trenching and Backfilling: Contractor shall be responsible for trenching and backfilling. Refer to Trenching and Backfilling section of the specifications for complete requirements.
- 2.28 Portable Assistive Listening System: A complete Williams PPA-VPE with 014 microphone shall be furnished to meet the ADA requirements for hard-of-hearing at Drama Classroom 252. Furnish R7 receivers in numbers equal to 4% of the seating or a minimum of four. The system shall be integrated into the any existing sound reinforcement system. The transmitter shall be portable with built-in antenna that can be adjusted as required for total coverage of seating area.

PART 3 - EXECUTION

3.1 Installation of Conduit and Outlet Boxes:

- A. All conduit except as hereinafter specified, installed in concrete or masonry, or damp or hazardous location, or subject to mechanical injury shall be heavy wall, threaded, galvanized rigid steel conduit (GRC).
- B. Exposed conduit not subject to abuse or damage and conduit installed in concrete and masonry shall be galvanized rigid steel conduit (GRC), or intermediate metal conduit (IMC).
- C. Rigid conduit or PVC conduit may be installed under floor slabs, under concrete sidewalls and as noted on the Drawings. Rigid conduit installed under slabs shall be 1" trade size minimum and shall be wrapped with 20 mil. polyvinyl chloride plastic tape. PVC conduit shall be minimum 1" diameter.
- D. Flexible steel conduit shall only be permitted to be used at light fixture outlets and connections to vibrating electrical equipment. All flexible steel conduit runs shall be less than 6'-0". All outdoor installation shall be made using liquid-tight flex with approved fittings. Include a separate insulated green ground conductor sized per NEC in each conduit. Other uses of flexible conduit shall be as approved by the Engineer.
- E. Flexible liquidtight conduit shall be installed in lieu of the flexible steel; where required by the, NEC, in damp and wet location, where exposed to weather, in refrigerated area (65°F or less), and/or between seismic joints. All rotating electrical equipment shall be supplied with flexible, liquid-tight conduit with appropriate slack and shall not exceed thirty-six (36) inches. Include a separate insulated green ground conductor sized per NEC in each conduit. Other uses of liquidtight flexible conduit shall be as approved by the Engineer.
- F. Intermediate metal conduit (IMC), is approved for use in all locations as approved for GRC or EMT and in accordance with Article 345 of NEC and UL Information card #DYBY.
- G. All conduit installed in the dry walls or ceilings of the building shall be steel tube (EMT), Galvanized Rigid Steel (GRC), or Intermediate Metal Conduit (IMC). Flexible conduit shall not be used in lieu of EMT, IMC or rigid conduit except as noted herein.
- H. Conduit shall be run so as not to interfere with other piping fixtures or equipment.
- I. The ends of all conduit shall be cut square, carefully reamed out to full size and shall be shouldered in fitting.
- J. No running threads will be permitted in locations exposed to the weather, in concrete or underground. Special union fittings shall be used in these locations.
- K. Underground conduit shall be, unless otherwise indicated, Schedule 40 PVC (polyvinyl chloride) complete with a minimum three (3")-inch, (2,000 LB) concrete envelope, (2")-inch minimum separation between conduits, installed at depth of not less than 24" below grade. Conduit separation shall be maintained using plastic spacers located at 10'-0" intervals. Where power and communication/signal conduits are run in a common trench a (12")-inch minimum separation shall be maintained between power and communication/signal conduits. Where underground conduit passes under a building slab, concrete encasement may not be required, contact the Engineer for direction. Include a separate insulated green ground conductor sized per NEC in each conduit.
- L. All underground or imbedded conduits shall be 3/4" minimum trade size for steel and for PVC.

- M. Where underground conduit runs stub-up, conduit shall transition to GRC underground. The contractor shall use GRC elbows and GRC risers wrapped in 20 mil. PVC tape for stub-ups.
- N. PVC conduit shall not be run in walls.
- O. Where underground conduit runs penetrate floor slab, conduit shall terminate flush with the floor slab using a flush coupling. Exception: communications conduits stubbed through the slab shall be terminated 4" above the finished floor and be equipped with a removable conduit plug and pull rope. Tie off pull rope to conduit plug. Plug by Jackmoon or Equal.
- P. Where conductors enter a raceway in a cabinet, pull box, junction box, or auxiliary gutter, the conductors shall be protected by a plastic bushing type fitting providing a smoothly rounded insulating surface.
- Q. Where conduit extends through roof to equipment on roof area, this Contractor shall provide 24 gauge galvanized sheet metal flashing cones with 4" flanges on roof surface. This flashing shall be delivered to the roofing contractor for installation. The actual location of all such roof penetrations and outlet shall be verified by the Contractor.
- R. All conduit underground, in masonry and concrete and where concealed under floor slabs shall have joints painted with thread compound prior to makeup.
- S. All conduit shall be supported at intervals not less than 6'-0" and within 12" from any outlet and at each side of bends and elbows. Conduit supports shall be galvanized, heavy stamped, two-hole conduit clamp properly secured.
- T. Where conduit racks are used the rack shall consist of two piece conduit clamps attached to galvanized steel slotted channels, properly secured via threaded rods attached directly to the building structure.
- U. Nail-in conduit supports will not be allowed. One-piece setscrew type conduit clamps or perforated iron for supporting conduit will not be permitted.
- V. Seismic Conduit Support:
 - 1. All conduit shall be supported in such a manner that it is securely attached to the structure of the building. Attachment is to be capable of supporting the tributary weight of conduit and contents in any direction. Maximum spacing of support and braces are to be as follows:

<u>CONDUIT SIZE</u>	<u>MAXIMUM SPACING</u>
1/2" to 3"	6'-0"
3-1/2" to 4"	8'-0"

- W. All conduit runs shall be installed parallel or perpendicular to walls, structural members, or intersection of vertical planes and ceilings. Field made bends and offset shall be avoided where possible. Crushed or deformed raceway shall not be installed.
- X. Open knockouts in outlet boxes only where required for inserting conduit.
- Y. Locate wall outlet of the same type at same level in all rooms, except where otherwise noted.
- Z. Outlet boxes on metal studs shall be attached to metal hangers, or bolted to studs; on wood studs attachment shall be with wood screws, nails not acceptable.

- AA. Recess boxes shall not be mounted back-to-back in any wall; minimum offset shall be 24 inches.
- BB. Junction Boxes that do not contain any device(s) shall be located in storage rooms, electrical closets, or above accessible ceilings, not in hard lid ceilings or other forms of inaccessible ceilings. Place boxes which must be exposed to public view in a location approved by the Owner's Project Manager. Provide covers or plates to match adjacent surfaces as approved by the Owner's Project manager.
- CC. Surface mounted panels secured to stud walls shall be secured to wall using 1/2" x 3" screws into steel backing plate as detailed by the Architect.
- DD. Sleeves shall be installed where conduit passes through masonry or concrete walls and shall be 24 gauge galvanized steel no more than 1/2" greater in diameter than the outside diameter of the conduit. When located in non-rated structures, caulk conduit sleeve with stone wool and waterproof below grade. When located in fire rated structures, provide U.L. listed fire stopping system as required.
- EE. All boxes shall be covered with outlet box protector, Appleton SB-CK. Keep dirt from entering box or panels. If dirt does get in, it shall be removed prior to pulling wires.
- FF. All boxes installed outdoors shall be suitable for outdoor installations, gasketed, screw cover and painted as directed by the Architect with weatherproof paint to match building.
- GG. All conduit entries to outdoor mounted panels, cabinets, boxes, etc., shall be made using Myers "SCRU-TITE" hubs Series ST.
- HH. All spare conduits shall have a 200 LB test polypropylene pull line left in place for future use in all runs tagged with a plastic tag at terminating end indicating the location of the opposite end of the conduit.
- II. Where conduit is underground, under slabs or grade, exposed to the weather, or in wet locations, make joints liquid tight and gas tight.
- JJ. All multiple conduit runs within suspended ceilings shall be suspended from building structure by means of unistrut hangers/racks, Conduit shall not be allowed to lay on ceiling or be supported from ceiling suspension wires or other suspension system. Support conduit to structure above suspended ceilings 8" minimum above ceiling to allow removal of ceiling tile. Maintain two-inch clearance above recessed light fixtures
- KK. All exposed conduits shall be painted to match the finish of the wall or ceiling to which it is supported.
- LL. Where conduits or wireways cross expansion joint, provide approved expansion or deflection fittings, or combinations of fittings, which allow deflection in all directions. For seismic joints provide liquidtight flex.
- MM. Seal all conduits where termination is subject to moisture or where conduit penetrates exterior wall, floor or roof, in refrigerated areas, classified (hazardous areas) and as indicated on the drawings.
- NN. Except as otherwise indicated on the Drawings, bends in conduit 2 inches or larger for underground conduit shall have a radius or curvature of the inner edge, equal to not less than ten (10) times the internal diameter of the conduit. For the serving utilities, make large radius bends to meet their requirements.

- OO. Provide nylon or a 1/8-inch O.D. polyethylene rope, rated at 250 pounds tensile strength, in all conduits more than 5 feet in length left empty for future use. Not less than 5 feet of rope shall be left at each end of the conduit.
 - PP. Tag all empty conduits at each accessible end with a permanent tag identifying the purpose of the conduit and the location of the other end. In wet, corrosive outdoor or underground locations, use brass, bronze, or copper 16 gauge tags or lead tags secured to conduit ends with #16 or larger galvanized wire. Inscribe on the tags, with steel punch dies, clear and complete identifying information.
 - QQ. Underground conduits, which terminate inside building(s) below grade, or which slope so that water might flow into building(s), shall be sealed at termination after installation of conductors. Install plugs or caps in spare (empty) conduits. Provide 4% slope to outside the building where possible to drain the water away from the building.
- 3.2 Installation of 600-Volt Conductors:
- A. All electrical wire, including signal circuits, shall be installed in conduit.
 - B. All circuits and feeder wires for all systems shall be continuous from switch to terminal or farthest outlet. No joints shall be made except in pull, junction or outlet boxes, or in panel or switchboard gutters.
 - 1. Utilize preinsulated connectors, 3M Company "Scotchlok," or Ideal Industries, Inc. "Super Nut," for splices and taps in conductors No. 10 AWG and smaller.
 - 2. Tape all splices and joints, exclusive of preinsulated connectors, with vinyl plastic tape manufactured by 3M Company, St. Paul, Minnesota. Use sufficient tape to secure insulation strength equal to that of conductors joined.
 - C. All underground splices must be encapsulated and resin filled and rated submessible.
 - D. Thoroughly clean all conduit and wire-ways and see that all parts are perfectly dry before pulling any wires. No joint shall be made except in pull, junction or outlet boxes, or in panel or switchboard gutters.
 - E. Install UL approved fixture wire from all lighting fixture lamp sockets into fixture outlet or junction box.
 - F. For 20 ampere branch circuit wiring, increase No. 12 conductors to No. 10 for 120 volt circuits longer than 100 feet and for 277 volt circuits longer than 150 feet.
 - G. Conductor Support. Provide conductor supports as required by codes and recommended by cable manufacturer. Where required, provide cable supports in vertical conduits and provide lower end of conduit with a ventilator.
- 3.3 Joints in 600-Volt Conductors:
- A. Joints in 600-volt conductors smaller than No. 4 AWG shall be made with Scotchlok spring type connectors. Wires No 4 AWG and larger shall be joined together with approved type of pressure connector and taped with #33 3M tape, three (3) layers minimum to provide insulation not less than that of conductor. Connections to switch or busbar shall be made with one-piece copper lugs. Splicing of all 600 volt or less in-line connections #2 AWG through 350 Kcmil shall be made with 3M brand PST connector.

3.4 Grounding:

- A. Provide grounding for entire electric installation as shown on plans, as listed herein and as required by applicable codes. Included as requiring grounding are:
 - 1. Conduit, Raceways and Cable Trays.
 - 2. Neutral or identified conductors of interior wiring system.
 - 3. Panelboards and Switchboards.
 - 4. Non-current carrying metal parts of fixed equipment.
 - 5. Telephone distribution equipment.
 - 6. UPS, PDU, ATS and Generator Systems
 - 7. Raised Flooring
 - 8. Antennas
- B. Furnish and install required number of 3/4" x 10' copper clad ground rods to meet specified resistance, all required grounding wires, conduit and clamps. The size of the grounding conductors shall be not less than that set forth in the latest edition of the California Code of Regulations, Title 24, State of California and NEC, unless otherwise indicated. Rods shall be installed such that at least 10 feet of length is in contact with the soil. Where rock bottom is encountered, the electrode shall be driven at an oblique angle not to exceed 45 degrees from vertical or shall be buried in a trench that is at least 2.5 feet deep. The upper end of the electrode shall be flush with or below ground level unless the aboveground end and the grounding electrode conductor attachments are protected against physical damage. Unless otherwise noted, connection to the grounding electrode conductor may be by compression type or exothermic process connector. Mechanical connectors shall not be used.
- C. Grounding System Connection:
 - 1. Compression connectors shall be unplated copper, manufactured by Burndy, or approved equal, designed specifically for the intended connection.
 - 2. Exothermic weld-type connectors shall be 'Cadweld' manufactured by Erico Products, or approved equal, designed specifically for the intended connection.
 - 3. Mechanical connectors shall not be used.
- D. Isolated Ground Receptacles shall have an insulated ground wire connected between the receptacle and the panelboard isolated ground bus. Unless otherwise noted, this ground wire shall not be grounded at any other point, and shall be distinguished from other ground wires by a continuous yellow stripe.
- E. Provide separate green equipment ground conductor in all electrical raceways, to effectively ground all fixtures, panels, controls, motors, disconnect switches, exterior lighting standards, and noncurrent carrying metallic enclosures. Use bonding jumpers, grounding bushings, lugs, busses, etc., for this purpose. Connect the equipment ground to the building system ground. Use the same size equipment ground conductors as phase conductors, up through No. 10 AWG. Use CEC Table 250-95 for conductor size with phase conductors No. 8 and larger, if not shown on the Drawings.
- F. Clean the contact surfaces of all ground connections prior to making connections.

- G. Ductwork. Provide a flexible ground strap, No. 6 AWG equivalent, at each flexible duct connection at each air handler, exhaust fan, and supply fan, and install to preclude vibration.
 - H. Motors. Connect the ground conductor to the conduit with an approved grounding bushing, and to the metal frame with a bolted solderless lug. Bolts, screws and washers shall be bronze or cadmium plated steel.
 - I. Building grounding system resistance to ground shall not exceed 25 ohm.
- 3.5 Power Supplies to all Mechanical Equipment Including Plumbing, Heating and Air Conditioning Units;
- A. An electric power supply, including conduit, any necessary junction and/or outlet boxes and conductors and connection shall be furnished and installed by this Contractor for each item or mechanical equipment.
 - B. Power supplies to individual items of equipment shall be terminated in a suitable outlet or junction box adjacent to the respective item of equipment, or a junction box provided by the manufacturer or the equipment and directed by the Mechanical Contractor. Allow sufficient lengths of conductor at each location to permit connection to the individual equipment without breaking the wire run.
 - C. The location of all conduit terminations to the equipment is approximate. The exact location of these conduit terminations shall be located and installed as directed by the Mechanical Contractor.
 - D. Provide power supplies to all mechanical equipment, including but not limited to, equipment furnished and installed by Owner or Contractor such as heating and air conditioning equipment. The installation shall produce a complete operable system.
 - E. Unless otherwise noted, this Contractor shall furnish and install all conduit, boxes, wires, etc., for line voltage wiring and low voltage wiring.
 - F. It is the Contractor's responsibility to verify with the Drawings of other trades regarding the extent of his responsibility for mechanical equipment. The bid must include a sum sufficient to cover the cost of the installation.
 - G. Power supplies shall be terminated in a suitable outlet or junction box adjacent to the respective item of equipment.
 - H. The location of all power supply connection and/or terminations to the mechanical equipment is approximate. The exact locations of these terminations shall be verified with other trades during construction.
- 3.6 Prefabricated Equipment: Installation of all prefabricated items and equipment shall conform to the requirements of the manufacturer's specifications and installation instruction pamphlets. Where code requirements affect installation of materials and equipment, the more stringent requirements, code or manufacturer's instructions and/or specifications, shall govern the work.

END OF SECTION

26 05 05 – SELECTIVE DEMOLITION FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Electrical Demolition: Selective removal and disposal of [interior] [and] [exterior] components of existing electrical systems not to remain for completed Project, as indicated on Drawings and specified herein.
 - 1. Demolition Work shall include complete demolition of components and shall include all buried and concealed items, their supports, coverings and adjoining finishes.
 - 2. Demolition shall include terminating and labeling of conductors and removal of circuit overload protection devices and relabeling of panel board circuit diagrams and other such informational aids.
 - 3. Extent of demolition is only indicated generally on Drawings and shall not be considered as the complete scope of demolition necessary. Conditions indicated are based on limited surveys of existing conditions. Deviations and conditions which could not be reasonably anticipated shall be governed by provisions in the Conditions of the Contract pertaining to unforeseen conditions.
- B. Electrical Components to be Demolished:
 - 1. Lighting fixtures: ceiling-mounted, as indicated on Drawings.
 - 2. Power outlets and related conductors, including devices, outlet boxes and as indicated on Drawings.
 - 3. Fire, signaling devices, and related conductors, as indicated on Drawings.
- C. Electrical Demolition due to Reconfiguration of Electrical Systems: Removal, disposal and reconfiguration of electrical components in order to keep existing systems operable, due to the following.
 - 1. Removal of partitions, walls, floors, ceilings and roofs.
 - 2. Penetrations through partitions, walls, floors, ceilings and roofs.
- D. Electrical Demolition to Eliminate Interferences: Removal disposal and reconfiguration of electrical components in order to eliminate conflicts of existing components to remain, due to the following.
 - 1. Interference with new electrical components provided under this Project.
 - 2. Interference with new, added partitions, walls, floors and ceilings.
 - 3. Interference with access for Work under this Contract, including structural, architectural, plumbing, HVAC and fire protection Work, whether or not indicated on Drawings, as necessary.

- 4. Interference with required clearances between and around components remaining and new components.
- E. Maintenance of Service: Maintain electrical power and signal services in full operation and protect systems against damage and disruption. Provide temporary services around Project area as necessary.
- F. Patching and Refinishing: Restore surfaces damaged due to electrical demolition, if not otherwise indicated or accomplished by Work described elsewhere in the Drawings and Specifications.

PART 2 - PRODUCTS

2.1 SALVAGEABLE MATERIALS

- A. Salvageable Item Removed by Owner: Prior to start of electrical demolition Work, Owner will make reasonable efforts to remove furnishings and equipment not fixed to the building or to utility services.
- B. Salvageable Items: Ownership of salvageable items shall remain with Owner, unless otherwise indicated.

2.2 NON-SALVAGEABLE MATERIALS

- A. Non-Salvageable Materials: All other materials, equipment, fixtures and debris become the property of the Contractor and shall be removed from the Site.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Review of Existing Systems: Review documents and verify against existing conditions immediately prior to starting electrical demolition Work.
 - 1. Confirm locations of disconnects, conductors and outlets. Mark locations of concealed elements on surfaces.
 - 2. Confirm whether circuits are active. Temporarily deactivate circuits as necessary.
- B. Utility Service Disconnection: Disconnect, remove, and cap designated utility services within demolition areas. Mark location of disconnected utilities. Identify and indicate capping locations on project record drawings.

3.2 PROTECTION

- A. Protection: Conduct demolition Work and removal of debris to ensure minimum interference with exit ways, roads, streets, walks, and facilities remaining operational.
- B. Temporary Barriers: Protect existing items which are not indicated to be altered. Erect and maintain weatherproof closures for exterior openings. Erect and maintain temporary partitions or barriers to prevent spread of dust, fumes, noise, and smoke to provide for continued occupancy of facility by Owner.

- C. Dust Control: Use water sprinkling, temporary enclosures, and other approved methods to minimize amount of dust and debris rising and scattering in the air. Comply with governing regulations pertaining to environmental protection. Do not use water when it may create hazardous or objectionable conditions such as [ice,] staining, flooding, pollution and electrical shock.
 - D. Disposal Methods: Use methods which minimize spread of dust and debris. See additional requirements specified in Section 01 73 29 - Cutting and Patching.
 - 1. Do not throw materials from windows. Use enclosed chutes which dump directly into disposal containers.
 - 2. Do not transport materials and debris through spaces to remain occupied, unless approved by Owner. When necessary to cross through occupied spaces, provide temporary covers and dust barriers. Provide plywood covers where necessary for wheeled traffic to cross existing flooring.
 - E. Protection of Existing Construction: In removal of materials, take care not to damage construction remaining in place, salvageable materials and equipment. Repair or replace existing construction, materials and equipment damaged during demolition, to Owner's satisfaction, at no change in Contract Time and Cost.
 - F. Remove all electrical materials completely and neatly, leaving surfaces smooth and ready for new Work. Sawcut where cutting is necessary. See additional requirements specified in Section 01 73 29 - Cutting and Patching.
- 3.3 DEMOLITION
- A. Demolition Equipment: Locate demolition equipment so as not to impose excessive loads to supporting walls, floors, roof or framing.
 - B. Demolition: Proceed with demolition in an orderly and careful manner. Protect existing foundation supporting structural members and finish material to remain. Coordinate activities with Work specified in other Sections.
 - C. Removal: Remove materials to be re-installed or retained in manner to prevent damage. Store and protect materials. Carefully remove, store, and protect for re-installation electrical materials and equipment identified on Drawings.
- 3.4 DISPOSAL AND CLEANING
- A. Disposal: Promptly remove from the Site all debris, rubbish, and other materials resulting from demolition operations. Dispose of debris legally. On-site burning or burying of debris will not be permitted.
 - B. Salvage: Items of salvageable value shall be delivered to Owner at location at Project site as directed.
 - C. Cleaning and Restoration: Clean adjacent finishes, equipment, improvements and other features of dust, dirt, and debris caused by demolition operations. Restore adjacent areas to condition existing prior to start of the Work, unless otherwise indicated.

END OF SECTION

26 51 00 – LIGHTING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 26 05 00 General Electrical Requirements.

1.2 SUMMARY

- A. Provide U.L. listed and labeled lighting fixtures complete with light engines at light outlets indicated on the drawings. Each fixture shall bear the U.L. Label, and shall comply with Code Requirements.
- B. Fixtures are listed and described in the Lighting Fixture Schedule and in the following paragraphs. Fixture catalog numbers are to be used as a guide only and shall be understood to be followed by the words "except as modified by the total fixture description". Provide all accessories, features and adaptations necessary to meet the requirements of the description.

1.3 DEFINITIONS

- A. CEC: Latest adopted version of California Electrical Code (CCR Title 24, Part 3) based on the National Electrical Code.

1.4 QUALITY ASSURANCE

- A. Products shall be UL listed and labeled.
- B. Comply with CEC.

1.5 SUBMITTALS

- A. Product Data
 - 1. Material List: A material list with names of manufacturers, model numbers, and technical information on all equipment proposed.
 - 2. Catalog cuts for each fixture including complete photometric data in IES format.
 - 3. Weight and dimensions.
 - 4. Product technical information sheets for each principal component in the proposed system. Identify by arrow, circle or similar means products being proposed. Submittals consisting of unmodified catalog pages with no markings will be rejected.
- B. Samples: when requested by Architect.

- C. Operation and Maintenance (O&M) Manuals: Furnish composite "Systems Operation and Maintenance" manuals in indexed three-ring binders, sized to hold the material below, plus 50% excess. Each manual shall contain, but not be limited to:
 - 1. Operational procedures for the overall lighting systems including the "Sequence of Operation".
 - 2. Test procedures and test results.
 - 3. Instruction for the proper operation and maintenance of the lighting system.
 - 4. Factory issued technical, installation, and maintenance manuals.
 - 5. A replacement parts list complete with part numbers and name, address, and phone number of suppliers used by the Contractor. A spare parts list recommended for purchase by the District shall be included.
 - 6. All portions of the material list and shop drawings which are not included in the foregoing.
- 1.6 LAMP REPLACEMENT
 - A. Replace lamps and light engines which burn out after Owner's use or acceptance of the project (or of an area in the case of beneficial occupancy).
 - B. Lamps and light engines which burn out within 120 days.
- 1.7 FIELD REPLACEMENT LIGHT ENGINE
 - A. Integrate LEDs, driver, power supply, thermal management components, and optical mixing components.

PART 2 - PRODUCTS

- 2.1 MANUFACTURERS
 - A. Products: Subject to compliance with requirements, provide one of the products indicated on Drawings.
- 2.2 GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS
 - A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
 - B. Metal Parts: Free of burrs and sharp corners and edges.
 - C. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.
- 2.3 EXIT SIGNS
 - A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
 - B. Internally Lighted Signs:
 - 1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.

2. Self-Powered Exit Signs (Battery Type): Integral automatic charger and a self-contained power pack.
3. Battery: Sealed, maintenance-free, nickel-cadmium type.
4. Charger: Fully automatic, solid-state type with sealed transfer relay.
5. Operation: Relay automatically energizes light engine from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects light engine from battery, and battery is automatically recharged and floated on charger.
6. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
7. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
8. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.4 LIGHTING FIXTURE SUPPORT COMPONENTS

- A. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.
- B. Twin-Stem Hangers: Two, 1/2-inch steel tubes each with single canopy designed to mount a single fixture. Finish same as fixture.
- C. Support Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gauge.
- D. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

PART 3 - EXECUTION

3.1 ACCEPTANCE TESTING

- A. Complete the testing and documentation requirements of Title 24 Energy Code Acceptance Testing procedures. Complete and sign the Acceptance Testing Forms and submit to District and DSA Inspector (IOR).

3.2 UTILITY DESIGN INCENTIVE PROGRAM

- A. Furnish the Utility Company representative with the itemized, paid proof of purchase/invoice for the purchase and installation of energy efficient equipment.
- B. Assist the Utility in the verification by Utility representative of both the purchase and installation of the energy efficient equipment, including providing the representative access to the Construction Project, at reasonable times, for verification of installation of the equipment.
- C. Provide the Utility with a written request for payment of the Incentives calculated, when the Construction Project is completed and occupied.

3.3 INSTALLATION

- A. Lighting fixtures:
 - 1. Set level, plumb, and square with ceilings and walls unless otherwise indicated.
 - 2. Install lamps in each luminaire.
- B. Temporary Lighting: If it is necessary, and approved by Architect, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, and reinstall.
- C. Remote Mounting of Drivers: Distance between the driver and fixture shall not exceed that recommended by driver manufacturer. Verify, with driver manufacturers, maximum distance between driver and luminaire.
- D. Lay-in Ceiling Lighting Fixtures Supports: Do not use grid as a support element.
 - 1. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture. Locate not more than 6 inches from lighting fixture corners.
 - 2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
 - 3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch (20-mm) metal channels spanning and secured to ceiling tees.
 - 4. Install at least one independent support rod or wire from structure to a tab on each lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
- E. Suspended Lighting Fixture Support:
 - 1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
 - 2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
 - 3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
 - 4. Do not use grid as support for pendant luminaires. Connect support wires or rods to building structure.

3.4 IDENTIFICATION

- A. Install labels with panel and circuit numbers on concealed junction and outlet boxes.

3.5 FIELD QUALITY CONTROL

- A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.
- B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.6 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.
1. Adjust aimable luminaires in the presence of Architect.

END OF SECTION

26 55 61 – THEATRICAL LIGHTING AND STAGE DIMMING SYSTEM

PART 1 - GENERAL

1.1 Related Sections

- A. 26 05 00: General Electrical Requirements.

1.2 Warranty

- A. Note to Design Professional: Require manufacturer's warranties.

1.3 Commissioning

- A. Note to Design Professional: Coordinate and specify commissioning requirements that applies to the specific project if Construction Commissioning is determined as necessary by designated District Representative.

PART 2 - PRODUCTS

A. Manufactures

1. Electronic Theatre Control (ETC) <http://www.etcconnect.com>
2. Leviton <http://www.leviton.com>
3. Or Approved Equal

B. Dimmer Racks

1. Freestanding dead-front switchboards. Exterior surfaces shall be finished in black powder coat.
2. Racks shall be designed to allow for adjacent or back-to-back mounting. Rear sections of racks behind dimmer modules shall be utilized wireways. Removable conduit panels shall be provided on both top and bottom of racks.
3. Racks shall be designed to operate at 208/120 volts and either single-phase or 3-phase power. Removable panels shall be provided on the sides of the rack to allow simple rack- to-rack busing.
4. Racks shall be factory-tested and control modules shall be burned-in at elevated temperatures for a minimum of 24 hours. Racks shall be UL listed and shall have a minimum interrupting capacity of 10,000 amps.
5. Dimmers within racks shall allow for selectable panic operation through external dry contact closures.

C. Dimmers

1. Plug-in modules shall consist of die-cast aluminum chassis containing one or 2 circuit breakers, solid-state power devices, high-speed processors and 2 filter chokes.

2. Dimmer modules shall include toroidal filter chokes to limit objectionable harmonics, radiated radio frequencies, electromagnetic interference on conductors and acoustical noise in load lamp filament. Current rise time shall be measured at 90 degrees conductive angle from 10 percent to 90 percent of output waveform. Rise time of dimmer shall not vary by over 10 percent operating at 25 percent to 100 percent of rated load. Rise time of stage dimmers shall be no less than 350 microseconds. Rise time of house dimmers shall be not less than 800 microseconds.
3. Power efficiency of dimming channels shall be at least 95 percent, or 97 percent at full load, depending on rise time of modules.
4. Dual dimmer modules shall be Strand 2.4 KW, CD80SV, 72314.

D. Control modules

1. Control modules shall be plug-in assembly consisting of formed steel chassis, one glass epoxy printed circuit board, and 2 levers for easy tool-free insertion and removal. Control modules shall contain LEDs providing user feedback. Control modules shall be Strand CD 80 SV Series.
2. Provide 48-module racks requiring one control module per rack. Slots shall be provided in racks for fully redundant, on-line backup control modules.
3. Control modules shall accept 2 input control signals of either industry standard DMX512 or Strand AMX protocols. Network interfaces for dimmers and feedback data shall be provided. Control module front panels shall provide RS232 serial ports and hand-held terminal ports.

E. Control Consoles: Control consoles shall be microprocessor-based lighting control systems. Control consoles shall provide for control of up to 512 dimmers on a maximum of 125 control channels with at least 200 cues. Output shall be user-selectable between digital (CMX) and USITT standard (DMX512) and Strand (AMX).

F. Entrance Stations: Entrance stations shall be Strand No. 63021 having full on/off functions with LED to indicate on status. Stations shall be wired with 6-conductor, 20AWG, stranded, unshielded cables.

G. Border lights: Optical train shall consist of medium screw base PAR38 or R40 reflector lamps. Unit may also be provided with general service A-Lamps with Alzak reflectors. Compartments shall accommodate combination filter holders for color gels or 55/8-inch diameter glass roundels.

H. Plug-In Boxes:

1. Plug-in boxes shall be Strand 9600 Series.
2. Plug-in boxes shall be formed of 18 gauge painted steel with a removable cover plate.
3. Plug-in box shall contain TLG receptacles on 18-inch S-cable pigtails with strain relief fittings.

PART 3 - EXECUTION

- 3.1 Deliver the operating and servicing manual for stage lighting and dimmer system to the District.

3.2 Training

- A. Instruct the District in the correct operation of system.
- B. Manufacturer of dimming system shall provide an engineering representative on-site, after installation has been completed to instruct District's personnel in the operation and maintenance of system. Instruction time shall not be less than 2 days.

END OF SECTION

DIVISION 27 – COMMUNICATIONS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

27 41 36 – TELEVISION DISTRIBUTION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. The work under this section includes all final design, all labor, material, equipment, supplies, labor, testing, and accessories required to furnish and install a complete Television Distribution System as indicated on the drawings and as specified herein.
- B. It is the intent of the Drawings and Specifications for the Contractor to design, provide and install a complete, fully operational, and tested system.
- C. All miscellaneous system components including, but not limited to, cables, termination equipment, punch blocks, patch panels, backboards, and any other related items shall be furnished and installed complete under this section, such that the system shall perform all functions listed herein in compliance with all of the specified requirements.

1.3 COORDINATION WITH OTHER SECTIONS

- A. It is a mandatory requirement that a single contractor perform the work described in this section and Section 27 51 23 – Intercommunications and Program Systems.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Blonder Tongue Laboratories, Inc., 1 Jake Brown Road, Old Bridge, NJ 08857. 800-523 6049. www.blondertongue.com
- B. Acceptable Manufacturer: None identified. Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 EQUIPMENT

- A. Amplifier shall be #RMDA750-50 with filters and return amp modules as required.
- B. Provide return equipment for one (1) channel - DSV separator/ESHM/T8 to unused cable channels converter/ESHP-A T8/ (cable channel to be selected by the District). Furnish rack for portable equipment.
- C. Modulators shall be #AM-60-750.
- D. Room taps shall be #V-3889 with isolation as required.

- E. Provide each tap location with a Peerless #WSP414 backplate.
- F. Terminators shall be #BTFTP and splitters #SUV-2 or 4 as required.
- G. Trunk cable shall be Westpenn #821 for runs of 500' or less, and JA500 style cable for runs over 500'.
- H. Drop cable shall be Westpenn #842.
- I. Equipment racks shall be Middle Atlantic #WRK44 with doors front and back and all necessary side panels and blanks.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. The wiring of the system shall be executed in accordance with the drawings and the equipment manufacturer's wiring diagrams. Should any variations in these requirements occur, the contractor shall notify the architect before making any changes. It shall be the responsibility of the factory-authorized distributor of the approved equipment to install the equipment and guarantee the system to operate as per plans and specifications.
- B. Furnish all conduit, junction boxes, conductors, equipment plugs, terminal strips, etc., and labor to install a complete and operable system.
- C. The cables within the rack or cabinets shall be carefully cabled and laced with no. 12 Cord waxed linen lacing twine or ty-raps. All cables shall be numbered for identification.
- D. Splices of conductors in underground pull boxes is not permitted.
- E. The labor employed by the contractor shall be regularly employed in the installation and repair of communication systems and shall be acceptable to the owner and architect to engage in the installation and service of this system.
- F. The contractor shall thoroughly clean all equipment and materials. All exposed parts of the equipment, cabinets, and other equipment shall be left in a clean condition, unblemished and free of all dirt, dust, smudges, spots, fingerprints, etc., The contractor shall remove all debris and rubbish occasioned by the electronic systems work from the site. The contractor shall thoroughly clean all buildings of any dirt, debris, rubbish, marks, etc., Caused by the performance of this work.
- G. The system must meet all local and other prevailing codes.
- H. All cabling installations shall be performed by qualified technicians.
- I. All cabling shall be splice free.
- J. In order to ensure the least amount of cable untwisting, it is required that all cables shall be stripped using a special tool.
- K. The use of lubricants (i.e. Yellow 77) to facilitate the installation of cables in conduits is highly discouraged. If such a lubricant must be used, the contractor shall verify the acceptability of the lubricant to be used with the cable manufacturer, prior to using such a lubricant.
- L. Under no circumstance are "channel locks" or other pliers to be used.

- M. Plenum rated cable may be run exposed above ceilings, provided the cabling is supported independent of other utilities such as conduits, pipes, and the ceiling support systems. The cables shall not be laid directly on the ceiling panels. The use of cable ties shall be done in accordance with the cable manufacturer's requirements. The cable jacket composition must meet local and all other prevailing fire and safety codes.
 - N. All firewalls penetrated by structured cabling shall be sealed by use a non-permanent fire blanket or other method in compliance with the current edition of National Fire Protection Association (NFPA) and the National Electric Code (NEC) or other prevailing code. The contractor must not use concrete or other non-removable substance for fire stopping on cable trays, wireways or conduits. Contractors who use this method will be required to replace all cables affected and provide the original specified access to each effected area.
 - O. All equipment racks shall be bolted to the floor by the contractor once the Owner determines the exact location for each rack. The earthquake mounting brackets that come with each relay rack kit shall be screwed to studs, not drywall. All equipment shall be serviceable in the racks final location – the need to unbolt racking equipment to access or service equipment is not acceptable.
- 3.2 PECIFIC SYSTEM INSTALLATION REQUIREMENTS
- A. The installer shall, upon completion of the system, orient all antennas, adjust all controls, etc., to provide a system operating at maximum capability.
 - B. Submit block diagram and shop drawing of equipment.
- 3.3 GENERAL TESTING REQUIREMENTS
- A. Provide all instruments for testing and demonstrating in the presence of the owner's inspector that the frequency response is as stated in the factory data sheets. Check all circuits and wiring to verify they are free of shorts and grounds.
- 3.4 SPECIFIC SYSTEM TESTING REQUIREMENTS
- A. Document that the system delivers a minimum of 6dbmV signal strength to each receiver on every TV channel in the system when every outlet is connected to a lead.
 - B. Document that each outlet in the system will accept, process and distribute a simultaneous sub-channel.
 - C. The installer shall prove that reception quality at an outlet designated by the Owner, or his authorized representative, is equal to or better than reception normally available in the area and that signal strength is as specified.
- 3.5 FINAL ACCEPTANCE
- A. The Owner or Owner's representative may visit the site during the installation of the system to ensure that correct installation practices are being followed.
 - B. The Owner or Owner's representative will conduct a final job review once the contractor has finished the job. This review will take place within one week after the contractor notifies the owner.
 - C. Two copies of all certification data and drawings for all identifications shall be provided to the Owner before the owner's review.
-

- D. The Owner or Owner's representative will review the installation and certification data prior to the system acceptance.
- E. The Owner or Owner's representative may test some of the systems features to ensure that the certification data is correct. If a substantial discrepancy is found, the Owner reserves the right to have an independent consultant perform a certification of the entire system. If such a procedure is undertaken, the cost of the testing will be billed back to the contractor.
- F. In the event that repairs or adjustments are necessary, the contractor shall make these repairs at his own expense. All repairs shall be completed within 10 days from the time they are discovered.
- G. The contractor shall provide not less than eight (8) hours for site instruction of personnel in the operation and maintenance of the installed systems. This instruction time shall be divided as directed by the Owner.
- H. The contractor shall hand to the owner a copy of any applicable installation specific software configurations in disk format.

END OF SECTION

27 51 23 – INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. The work under this section includes all final design, all labor, material, equipment, supplies, labor, testing, and accessories required to furnish and install a complete Integrated Communication System as indicated on the drawings and as specified herein.
- B. It is the intent of the Drawings and Specifications, for the Contractor to design, provide and install a complete, fully operational, and tested system.
- C. All miscellaneous system components including, but not limited to, cables, termination equipment, punch blocks, patch panels, backboards, and any other related items shall be furnished and installed complete under this section, such that the system shall perform all functions listed herein in compliance with all of the specified requirements.
- D. The Integrated Communication System shall include, but not limited to, the following subsystems / products:
 - 1. Intercommunication System
 - 2. Master Clock System.
 - 3. Emergency and Zone Paging System.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Specified Manufacturer: Bogen Communications, Inc., 1200 MacArthur Blvd. Suite 304, Mahwah, NJ 07430, 1-800-999-2809
- B. Acceptable Manufacturer: None identified. Equivalent products will be acceptable in accordance with the "or equal" provision of the General Conditions. Equivalent products of other manufacturers will be considered in accordance with the substitution provision specified in Section 01 60 00 - Product Requirements.

2.2 EQUIPMENT

- A. Console:
 - 1. Rack-mounted equipment shall be Bogen Model TCPER
 - a. Rack-TCPER42/TCPER61/TCPER70-42"/60"70" High

2. MCRMP
 - a. Rack-mounting panel. Includes the following components:
 - b. MC512-Power Supply (1 per system)
 - c. MC2626-Power Supply (1 for up to 120 stations, 2 for more than 120 stations)
 - d. MCAPI-Audio Program Module Interface Assembly (1 per system)
3. MCRMF
 - a. Rack mounting mainframe (1 per 120 stations). Includes built-in ventilation fans and the following circuit cards:
 - b. MCPCA2-Processor card (1 per system)
 - c. MCACB-Analog card (1 per 24 stations)
 - d. MCSC-Station card (1 per 24 stations)
 - e. MCJCA-Ribbon cable assembly (interconnects 2 MCRMF)
4. MCRM
 - a. Relay module (1 per 24 stations). Mounts to:
 - b. MCRRP-Stand-alone configuration
 - c. SBA225-Series 2223 configuration
 - d. SBA325-Series 2233 configuration
5. MCRCA
 - a. Ribbon cable assembly
6. CPT1B
 - a. AM/FM cassette unit
7. Power Amplifiers (as required)
 - a. BPA60-60 watt
 - b. HTA-125A-125 watt
 - c. HTA-250A-250 watt
8. Optional Equipment
 - a. MCTC-Telephone access card

2.3 PERIPHERAL DEVICES

A. Administrative Display Phone

1. One Administration display phone at the main office, for announcements, to ring bells or program system.

B. Enhanced Staff Stations

1. One enhanced Staff station at ASB or located where after school announcements are made.

- C. Speakers
 - 1. Classroom loudspeakers (or if not designated) - Interior flush mounted wall or ceiling shall be Rauland USO188 mounted in Rauland ACC1004 baffle and ACC1100 back box.
 - D. Wiring shall be done per manufacturer's recommendation, West Penn #357. All terminal connections to be on barrier strips. All cables to be labeled by room.
 - E. Exterior flush ceiling or wall loudspeaker shall be Quam C10PAOT10 weatherproof mounted on Rauland ACC1012 baffle and ACC1105 back box. Use vandal-proof hardware.
 - F. Supply U.P.S. unit for stand-by power during power failures.
- 2.4 TERMINAL BLOCKS
- A. All conductors in all terminal cabinets, equipment rack, etc., shall be terminated on Siemens 66M1-50 punch blocks or approved equal.
- 2.5 CONDUCTORS
- A. Classroom and staff room locations West Penn #WP56471 grey - home run.
 - B. Speaker West Penn #357.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. The wiring of the system shall be executed in accordance with the drawings and the equipment manufacturer's wiring diagrams. Should any variations in these requirements occur, the contractor shall notify the architect before making any changes. It shall be the responsibility of the factory-authorized distributor of the approved equipment to install the equipment and guarantee the system to operate as per plans and specifications.
- B. Furnish all conduit, junction boxes, conductors, equipment plugs, terminal strips, etc., and labor to install a complete and operable system.
- C. The cables within the rack or cabinets shall be carefully cabled and laced with no. 12 Cord waxed linen lacing twine or ty-raps. All cables shall be numbered for identification.
- D. Splices of conductors in underground pull boxes is not permitted.
- E. The labor employed by the contractor shall be regularly employed in the installation and repair of communication systems and shall be acceptable to the owner and architect to engage in the installation and service of this system.
- F. The contractor shall thoroughly clean all equipment and materials. All exposed parts of the equipment, cabinets, and other equipment shall be left in a clean condition, unblemished and free of all dirt, dust, smudges, spots, fingerprints, etc., The contractor shall remove all debris and rubbish occasioned by the electronic systems work from the site. The contractor shall thoroughly clean all buildings of any dirt, debris, rubbish, marks, etc., Caused by the performance of this work.
- G. The system must meet all local and other prevailing codes.
- H. All cabling installations shall be performed by qualified technicians.

- I. All cabling shall be splice free.
 - J. In order to ensure the least amount of cable untwisting, it is required that all cables shall be stripped using a special tool.
 - K. The use of lubricants (e.g. Yellow 77) to facilitate the installation of cables in conduits is highly discouraged. If such a lubricant must be used, the contractor shall verify the acceptability of the lubricant to be used with the cable manufacturer, prior to using such a lubricant.
 - L. Under no circumstance are "channel locks" or other pliers to be used.
 - M. Plenum rated cable may be run exposed above ceilings, provided the cabling is supported independent of other utilities such as conduits, pipes, and the ceiling support systems. The cables shall not be laid directly on the ceiling panels. The use of cable ties shall be done in accordance with the cable manufacturer's requirements. The cable jacket composition must meet local and all other prevailing fire and safety codes.
 - N. All firewalls penetrated by structured cabling shall be sealed by use a non-permanent fire blanket or other method in compliance with the current edition of National Fire Protection Association (NFPA) and the National Electric Code (NEC) or other prevailing code. The contractor must not use concrete or other non-removable substance for fire stopping on cable trays, wireways or conduits. Contractors who use this method will be required to replace all cables affected and provide the original specified access to each effected area.
 - O. All equipment racks shall be bolted to the floor by the contractor once the Owner determines the exact location for each rack. The earthquake mounting brackets that come with each relay rack kit shall be screwed to studs, not drywall. All equipment shall be serviceable in the racks final location – the need to unbolt racking equipment to access or service equipment is not acceptable.
- 3.2 SPECIFIC SYSTEM INSTALLATION REQUIREMENTS
- A. The installer shall, upon completion of the system installation, adjust all controls, etc., to provide a system operating at maximum capability.
 - B. Submit block diagram and shop drawing of equipment.
- 3.3 GENERAL TESTING REQUIREMENTS
- A. Provide all instruments for testing and demonstrating in the presence of the owner's inspector that the frequency response is as stated in the factory data sheets. Check all circuits and wiring to verify they are free of shorts and grounds.
- 3.4 SPECIFIC SYSTEM TESTING REQUIREMENTS
- A. Perform all manufactured required testing.
- 3.5 FINAL ACCEPTANCE
- A. The Owner or Owner's representative may visit the site during the installation of the system to ensure that correct installation practices are being followed.

- B. The Owner or Owner's representative will conduct a final job review once the contractor has finished the job. This review will take place within one week after the contractor notifies the owner.
- C. Two copies of all certification data and drawings for all identifications shall be provided to the Owner before the owner's review.
- D. The Owner or Owner's representative will review the installation and certification data prior to the system acceptance.
- E. The Owner or Owner's representative may test some of the systems features to ensure that the certification data is correct. If a substantial discrepancy is found, the Owner reserves the right to have an independent consultant perform a certification of the entire system. If such a procedure is undertaken, the cost of the testing will be billed back to the contractor.
- F. In the event that repairs or adjustments are necessary, the contractor shall make these repairs at his own expense. All repairs shall be completed within 10 days from the time they are discovered.
- G. The contractor shall provide not less than eight (8) hours for site instruction of personnel in the operation and maintenance of the installed systems. This instruction time shall be divided as directed by the Owner.
- H. The contractor shall hand to the owner a copy of any applicable installation specific software configurations in disk format.

END OF SECTION

DIVISION 28 – LIFE SAFETY

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

28 46 00 – FIRE DETECTION AND ALARM

PART 1 - GENERAL

1.1 General Conditions

- A. The Contractor shall furnish all equipment, devices, materials, tools, labor, drawings, permits and all associated documentation necessary for a complete distributed networked fire alarm system, ready for operational turn-over in accordance with the requirements of the NFPA-72, The National Fire Alarm Code, and the Authority Having Jurisdiction. The Contractor shall provide all devices and equipment required by the drawings and specifications. The Contractor may not delete any equipment or devices without submission and approval of a request for information detailing all deletions.

1.2 QUALITY

- A. To ensure reliability and complete compatibility, all items of the Fire Alarm System, including control panels, power supplies, as well as all initiating devices and notification appliances, shall be listed by Underwriters Laboratories inc. (UL) and shall bear the "UL" label. The fire alarm control panel equipment shall be U.L. Listed under the UL 864 Standard Control Units and Accessories for Fire Alarm Systems, 9th edition.

1.3 ACCEPTABLE MANUFACTURERS AND DISTRIBUTORS

- A. All references to manufacturer's model numbers and other pertinent information herein is intended to establish the District standard of FCI equipment, performance, function and quality. The system shall be installed by a Platinum Level Distributor. The contractor shall have been in business for a minimum of twenty years. The contractor shall have an office within 30 miles of the project site.
- B. The fire alarm contractor shall supply and install FCI equipment. The fire alarm contractor shall not outsource any equipment, and/or labor.
- C. The equipment, programming and installation shall be provided by an approved Platinum Level engineered systems distributor of FCI, located within San Diego County.
- D. The contractor shall provide a certificate from the manufacturer, for 3 year parts warrantee.
- E. The installing contractor shall provide a 24/7 service department and house spare products in their inventory, for all products used in this specification.
- F. The contractor shall be a UL Certified Installer, FCI factory trained technicians, and shall have a Nicet level 3 technician on site.

1.4 SCOPE

- A. A new intelligent reporting, networked, fully peer-to-peer, microprocessor controlled fire detection system shall be installed in accordance with the specifications and drawings. The existing FCI panel in the admin building shall be replaced with an E3 system including an ILI-MB-E3, an ILI-S-E3, a PM-9, a RPT-E3-UTP, a LCD-E3 and a DACT-E3 in a C size cabinet.

B. Basic Performance:

1. The Network Communications Circuit (NetSOLO) serving the network nodes shall be wired using a single twisted non-shielded two conductor cable or connected using an approved fiber optic cable between nodes in a Class B.
2. Signaling Line Circuits (SLC) serving the addressable devices shall be wired Class B.
3. Initiation Device Circuits (IDC) serving the non-addressable devices connected to addressable monitor modules shall be wired Class B.
4. Notification Appliance Circuits (NAC) serving strobes and speakers shall be wired Class B.
5. Transponders shall operate in a peer-to-peer fashion with other panels and transponders in the system.
6. All network node communications shall be communicated between panels and transponders on a single pair of copper wires or fiber optic cables.
7. All signaling line circuits (SLC) shall reside in the remote Transponders. The SLC modules shall operate in a peer-to-peer fashion with all other panels and transponders in the system. Systems that provide a "Degraded" mode of operation upon loss of the INCC Command Center or a short in the riser shall not be acceptable.

1.5 BASIC SYSTEM FUNCTIONAL OPERATION

- A. When a fire alarm condition is detected and reported by one of the system alarm initiating devices, the following functions shall immediately occur:
1. The System Alarm LED'S shall flash.
 2. A local piezo-electric signal in the control panel shall sound at a pulse rate.
 3. The 80-character LCD display shall indicate all information associated with the fire alarm condition, including the type of alarm point and its location within the protected premises.
 4. The historical log shall record the information associated with the fire alarm control panel condition, along with the time and date of occurrence.
 5. All system output programs assigned via control-by-event equations to be activated by the particular point in alarm shall be executed, and the associated system outputs (alarm notification appliances and/or relays) shall be activated.

1.6 STANDARDS

- A. The system shall conform to the latest editions of the following codes and standards:
1. NFPA 72 - National Fire Alarm Code 1999
 2. NFPA 70 - National Electrical Code
 3. Americans with Disabilities Act (ADA)
 4. NFPA 90A, Installation of Air Conditioning and Ventilating Systems
 5. NFPA 101 - Life Safety Code

1.7 WARRANTY

- A. The system shall be installed by a Platinum level distributor. The installing contractor shall warranty the entire installation for 1 year. The manufacturer shall guarantee all system equipment for a period of three (3) years from the date of final acceptance. This does not include existing field devices or wiring.

1.8 INTERFACING WITH RELATED SYSTEMS

- A. Coordinate with the appropriate contractors for interfacing to other building systems as required including but not limited to the sprinkler systems and the HVAC systems.

1.9 SUBMITTALS

A. General

- 1. Six copies of all submittals and shop drawings shall be submitted to the Architect/Engineer for review.

B. Equipment Submittals shall contain:

- 1. A bill of Material that indicates the quantity, model number and description of each of the components of the system.
- 2. Sufficient information, clearly presented, shall be included to determine compliance with drawings and specifications.

C. Shop Drawings:

- 1. A cover page indicating the project name and address, the engineered systems distributor's name and other contact information, the installing contractor's name and other contact information and the date of the equipment submittals. Any revised submittals shall reflect the original submittal's date and the revised submittal's date.
- 2. A separate floor plan for each floor must be provided. If a floor plan must be split using match lines in order to be able to fit on the page, match lines and match line references shall be provided that refer to the sheet number that shows the area on the opposite side of the match line.
- 3. A title block shall be provided on each sheet and shall include, at a minimum, the project name, the project address, the sheet name, the sheet number, the scale of the drawing, the date of the drawing and any revision dates if applicable.
- 4. Floor plans shall be prepared in AutoCAD.
- 5. The floor plans must be prepared to scale (1/8" = 1'0" unless otherwise required by the Architect, Engineer or AHJ). All equipment and device locations shall be shown on the floor plans. The floor plans shall show all wiring information in a point-to-point format. If required by the AHJ, all conduit routing shall be shown.
- 6. A sheet that details the exterior view and interior view of the annunciator panel(s) and that clearly shows the associated wiring information shall be provided.
- 7. Sufficient information, clearly presented, shall be included to determine compliance with drawings and specifications.

D. Operation and Maintenance Manuals and As-built Drawings:

1. Within 21 calendar days after the acceptance test, submit two copies of the complete Operating and Maintenance Manuals and As-built Drawings.
2. The Operating and Maintenance Manuals shall be similar to the Equipment Submittals but revised to reflect any changes made during the project. In addition, the Operating and Maintenance Manuals shall contain the factory's standard Installation and Operating Instructions.
3. The As-built Drawings shall be similar to the Shop Drawings but revised to reflect any changes made during the project.

E. Software Modifications

1. Provide the services of a Platinum Level FCI factory trained and authorized technician to perform all system software modifications, upgrades or changes.
2. Provide the use of all hardware, software, programming tools and documentation necessary to modify the fire alarm system software on site. Modification includes addition and deletion of devices, circuits, zones and changes to system operation and custom label changes for devices or zones. The system structure and software shall place no limit on the type or extent of software modifications on-site. Modification of software shall not require power-down of the system or loss of system fire protection while modifications are being made.

1.10 FIRE ALARM SYSTEM FUNCTIONALITY

- A. Provide a complete, electrically supervised distributed, networked analog/addressable fire alarm and control system, with analog initiating devices.
- B. Each ILI-MB-E3 node shall incorporate two (2) Signaling Line Circuits (SLC), with the capacity to support up to 99 analog addressable detectors and 98 addressable modules per SLC.
- C. All Voice, Data, and Fire Fighters phone Riser shall transmit over a single pair of wires or fiber optic cable.
- D. Each Network Node shall incorporate Boolean control-by event programming including as a minimum AND, OR, NOT, and Timer functions.
- E. The control panels shall have the capability to accept firmware upgrades via connection with a laptop computer, without the requirement of replacing microchips.
- F. The network shall be based on a peer to peer token ring technology operating at 625 K baud.
- G. The network shall include the capability of utilizing twisted pair wiring, a pair of fiber optic cable strands up to 200 microns, or both, to maximize flexibility in system configuration.
- H. Each network node shall have the capability of being programmed off-line using Windows based software supplied by FCI (Fire Control Instruments). Each node shall also have the capability of being downloaded by connecting the laptop computer into any other node in the system. Systems that require system software to be downloaded to each transponder at each transponder location shall not be acceptable.
- I. Each network node shall have the capability of being grouped with any number of additional nodes to produce a "Region", allowing that group of nodes to act as one, while retaining the

peer-to-peer functionality. Systems utilizing "Master/Slave" configurations shall not be acceptable.

- J. Each network node shall have the capability of annunciating all events within its "Region" or annunciating all events from the entire network, on both the front panel LCD without any additional equipment.
- K. Each SLC network node shall have the capability of having an integral DACT (digital alarm communicator transmitter) that can report events in either its region, or the entire network to a single central station monitoring account.
- L. Each ILI-MB-E3 panel shall have the capability of storing its entire program, and allow the installer to activate only the devices that are installed during construction, without further downloading of the system.
- M. Each system shall be provided with four (4) levels of password protection with up to sixteen (16) passwords.

PART 2 - PRODUCTS

2.1 Intelligent Network INCC Command Center HARWARE

- A. The Intelligent Network INCC Command Center (INCC) shall supply the user interface including an LCD or Touch screen 1/4 VGA display, and Intelligent Loop Interface Modules (ILI-MB-E3). The INCC shall consist of the following units, and components, each of which is described in detail in this section:
 - 1. System Cabinet (B, C or D Size Cabinet) with the associated inner door
 - 2. Power Supply Module (PM-9) with batteries
 - 3. 80 Character LCD Display (LCD-E3)
 - 4. Intelligent Loop Main Board Interface (ILI-MB-E3)
 - 5. Intelligent Loop Supplemental Interface (ILI-S-E3)
 - 6. DACT (DACT-E3)
 - 7. RS-485 Repeater (RPT-E3)
 - 8. (2) Auxiliary Switch Modules (ASM-16)
- B. System Cabinet
 - 1. The system cabinet shall be either surface or semi-flush mounted with a texture finish and shall consist of a back box, an inner door and a door. The Cabinet shall be available in at least three (3) sizes to best fit the project configuration. The system cabinet houses one or more PM-9 Power Supply Module, a INI-VG Intelligent Network Interface Voice Gateway, one or more ILI-MB-E3 assemblies, and other optional modules listed above. The cabinet shall be of dead-front steel construction with an inner door to conceal any internal circuitry and wiring. A minimum of a 1 inch wiring gutter space shall be provided behind the mounting plate. Wiring shall be terminated on removable terminal blocks to allow field servicing of all modules without disrupting system wiring.

C. Power Supply Module (PM-9)

1. The PM-9 power supply shall use the latest technologies to provide power to the INCC and shall incorporate the following features:
 - a. Power saving switching technology using no step-down transformers
 - b. 9 Amp continuous rated output to supply up to all power necessary under normal and emergency conditions for INCC Command Center Modules
 - c. Integral Battery Charger with capacity to charge up to 55 amp-hour batteries while under full load.

D. Batteries

1. Batteries shall be of sufficient capacity to provide power for the entire system upon loss of normal AC power for a period of twenty-four (24) hours with fifteen (15) minutes of alarm signaling at the end of this twenty four hour period as required by NFPA 72, Local Systems.

E. LCD Display Module (LCD-E3)

1. The LCD display shall be an 80 character RS-485 based textual annunciator with the capability of being mounted locally or remotely. It provides audible and visual annunciation of all alarms and trouble signals. Dedicated LED's shall be provided for:
 - a. AC Power On (green)
 - b. Alarm (red)
 - c. Supervisory (yellow)
 - d. System Trouble (yellow)
 - e. Power Fault (yellow)
 - f. Ground Fault (yellow)
 - g. System Silenced (yellow)
2. The 80-character alphanumeric display shall provide status of all analog/addressable sensors, monitor and control modules. The display shall be of the liquid crystal type (LCD), clearly visible in the dark and under all light conditions.
3. The panel shall contain four (4) functional keys:
 - a. Alarm Acknowledge
 - b. Trouble Acknowledge
 - c. Signal Silence
 - d. System Reset/Lamp Test
4. The panel shall contain three (3) configuration buttons:
 - a. Menu/Back
 - b. Back Space/Edit
 - c. OK/Enter
5. It shall also have a 12-key telephone style keypad which shall permit selection of functions.

F. Intelligent Loop Interface (ILI-MB-E3)

1. The system shall be of multiprocessor design to allow maximum flexibility of capabilities and operation. The Intelligent Loop Interface shall be capable of mounting in a standalone enclosure or integrated with the Intelligent Network INCC Command Center (INCC) described above.
2. Field Programmable
 - a. The system shall be capable of being programmed by means of a Field Configuration Program (FCP) allowing programming to be downloaded via portable computer from any node on the network.
3. RS-232C Serial Output
 - a. A supervised RS-232C serial port shall be provided to operate remote printers and/or video terminals, accept a downloaded program from a portable computer, or provide 80 column readout of all alarms, troubles, location descriptions, time, date, etc. The communication shall be standard ASCII code operating from 1200 to 115,200 baud rate.
4. RS-485 Serial Output
 - a. Each ILI-MB-E3 shall incorporate an RS-485 bus via a ribbon harness for connection of modules inside the same cabinet, and via a four wire quick connector for connection of modules up to 3000 feet from the cabinet. This RS-485 bus shall support up to sixteen (16) ASM-16 auxiliary switch modules, six (6) LCD-E3 main Annunciators and five (5) LCD-7100 annunciators.
5. Peer-to-Peer panel configuration.
 - a. All Loop Interface Modules shall incorporate it's own programming, log functions, Central Processor Unit, and control by event (CBE) programming. In the event that any loop becomes disabled, each remaining loop driver shall continue to communicate with the remainder of the network and maintain normal operation. "Degrade" configurations under these conditions are not acceptable.
6. Control-by-Event (CBE) Program
 - a. The ILI-MB-E3 shall be capable of programming using Boolean logic including AND, OR, NOT, and TIMING functions to provide complete programming flexibility.
7. Alarm Verification
 - a. Smoke detector alarm verification shall be a standard option while allowing other devices (i.e.: manual stations, sprinkler flow, etc.) to create an immediate alarm. This feature shall be selectable for smoke sensors that are installed in environments prone to nuisance or unwanted alarms.
8. Alarm Signals
 - a. All alarm signals shall be automatically latched or "locked in" at the control panel until the operated device is returned to normal and the control panel is manually reset. When used for sprinkler flow, the "SIGNAL SILENCE" switch may be bypassed, if required by the AHJ.

9. Electrically Supervised

- a. Each SLC and NAC circuit shall be capable shall be electrically supervised for opens, shorts and ground faults. The occurrence of any fault shall activate the system trouble circuitry but shall not interfere with the proper operation of any other circuit.
- b. A yellow "SYSTEM TROUBLE" LED'S shall light and the system audible sounder shall steadily sound when any trouble is detected in the system. Failure of power, open or short circuits on the SLC or NAC circuits, disarrangement in system wiring, failure of the microprocessor or any identification module, or system ground faults shall activate this trouble circuit. A trouble signal may be acknowledged by operating the "TROUBLE ACKNOWLED'SGE" switch. This shall silence the sounder. If subsequent trouble conditions occur, the trouble circuitry will resound. During an alarm, all trouble signals shall be suppressed with the exception of lighting the yellow "SYSTEM TROUBLE" LED'S.

10. Drift Compensation - Analog Smoke Sensors

- a. System software shall automatically adjust each analog smoke sensor approximately once each week for changes in sensitivity due to the effects of component aging or environment (i.e.: dust). Each sensor shall maintain its actual sensitivity under adverse conditions to respond to alarm conditions while ignoring the factors which generally contribute to nuisance alarms. The system trouble circuitry shall activate, display "DIRTY DETECTOR" and "VERY DIRTY DETECTOR" indications and identify the individual unit that requires maintenance.

11. Analog Smoke Sensor Test

- a. System software shall automatically test each analog smoke sensor a minimum of three times daily. The test shall be a recognized functional test of each photocell (analog photoelectric sensors) and ionization chamber (analog ionization sensors) as required annually by NFPA 72. Failure of a sensor shall activate the system trouble circuitry, display a "Test Failed" indication, and identify the individual device that failed.

12. Central Station Option

- a. The fire alarm control panel shall provide an integral Digital Alarm Communicator Transmitter (DACT) for signaling to a Central Station. The DACT shall contain a "Dialer-Runaway" feature preventing unnecessary transmissions as the result of intermittent faults in the system and shall be Carrier Access Code (CAC) compliant, accepting up to 20-digit central station telephone numbers. The fire department shall be consulted as to the authorized central station companies serving the municipality. The fire alarm system shall transmit both alarm and trouble signals with the alarm having priority over the trouble signal. The contractor shall be responsible for all installation charges, while the customer shall be responsible for the line lease charges.

13. Network Annunciator Option

- a. Each ILI-MB-E3 and associated display shall provide the option of being configured as a network annunciator. The options for annunciation shall default as a regional annunciator with the capability of selecting global annunciation to provide system wide protection as well as Acknowledge, Silence, and Reset capabilities.

14. Redundant History Log
 - a. Each ILI-MB-E3 shall contain a full 4100 event history log supporting local and network functions. In the event that a main processor or network node is lost the entire log shall be accessible at any other Loop Interface board. This shall be demonstrated by removing power from the INCC Command Center followed by the extraction of the history log from any loop driver location including the INCC Command Center or Transponder.
15. LED'S Indicator and Outputs
 - a. Each ILI-MB-E3 Loop Interface shall incorporate as a minimum the following Diagnostic LED'S indicators:
 - b. Power (green)
 - c. Alarm (red)
 - d. Supervisory (yellow)
 - e. General Trouble (yellow)
 - f. Ground Fault (yellow)
 - g. Transmit (green)
 - h. Receive (green)
16. Auxiliary Power Outputs
 - a. Each ILI-MB-E3 Loop Interface shall provide the following supply outputs as follows:
 - b. 24 VDC Non-resettable, 1 amp. max., power limited.
 - c. 24 VDC Resettable, 1 amp. max., power limited.
17. Microprocessor
 - a. The Loop interface shall incorporate a 32 bit RISC processor. An isolated "watchdog" circuit shall monitor the microprocessor and upon failure shall activate the system trouble circuits on the display. The microprocessor shall access the system program, for all control-by-event (CBE) functions. The system program shall not be lost upon failure of both primary and secondary power. Programming shall supporting Boolean logic including AND, OR, NOT, TIME DELAY functions for maximum flexibility.
18. Auto Programming
 - a. The system shall provide means for all SLC devices on any SLC loop to be pre-programmed into the system. Upon activation of auto programming, only the devices that are present will activate. This allows for a system to be commissioned in phases without the need of additional downloads.
19. Environmental Drift Compensation
 - a. The system shall provide means for setting Environmental Drift Compensation by device. When a detector accumulates dust in the chamber and reaches an unacceptable level but yet still below the allowed limit, the control panel shall indicate a maintenance alert warning. When the detector accumulates dust in the

chamber above the allowed limit, the control panel shall indicate a maintenance urgent warning.

20. NON-FIRE Alarm Module Reporting

- a. A non-reporting type ID shall be available for use for energy management or other non-fire situations. NON-FIRE point operation shall not affect control panel operation nor shall it display a message at the panel LDC. Activation of a NON-FIRE point shall activate control by event logic but shall not cause any indication on the control panel.

21. One-Man Walk Test

- a. The system shall provide both a basic and advanced walk test for testing the entire fire alarm system. The basic walk test shall allow a single operator to run audible tests on the panel. All logic equation automation shall be suspended during the test and while annunciators can be enabled for the test, all shall default to the disabled state. During an advanced walk test, field-supplied output point programming will react to input stimuli such as CBE and logic equations. When points are activated in advanced test mode, each initiating event shall latch the input. The advanced test shall be audible and shall be used for pull station verification, magnet activated tests on input devices, input and output device and wiring operation/verification.
- b. This test feature is simply intended to provide for certain random spot testing of the system and is not intended to comply with the requirements of testing fire alarm systems in accordance with NFPA 72, as it is impossible to test all of the functions and verify things such as annunciation with only one person.

22. Signaling Line Circuits

- a. Each ILI-MB-E3 module shall provide communication with all analog/addressable (initiation/control) devices via two (2) signaling line circuits. Each signaling line circuit shall be capable of being wired Class B, Style 4 or Class A, Style 6. The circuits shall be capable of operating in an NFPA Style 7 configuration when equipped with isolator modules between each module type device and isolator sensor bases. Each circuit shall communicate with a maximum of ninety-nine (99) analog sensors and ninety-eight (99) addressable monitor/control devices. A unique 40 character identifier shall be available for each device. The devices shall be of the Velocity series with the capability to poll 10 devices at a time with a maximum polling time of 2 seconds when both SLC's are fully loaded.

23. Notification Appliance Circuits

- a. Two (2) independent NAC circuits shall be provided on the ILI-MB, polarized and rated at 2 amperes DC per circuit, individually over current protected and supervised for opens, grounds, and short circuits. They shall be capable of being wired Class B, Style Y, or Class A, Style Z.

24. Alarm Dry Contacts

- a. Alarm dry contacts (Form C) shall be provided and shall be rated 2 amps @ 30 VDC (resistive) and shall transfer whenever a system alarm occurs.

25. Supervisory Dry Contacts

- a. Supervisory dry contacts (Form C) shall be provided and shall be rated 2 amps @ 30 VDC (resistive) and shall transfer whenever a system Supervisory condition occurs.

26. Trouble Dry Contacts

- a. Trouble dry contacts (Form C) shall be provided and shall be rated at 2 amps @ 30 VDC (resistive) and shall transfer whenever a system trouble occurs.

G. Auxiliary Switch Module (ASM-16)

1. Each ASM-16 has sixteen (16) programmable push-button switches.
2. Each push-button switch has three (3) associated status LED's (red, yellow, green), configurable to indicate any combination of functions.
3. Flexible switch configurations to allow flexible set-up of phone, speaker and auxiliary function circuits.
4. An insertable label to identify the function of each switch and LED'S combination.
5. Specialty modules that only perform one task such as Speaker, Phone, or Auxiliary are not acceptable.
6. RPT-E3
 - a. The RPT-E3 provides the capability to communicate with up to 16 ASM-16 modules locally up to 3000 feet from the INCC Command Center.

H. Network Repeater Module

1. The Intelligent Network Interface shall provide interconnection and protection of remote INCC Command Centers and Transponders. The repeater shall regenerate and condition the token passing, 625 k-baud signal between units. The Repeater shall be available in wire, fiber, or wire/fiber configurations as determined by field conditions.
2. Fiber configurations shall utilize "ST" type connectors and be able to operate with up to 200-micron multi-mode fiber, but optimize for 62.5/125. The interface shall have a jumper to allow selection of ground detection of wiring when used in the wire mode. The interface shall have integral LED's to display current status of the board.

I. Supplemental Notification Appliance Circuit (SNAC)

1. The SNAC shall be available in two models (SNAC-6 and SNAC-9) offering either up to 6.0 amps (4.0 amps continuous) or 9.0 amps (6.0 amps continuous) of regulated 24-volt power. It shall include an integral charger designed to charge 7.0 amp hour batteries and to support 60-hour standby.
2. The SNAC shall have two input triggers. The input trigger shall be a Notification Appliance Circuit (from the fire alarm control panel) or a relay.
3. The SNAC shall include an attractive surface mount back box.
4. The SNAC shall include the ability to delay the AC fail delay per 2002 NFPA requirements.
5. The SNAC include power limited circuitry, per UL standards.

2.2 SYSTEM PERIPHERALS

A. Addressable Devices - General

1. Addressable devices shall provide an address-setting means using rotary decimal switches.
2. Addressable devices shall use simple to install and maintain decade (numbered 0 to 9) type address switches by using a standard screwdriver to rotate two dials on the device to set the address. Devices which use a binary address set via dipswitch packages, a handheld device programmer or other special tools for setting the device address are not acceptable.
3. Detectors shall be analog and addressable, and shall connect to the fire alarm control panel's Signaling Line Circuits.
4. Addressable thermal and smoke detectors shall provide dual (2) status LED's. Both LED's shall flash under normal conditions, indicating that the detector is operational and in regular communication with the control panel, and both LED's shall be placed into steady illumination by the control panel, indicating that an alarm condition has been detected. If required, the flashing mode operation of the detector LED's can be programmed off via the fire control panel program.
5. The fire alarm control panel shall permit detector sensitivity adjustment through field programming of the system. Sensitivity can be automatically adjusted by the panel on a time-of-day basis.
6. Using software in the INCC Command Center, detectors shall automatically compensate for dust accumulation and other slow environmental changes that may affect their performance. The detectors shall be listed by UL as meeting the calibrated sensitivity test requirements of NFPA Standard 72, Chapter 2.
7. The detectors shall be ceiling-mount and shall include a separate twist-lock base which includes a tamper proof feature.
8. The following bases and auxiliary functions shall be available:
 - a. Standard base with remote LED output
 - b. Sounder base rated at 85 DBA minimum.
 - c. Form-C Relay base rated 30VDC, 2.0A
 - d. Isolator base
9. The detectors shall provide a test means whereby they will simulate an alarm condition and report that condition to the control panel. Such a test may be initiated at the detector itself (by activating a magnetic switch) or initiated remotely on command from the control panel.
10. Detectors shall also store an internal identifying type code that the control panel shall use to identify the type of device (ION, PHOTO, THERMAL).

B. Addressable Manual Station (MS-7AF)

1. Manual fire alarm stations shall be non-code, non-break glass type, equipped with key lock so that they may be tested without operating the handle.
2. An operated station shall be visually apparent, as operated, at a minimum distance of 100 feet (30.5 m) from the front or side.

3. Stations must be designed such that after an actual activation, they cannot be restored to normal except by key reset.
4. Manual stations shall be constructed of Lexan with clearly visible operating instructions provided on the cover. The word FIRE shall appear on the front of the stations in raised letters, 1.75 inches or larger.
5. Manual stations shall be constructed of high impact Lexan, with operating instructions provided on the cover. The word FIRE shall appear on the manual station in letters one half-inch in size or larger.
6. Addressable manual stations shall, on command from the control panel, send data to the panel representing the state of the manual switch and the addressable communication module status.

C. Intelligent Thermal Detectors

1. Thermal detectors shall be intelligent addressable devices rated at 135 degrees Fahrenheit and have a rate-of-rise element rated at 15 degrees F per minute. It shall connect via two wires to the fire alarm control panel signaling line circuit.

D. Intelligent Multi Criteria Acclimating Detector (ACS-ACCLIMATE) - NOT USED

E. Intelligent Duct Smoke Detector (ADPF)

1. The in-duct smoke detector housing shall utilize an on-board intelligent photoelectric detector, which provides continuous analog monitoring and alarm verification from the panel.
2. When sufficient smoke is sensed, an alarm signal is initiated, and appropriate action taken to shut down or change over air handling systems to help prevent the rapid distribution of toxic smoke and fire gases throughout the areas served by the duct system.
3. Duct smoke detectors which are mounted above a ceiling or otherwise obstructed from normal view shall be provided with a remote alarm indicator.
4. Each detector shall be installed in either the supply side or return side duct in accordance with the requirements of the Local applicable mechanical code. Duct detector shall be provided under this section, and installed by the mechanical contractor.

F. Addressable Dry Contact Monitor Module (AMM-2F)

1. Addressable monitor module shall be provided to connect one supervised IDC zone of conventional alarm initiating devices (any N.O. dry contact device) to one of the fire alarm control panel SLC's.
2. The monitor module shall mount in any standard deep electrical box.
3. The IDC zone shall be suitable for Style B operation.

G. Addressable Dry Contact Monitor Module (AMM-4F) - NOT USED

H. Addressable Dry Contact Monitor Module (AMM-2IF) - NOT USED

I. Addressable Dry Contact Monitor Module (MMI-10F) - NOT USED

J. Two Wire Detector Monitor Module (AMM-4SF) - NOT USED

K. Two Wire Detector Monitor Module (MMI-6SF) - NOT USED

- L. Addressable Control Module (AOM-2SF)
 - 1. Addressable control modules shall be provided to supervise and control the operation of one conventional NAC of compatible, 24 VDC powered, polarized audio/visual notification appliances or UL Listed polarized relays for fan shutdown and other auxiliary control functions.
 - 2. The control module shall mount in a standard 4-inch square 2-1/8-inch deep electrical box, or to a surface mounted back box.
 - 3. The control module NAC may be wired for Style Z or Style Y (Class A/B) with up to 1 amp of inductive signal or 2 amps of resistive signal operation. The relay coil shall be magnetically latched to reduce wiring connection requirements, and to insure that 100% of all auxiliary relay or NAC's may be energized at the same time on the same pair of wires.
- M. Addressable Control Module (MMO-6SF) - NOT USED
- N. Addressable Relay Module (AOM-2RF)
 - 1. Addressable Relay Modules shall be available for HVAC control and other building functions. The relay shall have two (2) form C sets of contacts that operate in tandem and are rated for a minimum of 2.0 Amps resistive or 1.0 Amps inductive. The relay coil shall be magnetically latched to reduce wiring connection requirements, and to insure that 100% of all auxiliary relay or NAC's may be energized at the same time on the same pair of wires.
 - 2. The relay module shall mount in a standard 4-inch square , 2-1/8-inch deep electrical box, or to a surface mounted back box.
- O. Addressable Relay Module (MMO-6RF) - NOT USED
- P. Isolator Module (M500X) - NOT USED
- Q. Sprinkler Waterflow Switches (provided and installed by the sprinkler contractor)
 - 1. Waterflow Switches shall be an integral, mechanical, non-coded, non-accumulative retard type.
 - 2. Waterflow Switches shall have an alarm transmission delay time which is conveniently adjustable from 0 to 60 seconds. Initial settings shall be 30-45 seconds.
 - 3. All waterflow switches shall come from a single manufacturer and series.
 - 4. Waterflow switches shall be provided and connected under this section but installed by the mechanical contractor.
 - 5. Where possible, locate waterflow switches a minimum of one (1) foot from a fitting which changes the direction of the flow and a minimum of three (3) feet from a valve.
- R. Sprinkler and Standpipe Valve Supervisory Switches (provided and installed by the sprinkler contractor):
 - 1. Each sprinkler system water supply control valve riser, zone control valve, and standpipe system riser control valve shall be equipped with a supervisory switch. Standpipe hose valves, and test and drain valves shall not be equipped with supervisory switches.
 - 2. PIV (post indicator valve) or main gate valves shall be equipped with a supervisory switch.

3. The switch shall be mounted so as not to interfere with the normal operation of the valve and adjusted to operate within two revolutions toward the closed position of the valve control, or when the stem has moved no more than one-fifth of the distance from its normal position.
4. The supervisory switch shall be contained in a weatherproof aluminum housing, which shall provide a 3/4-inch conduit entrance and incorporate the necessary facilities for attachment to the valves.
5. The switch housing shall be finished in red baked enamel.
6. The entire installed assembly shall be tamper proof and arranged to cause a switch operation if the housing cover is removed, or if the unit is removed from its mounting.
7. Valve supervisory switches shall be provided and connected under this section and installed by mechanical contractor.

S. Graphic or Matrix Annunciator (uses ANU-48 serial driver board) - NOT USED

T. LCD Display Annunciator Requirements

1. Furnish and install where shown on the plans a remote serial annunciator, model LCD-7100. The annunciator shall provide an 80-character display, which shall duplicate all information on the basic system display including any network nodes its host panel is annunciating, with the exception of menus. It shall also contain the following function keys: Alarm Acknowledge, Trouble Acknowledge, Signal Silence, System Reset/Lamp Test and System Drill Test.
2. The annunciator shall contain a key lock, which will enable the switches only when placed in the "ON" position, with the exception of the Trouble Acknowledge, which is used to silence the local trouble audible sounder. The annunciator shall also contain the following LED's: Alarm, Supervisory, System Trouble, Power Fault, System Silenced.
3. The annunciator shall mount on a standard three-gang surface or flush electrical box.
4. Each ILI-MB-E3 shall accommodate up to five (5) remote LCD-7100 annunciators which can be located up to 3,000 feet from the control panel.

U. Audible Evacuation Horns

1. The horn appliances shall be Wheelock Series AS horn and the horn strobe appliances shall be Wheelock Series AS horn Strobes or approved equals. The horn shall be UL Listed under Standard 464 for Audible Signal Appliances and horns equipped with strobes shall be listed under UL Standard 1971 for Emergency Devices for the Hearing-Impaired. In addition, the strobes shall be certified to meet the requirements of FCC Part 15, Class B and shall incorporate low temperature compensation to ensure the lowest possible current consumption.
2. All horns shall use solid-state components and shall provide field selectable operation with volume control and tone control. All models shall have a peak anechoic sound output of 83 dB at 10 feet and an adjustable frequency range of 800 to 1200 Hz. All inputs shall employ terminals that accept #12 to #18 AWG wire sizes.
3. The strobe portion of the appliance shall produce a flash rate of one (1) flash per second over the Regulated Voltage Range and shall incorporate a Xenon flashtube enclosed in a rugged Lexan® lens. The strobe shall be of low current design. Where Multi- Candela Chime Strobes are specified, the strobe intensity shall have a minimum

of four (4) field selectable settings and shall be rated per UL Standard 1971 at: 15/30/75/110cd or 135/185cd for wall mount and 15/30/75/95cd or 115/177cd for ceiling mount. The selector switch for selecting the candela shall be tamper resistant and not accessible from the front of the appliance. The 1575 candela strobe shall be specified when 15 candela UL Standard 1971 listing with 75 candela on-axis is required (e.g. ADA compliance).

4. When synchronization is required, the strobe portion of the appliance shall be compatible with Wheelock's SM, DSM sync modules or FCI's Snac9 Power Supply with built-in Patented Sync Protocol. The strobes shall not drift out of synchronization at any time during operation. If the sync module or Power Supply fails to operate, (i.e., contacts remain closed), the strobe shall revert to a non-synchronized flash rate.

V. Strobe Devices

1. Strobes shall meet the requirements of the ADA, UL Standard 1971 and shall meet the following criteria:
 - a. The maximum pulse duration shall be 2/10 of one second.
 - b. Strobe intensity shall meet the requirements of UL 1971.
 - c. The flash rate shall meet the requirements of UL 1971.
 - d. Strobe candela rating shall be determined by positioning the selector switch on the back of the device.

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. Installation shall be in accordance with the NFPA 72, NEC, local and state codes, as shown on the drawings, and as recommended by Gamewell-FCI.
- B. All conduit, junction boxes, conduit supports and hangers shall be concealed in finished areas and may be exposed in unfinished areas. Smoke detectors shall not be installed prior to the system programming and test period. If construction is ongoing during this period, measures shall be taken to protect smoke detectors from contamination and physical damage.
- C. All fire detection and alarm system devices, control panels and remote annunciators shall be flush mounted when located in finished areas and may be surface mounted when located in unfinished areas.
- D. Manual stations shall be suitable for surface mounting or semi-flush mounting as shown on the plans, and shall be installed not less than 42 inches, nor more than 48 inches above the finished floor measured to the operating handle.

3.2 TESTING:

- A. Provide the service of a competent, factory-trained technician authorized by Gamewell-FCI to technically supervise and participate during the pre-testing and acceptance testing of the system.
- B. Before energizing the cables and wires, conduct a complete visual inspection of all control panel connections and test wiring for short circuits, ground faults, continuity, and insulation.

- C. Close each sprinkler system control valve and verify proper supervisory alarm at the INCC Command Center.
 - D. Verify activation of all flow switches.
 - E. Open initiating device circuits and verify that the trouble signal actuates.
 - F. Open signaling line circuits and verify that the trouble signal actuates.
 - G. Open and short notification appliance circuits and verify that trouble signal actuates.
 - H. Ground initiating device circuits and verify response of trouble signals.
 - I. Ground signaling line circuits and verify response of trouble signals.
 - J. Ground notification appliance circuits and verify response of trouble signals.
 - K. Check installation, supervision, and operation of all intelligent smoke detectors.
 - L. Each of the alarm conditions that the system is required to detect should be introduced on the system. Verify the proper receipt and the proper processing of the signal at the INCC COMMAND CENTER and the correct activation of the control points.
 - M. When the system is equipped with optional features, the manufacturer's manual should be consulted to determine the proper testing procedures. This is intended to address such items as verifying controls performed by individually addressed or grouped devices, sensitivity monitoring, verification functionality and similar.
- 3.3 ACCEPTANCE TESTING:
- A. Provide the service of a competent, factory-trained technician authorized by Gamewell-FCI to technically supervise and participate during the pre-testing and acceptance testing of the system.
 - B. Before the installation shall be considered completed and acceptable by the AHJ, a complete test using as a minimum, the following scenarios shall be performed and witnessed by a representative approved by the specifying engineer. The monitoring company and/or the fire department must be notified prior to the final test in accordance with local requirements.
 - C. The contractor's job foreman, in the presence of a representative of the manufacturer, a representative of the owner, and the fire department shall operate every installed device to verify proper operation and correct annunciation at the control panel.
 - D. The signaling line circuits and notification appliance circuits shall be opened in at least two (2) locations to verify the presence of supervision.
 - E. When the testing has been completed to the satisfaction of both the contractors job foreman and the representatives of the manufacturer and owner, a notarized letter co-signed by each attesting to the satisfactory completion of said testing shall be forwarded to the owner and the fire department.
 - F. The contractor shall leave the fire alarm system in proper working order, and, without additional expense to the owner, shall replace any defective materials or equipment provided by him under this contract within one year (365 days) from the date of final acceptance by the awarding authority.
- 3.4 INSTRUCTION:
-

- A. Provide instruction for operating the system. Provide (4) two-hour training periods, to be scheduled at the owner's discretion, any time during the three year warranty period. "Hands-on" demonstrations of the operation of all system components and the entire system functions shall be provided.

END OF SECTION

DIVISION 31 – EARTHWORK

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

31 10 00 – SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Clearing of plant life and grass, surface rocks and debris.
- B. Removal of minor existing construction within Project area, as indicated on Drawings and as necessary to accomplish the Work, including:
 - 1. Paving.
 - 2. Utilities services, including capping and identification.
- C. Grubbing of root systems of trees and shrubs, abandoned utility lines and structures and other below grade obstructions.
- D. Handling and disposal of debris.
- E. Dewatering of excavations as necessary to control surface and sub-surface water.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.1 MINOR DEMOLITION

- A. Minor Demolition of Site Elements:
 - 1. Use techniques acceptable to authorities having jurisdiction and which will achieve intended results and provide protection of surrounding features to remain.
 - 2. Some items may have been demolished prior to Work of this Contract. Verify existing conditions prior to start of demolition. If items have been demolished contact the Architect.
 - 3. Some items may require postponement of demolition until late in Contract Time period.
 - 4. Phase demolition as necessary to provide adequate interfacing of related Work.
 - 5. Demolish in an orderly and careful manner. Protect existing foundations, retaining walls, utility structures, other structures and finish materials to remain.
- B. Utilities Demolition:
 - 1. Disconnect, remove, and cap designated utility services within demolition areas.

2. Mark location of disconnected utilities. Identify and indicate capping locations on project record drawings.
3. Coordinate cutting and capping sequences and procedures with serving utility and those affected by such activities. Remove utilities in a manner to minimize disturbance of portions to remain.

C. Cutting and Patching: Refer to requirements specified in Section 01 73 29 - Cutting and Patching.

3.2 CLEARING

A. Clearing, General:

1. Clear areas required for access to site and execution of Work.
2. Strip piles of soil, paving base and paving debris. Remove unacceptable materials from site and legally dispose. Contractor shall examine existing site conditions prior to bidding and consult with Owner to establish scope of soil and paving debris removal.

B. Blasting: Use of explosives is not permitted.

C. Vegetation Clearing: Clear only vegetation indicated to be removed.

1. Cut off trunks of trees and shrubs flush with ground or pull out with roots attached.
2. In areas to be grubbed, totally remove root systems during grubbing operation.
3. Outside areas to be grubbed, excavate and remove root systems or apply an herbicide which will not injure new plant materials, as approved by authorities having jurisdiction.

D. Pruning of Trees and Shrubs to Remain:

1. Prune away all dead and broken branches.
2. Trim tree branches to heights and widths as indicated or directed for construction clearance and landscape shaping.
3. Consult with Owner to confirm allowable extent of pruning to preserve and vegetation.
4. Cover temporarily exposed roots with wet burlap and backfill as soon as possible.
5. Coat cut plant surfaces with approved emulsified asphalt plant coating (wound paint).

E. Maintenance of Landscaping to Remain: Irrigate existing landscape plant materials as necessary to maintain health.

F. Removal of Existing Construction and Site Features: Remove all fencing, light standards, power poles and other above-grade existing construction within Work area which are not indicated to remain.

1. Salvage products for disposition as indicated on the Drawings.
2. Completely remove all improvements and other debris, except for those items indicated to remain.
3. Remove below grade improvements at least 12 inches below finish grade and to the extent necessary to not interfere with new construction.

3.3 GRUBBING

- A. Extent of Grubbing: Grubbing shall be performed over entire Work area beneath new construction, paving, surfacing and landscaping and at other such locations where indicated.
- B. Depth of Grubbing: Grubbing shall extend down from original soil surface a minimum of 18 inches, or 18 inches below bottom of footing or slab on grade, whichever is deepest.
- C. Roots, Brush, Grass, Weeds and Other Organic Matter: Completely remove all such matter, including tree and shrub roots which may extend below specified grubbing depth and which may extend beyond grubbing limits.
- D. Inorganic and Metallic Debris:
 - 1. Completely remove all rock, boulders and cobbles greater than 6 inches in any dimension to the minimum grubbing depth.
 - 2. Completely remove all buried organic and metallic debris, and abandoned pipes and buried utility structures, including portions which may extend below minimum grubbing depths and limits.
 - 3. Conditions which are not reflected in information provided to Contractor by Owner, such as geotechnical data, or which are unusual for the geographic area, shall be governed by the provisions of the General Conditions of the Contract for changed conditions.

3.4 DAMAGED VEGETATION

- A. Damaged Vegetation:
 - 1. Neatly prune damaged branches and severed roots.
 - 2. Apply wound paint to above-ground cuts and abrasions.
 - 3. If trees and shrubs indicated to remain are damaged excessively, as determined by Architect or authorities having jurisdiction, remove and replace damaged plants with comparable plants.

3.5 PORTLAND CEMENT CONCRETE PAVING DEMOLITION

- A. Cutting: Make a saw cut at edges of existing concrete to be removed, where portions of existing concrete are indicated to remain.
- B. Cutting Method: Cut at first joint line or marking line adjacent to area to be removed. Cut with abrasive type, water-cooled saw to a minimum depth of 1-1/2 inches. Cut lines straight and square to face of concrete.
- C. Removal: Break concrete and remove debris. Exercise care at cut lines to preserve straight cut.
- D. Disposal: Remove concrete debris from the site.

3.6 ASPHALTIC CONCRETE PAVING DEMOLITION

- A. Cutting: Saw cut paving similar to that specified for portland cement concrete. Pneumatic spade may be used for initial line of cut but final line shall be saw cut.

- B. Aggregate Base: Existing aggregate base may be retained except where landscaping and overexcavation are indicated.
 - C. Disposal: Remove asphaltic concrete debris from the site.
- 3.7 UTILITY LINES, POSTS AND STRUCTURES
- A. Work by Utility: Posts, conductors, guy wires, boxes, structures and equipment shown to be cleared or removed by the responsible utility company or agency shall be considered work under a separate contract.
 - B. Coordination: Contractor shall arrange, schedule and coordinate work by utility companies and agencies.
 - C. Payment: Costs, if any, imposed by utility companies and agencies shall be included in the Contract Sum.
- 3.8 DISPOSAL
- A. Debris Disposal: Dispose of all cleared and grubbed materials in a legal manner off site.
 - B. Hazardous Materials:
 - 1. Immediately notify the Owner should hazardous materials or suspected hazardous materials be encountered.
 - 2. Dispose of such materials in accordance with all applicable laws and regulations and as directed by authorities having jurisdiction.
 - 3. Unforeseen conditions will be resolved in accordance with the Conditions of the Contract.
 - C. Saleable Materials:
 - 1. Unless otherwise indicated, all felled trees from which merchantable lumber or firewood can be produced shall become the property of the Contractor.
 - 2. Unless otherwise indicated, all metallic debris of salvageable value shall become the property of the Contractor.
 - 3. The Contractor shall remove all saleable materials from the site in a timely manner.
 - 4. Sale of salvaged and merchantable materials shall not be done on site.
 - 5. Burial and Burning: Debris shall not be buried or burned on site.
- 3.9 NOISE CONTROL
- A. Noise Control: Comply with applicable noise control regulations of authorities having jurisdiction, including time of day restrictions and muffler requirements on equipment.
- 3.10 DUST AND RUN-OFF CONTROL
- A. Dust and Runoff Control, General: Refer to requirements of General Conditions and Drawings.
 - 1. Promptly, remove waste materials and unacceptable topsoil from site and dispose of materials in a legal manner.

2. Minimize dust during clearing and grubbing to protect adjoining property and vehicles parked in the vicinity.
 3. Control windblown dust.
 4. Prevent erosion and siltation of streets, catch basins and piping.
 5. Prevent accumulation of soil and debris on public thoroughfares from construction activities.
- B. Clean-up: Keep public thoroughfares clear of soiling, siltation, dust and debris by periodic sweeping and washing down, at least daily at the end of working hours.
- C. Surface Run-off Water Control:
1. Minimize flow of ground water from adjacent areas into Work areas.
 2. Do not restrict flow from adjacent properties such that natural flow is hindered.
- D. Dewatering: Dewater site in localized areas as Work progresses.
1. Provide an adequate system to lower and control groundwater in order to permit excavation, construction of structures, and placement of fill materials under dry conditions.
 2. Install sufficient dewatering equipment to pre-drain waterbearing strata above and below bottom of structure foundations, drains, sewers, and other excavations.
 3. Maintain excavations free of standing water.
 4. Provide dewatering 24 hours per day in advance of placement of concrete.
 5. Allow no concrete to be placed in standing water.
 6. Ensure that trenching and excavations do not cave in due to water.
- E. Water Disposal:
1. Dispose of run-off by legal means and as acceptable to authorities having jurisdiction.
 2. Dispose of water removed from excavations in a manner to avoid endangering public health, property, and portions of Work under construction or completed.
 3. Dispose of water in a manner to avoid disruptions to adjacent sites. Dispose of water in a manner to avoid soiling of public thoroughfares and passing vehicles.
 4. Provide sumps, sedimentation tanks, and other flow control devices as required by authorities having jurisdiction.
- 3.11 SALVAGED MATERIALS
- A. Ownership: Unless otherwise indicated, all materials demolished and removed shall become property of Contractor.
- B. Disposal of Materials: Contractor shall haul and dispose of all demolished and removed materials to offsite disposal sites in any legal manner.
1. Except where noted otherwise, immediately remove demolished materials from site.
 2. Promptly remove from the site and properly dispose of all contaminated, vermin infested, or dangerous materials encountered.
 3. Do not burn or bury materials on site.

C. Salvage:

1. Contractor shall take care when removing salvageable material to avoid damaging the material itself and the adjacent or adjoining structures that are to remain.
2. Items of salvageable value to the Contractor shall be removed from the site by the Contractor as the Work progresses and transported from the site as they are removed. Storage or sale of salvaged items on the site by the Contractor will not be permitted.

END OF SECTION

31 20 00 – EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Rough grading of the Site in preparation for excavation, trenching, backfilling and compacting Work.
- B. Removal of topsoil and stockpiling for later reuse.
- C. Excavation of subsoil, stockpiling for later reuse, and removal of excess from the site.
- D. Excavations for footings and foundations.
- E. Building perimeter and site structure backfilling, to subgrade elevations.
- F. Filling and backfilling to attain indicated grades, including fill under paving and fill under slabs-on-grade.
- G. Trench excavations and backfilling for utility service lines from building perimeter ("five-foot line") to connections to municipal and site utilities points of connections.
- H. Consolidation and compaction.
- I. Fill for over-excavation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Select Fill Material: Fill material shall be free of roots, rocks larger than 2 inches, clods larger than 4 inches, debris and large weeds. Fill materials shall swell less than 3 percent when compacted.
 - 1. It is intended that on-site material, free from debris, shall be used for backfill and fill material where possible. Stockpile on-site soil from excavations and grading operations.
 - 2. Supplement on-site soil with suitable imported soil. Imported soil shall be free of detectable amounts of toxic compounds in accordance with requirements of California Environmental Protection Agency, Department of Toxic Substances Control (DTSC).
 - a. Imported soil shall be from a source tested and certified in accordance with requirements of California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) and, specifically, DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual.
 - b. Detectable amounts of compounds of concern within the fill material should be evaluated for risk in accordance with the DTSC Preliminary Endangerment

Assessment (PEA) Guidance Manual. If metal analyses are performed, only those metals (CAM 17 / Title 22) to which risk levels have been assigned need to be evaluated.

- c. Testing and certification shall include compliance with applicable Regional Water Quality Control Board's (RWQCB) guidelines for reuse of non-hazardous petroleum hydrocarbon contaminated soil as applied to Total Petroleum Hydrocarbons (TPH) only. RWQCB guidelines shall not be used for volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCS).
- d. In addition, standard laboratory data package, including summary of QA/QC (Quality Assurance/Quality Control) sample results, shall accompany all analytical reports.
- e. Recommended Fill Material Sampling Schedule:

1)	Area of Individual Borrow Area	Sampling Requirements
2)	2 acres or less	Minimum of 4 samples
3)	2 to 4 acres	Minimum of 1 sample every 1/2 acre
4)	4 to 10 acres	Minimum of 8 samples
5)	Greater than 10 acres	Minimum of 8 locations with 4 subsamples per location
6)	Volume of Borrow Area Stockpile	Samples per Volume
7)	Up to 1,000 cubic yards	1 sample per 250 cubic yards
8)	1,000 to 5,000 cubic yards	4 samples for first 1000 cubic yards + 1 sample per each additional 500 cubic yards
9)	Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards + 1 sample per each additional 1,000 cubic yards
- f. Fill documentation shall include detailed information on previous use of land from where fill is taken, whether an environmental site assessment has been performed and, if so, its findings, and results of all testing performed. Documentation shall be signed by appropriately licensed (CA-registered) individual. If such documentation is not available or is inadequate, samples of import fill material shall be chemically analyzed and demonstrated to be in compliance with referenced criteria.
- g. Imported fill material shall be visually distinct from existing on-site material. If not visually distinct, imported fill material shall have small quantity of non-toxic dye added only as necessary to achieve visual distinction.

- B. Bedding Material: Imported fill material shall be visually distinct from existing on-site material re-used as bedding material. If not visually distinct, import material shall have small quantity of non-toxic dye added as necessary to achieve visual distinction.
 - 1. Soil bedding: Comply with requirements specified in Section 300 and Section 306 of the Standard Specifications ("Green Book").
 - 2. Sand bedding: Natural river or bank sand, free of silt, clay, loam, friable or soluble materials, or organic matter, graded in accordance with ANSI/ASTM C 136.

- C. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, ASTM D 448, coarse aggregate grading size 57, with 100 percent passing a 1-1/2-inch sieve and not more than 5 percent passing a No. 8 sieve.
- D. Filtering Material: Evenly graded mixture of natural or crushed gravel or crushed stone and natural sand, with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 50 sieve.
- E. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.
 - a. Imported impervious fill shall comply with DTSC requirements as specified above for select fill material.
 - b. Imported impervious fill material shall be visually distinct from existing on-site material re-used as fill material. If not visually distinct, import material shall have small quantity of non-toxic dye added as necessary to achieve visual distinction.
- F. Topsoil: Excavated on-site material, graded free of roots, rocks larger than 1 inch and clods larger than 2 inches, and free of subsoil, roots, grass, excessive amount of weeds, stone and foreign matter, for use in grass and planting areas.
 - a. Imported topsoil shall comply with DTSC requirements as specified above for select fill material.
 - b. Imported topsoil shall be visually distinct from existing on-site topsoil re-used at planting area. If not visually distinct, make imported topsoil distinct through addition of soil amendments and fertilizer prior to placement.
- G. Soil Amendments and Fertilizers: As specified on the drawings.
- H. Detectable Warning Tape: Acid- and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:
 - 1. Red: Electric.
 - 2. Yellow: Gas, oil, steam, and dangerous materials.
 - 3. Orange: Telephone and other communications.
 - 4. Blue: Water systems.
 - 5. Green: Sewer systems.
- I. Shoring and Bracing Materials: Provide all materials and services necessary to properly engineer and construct shoring for excavations. Selection of materials and design of shoring, underpinning and bracing shall be solely the responsibility of the Contractor.
- J. Concrete: Concrete conforming to requirements specified in Section 03 30 00 – Cast-in-Place Concrete with compressive strength of [2000] [2500] psi minimum or as specified in the soils report, except as follows:
 - 1. Concrete used under footings and foundations to correct overexcavation shall be same as for footings and foundation.
 - 2. Concrete used for backfilling of electric utility trenches shall comply with requirements of serving utility.

PART 3 - EXECUTION – NOT USED

END OF SECTION

31 31 16 – TERMITE CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Chemical soil poisoning to control subterranean termites.

PART 2 - PRODUCTS

2.1 TERMITICIDE

- A. Specified Manufacturer: Dow Chemical USA, Midland, MA (800/441-4369). Or equal
- B. Acceptable Manufacturers: None identified. Equivalent products of other manufacturers will be considered in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
- C. Termiticide: Dow Dursban TC. Or equal
- D. Environmental Approval: Termiticide shall be currently approved for use by the United States Environmental Protection Agency (EPA) and by state authorities having jurisdiction.

PART 3 - EXECUTION – NOT USED

END OF SECTION

DIVISION 32 – EXTERIOR IMPROVEMENTS

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements.

32 12 16 – ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 10 14 00 Signage
- C. Section 32 17 23 Pavement Markings.

1.2 SECTION INCLUDES

- A. Asphaltic concrete paving for vehicular traffic and curbs.
- B. Asphaltic concrete paving for playgrounds and play courts.
- C. Patching and repair of existing asphaltic paving for underground utility Work and where damaged by new construction.
- D. Slurry seal over asphaltic concrete surfaces after completion of construction, to restore and seal surfaces.

1.3 REFERENCES

- A. Standard Specifications: Standard Specifications for Public Works Construction ("Green Book"), 1997 Edition, by Joint Cooperative Committee of the Southern California Chapter of the American Public Works Association and the Southern California Districts of the Associated General Contractors of California. Standard Specifications shall be as amended and adopted by the authorities having jurisdiction, including San Diego Regional Supplementary Amendments to the Standard Specifications for Public Works Construction.

1.4 SUBMITTALS

- A. Submit mix design(s) for review.

PART 2 - PRODUCTS

- 2.1 Materials, General: Unless otherwise indicated on the Drawings or specified herein, sub-base, aggregate base and asphaltic concrete paving materials shall comply with Section 200 - Rock Materials and Section 203 - Bituminous Materials, in the Standard Specifications.
- 2.2 Sub-Base Material: Existing or imported materials, Select Subbase in accordance with Standard Specifications, Subsection 200-2.6.
- 2.3 Aggregate Base: Crushed Aggregate Base in accordance with Standard Specifications, Subsection 200-2.2.2.

- 2.4 Asphalt Concrete Materials: Standard Specifications, Subsection 203-6.
- 2.5 Slurry Seal Coat: Emulsion-aggregate slurry, Standard Specifications, Subsection 203-5.
- 2.6 Headers and Stakes: 2x6 nominal preservative treated douglas fir, except at curves provide laminated 1x6 nominal preservative treated douglas fir. Use hot dipped galvanized nails only.

PART 3 - EXECUTION

3.1 ASPHALT PAVING MIXES

- A. Asphalt Paving Mixes: As referenced in Standard Specifications ("Green Book").
 - 1. Base or underlying courses: Standard Specifications, A-AR-4000 or B-AR-4000.
 - 2. Finish course, vehicle traffic areas: Standard Specifications, C2-AR-4000 (Dense Medium).
 - 3. Finish course, playground areas: Standard Specifications, E-AR-4000 (Extra Fine).

3.2 ASPHALTIC CONCRETE PAVING, PATCHING AND REPAIR.

- A. Replace Asphaltic Concrete Paving: Remove existing asphaltic concrete surfacing and underlying base material and replacing removed surfacing and base material with new asphaltic concrete as shown on the Drawings and as specified herein.
 - 1. Exact limits of asphaltic concrete surfacing to be removed and replaced shall be as directed by the Architect.
 - 2. Cut on neat lines with a power-driven saw to minimum depth of 46 mm before removing existing asphaltic concrete paving.
 - 3. Remove surfacing and base without damage to surfacing that is to remain in place. Damage to pavement which is to remain in place shall be repaired to a condition satisfactory to the Architect or damaged pavement shall be removed and replaced with new asphalt concrete if ordered by the Architect. Repairing or removing and replacing pavement damaged outside the indicated limits of pavement shall be at no change in Contract Time and Contract Sum.
 - 4. Removed materials shall be legally disposed of offsite.
 - 5. Material remaining in place, after removing surfacing and base to required depth, shall be graded to plane, watered, and compacted. Finished surface of the remaining material shall not extend above grade indicated on the Drawings.
 - 6. Areas of base material which are low as a result of over excavation shall be filled asphaltic concrete, at no change in Contract Time and Contract Sum.
 - 7. Install new aggregate base and compact new and existing aggregate base as necessary.
 - 8. Place and compact new asphaltic concrete paving as specified elsewhere herein.

- B. Small Area Asphaltic Concrete Placement: Spreading and compacting shall be performed by methods that will produce an asphalt concrete surfacing of uniform smoothness, texture, and density. Use methods and equipment suitable for location, size and configuration of asphaltic concrete paving area.
- C. Crack Repair: Cracks in existing asphalt concrete surfacing shall be prepared and filled with crack sealant and covered with sand.
 - 1. Cracks 6 mm wide and wider in existing asphalt concrete surfacing and shoulders shall be prepared and sealed.
 - 2. Cracks to be filled and adjacent asphalt concrete surfacing shall be cleaned and shall be free of dirt, vegetation, debris and loose sealant. Cleaning shall be done by air blasting. Old sealant which protrudes above the asphalt concrete surfacing shall be completely removed. Routing will not be required.
 - 3. Crack sealant shall be readily handled at ambient temperature, shall be capable of being stored for periods of up to 6 months, shall withstand freeze-thaw cycles and shall contain no volatile organic compounds which may contribute to air pollution. Base material shall remain ductile with aging and provide resiliency under extreme climatic conditions.
 - 4. Immediately following the application of crack sealant material, apply sand on crack sealant material. Sand shall be free from clay or organic material, and 90 percent to 100 percent shall pass a 4.75-mm sieve and not more than 5 percent shall pass a 75-µm sieve. Spread sand uniformly with full coverage of joint sealer.
 - 5. Lightly broom clean completed joint repair to remove loose excessive sand.
 - 6. Within 2 days after application of sealant, sealed cracks that reopen or in which sealant material sags below the surrounding asphalt concrete surfacing shall be resealed.

END OF SECTION

32 13 13 – CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 10 14 00 Signage
- C. Section 32 17 23 Pavement Markings.

1.2 SECTION INCLUDES

- A. Concrete paving for pedestrian and vehicular traffic.
- B. Portland cement concrete curbs and gutters.
- C. Portland cement concrete sidewalks integral with curbs and gutters.
- D. Repair of portland cement concrete paving.

1.3 REFERENCES

- A. Standard Specifications: Standard Specifications for Public Works Construction ("Green Book"), 1997 Edition, by Joint Cooperative Committee of the Southern California Chapter of the American Public Works Association and the Southern California Districts of the Associated General Contractors of California. Standard Specifications shall be as amended and adopted by the authorities having jurisdiction, including San Diego Regional Supplementary Amendments to the Standard Specifications for Public Works Construction.

1.4 SUBMITTALS

- A. Submit mix design(s) for review.

PART 2 - PRODUCTS

2.1 BASE MATERIALS

- A. Base Material: As specified in Section 31 20 00 – Earth Moving.
- B. Aggregate Base: Where indicated on the Drawings or, if not indicated, Crushed Aggregate Base in accordance with Standard Specifications, Subsection 200-2.2.

2.2 FORM MATERIALS

- A. Forms Materials: Steel or wood, at Contractor's option.
 - 1. Lumber shall be S4S No. 2 or better Douglas fir. At straight forms, use 2x lumber. At curved forms, provide laminated 1x lumber or plywood.
 - 2. Soil forms are not permitted to form paving work.

3. Form materials shall be new. Reuse of forms will not be acceptable.

- B. Formwork: Construct formwork to result in concrete formed the lines, profiles and grades shown on Drawings. Provide adequate bracing in conformance with the general material requirements of Section 03 10 00 - Concrete Forming and Accessories.

2.3 REINFORCEMENT

- A. Reinforcement, General: As indicated on Drawings and specified following. Off-site Work shall comply with Standard Specifications and Standard Details.
- B. Steel Reinforcing Bars, On-Site Work: ASTM A615, Grade 40 or 60, unless otherwise indicated, deformed billet steel bars, clean and free from rust, scale and coatings that would reduce bond. Unless otherwise indicated on the Drawings, provide minimum No. 3 reinforcing bars.
- C. Dowels: Smooth or deformed steel reinforcing bars, as indicated on the Drawings and to work with dowel sleeves specified below.
- D. Dowel Sleeves: Speed Dowel slip-dowel system, as manufactured by Aztec Concrete Accessories, Inc., Fontana, CA (909/829-2765 or 800/531-3355), or equivalent in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements.
1. Sleeves shall be two-piece design, with sleeve to slip over smooth or deformed reinforcing bar and base plate to secure sleeve in form.
 2. Sleeve materials shall be polypropylene plastic.
- E. Supports for Reinforcement: Wire-bar-type chairs, bolsters, bar supports and spacing devices, complying with CRSI Manual of Standard Practice, for spacing, supporting and fastening reinforcing bars and welded wire fabric in place. Provide size and shape as required for strength and support of reinforcement during reinforcement installation and concrete placement.
- F. Tie Wires: 18 gauge minimum, black annealed steel.
- G. Reinforcement Fabrication: To required shapes and dimensions, in accordance with requirements specified in Section 03 20 00 - Concrete Reinforcing, for on-site Work, and in accordance Standard Specifications 201-2 and 303-1.7.3, for off-site Work in public rights-of-way.

2.4 NATURAL COLOR CONCRETE MATERIALS

- A. Concrete Materials, General:
1. Comply with Standard Specifications for site paving.
 2. For exterior slabs on grade, such as trash enclosure slab, comply with requirements specified in Division 3 - Concrete.
- B. Portland Cement: ASTM C150, Type II, unless sulfate resistant Type is determined to be necessary by sulfate content tests performed by Testing Laboratory after grading Work is completed.
- C. Fine and Coarse Aggregates: ASTM C33.

- D. Select Exposed Aggregate: ASTM C33, proprietary mixture as indicated on the Drawings, from single source and selected from within range offered by supplying quarry.
 - E. Curing Compounds for Natural Color Concrete: Non-staining, dissipating resin, conforming to ASTM C 309, Type 1, Class B, translucent, complying with applicable air quality (VOC) regulations.
 - 1. W.R. Meadows Sealtight 1100.
 - 2. L&M Cure R, manufactured by L&M Construction Chemicals, or equal.
 - F. Top Surface Set Retarder: For exposed aggregate concrete, provide one of the following or equivalent product of another manufacturer in accordance with the "or equal" provision specified in Section 01 60 00 - Product Requirements:
 - 1. True Etch Surface Retarder, manufactured by Burke Group, LLC (The).
 - 2. Concrete Surface Retarders, manufactured by Euclid Chemical Co.
 - 3. Lithotex, manufactured by L. M. Scofield Co.
 - 4. Rugasol-S, manufactured by Sika Corporation.
 - G. Water: Clean and not detrimental to concrete.
- 2.5 ACCESSORY MATERIALS
- A. Form Release Compound: Debond Form Coating, manufactured by L&M Construction Chemicals, or equal.
 - B. Bonding Agent: One of the following, or equal.
 - 1. Everbond, manufactured by L&M Construction Chemicals.
 - 2. Weldcrete, manufactured by Larsen Products Corporation.
 - C. Fast-Setting Grout: Formulated for minimum initial set time of 15 minutes and minimum final set time of 25 minutes at 21 deg C.
 - 1. Commercially prepared and pre-packaged, one of the following, at Contractor's option:
 - a. Magnesium phosphate grout, single-component, water-activated or two-component with prepackaged liquid activator.
 - b. Modified high-alumina based grout.
 - c. Hydraulic cement-based grout.
 - 2. Clean, uniformly rounded aggregate filler may be used to extend prepackaged grout. Moisture content of aggregate filler shall not exceed 0.5 percent. Amount of aggregate filler shall not exceed instructions and recommendations of grout manufacturer.
 - D. Expansion Joint Filler, Paving: Deck-O-Foam Expansion Joint Filler manufactured by W.R. Meadows, Inc., or equal, conforming to AASHTO-M-153-84, Type 1 and Type 2, 1/2-inch thick, compatible with joint sealing products.
 - E. Expansion Joint Sealant, Paving: Three-component urethane joint sealant, as specified in Section 07 90 00 - Joint Protection, color to match adjacent concrete color.
 - F. Concrete Sealer: HLQ-125 as manufactured by SINAK Corp., San Diego, CA (619/231-1771), or equal, penetrating sealer that interacts with mineral compounds and siliceous materials in portland cement concrete to produce more dense, non-dusting surface.

- G. curb Drain Penetration Forms: Thru The Curb Drain standard model (no stamping), or equal, size as recommended by manufacturer for drain pipe required.

PART 3 - EXECUTION

3.1 CONCRETE MIXES

- A. Concrete Mix and Delivery Requirements, General: Comply with requirements specified in Section 03 30 00 – Cast-in-Place Concrete.
- B. Concrete Mix for Pedestrian (Sidewalk) Pavements, Natural Color: Standard Specification for Public Works Construction, Section 201-1.1.2 - Class 520-B-2500, with minimum slump of 4 inches, except concrete paving in public rights of way shall be as required authorities having jurisdiction.
- C. Concrete Mix for Trash Enclosure and other Exterior Slabs on Grade, Natural Color: ASTM C94 - Ready-Mixed Concrete, Alternative No. 2, minimum 28 day compressive strength as indicated on Drawings or, if not indicated, 3000 psi. Special inspection is not required.

3.2 PORTLAND CEMENT CONCRETE PAVING CONCRETE REPAIR

- A. Cracked Portland Cement Concrete Repair: Where indicated or directed, remove cracked concrete segments completely and dispose of materials legally off-site.
 - 1. Cut out defective concrete using diamond-bladed saw. Cuts shall be at crack control joints or expansion control joints. Cuts shall be neat and regular.
 - 2. Remove and replace concrete pavement that is broken, damaged, or defective or that does not comply with requirements in this Section.
 - 3. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with portland cement concrete bonded to pavement with epoxy adhesive.
 - 4. Install new portland cement concrete matching existing finish, including crack control (score) lines.
- B. Portland Cement Concrete Paving Spall Repair: Cut out and patch spalled concrete.
 - 1. Comply with fast-setting grout manufacturer's instructions and recommendations.
 - 2. Match shape and finish of existing concrete to minimize difference in appearance between patched and existing concrete.
- C. Portland Cement Concrete Grinding:
 - 1. Where indicated or directed, and where offsets are greater than 3/8-inch, grind joints between concrete segments level using diamond-bladed grinders specifically produced for concrete grinding.
 - 2. Grind in longitudinal direction of traveled way, for full width of offsetting concrete.
 - 3. Grinding shall begin and end at lines perpendicular to pavement edges and score lines, as applicable. Comply with Architect's directions for orientation.

END OF SECTION

32 17 23 – PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Section 32 12 16 Asphalt Paving.
- C. Section 32 13 13 Concrete Paving.

1.2 SECTION INCLUDES

- A. Painted traffic and parking control markings.
- B. Painted markings at playgrounds, hard courts and other exterior locations.

1.3 SUBMITTALS

- A. Submit paint samples of each color specified on the drawings.

PART 2 - PRODUCTS

2.1 PAVEMENT MARKING PAINT

- A. Paint for Traffic Striping and Marking: Epoxy-fortified vinyl/acrylic water-based paint, formulated specifically for marking traffic lines on asphaltic concrete and portland cement concrete paving, and manufactured for application in compliance with California Air Resources Board (CARB) and local air quality authorities, as applicable.
- B. Abrasive Grit: At wheelchair-accessible parking stalls and other locations with large markings, include abrasive grit for non-slip finish.
- C. Colors, General: Provide standard factory-mixed, quick drying and non-bleeding colors.
 - 1. For parking and traffic control markings, conform to Standard Specifications, as amended and adopted by City or County authority having jurisdiction, and State of California, Department of Transportation (CALTRANS) Traffic Manual, Chapter 6, Markings.
 - 2. For wheelchair accessible parking stall markings, painted lines and markings on pavement shall be 4 inches minimum wide and international blue in color, equal to Color No. 15090 according to Federal Standard 595B.
 - 3. For playground and hardcourt markings, provide colors as indicated on the Drawings.

PART 3 - EXECUTION

- 3.1 Application, General: Using proper masking, stencils and application equipment, apply marking paint at rate recommended by paint manufacturer or approximately one gallon per 150 square feet (equivalent to approximately one gallon for 450 lineal feet of 4-inch wide stripe), whichever is greater.
- 3.2 Traffic Striping: Uniform line width, typically 4 inches unless otherwise indicated, with uniform, straight edges without overspray. Provide reflective materials in striping.
- 3.3 Traffic Directional Markings and Accessibility Logo: Provide minimum of two coats paint. Provide reflective material in traffic directional markings if required by authorities having jurisdiction.
- 3.4 Curbs: Paint full vertical face and first 6 inches of horizontal plane at top of curb or combination curb/paving.
- 3.5 Hatching: Provide hatching in parking areas, including accessible parking stalls, as indicated on Contract Drawings.
- 3.6 Stall Marking:
 - A. Standard and compact stall markings: Markings style and widths as indicated on the Drawings.
 - B. Accessible stalls: Markings as indicated on Drawings and in compliance with California Building Code (CBC) Section 1129B.5.
- 3.7 Tactile Warning Lines: At accessible stalls and path of travel, provide tactile warning lines in compliance with California Building Code (CBC) Section 1133B.8.3 and Section 1133B.8.4.
- 3.8 Abrasive Grit: Broadcast abrasive grit onto wet paint at wheelchair accessible stall markings and other locations with pavement markings more than 6 inches wide.
- 3.9 Playground and Hardcourt Markings: Provide markings as indicated on the Drawings. Apply paint in two coats, allowing minimum 24 hours curing between coats, with each coat at specified application rate.

END OF SECTION

32 31 13 – CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- 1. Galvanized steel tubing
- 2. Chain link fencing
- 3. Gates and supporting hardware.

1.3 REFERENCES

- A. ASTM A392 Specification for Zinc-Coated Steel Chain-Link Fence Fabric
- B. ASTM A780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings
- C. ASTM A824 Specification for Metallic-Coated Steel Marcellled Tension Wire for Use With Chain Link
- D. ASTM F552 Standard Terminology Relating to Chain Link Fencing
- E. ASTM F567 Standard Practice for Installation of Chain Link Fence
- F. ASTM F626 Specification for Fence Fittings
- G. ASTM F668 Specification for Polymer Coated Chain Link Fence Fabric
- H. ASTM F900 Specification for Industrial and Commercial Swing Gates
- I. ASTM F934 Specification for Standard Colors for Polymer-Coated Chain Link
- J. ASTM F1083 Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures
- K. ASTM F1184 Specification for Industrial and Commercial Horizontal Slide Gates
- L. ASTM F1664 Specification for Poly (Vinyl Chloride) (PVC) and Other Conforming Organic Polymer-Coated Steel Tension Wire Used with Chain-Link Fence
- M. STM F2200 Specification for Automated Vehicular Gate Construction
- N. UL325 Automatic operators: Door, Drapery, Gate, Louver and Window

1.4 SUBMITTALS

- A. Shop drawings: Site plan showing layout of fence location with dimensions, location of gates and opening size, cleared area, elevation of fence, gates, footings and details of attachments.

- B. Certifications: Manufacturers material certifications in compliance with the current ASTM specifications.
- C. Material samples: One 12" x 12" sample of each type of chain link fabric and windscreen fabric.

1.5 QUALITY ASSURANCE

- A. Manufacturer: Company headquartered in the United States having U.S. manufacturing facility/facilities specializing in manufacturing chain link fence products with at least 5 years of experience.
- B. Fence contractor: Company with demonstrated successful experience installing similar projects and products in accordance with ASTM F567 and have at least 5 years of experience in accordance with the provisions of Section 01 43 23.
- C. Tolerances: Current published edition of ASTM specifications tolerances apply. ASTM specification tolerances supersede any conflicting tolerance.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Delivery: Deliver products to site per the requirements of Section 01 65 00.
- B. Storage: Store and protect products off the ground when required, Section 01 66 00

PART 2 - PRODUCTS

2.1 CHAIN LINK FENCING

- A. Chain Link Fencing, General: Comply with CLFMI Product Manual and the following material requirements. Fence height shall be as indicated on the Drawings.
- B. Galvanized Steel Chain Link Fabric: Helically wound and woven in diamond mesh. Provide fabric fabricated in one-piece widths for fencing in height of 12 feet (3.6 m) and less.
 - 1. Size: 2-inch mesh opening, 11 gauge (0.120-inch) wire.
 - 2. Zinc-Coated (Galvanized) Fabric: ASTM A 392, with zinc coating applied to steel wire before weaving, with minimum coating weight of not less than 1.2 oz./sq. ft. of uncoated wire surface (ASTM A 392, Class 1).
 - 3. Fabric Selvage: Knuckle at top and bottom.
- C. Vinyl-coated Chain Link Fabric: Helically wound and woven in diamond mesh. Provide fabric fabricated in one-piece widths for fencing in height of 12 feet (3.6 m) and less.
 - 1. Size: 2-inch mesh opening, 11 gauge (0.120-inch) core wire.
 - 2. Zinc-Coated (Galvanized) Fabric: ASTM A 392, with zinc coating applied to steel wire before weaving, with minimum coating weight of not less than 1.2 oz./sq. ft. of uncoated wire surface (ASTM A 392, Class 1).
 - 3. Vinyl coating:
 - a. Class 2 Extruded or fused and adheared.
 - b. Color: Black unless otherwise noted on drawings.

4. Fabric Selvage: Knuckle at top and bottom.
 - D. Steel Framework, General: Comply with material size requirements of CLFMI Product Manual requirements for Light Industrial Fences.
 1. Comply with ASTM F 1083 for line, end, corner, and pull posts and for top, bottom, intermediate and brace rails.
 2. Comply with ASTM F 900 for gate posts.
 - E. Round steel pipe and rail: Schedule 40 standard weight pipe, in accordance with ASTM F1083, 1.8 oz/ ft² hot dip galvanized zinc exterior and 1.8 oz/ft² hot dip galvanized zinc interior coating. Regular Grade: Minimum steel yield strength 30,000 psi. Provide sizes listed below unless otherwise noted on the drawings.
 1. Line posts: 4.0 inches O.D.
 2. End, Corner, Pull post: same as line posts.
 3. Top, brace, bottom and intermediate rails: 1-5/8" O.D.
- 2.2 FITTINGS
- A. Fittings Material: Comply with ASTM F 626, hot-dip galvanized pressed steel or cast-iron fence fittings and accessories with at least 1.2 oz. zinc per sq. ft. as determined by ASTM A 90.
 - B. Bottom and Center Rail Fittings: Provide manufacturer's standard galvanized steel or cast iron expansion-type couplings, approximately 6 inches long, for each joint. Provide means for attaching top rail securely to each gate corner, pull and end post.
 - C. Post and Line Caps: Provide weathertight closure cap for each post. Provide line post caps with loop to receive tension wire or top rail.
 - D. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric.
 1. Use same material as top rail for brace, and truss to line posts with 5/16-inch diameter rod and adjustable tightener.
 2. Provide manufacturers standard galvanized steel or cast iron cap for each end.
- 2.3 CHAIN LINK FENCE GATES AND HARDWARE FITTINGS
- A. Gates, General: Fabricate perimeter frames of gates from same material and finish as fence framework. Assemble gate frames by welding. Provide horizontal and vertical members to ensure proper gate operation and attachment of fabric, hardware, and accessories. Space frame members maximum of 8 feet apart unless otherwise indicated.
 - B. Swing Gates: Comply with ASTM F 900.
 1. Steel framing: Gates up to 8 feet wide:
 - a. Up to 7 Feet High: Fabricate perimeter frames of 1.660-inch minimum OD Type I steel pipe with weight of zinc-coating not less than 1.20 ounces per square foot.
 - b. Over 7 Feet High: Fabricate perimeter frames of 1.90-inch minimum OD Type I steel pipe with weight of zinc-coating not less than 1.20 ounces per square foot.

- c. Gate hardware provisions: Provide fabricated steel lockset enclosure on gate and strike enclosure on post, as indicated on the Drawings.
- 2. Fabric: Provide same fabric as for fence unless otherwise indicated. Secure fabric at vertical edges with tension bars and bands and to top and bottom of frame with tie wires.
- 3. Bracing: On gates wider than 4 feet, provide diagonal cross-bracing consisting of 5/16-inch-diameter adjustable-length truss rods on gates to ensure frame rigidity without sag or twist.
- 4. Hardware: Provide galvanized hardware and accessories for each gate according to the following:
 - a. Hinges: Size and material to suit gate size, non-lift-off type, offset to permit 180-degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6-foot nominal height.
 - b. Latch: Forked type or plunger-bar type to permit operation from either side of gate, with padlock eye as an integral part of latch.
- C. Gate Hardware, Typical:
 - 1. Latches, hinges, stops, keepers and accessories: As standard with manufacturer to suit gate size, zinc-coated steel, with weight of zinc-coating not less than 2.0 ounces per square foot.
 - 2. Hinges: Non-lift-off type, offset to permit 180-degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6-foot nominal height.
 - 3. Latches, single leaf: Forked type or plunger-bar type to permit operation from either side of gate, with padlock eye as an integral part of latch.
 - 4. Latches, double leaf: Forked gate latch assembly. 1/2-inch drop rod/fork with padlock eye as integral part of latch. Two guides welded to gate frame.
- D. Gate Hardware, Gates in Path of Travel: As indicated on the Drawings and as specified in Section 08 70 00 - Hardware. If not indicated, provide hardware as follows:
 - 1. Swing gate hardware: For gates in path of travel, comply with exit door requirements (CBC Section 1003.3.2).
 - a. Provide hardware that does not require pinching, grasping or twisting motion to operate and provide solid kick plates 10 inches minimum high, 3 inches maximum from the paving on both sides of gate.
 - b. Provide exit device (panic hardware) as indicated on the Drawings. Unlatching force for exit devices shall not exceed 15 pounds applied in the direction of travel, in compliance with UBC Standard 10-4.
 - c. Exit devices shall comply with CBC Section 1003.3.1.9.
 - d. Provide hardware of stainless steel or zinc-coated steel, with weight of zinc-coating not less than 2.0 ounces per square foot.
 - 2. Swing gate hinges: Weld-on type, butt hinge, heavy-weight, galvanized steel.
 - 3. Lockset for swing gate: Conventional swing door lockset equivalent to Sargent 30 Series cylindrical lockset, stainless steel finish and interior components suitable for exterior exposure, lever handle design to match handles used in building, storeroom

lock function (exterior lever always fixed, interior lever always operable), for mounting in special fabricated lockset enclosure on chain link gate. Provide strike box and strike for installation in special fabricated strike enclosure on strike-side gate post. Refer to Drawings for details.

E. Horizontal Sliding Gates: Comply with ASTM F 1184.

1. Steel framing: Fabricate perimeter frames of 1.90-inch minimum OD Type I steel pipe.
2. Fabric: Provide same fabric as for fence unless otherwise indicated. Secure fabric at vertical edges with tension bars and bands and to top and bottom of frame with tie wires.
3. Bracing: On gates wider than 4 feet, provide diagonal cross-bracing consisting of 5/16-inch-diameter adjustable-length truss rods on gates to ensure frame rigidity without sag or twist.
4. Track:
 - a. New construction: V-track with j-bolts for anchorage into concrete.
 - b. Existing concrete base: V-track on 1/4-inch x 4-inch steel plate (ASTM A 36) with weight of zinc-coating not less than 2.0 ounces per square foot. Provide 1/2-inch anchor holes at 18 inches on alternating sides of track.

2.4 CHAIN LINK FENCE ACCESSORIES

A. Wire:

1. Tension wire: 7 gauge (0.177-inch) marcelled tension wire complying with ASTM A 824, Coating Type II zinc, Class 4, with a minimum coating weight of 1.20 oz. per sq. ft. of uncoated wire surface.
2. Tie wire and Hog Rings: 9 gauge (0.148-inch) galvanized steel with a minimum of 1.20 oz. per sq. ft. of zinc coating to match fabric wire in compliance with ASTM F626.
3. Match type and color of vinyl coating if the chain link fabric is vinyl coated.

B. Tension or Stretcher Bars: Hot-dip galvanized steel with a minimum length 2 inches less than the full height of fabric, a minimum cross section of 3/16-inch by 3/4-inch, and a minimum of 1.2 oz. of zinc coating per sq. ft. Provide one bar for each gate and end post, and two for each corner and pull post, except where fabric is integrally woven into the post.

C. Tension and Brace Bands: 3/4-inch wide minimum hot-dip galvanized steel with a minimum of 1.20 oz. of zinc coating per sq. ft.

1. Tension Bands: 0.074-inch thick (14 gauge) minimum.
2. Brace Bands: 0.105-inch thick (12 gauge) minimum.

D. Terminal Post Caps, Line Post Loop Tops, Rail and Brace Ends, Boulevard Clamps, Rail Sleeves: In compliance to ASTM F626, pressed steel galvanized after fabrication having a minimum zinc coating of 1.20 oz/ft².

E. Concrete: For fence post base, ASTM C 94, 3,500 psi compressive strength at 28 days, using 3/4-inch maximum size aggregate and complying with general requirements specified in Section 03 30 00 – Cast-in-Place Concrete. Site mixed concrete will be acceptable.

1. Mix materials to obtain concrete with a minimum 28-day compressive strength of 3,500 psi.

2. Use at least 4 sacks of cement per cu. yd., 1 inch maximum size aggregate, maximum 3-inch slump, and 2 to 4 percent entrained air.
- F. Other Fencing Accessories: Provide other pressed steel or cast iron accessories and fencing items necessary for a complete installation as required by Project conditions and as recommended by fencing manufacturer.

PART 3 - EXECUTION

3.1 FRAMEWORK INSTALLATION

- A. Posts: Posts shall be set plumb in concrete footings in accordance with ASTM F567.
- B. Top rail: When specified, install 21 ft. lengths of rail continuous thru the line post or barb arm loop top. Splice rail using top rail sleeves minimum 6 in. long. Rail shall be secured to the terminal post by a brace band and rail end. Bottom rail or intermediate rail shall be field cut and secured to the line posts using boulevard clamps or brace band with rail end. Fences 12 feet high or higher require mid rail.
- C. Terminal posts: End, corner, pull and gate posts shall be braced and trussed for fence 6 ft. and higher and for fences 5 ft. in height not having a top rail. The horizontal brace rail and diagonal truss rod shall be installed in accordance with ASTM F567.
- D. Tension wire: Shall be installed 4 in. up from the bottom of the fabric. Fences without top rail shall have a tension wire installed 4 in. down from the top of the fabric. Tension wire to be stretched taut, independently and prior to the fabric, between the terminal posts and secured to the terminal post using a brace band. Secure the tension wire to each line post with a tie wire

3.2 CHAIN LINK FABRIC INSTALLATION

- A. Chain Link Fabric: Install fabric to outside of the framework. Attach fabric to the terminal post by threading the tension bar through the fabric; secure the tension bar to the terminal post with tension bands and 5/16 in. carriage bolts spaced no greater than 12 inches on center. Small mesh fabric less than 1 in., attach to terminal post by sandwiching the mesh between the post and a vertical 2 in. wide by 3/16 in. galvanized steel strap using carriage bolts, bolted thru the bar, mesh and post spaced 15 in. on center. Chain link fabric to be stretched taut free of sag. Fabric to be secured to the line post with tie wires spaced no greater than 12 inches on center and to horizontal rail spaced no greater than 18 inches on center. Secure fabric to the tension wire with hog rings spaced no greater than 18 inches on center.
- B. Tie wire shall be wrapped 360 degrees around the post or rail and the two ends twisted together three full turns. Excess wire shall be cut off and bent over to prevent injury. The installed fabric shall have a ground clearance on no more than 3/4 inches.

3.3 GATE INSTALLATION

- A. Swing Gates: Installation of swing gates and gateposts in compliance with ASTM F 567. Gates shall be plumb in the closed position. Hinge offset opening space shall be no greater than 1-3/4 in. in the closed position. Latch offset opening space shall be no greater than 1/4 in. in the closed position. Double gate drop bar receivers shall be set in a concrete footing minimum 6 in. diameter 24 in. deep. Gate leaf holdbacks shall be installed for all double

gates. Electrically operated gates must be manufactured and installed in compliance with ASTM F2200 and UL 325.

- B. Horizontal Slide Gates: Installation varies by design and manufacturer, install according to manufacturer's instructions and in accordance with ASTM F567. Gates shall be plum in the closed position, installed to slide with an initial pull force no greater than 40 lbs. Double gate drop bar receivers to be installed in a concrete footing minimum 6 in. diameter, 24 in. deep. Roller guards and guide posts must be installed on Type I external roller cantilever slide gate in compliance with ASTM F1184. Ground clearance shall not exceed 3 in., grade permitting. Electrically operated gate installation must conform to ASTM F2200 and UL 325.

3.4 NUTS AND BOLTS

- A. Bolts: Carriage bolts used for fittings shall be installed with the head on the secure side of the fence. All bolts shall be peened over to prevent removal of the nut.

3.5 ELECTRICAL GROUNDING

- A. Grounding: Grounding of the fence and gates is not the responsibility of the fence contractor and not included in the fencing scope of work for this contract. Grounding, when required, shall be specified and included in Division 26 Electrical. A licensed electrical contractor shall install grounding when required.

3.6 CLEAN UP

- A. The area of the fence line shall be left neat and free of any debris caused by the installation of the fence.

END OF SECTION

32 31 13.26 – TENNIS COURT FENCES AND GATES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- 1. Galvanized steel tubing
- 2. Chain link fencing
- 3. Gates and supporting hardware.

1.3 REFERENCES

- A. ASTM A392 Specification for Zinc-Coated Steel Chain-Link Fence Fabric
- B. ASTM A780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings
- C. ASTM A824 Specification for Metallic-Coated Steel Marcellled Tension Wire for Use With Chain Link
- D. ASTM F552 Standard Terminology Relating to Chain Link Fencing
- E. ASTM F567 Standard Practice for Installation of Chain Link Fence
- F. ASTM F626 Specification for Fence Fittings
- G. ASTM F668 Specification for Polymer Coated Chain Link Fence Fabric
- H. ASTM F900 Specification for Industrial and Commercial Swing Gates
- I. ASTM F934 Specification for Standard Colors for Polymer-Coated Chain Link
- J. ASTM F1083 Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures
- K. ASTM F1184 Specification for Industrial and Commercial Horizontal Slide Gates
- L. ASTM F1664 Specification for Poly (Vinyl Chloride) (PVC) and Other Conforming Organic Polymer-Coated Steel Tension Wire Used with Chain-Link Fence
- M. STM F2200 Specification for Automated Vehicular Gate Construction

1.4 SUBMITTALS

- A. Shop drawings (1 set): site plan showing layout of fence location with dimensions, location of gates and opening size, cleared area, elevation of fence, gates, footings and details of attachments.

- B. Certifications: one copy of the manufacturers material certifications in compliance with the current ASTM specifications.
 - C. Manufacturers specifications: one copy of the manufacturers specifications for the windscreen.
 - D. Material samples:
 - 1. Chain Link Fabric: one 12-inch x 12-inch sample of each type of chain link fabric used.
 - 2. Windscreen: one 12-inch x 12-inch sample of each type of windscreen used.
- 1.5 QUALITY ASSURANCE
- A. Manufacturer: Company headquartered in the United States having U.S. manufacturing facility/facilities specializing in manufacturing chain link fence products with at least 5 years of experience.
 - B. Fence contractor: Company with demonstrated successful experience installing similar projects and products in accordance with ASTM F567 and have at least 5 years of experience in accordance with the provisions of Section 01 43 23.
 - C. Tolerances: Current published edition of ASTM specifications tolerances apply. ASTM specification tolerances supersede any conflicting tolerance.

PART 2 - PRODUCTS

2.1 CHAIN LINK FENCING

- A. Chain Link Fencing, General: Comply with CLFMI Product Manual and the following material requirements. Fence height shall be as indicated on the Drawings.
- B. Galvanized Steel Chain Link Fabric: Helically wound and woven in diamond mesh. Provide fabric fabricated in one-piece widths for fencing in height of 12 feet (3.6 m) and less.
 - 1. Size: 1-3/4 -inch mesh opening, 9 gauge (0.148-inch) wire.
 - 2. Zinc-Coated (Galvanized) Fabric: ASTM A 392, with zinc coating applied to steel wire before weaving, with minimum coating weight of not less than 1.2 oz./sq. ft. of uncoated wire surface (ASTM A 392, Class 1).
 - 3. Fabric Selvage: Knuckle at top and bottom.
- C. Vinyl-coated Chain Link Fabric: Helically wound and woven in diamond mesh. Provide fabric fabricated in one-piece widths for fencing in height of 12 feet (3.6 m) and less.
 - 1. Size: 1-3/4-inch mesh opening, 9 gauge (0.148-inch) core wire.
 - 2. Zinc-Coated (Galvanized) Fabric: ASTM A 392, with zinc coating applied to steel wire before weaving, with minimum coating weight of not less than 1.2 oz./sq. ft. of uncoated wire surface (ASTM A 392, Class 1).
 - 3. Vinyl coating:
 - a. Class 2 Extruded or fused and adheared.
 - b. Color: Black unless otherwise noted on drawings.
 - 4. Fabric Selvage: Knuckle at top and bottom.

- D. Steel Framework, General: Comply with material size requirements of CLFMI Product Manual requirements for Light Industrial Fences.
 - 1. Comply with ASTM F 1083 for line, end, corner, and pull posts and for top, bottom, intermediate and brace rails.
 - 2. Comply with ASTM F 900 for gate posts.
- E. Round steel pipe and rail: Schedule 40 standard weight pipe, in accordance with ASTM F1083, 1.8 oz/ ft² hot dip galvanized zinc exterior and 1.8 oz/ft² hot dip galvanized zinc interior coating. Regular Grade: Minimum steel yield strength 30,000 psi. Provide sizes listed below unless otherwise noted on the drawings.
 - 1. Line posts: 4.0 inches O.D.
 - 2. End, Corner, Pull post: same as line posts.
 - 3. Top, brace, bottom and intermediate rails: 1-5/8" O.D.

2.2 FITTINGS

- A. Fittings Material: Comply with ASTM F 626, hot-dip galvanized pressed steel or cast-iron fence fittings and accessories with at least 1.2 oz. zinc per sq. ft. as determined by ASTM A 90.
- B. Bottom and Center Rail Fittings: Provide manufacturer's standard galvanized steel or cast iron expansion-type couplings, approximately 6 inches long, for each joint. Provide means for attaching top rail securely to each gate corner, pull and end post.
- C. Post and Line Caps: Provide weathertight closure cap for each post. Provide line post caps with loop to receive tension wire or top rail.
- D. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric.
 - 1. Use same material as top rail for brace, and truss to line posts with 5/16-inch diameter rod and adjustable tightener.
 - 2. Provide manufacturers standard galvanized steel or cast iron cap for each end.

2.3 CHAIN LINK FENCE GATES AND HARDWARE FITTINGS

- A. Gates, General: Fabricate perimeter frames of gates from same material and finish as fence framework. Assemble gate frames by welding. Provide horizontal and vertical members to ensure proper gate operation and attachment of fabric, hardware, and accessories. Space frame members maximum of 8 feet apart unless otherwise indicated.
- B. Swing Gates: Comply with ASTM F 900.
 - 1. Steel framing: Gates up to 8 feet wide:
 - a. Up to 7 Feet High: Fabricate perimeter frames of 1-5/8-inch minimum OD Type I steel pipe with weight of zinc-coating not less than 1.20 ounces per square foot.
 - b. Over 7 Feet High: Fabricate perimeter frames of 1-7/8-inch minimum OD Type I steel pipe with weight of zinc-coating not less than 1.20 ounces per square foot.
 - c. Gate hardware provisions: Provide fabricated steel lockset enclosure on gate and strike enclosure on post, as indicated on the Drawings.

2. Fabric: Provide same fabric as for fence unless otherwise indicated. Secure fabric at vertical edges with tension bars and bands and to top and bottom of frame with tie wires.
 3. Bracing: On gates wider than 4 feet, provide diagonal cross-bracing consisting of 5/16-inch-diameter adjustable-length truss rods on gates to ensure frame rigidity without sag or twist.
 4. Hardware: Provide galvanized hardware and accessories for each gate according to the following:
 - a. Hinges: Size and material to suit gate size, non-lift-off type, offset to permit 180-degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6-foot nominal height.
 - b. Latch: Forked type or plunger-bar type to permit operation from either side of gate, with padlock eye as an integral part of latch.
- C. Gate Hardware, Typical:
1. Latches, hinges, stops, keepers and accessories: As standard with manufacturer to suit gate size, zinc-coated steel, with weight of zinc-coating not less than 2.0 ounces per square foot.
 2. Hinges: Non-lift-off type, offset to permit 180-degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6-foot nominal height.
 3. Latches, single leaf: Forked type or plunger-bar type to permit operation from either side of gate, with padlock eye as an integral part of latch.
 4. Latches, double leaf: Forked gate latch assembly. 1/2-inch drop rod/fork with padlock eye as integral part of latch. Two guides welded to gate frame.
- D. Gate Hardware, Gates in Path of Travel: As indicated on the Drawings and as specified in Section 08 70 00 - Hardware. If not indicated, provide hardware as follows:
1. Swing gate hardware: For gates in path of travel, comply with exit door requirements (CBC Section 1003.3.2).
 - a. Provide hardware that does not require pinching, grasping or twisting motion to operate and provide solid kick plates 10 inches minimum high, 3 inches maximum from the paving on both sides of gate.
 - b. Provide exit device (panic hardware) as indicated on the Drawings. Unlatching force for exit devices shall not exceed 15 pounds applied in the direction of travel, in compliance with UBC Standard 10-4.
 - c. Exit devices shall comply with CBC Section 1003.3.1.9.
 - d. Provide hardware of stainless steel or zinc-coated steel, with weight of zinc-coating not less than 2.0 ounces per square foot.
 2. Swing gate hinges: Weld-on type, butt hinge, heavy-weight, galvanized steel.
 3. Lockset for swing gate: Conventional swing door lockset equivalent to Sargent 30 Series cylindrical lockset, stainless steel finish and interior components suitable for exterior exposure, lever handle design to match handles used in building, storeroom lock function (exterior lever always fixed, interior lever always operable), for mounting in special fabricated lockset enclosure on chain link gate. Provide strike box and strike

for installation in special fabricated strike enclosure on strike-side gate post. Refer to Drawings for details.

- E. Horizontal Sliding Gates: Comply with ASTM F 1184.
 - 1. Steel framing: Fabricate perimeter frames of 1.90-inch minimum OD Type I steel pipe.
 - 2. Fabric: Provide same fabric as for fence unless otherwise indicated. Secure fabric at vertical edges with tension bars and bands and to top and bottom of frame with tie wires.
 - 3. Bracing: On gates wider than 4 feet, provide diagonal cross-bracing consisting of 5/16-inch-diameter adjustable-length truss rods on gates to ensure frame rigidity without sag or twist.
 - 4. Track:
 - a. New construction: V-track with j-bolts for anchorage into concrete.
 - b. Existing concrete base: V-track on 1/4-inch x 4-inch steel plate (ASTM A 36) with weight of zinc-coating not less than 2.0 ounces per square foot. Provide 1/2-inch anchor holes at 18 inches on alternating sides of track.

2.4 CHAIN LINK FENCE ACCESSORIES

- A. Wire:
 - 1. Tension wire: 7 gauge (0.177-inch) marcelled tension wire complying with ASTM A 824, Coating Type II zinc, Class 4, with a minimum coating weight of 1.20 oz. per sq. ft. of uncoated wire surface.
 - 2. Tie wire and Hog Rings: 9 gauge (0.148-inch) galvanized steel with a minimum of 1.20 oz. per sq. ft. of zinc coating to match fabric wire in compliance with ASTM F626.
 - 3. Match type and color of vinyl coating if the chain link fabric is vinyl coated.
- B. Tension or Stretcher Bars: Hot-dip galvanized steel with a minimum length 2 inches less than the full height of fabric, a minimum cross section of 3/16-inch by 3/4-inch, and a minimum of 1.2 oz. of zinc coating per sq. ft. Provide one bar for each gate and end post, and two for each corner and pull post, except where fabric is integrally woven into the post.
- C. Tension and Brace Bands: 3/4-inch wide minimum hot-dip galvanized steel with a minimum of 1.20 oz. of zinc coating per sq. ft.
 - 1. Tension Bands: 0.074-inch thick (14 gauge) minimum.
 - 2. Brace Bands: 0.105-inch thick (12 gauge) minimum.
- D. Terminal Post Caps, Line Post Loop Tops, Rail and Brace Ends, Boulevard Clamps, Rail Sleeves: In compliance to ASTM F626, pressed steel galvanized after fabrication having a minimum zinc coating of 1.20 oz/ft².
- E. Concrete: For fence post base, ASTM C 94, 3,500 psi compressive strength at 28 days, using 3/4-inch maximum size aggregate and complying with general requirements specified in Section 03 30 00 – Cast-in-Place Concrete. Site mixed concrete will be acceptable.
 - 1. Mix materials to obtain concrete with a minimum 28-day compressive strength of 3,500 psi.

2. Use at least 4 sacks of cement per cu. yd., 1 inch maximum size aggregate, maximum 3-inch slump, and 2 to 4 percent entrained air.

- F. Other Fencing Accessories: Provide other pressed steel or cast iron accessories and fencing items necessary for a complete installation as required by Project conditions and as recommended by fencing manufacturer.

2.5 WINDSCREENS

- A. Windscreen: Royale T5021B or Durascreen T5420B as supplied by Sportsmaster or equal.
- B. Weight: .08 lbs/sq. ft.
- C. Color: Black

PART 3 - EXECUTION

3.1 FRAMEWORK INSTALLATION

- A. Posts: Posts shall be set plumb in concrete footings in accordance with ASTM F567.
- B. Top rail: When specified, install 21 ft. lengths of rail continuous thru the line post or barb arm loop top. Splice rail using top rail sleeves minimum 6 in. long. Rail shall be secured to the terminal post by a brace band and rail end. Bottom rail or intermediate rail shall be field cut and secured to the line posts using boulevard clamps or brace band with rail end. Fences 12 feet high or higher require mid rail.
- C. Terminal posts: End, corner, pull and gate posts shall be braced and trussed for fence 6 ft. and higher and for fences 5 ft. in height not having a top rail. The horizontal brace rail and diagonal truss rod shall be installed in accordance with ASTM F567.
- D. Tension wire: Shall be installed 4 in. up from the bottom of the fabric. Fences without top rail shall have a tension wire installed 4 in. down from the top of the fabric. Tension wire to be stretched taut, independently and prior to the fabric, between the terminal posts and secured to the terminal post using a brace band. Secure the tension wire to each line post with a tie wire

3.2 CHAIN LINK FABRIC INSTALLATION

- A. Chain Link Fabric: Install fabric to outside of the framework. Attach fabric to the terminal post by threading the tension bar through the fabric; secure the tension bar to the terminal post with tension bands and 5/16 in. carriage bolts spaced no greater than 12 inches on center. Small mesh fabric less than 1 in., attach to terminal post by sandwiching the mesh between the post and a vertical 2 in. wide by 3/16 in. galvanized steel strap using carriage bolts, bolted thru the bar, mesh and post spaced 15 in. on center. Chain link fabric to be stretched taut free of sag. Fabric to be secured to the line post with tie wires spaced no greater than 12 inches on center and to horizontal rail spaced no greater than 18 inches on center. Secure fabric to the tension wire with hog rings spaced no greater than 18 inches on center.
- B. Tie wire shall be wrapped 360 degrees around the post or rail and the two ends twisted together three full turns. Excess wire shall be cut off and bent over to prevent injury. The installed fabric shall have a ground clearance on no more than 3/4 inches.

3.3 GATE INSTALLATION

- A. Swing Gates: Installation of swing gates and gateposts in compliance with ASTM F 567. Gates shall be plumb in the closed position. Hinge offset opening space shall be no greater than 1-3/4 in. in the closed position. Latch offset opening space shall be no greater than 1/4 in. in the closed position. Double gate drop bar receivers shall be set in a concrete footing minimum 6 in. diameter 24 in. deep. Gate leaf holdbacks shall be installed for all double gates. Electrically operated gates must be manufactured and installed in compliance with ASTM F2200 and UL 325.
- B. Horizontal Slide Gates: Installation varies by design and manufacturer, install according to manufacturer's instructions and in accordance with ASTM F567. Gates shall be plum in the closed position, installed to slide with an initial pull force no greater than 40 lbs. Double gate drop bar receivers to be installed in a concrete footing minimum 6 in. diameter, 24 in. deep. Roller guards and guide posts must be installed on Type I external roller cantilever slide gate in compliance with ASTM F1184. Ground clearance shall not exceed 3 in., grade permitting. Electrically operated gate installation must conform to ASTM F2200 and UL 325.

3.4 NUTS AND BOLTS

- A. Bolts: Carriage bolts used for fittings shall be installed with the head on the secure side of the fence. All bolts shall be peened over to prevent removal of the nut.

3.5 ELECTRICAL GROUNDING

- A. Grounding: Grounding of the fence and gates is not the responsibility of the fence contractor and not included in the fencing scope of work for this contract. Grounding, when required, shall be specified and included in Division 26 Electrical. A licensed electrical contractor shall install grounding when required.

3.6 WINDSCREENS

- A. Attach windscreens to chain link fabric at 12 inches O.C. vertically and 18" O.C. at top and bottom. Windscreens over 6 feet shall be attached in the center as well.

3.7 CLEAN UP

- A. The area of the fence line shall be left neat and free of any debris caused by the installation of the fence.

END OF SECTION

32 31 19 – DECORATIVE METAL FENCES AND GATES

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Ornamental steel fencing, gates and related hardware, fabricated from stock steel components.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Fencing Materials, General: Provide materials of sizes and shapes as indicated on the Drawings and specified below.
 - 1. For metal fabrications exposed to view upon completion of the Work, provide ferrous metals materials selected for their surface flatness, smoothness, and freedom from surface blemishes.
 - 2. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, rolled trade names and roughness.
- B. Steel Shapes: Steel plates, bars, angles, channels, and H-sections: ASTM A36.
- C. Steel Tube:
 - 1. Hot-rolled: ASTM A501.
 - 2. Cold-formed: ASTM A500.
- D. Gate Hardware:
 - 1. Hinges: Manufacturer's standard 7-inch ball bearing hinge designed to accept lubrication.
 - 2. Gate latches for gates not in path of travel: Manufacturer's standard latch, with provision for padlock provided by Owner. Finish latches to match fencing. Provide means to latch and lock gates in both open and closed positions.
 - 3. Gate latches for gates in path of travel:
 - a. Normally closed gates: Comply with exit door requirements (CBC Section 1003.3.2). Hardware shall not require pinching, grasping or twisting motion to operate and provide solid kick plates 10 inches minimum high, 3 inches maximum from the paving on both sides of gate. At swing gates, lockset shall be exit device (panic device). See Drawings for details and hardware.
 - b. Normally open gates: Provide means to lock gate with padlock in both open and closed positions. Provide sign on or adjacent to gate stating, "This gate shall

remain locked in the open position during business/school hours or during any public functions." Sign shall be mounted 60 inches grade on or adjacent to gate.

- E. Fasteners and Accessories: Unless otherwise indicated, provide fasteners of type, grade and class required for heavy-duty use and sized and spaced as required for loads and substrate. Comply with requirements specified in Section 05 05 23 – Metal Fastenings for anchors, fasteners and grout for attachment to ground and structures.
 - 1. Provide hot-dipped galvanized or stainless steel fasteners, finished to match fencing at exposed locations.
 - 2. Provide PVC grommets to seal all picket-to-rail intersections.
- F. All metal components: All hot dip galvanized. ZINC plating is NOT acceptable.
- G. Grout: Non-metallic, non-shrink grout, as specified in Section 05 05 23 - Metal Fastenings.

2.2 FABRICATION

- A. Shop Fabrication: Shop fabricate fencing and gates in largest sizes practicable for shipping and handling.
 - 1. Fabricate components with accurate angles and surfaces, true to the required lines and levels and as required to suit installation conditions.
 - 2. Posts to be a minimum of 2 1/2" square tube x .19 wall. Top and bottom rail to be 2" square tube x .12 wall. Pickets to be 1" square tube x .06 wall. All other details of assembly and support shall give ample strength and stiffness for the intended purpose.
 - 3. Make cuts straight and free of burrs or nicks.
 - 4. Make miters, cuts and splices accurately so members will join with hairline joint gaps.
- B. Joints, General: Fit or miter to hairline tolerances. Provide lugs, clips, anchors and miscellaneous fastenings as indicated and as necessary for complete assembly and installation. Form joints to exclude water.
- C. Steel Welding: Conform to AWS D1.1.
 - 1. All field welded refinished components must be cold galvanized at weld joints. Silver paint is not acceptable.
 - 2. Grind welds smooth and flush with base material.
 - 3. Re-weld to fill holes. Putties and fillers will not be accepted.
- D. Bolted and Screwed Connections: Provide holes and connection provisions before finishing fencing components.
 - 1. Provide manufacturer's standard riveted connections typically.
 - 2. Use bolts for field connections only. Provide flat washers to distribute bearing load and provide lock washers to prevent loosening.
 - 3. Where screws must be used for permanent connections, use flat head type, countersunk, with screw slots filled and finished smooth and flush.
- E. Embedded Items: For embedment in concrete, provide weld-on lugs or anchors for secure anchorage.

- F. All components must move freely upon completion.

2.3 FINISHING ORNAMENTAL METAL FENCES AND GATES

- A. All metal components: To be hot dipped galvanized, ZINC PLATING IS NOT ACCEPTABLE
Cold galvanize all field welded joints.
- B. Finish Painting: Field finished as specified in Section 09 90 00 – Painting and Coating.

PART 3 - EXECUTION– NOT USED

END OF SECTION

32 80 00 – IRRIGATION

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Automatic sprinkler irrigation systems and controls.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Materials, General: All materials shall comply with Section 212 of the Standard Specifications, California Plumbing Code (CPC) and requirements specified below, whichever is greater.
 - 1. Re-use of existing piping, fittings and wiring materials will be acceptable.
 - 2. Re-use of existing valve boxes, valves, backflow preventers, wye strainers, meters, moisture sensors and metallic irrigation heads will be acceptable if these components are inspected by Project Inspector after removal and determined to be suitable for re-use. Should these components be found after re-installation to be defective, these components shall be replaced with new components at no change in Contract Time and Contract Sum.
 - 3. Re-use of existing controllers will be acceptable. Should these components be found after re-installation to be defective, these components shall be replaced with new components at no change in Contract Time and Contract Sum.
 - 4. Re-use of electrical power and signal components will not be acceptable.

2.2 PIPE AND FITTINGS

- A. Pipe and Fittings Identification:
 - 1. Identify all pipe and fittings with the following indelible and continuous markings:
 - a. Manufacturer's name.
 - b. Nominal pipe size.
 - c. Schedule or class.
 - d. Pressure rating, in psi.
 - e. NSF Seal of Approval.
 - f. Date of extrusion.

2. Electric Control Valve Tags: Yellow in background with black letters 2-3/4 inches by 2-1/4 inches.
 - a. Attach identification tag showing valve number on each solenoid pigtail.
 - b. Quick Coupling Valve Tags: Red background with black letters which read, WARNING--UNSAFE WATER--DO NOT DRINK. Print Spanish translation on other side.
 - c. Attach identification tag to each quick coupling valve.
- B. Plastic Pipe and Fittings: Solvent weld type, virgin polyvinyl chloride (PVC) compound, complying with ASTM D 2241 or ASTM D 1784, Class 12454-B.
 1. Hydrostatic design stress rating: 2,000 psi.
 2. Exposed plastic pipe: Integral gray color, Schedule 40 ultra-violet resistant (UVR) PVC pipe manufactured with a distinguishing brown color and marked with manufacturer's name and UVR designation.
 - a. PVC fittings used with UVR pipe: Schedule 40 UVR PVC type.
 - b. Threaded risers and nipples: ASTM D 1785 Schedule 80 PVC.
 - c. Other risers and fittings: ASTM D 1785 Schedule 40 PVC, solvent weld.
 3. Pressure Pipe:
 - a. Point of Connections to Backflow Preventer: Provide copper or brass piping.
 - b. Downstream of Backflow Preventer:
 - 1) Size up to 1-1/2 inches diameter: Type I, Grade I, Schedule 40 PVC in accordance with ASTM D 1785.
 - 2) Size 2 inches diameter up to 2-1/2 inches diameter: Class 315 solvent weld PVC in accordance with ASTM D 2241.
 - 3) Size 3 inches diameter and larger: Class 200 bell and gasket PVC in accordance with ASTM D 2672.
 4. Non-Pressure Pipe: Piping downstream of remote control valves, 3/4-inch diameter and larger:
 - a. Schedule 40 solvent weld PVC conforming to ASTM D 1785 under paved areas.
 - b. Class 200 solvent weld PVC conforming to ASTM D 2241 in planted areas.
 - 1) Comply with general requirements for pressure lines specified above.
 - 2) Offsets shall be a minimum 3/4-inch unless Contractor receives written approval from Architect.
 - c. Comply with general requirements for pressure lines specified above.
 - d. Offsets shall be minimum 3/4-inch unless otherwise approved in writing.
- C. PVC Fittings: Schedule 40 for Schedule 40 (laterals) piping, and Schedule 40 for Schedule 40, CL 315 and Schedule 80 (main) piping as indicated on the Drawings. PVC fittings shall be II-I NSF approved and shall conform to ASTM D 2466.
 1. Weight: Standard.
 2. Manufacture: Injection molded of improved virgin PVC fitting compound.

3. Slip Fittings: Deep socket bracketed type.
4. Threads (where required): Injection molded type.
5. Tees and Ells: Side gated.
6. Threaded nipples: ASTM D 1785 Schedule 80 Type 1, with molded threads, 3-inch minimum length.
7. Identification: Manufacturer's name or trademark, material designation, size, applicable IPS schedule and NSF seal of approval.

D. Copper Pipe and Fittings:

1. Pipe: Type K, hard tempered.
2. Fittings: Wrought copper, solder joint type.
3. Solder: Silver solder, 45 percent silver, 15 percent copper, 16 percent zinc, and 24 percent cadmium. Solder shall be solid at 1125 degrees F and liquid at 1145 degrees F.

E. Brass Pipe and Fittings:

1. Brass pipe: 85 percent red brass, ANSI [____], IPS Standard 125 pound class, [Schedule 40] [medium weight] threaded pipe with threads conforming to ASA Specification B2.
2. Fittings: Medium pattern, banded, 125 pound class, FS WW-P-460.

F. Conduit: Gray, UL listed and labeled, PVC, Schedule 40 electrical conduit ASTM F 512.

G. Bell and Gasket Fittings:

1. Fittings for bell and gasket pressure supply lines shall be ductile iron deep bell type. Fittings shall be manufactured of ductile iron, Grade 65-45-12 in accordance with ASTM A 536. Fitting gaskets shall be in accordance with ASTM F 477. All ductile iron fittings shall be manufactured with exterior lugs. Ductile iron fittings shall be as manufactured by Leemco, Inc., Corona, CA, or equal.
2. All tee fittings used to connect remote control valve assemblies and quick coupler assemblies to the mainline shall be ductile iron deep bell type. The outlet side of the tee or ell to the valve assembly shall be sized according to the diameter of the largest valve in the assembly or a minimum of 2 inches. Ductile iron deep bell type reducers when used with bolt-on links are allowable instead of reducing tees or ell. PVC pipe connections to the valve assembly shall be secured to ductile iron fitting using a joint restraint.
3. All ductile iron fittings and all bell and gasket joints within 50 feet of a directional change in the mainline shall be equipped with mechanical joint restraints. Joint restraint shall be capable of securing PVC pipe directly to lugs on ductile iron fittings without use of bolts, links and adapters. Joint restraint shall be capable of securing PVC pipe to PVC pipe and PVC pipe to ring joint isolation valves without use of threaded linkages. Joint restraints shall be as manufactured by Leemco, Inc., Corona, CA, or equal.

H. Pipe Sleeves: All piping under vehicular paving shall be installed in PVC pipe sleeve.

1. Smaller than 4 inches: ASTM D 1785 Schedule 40 PVC.

2. 4 inches and Larger: ASTM D 1784 Class 12454-C (formerly Type I, Grade 2, Class 315) PVC.

2.3 PVC PIPE JOINT CONNECTIONS

- A. Slip-Fit Connections: Solvent cement welded, using two-step process consisting of primer and solvent cement applied according to manufacturer's instructions. Solvent cementing shall be in conformance with ASTM D 2564 and ASTM D 2855.
 1. Joint Cement: For non-pressure plastic pipe and fittings, 100 percent active solvent chemically-compatible with pipe, fittings and primer, having fluid consistency, not gel-like or ropy, blue in color.
 2. As recommended by manufacturers of pipe and cement.
- B. Plastic-to-Metal Connections: Female adapters, hand-tightened, plus one turn with strap wrench. Joint compound shall be non-lead base Teflon paste, tape, or equal.

2.4 VALVES

- A. Gate Valves: Gate valves shall be of the manufacturer, size, and type indicated on the Contract Drawings.
 1. Comply with AWWA Standards.
 2. Provide line-sized, ASTM A 126 Class B cast iron, epoxy coated, 200 psi rated, vulcanized encapsulated resilient wedge disc.
- B. Ball Valves: Provide size, type, and manufacturer indicated on Contract Drawings.
 1. Conform to AWWA standards.
 2. Provide bronze body and stainless steel ball and stem. Ball valves shall have threaded connections.
 3. Valves shall be pressure-rated not less than 1000 pound WOG.
- C. Quick Coupler Valves: Manufacturer, size, and type indicated on the Drawings.
 1. Quick coupler valves shall have [3/4-inch] [1 inch] female threaded opening at base, with two-piece body.
 2. Valves shall to be operated only with coupler key, designed for that purpose. When coupler key is inserted into valve a positive, watertight connection shall be made between the coupler key and valve.
 3. Provide hinged, self-closing cover, locking type, constructed of brass with green rubber-like vinyl protective covering.
- D. Swing Check Valves 2 inches and Smaller: 200 pound WOG bronze construction with replaceable composition, neoprene, or rubber disc, conforming to FS WW-V-51D, Class A, Type IV.
- E. Anti-Drain Valves: Provide manufacturer, size, and type indicated on the Contract Drawings.
 1. Heavy duty virgin PVC construction with FIP thread inlet and outlet.
 2. Internal parts shall be stainless steel and neoprene.
 3. Field adjustable against drawout from 5 to 40 feet of head, factory set at 12 feet.

4. Provide 18-8 stainless steel springs and valve stems with Buna-N seals.
5. Threaded connections shall be the size of the riser or pipe they are to be installed onto, or the next available size. No slip connection anti-drain valves are allowed.

F. Remote Control Valves: Electrically-operated and of the manufacturer, size, and type indicated on the Drawings.

1. Valve Type: Spring-loaded, self-cleaning, packless diaphragm activated, normally closed type, equipped with flow control.
2. Valve Body: Brass or plastic as indicated on Contract Drawings.
3. Valve Solenoid: 24-volt AC 4.5-watt maximum, 500-milliamp maximum surge, corrosion-proof, stainless steel construction, epoxy encapsulated to form a single integral unit.
4. Provide manual bleeder valve to permit operation in the field without power at the controller.

2.5 VALVE BOXES

A. Non-Traffic Type Valve Boxes: Green weather-resistant plastic material resistant to sunlight and chemical action of soils. Provide box with locking cover.

1. Remote Control Valve Boxes: 9-1/2 inches by 16 inches by 11-inches. Box shall be marked IRRIGATION CONTROL VALVE. Brand valve station numbers on top of cover with 2-inch high letters.
2. Valve Boxes: Provide round green plastic valve box with locking lid marked WATER. Brand the symbol BV in 2-inch high letters on lid for ball valve boxes. Brand the symbol GV in 2-inch high letters on lid for gate valve boxes.
3. Quick Coupling Valve Boxes: Provide locking lid for quick coupling valves. Brand QCV in 2-inch high letters.
4. Valve box extensions shall be by the same manufacturer as the valve box.
5. Automatic control valve, master valve, and flow sensor boxes shall be 6 inches by 11-inches by 12 inches rectangular size. Valve box covers shall be heat branded in 2-inch high letters with either RCV with the valve identification number, MCV, or FS.
6. Ball valve, gate valve, air relief valve, flush valve, and quick coupler valve boxes shall be 10 inches circular size. Valve box covers shall be heat branded in 2-inch high letters with either BV, GV, AR, FV, or QCV, as applicable.

B. Traffic-Type Valve Boxes: The cover and box shall be capable of sustaining a load of 1,500 pounds. No valve boxes shall be allowed in paved areas.

2.6 IRRIGATION HEADS

A. Irrigation Heads: Manufacturer, size, type as indicated on the Drawings.

1. Radius of throw, operating pressure, and discharge rate: As indicated on the Drawings.
2. Irrigation head types: As indicated on the Drawings.

B. Riser/Swing Joint Assemblies: Fabricated in accordance with details indicated on the Contract Drawings.

- C. Riser Nipples: Same size as riser opening in sprinkler body.
- 2.7 BACKFLOW PREVENTION UNITS
- A. Backflow Prevention Unit: Manufacturer, size and type shown on the Drawings. Backflow prevention units shall include gate valve and test cock.
 - 1. Include wye strainer constructed of 85 percent red brass with 40 mesh monel screen.
 - 2. Devices shall meet the requirements of ASSE Standard 1013, AWWA Standard C506, and USC Foundation for Cross Connection Control and Hydraulic Research.
- 2.8 AUTOMATIC CONTROLLER
- A. Automatic Irrigation Controller: Manufacturer, size and type shown on the Drawings.
 - B. Electrical Connections: Make connections between controller and remote control valve with direct burial copper wire.
 - 1. Wire shall be No. 14 AWG Type UP 600-volt single conductor type, PVC insulated underground feeder, UL approved.
 - 2. Pilot wires shall be a different color for each controller. Common wires shall be white with a color stripe matching the controller pilot wire color.
- 2.9 ELECTRICAL
- A. Electrical, General: All electrical equipment shall be NEMA Type 3, waterproofed for exterior installations, complying with requirements of California Electrical Code (CEC) and requirements specified in Division 16 - Electrical.
 - B. High Voltage: Electrical service to automatic controller shall be in accordance with Division 16 Sections. Provide final hookup to equipment as a part of the Work specified in this Section.
 - C. Low Voltage:
 - 1. Connections between controller and remote control valves shall be made with direct burial AWG-UF 600 volt wire, 14 gauge or larger, insulation thickness 3/64-inch, utilizing low density high molecular weight polyethylene insulation.
 - 2. Control wires shall be red. Where two or more controllers are used, they shall be a different color for each controller.
 - 3. Colors shall be noted on the Controller Charts located on controller door.
 - 4. Flow sensor shall be wired to the controller using Rainmaster EV-CAB-SEN shielded sensor cable consisting of two 14 gauge copper wires.
 - D. Direct Burial Wiring: AWG-UF 600 volt wire, 12 gauge or larger, insulation thickness 3/64-inch, utilizing low density high molecular weight polyethylene insulation.
 - 1. Bury wire a minimum of 18 inches in depth in same trench as main irrigation line. Secure to pipe with plastic electrical tape at intervals of 10 feet on centers, providing slack for thermal movement.
 - 2. Provide a 24-inch expansion curl within 3 feet of each wire connection, change of direction, and at least every 100 feet of wire length.

- E. Wiring Splices: All splices and RCV connections shall be made using 3M DBY wire connectors or Spears DS-400 pre-filled wire connectors.
 - 1. Locate field splices in pull boxes set 1 inch above finish grade.
 - 2. Field splices between controller and remote control valve will not be permitted.

2.10 MISCELLANEOUS EQUIPMENT

- A. Miscellaneous Equipment: Flow meters, rain sensors, basket strainers and master valves shall be manufacturer, size and type shown on the Drawings.

PART 3 - EXECUTION – NOT USED

DIVISION 33 – UTILITIES

The Design Professional must coordinate the technical specifications with the District's Division 00 and 01 requirements

33 30 00 – SANITARY SEWERAGE

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Sanitary sewer lines

PART 2 - PRODUCTS

2.1 BEDDING MATERIALS

- A. Bedding Materials: Comply with requirements specified in Section 31 20 00 – Earth Moving.

2.2 MANHOLES

- A. Precast Concrete Manholes: Manufacturer and model as indicated on the Drawings, complying with ASTM C478, precast reinforced concrete, of depth indicated with provision for rubber gasket joints.
 - 1. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having a separate base slab or base section with integral floor.
 - 2. Riser Sections: 4-inch minimum thickness; 48-inch diameter, and lengths to provide depth indicated.
 - 3. Top Section: Eccentric cone type, unless concentric cone or flat-slab-top type is indicated. Top of cone to match grade rings.
 - 4. Grade Rings: Provide 2 or 3 reinforced concrete rings, of 6 to 9 inches total thickness and match 24-inch diameter frame and cover.
 - 5. Gaskets: ASTM C443, rubber.
 - 6. Steps: Cast into base, riser, and top sections sidewall at 12-to 16-inch intervals.
 - 7. Pipe Connectors: ASTM C923, resilient, of size required, for each pipe connecting to base section.
 - 8. Channel and Bench: Concrete.
- B. Manhole Frames and Covers: As produced by Alhambra Foundry Co., Ltd., (AFC), Alhambra, CA (818/289-4294), or equivalent, complying with ASTM A536, Grade 60-40-18, heavy-duty, ductile iron, 24-inch inside diameter by 7- to 9-inch riser with 4-inch minimum width flange, and 26-inch-diameter cover, indented top design, with lettering "SANITARY SEWER" cast into cover. Or equal

2.3 PIPING AND FITTINGS

- A. Piping and Fittings, General: Provide types, sizes and configurations of pipe, fittings and accessory products as indicated on the Drawings and as required by authorities having jurisdiction. Piping, fittings and accessory materials specified herein shall be provided unless otherwise indicated or required by authorities having jurisdiction.
- B. Vitrified Clay Pipe (VCP) and Joint Devices:
 - 1. Pipe: ASTM C700, unperforated, strength according to standard specifications of serving sanitary sewer agency; inside nominal diameter as indicated on the Drawings, bell and spigot end joints.
 - 2. Vitrified Clay Pipe Joint Device: ASTM C425, compression gasket joint.
- C. PVC (Polyvinyl Chloride) Pipe and Joint Devices:
 - 1. Pipe: PVC pipe conforming to ASTM D3034 for SDR 35 or Uni-Bell Uni-B-7 conforming to ASTM F679, unperforated, strength according to standard specifications of serving sanitary sewer agency.
 - 2. Joints: Bell and spigot with elastomeric gaskets.
 - 3. Size: Inside nominal diameter as indicated on the Drawings.
 - 4. Gaskets: ASTM F477, elastomeric seal.
 - 5. Fittings: ANSI A21.10 gray iron or ductile iron for use with PVC pipe, with mechanical joint ends. Couplings shall be Certainteed Corp. Fluid-Tite, Johns-Manville Ring-Tite, or approved equivalent.
- D. Fitting Bends: Long-radius unless otherwise approved by responsible design professional and serving sanitary sewer agency.
- E. Pipe-to-Pipe Connections: Make with 45 degree wyes and long radius bends. Tees will not be acceptable.
- F. Cleanouts: At grade, cleanouts shall have adjustable sleeve-type housing, threaded brass plug with countersunk slot, and cast iron frame and cover.
- G. Piping Adapters: As recommended by pipe manufacturer and as approved by authorities having jurisdiction, for connecting pipe to manholes and for end enclosures.

PART 3 - EXECUTION – NOT USED

33 50 00 – NATURAL GAS SERVICE SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

- A. The general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Natural gas distribution systems piping, specialties, and accessories outside the building.

PART 2 - PRODUCTS

2.1 BEDDING MATERIALS

- A. Bedding Materials: Comply with requirements specified in Section 31 20 00 – Earth Moving.

2.2 PIPE AND PIPE FITTINGS, GENERAL

- A. Pipe and Fittings, General: All pipe and pipe fittings shall comply with requirements of the serving utility. Pipe and pipe fitting materials shall be compatible with each other. Where more than one type of material or product is indicated, selection shall be made by the serving utility.

PART 3 - EXECUTION – NOT USED

Introduction:

A7 Group, Inc. has been awarded a contract by San Diego County Office of Education (SDCOE) to prepare a roofing information and specification manual for the Sweetwater Unified School District.

The intended purpose of this manual is to 1) educate the user on roofing options typically utilized on commercial buildings in Southern California, 2) provide cost, useful life expectancy, and typical warranty options for roofing types, and 3) provide generic specifications for several roofing type options. Specifications included are intended for procuring competitive bidding on both new and replacement roofing projects and are not to be used as part of construction documents for individual projects. Design team and/or roofing contractor is required to provide final record drawings and specifications.

Low Slope vs Steep Slope

Roofs can generally be divided into two categories: low slope and steep-slope. The incline or slope of a roof is the primary factor in determining which of these categories a particular roof falls. The *NRCA Roofing and Water-proofing Manual, Fifth Edition*, defines these conditions as follows:

Low-slope roofs: a category of roofs that generally include weatherproof membrane types of roof systems installed on slopes at or less than 3:12 (14 degrees).

Steep-slope roofs: a category of roofs that generally include water-shedding types of roof coverings installed on slopes greater than 3:12 (14 degrees).

Roofing Costs

Total roofing costs to consider when determining best roofing option for the assembly, include the removal of existing roofing (material hauling and dump fees), new roofing material cost, installation and maintenance required over time. Using either recycled or recyclable roofing materials can help reduce the cost of a roofing system. Using simple roofing systems like self adhered TPO or large panel metal roof can also help reduce installation costs.

Useful Life Expectancy

Exposure to the elements, product quality, routine maintenance, and design all play roles in determining the useful life expectancy of a roofing system. Longer lasting roofing systems like tile and metal systems are extremely durable and inherently a much larger investment. Asphalt and membrane based roofing systems do not last as long but can be easily repaired by applying a new coats or layers.

Typical Warranty Options

There are two warranties that need consideration when choosing a roofing system, product warranty and installation warranty. The product warranty is through the manufacturer product manufacturer and typically includes protection against product related defects. A good resource for additional information about roofing warranties is the NRCA's Consumer Advisory Bulletin Addressing Roofing Warranties.

The installation warranty will be provided by the roofing contractor and will cover roofing installation and workmanship issues. There should be a list of items provided by the contractor, highlighting the work

done and which items will be covered under the warranty. Typical warranties will cover the roofing installation for one or two years.

Volatile Organic Compounds (VOC)

Volatile organic compounds or VOC's are harmful compounds that can be released into the environment and are regulated both state and city wide. The Federal Clean Air Act Amendments of 1990 (CCA) place the Environmental Protection Agency (EPA) in charge of the regulation of pollutants in commercial products. These regulations hold the manufacturers, installers and owners (people who "solicit" the use of containing products) responsible for abiding by the National Air Quality Standards (NAAQS). Adhesives and sealants in the single ply roofing membrane category are specifically regulated by the South Coast Air Quality Management District (SCAQMD) established in 1989 in California. Other VOC's that are regulated are those that are released by exposure to the sun's rays (photochemically reactive) and that stay within the ground level ozone layer (troposphere). These products include; substrates, roofing systems, primers and coatings, adhesives.

Cool Roofs/ Title 24 (California)

Cool roofs are roofs that gain less energy from the sun than traditional roofs reducing the heat island effect which produces hotter climates and produces unhealthy air. Cool roofs passively provide buildings that are more comfortable for people while reducing the cost to regulate indoor temperatures with traditional air conditioning systems. It is because of these benefits that California's energy code (title 24) has incorporated cool roofs into its energy efficiency standards.

The Cool Roof Rating Council (CRRC) is an organization that analyze thermal emittance and solar reflectance of roofing products. The CRRC is a valuable resource for city officials in providing insight into low-slope and steep-slope roofing products.

Additional information, including current regulations, training, and financial incentives offered from local utilities, can be found online at the California Energy Commission's website.

Fire Rated Roofing Classification

Roofing systems must be able to meet or exceed the fire ratings regulated by building codes and insurance policies. Roofing systems are classified by both the top surface resistance to fire and the time taken to reach the interior side. Roof systems are classified as either Class A (highest resistance rating), B or C (lowest resistance rating). See manufacturer submitted test results and required construction buildouts to obtain rating.

ASTM International (American Society for Testing and Materials) is an international organization that develops and publishes technical standards for materials, products and systems. ASTM E108 is the fire test method for roof systems and may be carried out by multiple companies including industry respected laboratories like UL Inc., FM Global, or other certified testing laboratories.

Ventilation

Providing your roof system with ventilation methods can lead to cooler attics in summer and dryer attics in winter. This can reduce the chance of roofing system failure and save energy which is why all roofs whether flat or sloped are required by the International Code Council (ICC) and California Building Code (CBC) to be ventilated. Having an unvented attic space in summer can cause moisture buildup within the

roofing system due to condensation which can cause moisture to infiltrate roof sheathing, structure, and roofing membranes. Letting the heat buildup in an attic space can cause radiation of heat to transfer down to the occupiable spaces causing HVAC systems and other appliances to work harder. In chilly winter days, moist air can rise from the lower portions of the building causing it to condense on the colder surface to the roofing system.

Ventilation can be acquired by both passive and active strategies. Ventilation components must be correctly sized and positioned to allow for a proper volume of air movement. Attic space vents and fans are typically located at the top (roof ridge) and bottom (roof eave) to allow an intake and exhaust system for the enclosed space. Flat roofing systems, if enclosed, are required to have a one inch vented air barrier within the construction. Providing an escape route for high pressure (hot) air to escape produces a low pressure below drawing in cooler outside air. Using natural wind currents are also a crucial factor in providing adequate ventilation. Low pressure winds traveling over the roof causes a vacuum effect that pulls high pressure (hot) air from the enclosed roof space up and out while cooler outside air travels in from other vents below. If these passive strategies are inadequate, then active strategies like fan can be installed to help push and pull air through the space.

Deferred Maintenance

The roof is the buildings first line of defense against the elements. It's a year-round battle against wind, rain, fire and the sun. This constant exposure is bound to put wear and tear on any roof system. Routine observations are crucial to maintaining a roof system. Roof inspections should be done annually and your priority should be to identify and repair any major problems so they don't compromise the buildings structure causing more work to be done.

Identifying the cause of a roof leak or areas that might turn into a leak can be as easy as performing a visual inspection both on the interior and exterior. On the interior, stains on the ceiling can be caused by water penetrating the roof system. Water pooling on a roofs surface means that the slope of the roof is not adequate for proper runoff and can lead to premature aging of the roofing material. Water leaking through the top roofing material can cause wearing and degradation substrates, roof structure, and other interior elements. Symptoms such as these should be addressed immediately with a visual inspection and confirmation that the roof system is the cause.

Other areas to check include making sure gutters and downspouts, as well as all drains, are clear so that water can properly shed the roofing surface having a clear path or travel away from the structure.

3rd Party Roofing Consultant

Roofing systems are complex and depending on the systems can have many failure points over time. Roofing consultants provide assistance with educated decision making regarding which roof system is appropriate for your specific building and which steps should be taken to reduce the chance of failures in the future.

Quick Reference Roofing Selection Matrix

The matrix below is intended to quick reference guide to roofing options for specific project types.

	Pages	Cost/SF	Useful Life (Years)	Warranty Periods	Low-VOC	Class 'A' Fire Rating	Coolroof Certified	Recyclable	Simple Installation	Medium Installation	Complex Installation	
<u>Steep Slope</u>												
Asphalt Shingles	5 - 6	\$4.00 - \$6.50	15 - 18	10 - 30	X	X	X	X	X			
Clay Roof Tiles	7 - 8	\$12.00 - \$18.00	75 - 100	10 - 50	X	X		X		X		
Concrete Roof Tiles	9 - 10	\$7.00 - \$10.00	40 - 50	10 - 50	X	X		X		X		
Standing-Seam Mtl. Panels	11 - 12	\$12.00 - \$18.00	25 - 100	20 - 50	X	X	X	X	X			
<u>Low Slope</u>												
Built-Up Asphalt Roofing	13 - 14	\$6.00 - \$10.00	15 - 20	10 - 20		X	X	X			X

073113 Asphalt Shingles

Commercial Application Images

General Information

History - Asphalt shingles have been used in North America since the early 1900s and are the most common type of roof covering used for steep-sloped roof construction. Asphalt prepared roofing was the precursor to asphalt shingles and was similar to underlayment of today being topped with granules like mica, oyster shells or slate. Originally all out of heavy organic material, usually cotton or wood fiber, structural base mats became offered in fiberglass decreasing the weight of the material and structural system needed to support the roofing compared to heavier concrete or clay roofs. Asphalt shingles today are factory manufactured at massive scale and are among the most common choice for a multi-layered, overlapping, water-shedding roof coverings.

Composition – Shingles are generally composed of asphalt or modified asphalt, fillers, a reinforcing mat and a granular surface. Organic and fiberglass base mats are both used for the structural component in shingles. Organic bases consist of formerly living materials such as wood fiber or cellulose which are more suited for cold climates because they are less brittle than fiberglass shingles and receive a Class “B” fire rating. Fiberglass shingles use layered fiberglass with resins which are better suited for warmer climates because they are typically a Class “A” roof construction. These base mats are coated with asphalt or modified asphalt on both sides and one side is topped with slate, quartz, vitrified brick or stone granules.

Shingle Shapes & Styles – There are a variety of shingle assemblies including individual shingles, strip shingles, and laminated shingles. Strip shingles generally come in “3-tab” and “4-tab” lengths creating a time saving, easy to install unit, and are the most common asphalt shingle produced. Laminated strip shingles, commonly referred to as “dimensional” or “architectural” shingles have multiple layers of material varying per tab, creating a diverse pattern. Strip and laminated shingles have a self-sealing adhesive strip option on the bottom side which help resist strong wind loads. Single shingles do not come with a self-sealing adhesive strip option but do have a “T”-Lock system where individual shingles lock together to create wind resistant assemblies. Single shingles are commonly used for the different profiles that are offered including diagonal and octagonal shapes.

Typical Assembly

Attachment Methods - Asphalt shingles are typically installed using minimum 12- gauge galvanized steel nails with a minimum head diameter of 3/8” into a structural wooden substrate with underlayment between. Nails should be long enough to penetrate 3/4” into the roof deck.

Roof Deck & Underlayment - The roof deck is the structural substrate on which shingles are attached. The roof deck material must be able to accept which ever fastening system is being used.

The underlayment in a roofing system provides protection for the roof deck during and after installation of the roofing system. Typical underlayment types include asphalt saturated felt, polymer-modified bitumen sheets and asphalt roof cement.

Pros/Cons

Pros - Asphalt shingles are widely used because of their many attributes including: ease of installation, recyclability, wide variety of shapes and colors, and being an economic alternative. The quick and easy installation allows for flexibility in timing of the construction process.

Cons - Asphalt shingles have a relatively short lifespan and since being made from petroleum are not an environmentally friendly product. Lifespan can also be greatly decreased with rapid variations in weather (soaking then drying shingles) and by poor attic ventilation that bakes the shingles, driving out essential oils.

Life Expectancy

Depending on quality of shingle and climate, Asphalt shingles life can range from 15-18 years.

Material and Installation Cost (Approx. SD Region)

\$4.00 - \$6.50 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment). Low material cost with relatively fast installation.

Typical Manufacturer Warranty Options

Material warranty period: 10-30 years.

Masterspec Specification Section 073113

Refer to attached.

073213 Clay Roof Tiles

Commercial Application Images

General Information

History - Clay roofing tiles are amongst the oldest modular roofing systems used throughout the world dating back as far as 10,000 B.C. and are still being widely used today. Clay tiles became prevalent when looking for a more durable fire resistant replacement for thatched roofs. Since then the specific composition and shapes of these tiles have been adapted to suit the performance and design requirements of modern day applications.

Composition – Clay tile roofing has evolved over centuries. High quality clay and shale deposits are selected for mining based on their mineral compositions, which are responsible for the hardness, durability and color of the finished product. The raw material is crushed into fine powder and mixed with minerals to achieve the desired mixture. The clay is then wetted and worked to become a homogenous mass of the proper plasticity. The clay is extruded, cut to size, and formed or pressed into the various shapes and styles desired. A wide variety of surface textures and some ceramic matte colors may be applied before drying and firing. The natural red color of clay tile results from the firing process. High-gloss ceramic glazes may be applied to fired tile, which in turn is re-fired to add durable color and gloss to the surface.

Roof Tile Shapes – Common types include Pan & Cover (2-piece barrel or mission tile), Roman tile (barrel caps & flat pans), Greek tile (angular caps & flat pans), flat interlocking tiles, S tile and a plain flat tile. Hundreds of custom tile shapes exist, and vary per manufacturer, making clay tiles an easy option to suit custom design intents.

Typical Assembly

Attachment Methods - Several types of securement methods are used with respect to climate and design. The following should be considered when choosing a securement method: slope, deck type, wind loads, seismic affects, local codes and manufacturers recommendations. Several types of attachment methods are used including: nails, clips, lug hung tile, bedding tile, and wire tie and strapping systems. Nails and/or clip attachment, are the most common methods used for tile fastening in high wind and seismic areas. Lug hung, wire tie and strapping systems are used when there is no sheathing for attachment. Bedding the tile in either mortar or a spray adhesive is a less common option but used for sealing gaps for increased fire protection and thermal insulation purposes.

Roof Deck & Underlayment - The roof deck is the structural substrate on which the tiles are attached. The roof deck material must be able to accept the selected fastening system. The underlayment in a roofing system provides weather protection for the decking and interior space below. Typical underlayment types include asphalt saturated felt, polymer-modified bitumen sheets and asphalt roof cement.

Pros/Cons

Pros – Clay tiles are a long-term roofing solution lasting up to 100 years. Highly customizable means suitable for a multitude of designs. Clay tiles have a low moisture absorption rate of around 6% which leads to a lesser chance of mildew and stains. Tiles offer a high fire resistance rating.

Cons – Clay tile roofing is initially expensive for both the material and installation tile required. Among the heavier of roofing systems, the roof structure must be able to accept the larger loads. Relatively strong but still among the more fragile of roofing systems.

Life Expectancy

Depending on quality of tile and climate, Clay tiles life can range from 75 to 100 years.

Material and Installation Cost (Approx. SD Region)

\$12.00 - \$18.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment).

Typical Manufacturer Warranty Options

Material warranty period: 10-50 years.

Masterspec Specification Section 073213

Refer to attached.

073216 Concrete Roof Tiles

Commercial Application Images

General Information

History – Concrete roof tiles came after the invention and wide use of clay roofing tiles in the mid-19th century in Europe. Today 90% of all roofs in Europe are concrete tiles because of the rapid improvements in the manufacturing process decreasing the cost compared to that of clay. Tiles today are largely available due to the automated extrusion plants that exist in North America.

Composition – Tiles typically consist of Portland cement, water, and sand which are mixed and either, extruded at elevated temperatures or tamped into the desired shape. Tiles can also be made from light weight concrete mixes decreasing the load on the roof deck. Admixtures and fiber reinforcements are also added in to give tiles improved strength, reduce water absorption and cure rate. Using a lightweight composition can reduce the overall tile weight by half. This is done by using lightweight aggregate, usually expanded shale, rather than sand. Like other concrete products curing is a time intensive process that will continue after the tiles are installed.

Roof Tile Shapes & Color – There is a large variety of profiles, styles and finishes available. Classic types include Pan & Cover (2-piece barrel or mission tile), flat interlocking tiles, S tile and a plain flat tile. Tiles are now being made to imitate wood shake roofs. Color can be added to the tiles by either integration into the mix pre-extrusion or applying a glaze afterwards. Applying glaze can provide additional strength and resistance to the elements. Some tiles receive sprayed solution that soak into the tile provided additional waterproofing.

Typical Assembly

Attachment Methods - Several types of securement methods are used with respect to climate and design. The following should be considered when choosing a securement method: slope, deck type, wind loads, seismic affects, local codes and manufacturers recommendations. Several types of attachment methods are used including: nails, clips, lug hung tile, bedding tile, and wire tie and strapping systems. Nails, and sometime with clips, are the most common method used for tile fastening in high wind and seismic areas. Lug hung, wire tie & strapping systems are used when there is no deck to attach to. Bedding the tile in either mortar or a spray adhesive is a less common option but used for sealing gaps for increased fire protection and thermal insulation purposes.

Roof Deck & Underlayment - The roof deck is the structural substrate on which the tiles are attached. The roof deck material must be able to accept which ever fastening system is being used. The underlayment in a roofing system provides protection for the roof deck during and after installation of the roofing system. Typical underlayment types include asphalt saturated felt, polymer-modified bitumen sheets and asphalt roof cement.

Pros/Cons

Pros - Concrete tiles are a long-term roofing solution lasting upwards of 50 years. Due to its durable material qualities, concrete tiles are both a minimal maintenance option while being an economic alternative. Tiles have a high resistance to fire and elements.

Cons – Among the heavier of roofing systems, the roof structure must be able to accept the larger loads. Concrete tiles have a higher moisture absorption rate of around 13% which leads to a greater chance of mildew and stains. Concrete tiles lose color over time due to the integral pigments used to imitate clay roofs.

Life Expectancy

Depending on quality of tile and climate, concrete tiles life can range from 40-50 years.

Material and Installation Cost (Approx. SD Region)

\$7.00 - \$10.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment). Medium material cost with labor intensive installation.

Typical Manufacturer Warranty Options

Material warranty period: 10-30 years to lifetime.

Masterspec Specification Section 073216

Refer to attached.

074113 Standing-Seam Metal Roof Panels

Commercial Application Images

General Information

History - The term “Standing Seam” is an industry standard for a type of metal roofing system that uses overlapping metal panels and raised vertical seams that bind them together. Standing seam roofing panels came from the problems being noticed by the attachment method of penetrating corrugated roofing panels ultimately creating leaks. Copper was of the first metal to be widely used for panels as it was easily malleable to create seams on site and off. In the early 1900’s companies began mass producing these metal roofing panels driving down the consumer cost and making it a more competitive product against traditional roofing technologies like asphalt and clay/concrete tile roofs.

Composition – Today there are many different alloys and coatings available. The most common metals used include: steel, aluminum, copper, terne and zinc. Companies have coined terms using alloys like zinc-aluminum alloys called “Zincalume” and galvanize aluminum called “Galvalume”. Along with these base materials a multitude of coatings are available to offer specific aesthetics and additional resistance to rust, solar heat gain and the elements.

Profiles, Sizes & Coatings – There is a large variety of profiles available between manufacturers today. They range from simple systems that use a machine that fold two panel seams over each other, to systems that use channels that slide over and cap two adjacent edges to systems that simply snap over seams. Panels are typically formed from 24 or 26-gauge metal sheets with widths ranging from 12”, 16” and 18” panels while being offered up to 30’ in length.

Typical Assembly

Attachment Methods - Standing-seam metal panels use concealed fastener systems which set it apart from traditional corrugated roof systems. These long panels run from the roof eave to the roof ridge and are fastened directly to the structural substrate using gasket screws.

Roof Deck & Underlayment - Standing seam roofing is installed over a variety of substrates. Two systems are typically used as substrates for the attachment metal sheets. A continuous decking where the panels can be attached at various intervals, and a spaced structural frame where the panels are attached where they cross this frame. An underlayment is typically installed over the decking before the standing seam is applied to provide a temporary waterproofing while metal is installed and acts as an additional waterproofing layer if water does penetrate the panel seams.

Pros/Cons

Pros – Standing seam roofing can be installed directly over an existing failing asphalt roof. The basic design using raised seams with no fasteners penetrating the runoff surface helps to reduce the chance that a leak will occur. Roofs in general are known for their durability, simplicity, versatility, energy efficiency, and clean aesthetic.

Cons – Initial cost can be a deterrent but makes up for it with a long lifespan. Metal roofing in general are loud when it rains. If a roofs surface has many vents or penetrations the installation can be very time consuming and reduce the effectiveness of such a simple system. Furthermore, having a smooth steep sloped roof can become difficult to walk on and can end up denting the smooth surface of the panels.

Life Expectancy

Depending on quality of metal, finish and climate, metal roofs life can range from 25 to 100 years.

Material and Installation Cost (Approx. SD Region)

\$12.00 - \$18.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment). High material cost with relatively fast installation time.

Typical Manufacturer Warranty Options

Material warranty period: 20-50yrs.

Masterspec Specification Section 074113.16

Refer to attached.

075113 Built-Up Asphalt Roofing (BUR)

Commercial Application Images

General Information

History – Build-up asphalt roofing systems, commonly referred to as “tar & gravel” roofs, have been in use since the early 1900’s. As the refining of petroleum started to get more advanced so did the BUR systems. Being a byproduct of the oil industry, in 1942, the fluid catalytic cracking process improved the purity of the product making it more prevalent in the industry. Asphalt roofing systems started to replace coal tar roofs as its operation temperature range was much wider making it easier to transport and install.

Composition – Asphalt is typically a byproduct of the oil industry but some higher end, longer lasting, systems use asphalt as the main product from oil. The system consists of reinforcing felts, either glass-fiber or organic, that are coated with a variety of asphalt surfacing. The surfacing of BUR systems include aggregate (composed of gravel, mineral granules or slag), glass fiber or mineral surfaced cap sheets, hot asphalt mopped over the surface, aluminum coatings or elastomeric coatings. Four types of roofing asphalts are developed today for a variety of roofing applications. To achieve higher melting points the product is heated and blown with oxygen. The longer procedure the higher the melting point.

Type I – Very high melting point, can be used on level decks.

Type II – High melting point, can be used on ¼ in 12 slopes.

Type III – Medium melting point, can be used on 2 in 12 slopes.

Type IV – Low melting point, used on extreme slopes.

Sizes - Felts are typically produced at 36” widths or 1 meter.

Typical Assembly

Attachment Methods - This system consists of 2 or 3 layers of reinforcing piles and a modified bitumen mineral surfaced cap sheet. These piles are adhered to the roofing deck using asphalt, coal-tar, or cold-applied adhesive. Asphalt and coal-tar is heated up in either a kettle or a tanker and applied to the surface with mops or spreaders.

Note: No two manufacturers create the same product mixture. See manufacturer recommendations for specific installation requirements.

Pros/Cons

Pros - Asphalt roofs are one of the most economic high performance roof systems on the market. Relatively long life cycle due to the ease of repairs and recoating with using a compatible product. The layering affect creates a top performance based barrier between the interior and exterior environments. These roofs pass all fire resistance and wind uplift tests.

Cons – The installation of asphalt roofs is very energy intensive when using the heat applied method (typically LP gas) that release harmful toxins into the atmosphere. Heat applied method creates a Potential fire hazard. UV-rays cause asphalt to photo-oxidize creating a powdery substance on the surface made from the additives such as the plasticizers. This reaping of plasticizers reduces the overall mass and flexibility which creates surface cracks. Asphalt naturally dissolves in water, oils and some solvents. If proper slope is not provided or maintained, pooling will occur and drastically reduce the lifespan. Due to the multi layered systems, installation costs are comparatively high.

Life Expectancy

Built-up asphalt roofing's lifespan (depending on proper installation) can range from 15-20 years but can be repaired and revitalized with new layers and compatible products.

Material and Installation Cost (Approx. SD Region)

\$6.00 - \$10.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment).

Typical Manufacturer Warranty Options

Material warranty period: 10-20 years.

Masterspec Specification Section 075113

Refer to attached.

075216 Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing

Commercial Application Images

General Information

History - The technology was developed in France in the 1960's as concerns rose regarding the quality and life expectancy of BUR membranes. The roofing industry began to look for higher performing systems that were also less labor intensive to install. SBS-modified bitumen membranes were more durable and had a higher recovery rate which lead to the technology being accepted to the industry. By the early 1980s, SBS Modified roofing systems were prevalent throughout North America.

Composition - Three main components are used for the roofing composition; asphalt, SBS synthetic rubber conditioner, and filler used in the bitumen blend. When crude oil is processed one of the byproducts is asphalt flux. This asphalt flux is then modified to increase its melting point, lower its temperature resilience and increase its elongation and recovery properties. Fillers can add many attributes such as cleansing the SBS blend by absorbing unwanted oils and to increase fire-resistance. This mixture is applied to polyester, fiberglass, or polyester and fiberglass membranes to form a sheet good. Adding the SBS copolymer gave the blend more flexibility, ability to expand and contract with the roofing system without cracking or splitting, flex in freezing weather, durability under elevated temperatures and increased resistance to UV exposure. SBS polymers also have better adhesion properties making the seams of the systems last longer and help resist wind uplift.

Typical Assembly

SBS modified bitumen roofing can be applied over almost any structural roof deck. Over wood decks, torch down method of assembly is very dangerous and the cold applied (low VOC) method should be used. Metal and concrete roofs typically use the torch down method. There are many variations to consider for reinforcing SBS-modified products, including fiberglass, polyester and virtually any combination of the two. One of the most important properties for roof membranes is dimensional stability—the reinforcement's resistance to expanding or shrinking due to moisture, temperature or physical forces. Roof membranes should always be stable to provide maximum protection. Usually applied by heating up the underside of the roll with a torch.

Note: No two manufacturers create the same product mixture. See manufacturer recommendations for specific installation requirements.

Sizes – Felts are typically produced at 36" widths or 1 meter.

Pros/Cons

Pros – Due to the flexibility of SBS modified bitumen roofing, it is ideal for climates where the temperature fluctuates. Relatively long life cycle due the ease of repairs and recoating with using a compatible product. The layering affect creates a top performance based barrier between the interior and exterior environments. Theses roofs pass all fire resistance and wind uplift tests.

Cons - The installation of asphalt roofs is very energy intensive when using the heat applied method (typically LP gas) that release harmful toxins into the atmosphere. Heat applied method creates a Potential fire hazard. Due to the multi layered systems, installation costs are comparatively high.

Life Expectancy

Modified Bitumen Roofs (depending on climate and maintenance) can range from 12-20 years.

Material and Installation Cost (Approx. SD Region)

\$6.00 - \$10.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment).

Typical Manufacturer Warranty Options

Material warranty period: 10-20 years.

Masterspec Specification Section 075216

Refer to attached.

075323 EPDM (Ethylene Propylene Diene Monomer Rubber)

Commercial Application Images

General Information

History - Chemical companies in the early 1960's developed EPDM as an alternative for asphalt roofing systems as a reaction to the Middle East oil embargo which drove up the cost of asphalt roofing systems and lowered the quality of asphalt received. EPDM was simple and easy to install (with the advancement of taped seams) being a single membrane system and offered better UV resistance and weathering over time. Since then the formula has been developed and redeveloped to increase its attributes.

Composition - Ethylene propylene diene monomer rubber (EPDM) is comprised of polymers that are modified and mixed with fillers, plasticizers, and catalysts to form sheets which are then offered in both vulcanized (to create elastomeric sheets) and non-vulcanized sheets. Reinforcing membranes (typically polyester fleece) are often added to increase the puncture and tear resistance by up to 300% while still allowing the membrane to retain its elastomeric qualities. In addition to the other additives in EPDM roofing, membranes are offered in both black (typically carbon) which absorbs UV rays and white (typically titanium dioxide) which reflects UV rays preventing the degradation of polymers.

Sizes, Thicknesses & Colors – Sizes can get up to 50' wide by 200' long. Typical thicknesses can range from .045" to .090" with or without reinforcing membranes. Black and white membranes are both offered.

Typical Assembly

Membranes can be installed right over insulation atop the roof substrate and structure. Single-ply membranes can be installed using three methods; mechanically attached, fully adhered or ballasted. Membrane seams can be adhered, cemented, or taped.

Mechanically Attached – Uses screws (normally 12" or 6" O.C.) to penetrate the membrane and insulation attaching to the roofing substrate. The adjacent sheet edge is then overlapped utilizing adhesive or heat welding to cover fastener heads.

Note: In high wind zones such as the coast, mechanically attached methods are favored because of the strength of connection to roofing substrate.

Fully Adhered – Uses glue to adhere sheets directly to insulation panels. Adjacent sheets are either heat welded or glued to create a waterproof seal.

Note: Condensation between the membrane and insulation layer can cause the assembly to delaminate making the membrane prone to tear off with high winds.

Ballasted – Membrane is loose laid over the insulation and mechanically or adhered at the edges and uses a ballast (smooth rocks or stepping stones) to hold the membrane in place.

Note: This assembly method applies large dead loads upon the roof structure which may not be applicable in many situations.

Pros/Cons

Pros – EPDM membranes are low cost and have a low embodied energy. EPDM is easily recyclable into other roofing tiles and products. A leader in resistance to climate due to the EPDM composition and reduction of seams due to large sheet size.

Cons - Being an uncommon roofing system, most are installed by roofers that have little or no special knowledge of EPDM systems.

Life Expectancy

EPDM Roofs (depending on climate and maintenance) can range from 20-30 years.

Material and Installation Cost (Approx. SD Region)

\$6.00 - \$9.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment).

Typical Manufacturer Warranty Options

Material warranty period: 10-30 years (depending on material thickness).

Masterspec Specification Section 075323

Refer to attached.

075419 PVC (Polyvinyl Chloride)

Commercial Application Images

General Information

History - PVC is one of the pioneering single-ply roof materials that was specifically designed to address a wide range of roofing problems resulting from water leaks. In 1966, a German company created the first known PVC roofing membrane. Because of its single ply roofing application within a decade it made its way across Europe and to the US. PVC roofing had a rough start as many of the initial manufacturers made critical errors in the composition. Since PVC is not naturally flexible, plasticizers were added to make the membranes flexible to compete with other roofing technologies. US manufacturers, in order to make it more economic, began to use cheap plasticizers which leached out (with exposure to UV rays) of the material making it brittle and prone to cracking. Massive recalls followed and the US began to use the strict industry standards of European manufacturers. Today, PVC membranes are considered to be very durable and able to withstand the constant expansion and contraction of the building structure throughout the day, throughout its life. A properly heat-welded seam of a PVC roof is a much better seam than a glued or taped seam of an alternate roofing type.

Composition – Polyvinyl Chloride (PVC) or vinyl roofing is derived from two ingredients. Natural gas or petroleum is converted to ethylene, and chlorine is gathered from salt from the process of electrolysis. These are combined to produce ethylene dichloride (EDC) and further processed into vinyl chloride monomer (VCM) polymerization. The VCM molecules (through polymerization) then forms chains, converting the gas into a white powder. The vinyl resin may then be mixed with additives such as stabilizers for durability, plasticizers for flexibility and pigments for color. PVC resin is modified with plasticizers and UV stabilizers, and reinforced with fiberglass non-woven mats or polyester woven scrims, for use as a flexible roofing membrane. Thus, a thicker membrane has a larger reservoir of plasticizer to maintain flexibility over its lifespan. Vinyl roofs provide an energy-efficient roofing option due to their inherent light coloring.

Typical Assembly

Membranes can be installed directly over insulation atop the roof substrate and structure. Single-ply membranes can be installed using three methods; mechanically attached, fully adhered or ballasted. Depending on the manufacturer, membrane seams can be adhered, cemented, or taped. PVC seams

can also be heat-welded which form a permanent, watertight bond that is stronger than the membrane itself.

Mechanically Attached – Uses screws (normally 12” or 6” O.C.) to penetrate the membrane and insulation attaching to the roofing substrate. The adjacent sheet edge is then overlapped utilizing adhesive or heat welding to cover fastener heads.

Fully Adhered – Uses glue to adhere sheets directly to insulation panels. Adjacent sheets are either heat welded or glued to create a waterproof seal.

Ballasted – Membrane is loose laid over the insulation and mechanically or adhered at the edges and uses a ballast (smooth rocks or stepping stones) to hold the membrane in place.

Sizes, Thicknesses & Colors – Roles can range from 5’ to 10’ wide by 100’ long. Typical membrane thicknesses range from .045” to .060” with or without reinforcing membranes. A large variety of colors are available per manufacturer, including black and white membranes both being offered.

Pros/Cons

Pros – PVC roofs can be strong and reliable if provided by the right manufacturer with a relatively long lifespan. Resistant to chemicals, grease and oil. White roof color increases energy efficiency, conserves resources, and reduces carbon footprint.

Cons – Expensive material. Shrinkage may occur over time, breaking seams and causing leakage. Some PVC mixtures tend to lose plasticizers due to UV exposure which can cause the color to darken over time reducing the reflectivity and flexibility as well (use long time manufacturer). Manufacturing process considered by some to be environmentally unconscious because of chemical release when manufactured and recycled.

Life Expectancy

Depending on Cool roof pigments, UV stabilizers and other additives, PVC Roofs can range from 20-30 years.

Material and Installation Cost (Approx. SD Region)

\$7.00 - \$11.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment).

Typical Manufacturer Warranty Options

Material warranty period: 10-30 yrs.

Masterspec Specification Section 075419

Refer to attached.

075423 TPO (Thermoplastic Polyolefin)

Commercial Application Images

General Information

History – TPO roofing membranes were developed to be flexible low slope roofing alternative as EPDM membranes could not be heat welded and PVC's use of plasticizers ultimately reduced flexibility. Being introduced in the late 1980's to the roofing market, TPO emerged as a reliable single ply roofing system by many manufacturers. TPO membranes are a popular choice for "Green" buildings as there are no plasticizers added and TPO does not degrade under exposure to UV. TPO is available in white, grey, and black. Using white roof material helps reduce the "heat island effect" and solar heat gain in the building.

Composition – Thermoplastic Olefin (TPO) consists of a thermoplastic, an elastomer or rubber, and a series of fillers and additives. Polypropylene (PP) and polyethylene (PE) are two common thermoplastics used as the base. Elastomers like Ethylene Propylene Diene Monomer Rubber (EPDM), ethylene propylene rubber (EPR), ethylene octane (EO), and styrene ethylene butadiene styrene (SEBS) are combined to make up the rest with fillers like carbon fiber, fiberglass and wollastonite for structural characteristics. The mixture is fireproofed by using magnesium hydroxide or aluminum trihydrate. Improved UV protection is added by using titanium dioxide or carbon black. The mixes are then blended at elevated temperature and extruded into sheets. The built in ultraviolet light stabilizers are crucial to the strength and weather resistance of this system.

Typical Assembly

Membranes can be installed right over insulation on the roof substrate and structure. Single-ply membranes can be installed using four methods; mechanically attached, fully adhered, ballasted or self-adhered. Membrane seams can be adhered, cemented, or taped. TPO seams can also be heat-welded for a permanent, watertight bond that is stronger than the membrane itself.

Mechanically Attached – Uses screws (normally 12" or 6" O.C.) to penetrate the membrane and insulation attaching to the roofing substrate. The adjacent sheet edge is then overlapped utilizing adhesive or heat welding to cover fastener heads.

Fully Adhered – Uses glue to adhere sheets directly to insulation panels. Adjacent sheets are either heat welded or glued to create a waterproof seal.

Ballasted – Membrane is loose laid over the insulation and mechanically or adhered at the edges and uses a ballast (smooth rocks or stepping stones) to hold the membrane in place.

Self-Adhered – Membranes are offered with a self-adhering (peel & stick) back making the installation process extremely time efficient.

Sizes, Thicknesses & Colors – Roles can range from 5' to 10' wide by 100' long. Typical membrane thicknesses range from .045" to .060" with or without reinforcing membranes. TPO's are typically white but can be ordered in many of the shelf and custom colors.

Pros/Cons

Pros - TPO Single-ply roofing membranes provide top of class resistance to ozone, ultraviolet rays and some chemical exposures. TPO's are highly puncture resistant and can be easily repaired. They are also LEED & ENERGYSTAR certified, fully recyclable, and flexible without the addition of plasticizers. Resistant to chemicals, grease and oil.

Cons - Perhaps the biggest disadvantages of TPO roofing is that it is a new roofing technology, and manufacturers are still testing and developing chemical formulas best suited for lasting performance.

Life Expectancy

TPO Roofs (depending on Cool roof pigments, UV stabilizers and other additives) can range from 20-30 years.

Material and Installation Cost (Approx. SD Region)

\$6.00 - \$10.00 per sf (includes demo, disposal, new product, installation, supplies, flashing & equipment). Medium material cost with labor intensive installation (Can be reduced with the use of peel & stick version).

Typical Manufacturer Warranty Options

Material warranty period: 10-30 yrs.

Masterspec Specification Section 075423

Refer to attached.

June 26, 2017

Board Item - N.-1.

Issue:

Ratification of purchase orders.

Superintendent's Recommendation:

Ratify purchase orders issued for the period of May 1, 2017, through May 31, 2017, and purchase order adjustments for the period May 1, 2017, through May 31, 2017.

Analysis:

For the period of May 1, 2017, through May 31, 2017, 1,124 purchase orders were written for a total of \$59,365,981.82, and 568 non-purchase order requisitions (for Office Depot and Waxie Sanitary Supply) were written for a total of \$157,522.78.

All transactions between the district and any other entity or person involving the transfer of property or rendering of a service are contracts and subject to approval or ratification by the board of trustees. Since the final responsibility for purchasing cannot be delegated by the board of trustees in accordance with state law, all purchase orders must be approved or ratified by the board with specific evidence of such action indicated in the official board minutes.

The Purchasing Department of the Sweetwater Union High School District has agreements with two of the high volume vendors (Office Depot and Waxie Sanitary Supply) to place online orders for office and janitorial supplies. Employees place their order online and enter a requisition in the business system referencing the online order number and cost. As a check and balance, please know the purchasing department reviews the requisition and gives the final approval but does not generate a Purchase Order as the items have already been requested online.

All purchases comply with the appropriate state codes and Administrative Regulation No. 3314, Payment for Goods and Services.

During the period May 1, 2017, through May 31, 2017, 40 purchase order adjustments were issued for a total of \$142,386.74. This adjustment report includes all purchase order encumbrance adjustments (formal request from a site and approved by finance to either increase or decrease the amount of a purchase order) in excess of \$50 and change orders (any revision to the original purchase order

related to a construction or public works bid) in excess of 10 percent of the original approved bid amount.

Purchase orders and the purchase order report are available for inspection in the purchasing department.

For questions regarding this board item, please contact Karen Michel at 619/691-5550 or karen.michel@sweetwaterschools.org.

Fiscal Impact:

Expenditure of \$59,365,981.82, for purchase orders, and \$157,522.78, for non-purchase order requisitions for the period of May 1, 2017, through May 31, 2017.

540012	Broadway Typewriter Company Inc	Information Technology	2	RQ17018107	1	Project	<p>New iPad Provisions - Summer 2017 - Arey Jones will pick up iPads from the SUHSD warehouse and transport them to the local Arey Jones configuration center. Once provisioning and encasement services are completed Arey Jones will deliver the iPads back to designated SUHSD sites according to the master listing. Once devices arrive at Arey Jones' configuration center each iPad will be removed from its packaging and physically inspected. Cases will also be inspected for damage or manufacturing defects during this process. Each device will be asset tagged and and asset data will be collected in accordance with Arey Jones existing asset data collection procedures for SUHSD. Each device will have the latest version of iOS loaded using Apple Configurator 2. The iPad will then be enrolled in the District's MDM using Apple's Device Enrollment Program (DEP). The device enrollment will be performed with the accounts supplied by the district. The iPad will be connected to Arey Jones' local network via Ethernet rigs to ensure that DEP MDM enrollment process completes successfully in our configuration center. Once DEP MDM enrollment has completed Arey Jones' technicians will ensure that the two (2) SUHSD required apps (Absolute and School Connect) are installed and power off the iPad. Once configuration has been completed each iPad will be placed in a new case and selected asset data will be collected for reporting purposes and the iPad will be sorted, palletized and delivered in batches per the master listing provided by SUHSD. The pricing presented below is per device for an unrestricted quantity of iPad devices. \$13.50 per device.</p>	\$0.00	\$0.00

540034	Peterson's Nelnet, LLC	State & Federal Programs	1	RQ17017621	1	LOT	Consultant Peterson's Nelnet, LLC, dba Peterson's Velocity will provide a professional development workshop on May 16, 2017 to Educators of St. Rose of Lima School, St. Pius X School, St. Charles Catholic School and Our Lady of Mt. Carmel School. The workshop will include STEAM Implementation. The presentation will provide participants with practical strategies to implement a STEAM program at their site. The participants will be able to ask questions of other educators in the field who created a STEAM program from concept to execution. The participants will be given the tools that will support student learning in the areas of Science, Technology, Engineering, Art and Math (STEAM) curriculum and ideas for easy-to-do classroom-based and student-driven projects. The participants will receive an outline of roles and responsibilities of a successful STEAM team and will have time to reflect on how they will be able to bring their STEAM dream back to their local school.	\$12,000.00	\$12,000.00

Board Item - N.-2.

Issue:

Ratify tracking of confirmation received orders.

Superintendent's Recommendation:

Ratify confirmation received orders for the period of May 1, 2017, through May 31, 2017.

Analysis:

Orders directly placed with vendors, prior to processing a requisition and receiving a purchase order number, are considered "Confirmation Received."

Procedures for processing a Confirmation Received order are as follows:

- 1 . A copy of the requisition and backup are sent to the appropriate cabinet member along with a confirmation received form.
- 2 . The cabinet member must evaluate, state the reason for the Confirmation Received and sign the approval form. Designated cabinet members should contact the appropriate supervisor to make them aware of the Confirmation Received before approval.
- 3 . After approval the cabinet member will forward the documents to the fiscal services office.
- 4 . The chief financial officer ("CFO") must acknowledge the order.
- 5 . Only after the CFO has signed the Confirmation Received form, and returned it to the purchasing department, will the requisition be converted to a purchase order.
- 6 . The purchase order and invoice are then sent to the accounts payable department for payment processing.

Attached is the Confirmation Received report for the month of March.

Effective December 1, 2015, all "Employee Reimbursement" requisitions will be included in this report.

CONFIRMATION RECEIVED REPORT MAY 2017

Requisition Number	Vendor	Site/Department	Cabinet Member	Amount of Requisition	Reason
14014120	Employee Reimbursement	Division of Adult Ed	Dr. Fulcher	\$542.51	The requisition was processed after the conference.
14014114	Youth Development Network	Equity, Culture & Support Serv.	Dr. Fulcher	\$1,000.00	Staff was unaware of who was attending until just prior to the event.
17014556	Employee Reimbursement	National City Adult School	Dr. Fulcher	\$521.35	In the past, the CIS office paid for this conference. This was not covered this year, and the site did not know that until it was too late to process a requisition.
17015007	Employee Reimbursement	Transportation	Dr. Aguirre	\$5,980.56	The requisition was entered as a prepay. Staff was not aware that the requisition needed to be entered as a cash advance.
17016631	SD Science Education Conference	Professional Development	Ms. Alvarez	\$125.00	Staff was unable to confirm the vendor information that was needed to enter a requisition until a later date.
17014631	Employee Reimbursement	Castle Park Middle School	Dr. Carberry	\$495.00	Employee was not aware that the procedure for attending a conference had changed, and that a requisition in advance was required.
17016047	Employee Reimbursement	Transportation	Dr. Aguirre	\$703.29	The requisition was entered as a prepay. Staff was not aware that the requisition needed to be entered as a cash advance.
17014420	Grey House Publishing	Sweetwater High School	Ms. Alvarez	\$161.31	This was an employee error. Training has been provided to the employee.
17014785	Employee Reimbursement	Special Services	Ms. Alvarez	\$99.00	The employee paid for the conference before a requisition was entered.
17017356	Employee Reimbursement	Curriculum	Ms. Alvarez	\$1,261.19	The employee did not provide backup documents for a cash advance requisition to be entered.
17014817	Good Sports Plus LTD	Southwest High School	Dr. Carberry	\$1,200.00	The coordinator thought the two additional student conferences would be added to the original requisition, which was funded by a grant. Staff has been notified to check all pertinent information in the future.
17013314	Employee Reimbursement	Rancho Del Rey Middle School	Dr. Carberry	\$360.00	A requisition was not entered until after the conference.
17015182	Employee Reimbursement	National City Middle School	Ms. Alvarez	\$450.89	The site thought the district would cover the cost in advance.
17013890	Youth Development Network	Mar Vista High School	Dr. Carberry	\$2,400.00	The quote was sent to CIS, but staff had previously registered for the conference.
17013493	La Class Transportation	Bonita Vista High School	Dr. Carberry	\$1,498.50	The athletic brackets for a tournament were created on a Saturday and buses were needed at the beginning of the week. School was closed at this time and there was no way to enter a requisition.
17012891	Employee Reimbursement	Southwest High School	Dr. Carberry	\$565.38	The coach had only three days to secure travel arrangements after an athlete qualified for the state championship.
17013399	Employee Reimbursement	College & Career Readiness	Ms. Alvarez	\$115.26	The staff member was not included on the original list of counselors to attend this conference.
17009418	Employee Reimbursement	Mar Vista High School	Dr. Carberry	\$841.24	Staff member paid out of pocket to attend the conference. This item needed board approval before reimbursing the staff member.
17012023	Illuminate Education	San Ysidro High School	Ms. Alvarez	\$798.00	The requisition was entered prior to the event but was cancelled back to the site for budget changes. The cancellation was not noticed until later.

17017785	Employee Reimbursement	Professional Development	Ms. Alvarez	\$2,047.90	This out of state conference needed all back-up documents to be provided to the assistant superintendent for signature approval before a requisition could be entered. These documents were not provided in time to enter a requisition prior to the conference.
17017778	Employee Reimbursement	Professional Development	Ms. Alvarez	\$1,227.30	This out of state conference needed all back-up documents to be provided to the assistant superintendent for signature approval before a requisition could be entered. These documents were not provided in time to enter a requisition prior to the conference.
17017590	Employee Reimbursement	Equity, Culture & Support Serv.	Dr. Fulcher	\$365.84	Staff member was not familiar with the process for entering travel requisitions, which resulted in the travel occurring before a requisition was issued. Staff has now been trained in the correct procedure.
17017671	Employee Reimbursement	Equity, Culture & Support Serv.	Dr. Fulcher	\$523.90	Staff member was not familiar with the process for entering travel requisitions, which resulted in the travel occurring before a requisition was issued. Staff has now been trained in the correct procedure.
17017680	Employee Reimbursement	Equity, Culture & Support Serv.	Dr. Fulcher	\$523.90	Staff member was not familiar with the process for entering travel requisitions, which resulted in the travel occurring before a requisition was issued. Staff has now been trained in the correct procedure.
17017680	Employee Reimbursement	Equity, Culture & Support Serv.	Dr. Fulcher	\$303.00	Staff member was not familiar with the process for entering travel requisitions, which resulted in the travel occurring before a requisition was issued. Staff has now been trained in the correct procedure.
17015978	Nevertardy Transit, LLC	Southwest Middle School	Dr. Carberry	\$703.63	The original date of the field trip was changed and the original charter company did not get the memo regarding the change. An emergency charter company had to be booked on the day of the event.
17018003	School Services of California, Inc.	Legal Services Division	Ms. Carbuccia	\$165.00	Registration occurred on the day before the conference. Staff was not available to enter the requisition. Conference was necessary due to negotiation status.
17013696	Employee Reimbursement	Southwest Middle School	Dr. Carberry	\$1,165.02	Budget transfers needed to occur prior to entering the requisition. Budget transfers were late posting and requisition was entered on the second day of the conference.
17016947	Employee Reimbursement	Montgomery High School	Dr. Carberry	\$1,088.63	The staff member did not get pre-approval to attend the conference.
17016055	Employee Reimbursement	Transportation	Dr. Aguirre	\$261.70	The requisition was entered as a prepay. Staff was not aware that the requisition needed to be entered as a cash advance.
17013322	Employee Reimbursement	Olympian High School	Ms. Alvarez	\$847.77	The coach had only three days to secure travel arrangements after an athlete qualified for the state championship.
17017616	ACC Business Machines	Chula Vista Adult School	Dr. Fulcher	\$111.16	A quote was requested and received and then the items were delivered to the site without a purchase order being entered.

Board Item - O.-1.

Issue:

Agreement with Food Safety Systems.

Superintendent's Recommendation:

Approve Agreement between the Sweetwater Union High School District and Food Safety Systems for the purpose of Hazard Analysis Critical Control Points (HACCP) monitoring, and staff trainings, food safety training and data reporting.

Analysis:

Food Safety Systems (FSS), formerly known as School Nutrition Services (SNS), has been providing Sweetwater Union High School District (SUHSD) with Hazard Analysis Critical Control Point (HACCP) monitoring, food safety and sanitation programming for 10 years. FSS provides monthly training to 250 district employees on proper cleaning, food storage and correct sanitation procedures. FSS provides direct monitoring to ensure the nutrition services departments (NSD) HACCP plan is executed correctly.

FSS will also provide additional food safety education modules mandated by the California Department of Education/US Department of Agriculture (CDE/USDA) under the new Healthy Hunger Free Kids Act of 2010. Beginning July 1, 2015, the nutrition services department was required to provide continuing education and training to all front line staff.

FSS will also supply the nutrition service's sites with Occupational Safety and Health Administration (OSHA) approved cleaning products to ensure food safety and sanitation is completed. FSS will provide all Material Safety Data Sheets (MSDS), posters, binders, procedure guides and ancillary items, such as package cutters and sanitizer strips, to each site. FSS will assist the NSD in performing audits at each site to document any corrective actions that are needed and provide onsite follow up training. FSS will provide electronic copies of these audits to the nutrition services director for follow up and training using audit findings as a guide. FSS will provide these services to all 23 nutrition service's cafeteria sites.

FOOD SERVICE SAFETY AND SANITATION PROGRAM SERVICE AGREEMENT

Overview

This agreement is made between Food Safety Systems ("FSS") and Sweetwater Union High School District ("School District"), effective as of July 1, 2017. Under this agreement, FSS will provide School District with a complete and sustainable food safety and sanitation system, inclusive of oversight, safety and sanitation training, education, and inventory control as detailed in **Schedule A**.

Schedule A includes trade secrets of FSS, which derive independent economic value from not being generally known to the public or by FSS competitors, and are the subject of reasonable efforts to maintain their secrecy. Therefore, School District will not, except as required in the conduct of School District's business or as required under California State or other laws, use, publish or disclose any of FSS's trade secrets (e.g., Schedule A) until at least such time that the information are no longer trade secrets. If School District discloses any of FSS's trade secrets, School District will notify FSS of such disclosure or use.

Term and Termination

This agreement is year one (1) of a five (5) year agreement, and may be extended at the discretion and consensus of both parties for the stated additional four (4) one-year term(s). The pricing submitted for the SY17-18 will remain fixed until June 30, 2018. Pricing agreed to for each renewal will remain fixed throughout each annual agreement period ending June 30. FSS may petition a price increase annually for each renewal period. The School District reserves the right to accept or reject any price increase, and terminate the agreement, without penalty.

The term of this agreement is one year, unless terminated by either party for any reason with thirty (30) days advanced written notice. All materials, dispensers, accessories and instructional charts that are provided as part of this program remain the property of Food Safety Systems and may be removed if, and when, the program is cancelled.

Services

FSS will visit each of the schools listed in **Schedule B** during each service visit cycle unless otherwise specified here. There will be a total of nine (9) service visit cycles during each full school year.

School District will pay a total agreement cost of \$57,915.00 for this school year, which will be divided into installment payments of \$6,435.00, to be paid upon being invoiced after the completion of each of the service visit cycles. A 3% discount will be available if the district agrees to two payments; one to be invoiced on July 1, 2017, and the other on January 1, 2018. If the term of this agreement includes a partial school year, the district will only be invoiced for the service visit cycles completed. Schedule B may be modified to add additional schools, which in turn may affect total agreement cost.

Billing and Remittance

All billing will be from FSS unless otherwise notified. Remittance should be made payable to:

SCHEDULE A EDUCATION AND SERVICES

All services, materials, and consultation are included in the total cost provided under the Food Service Safety and Sanitation Service Agreement, offering complete budget control and predictability to School District. FSS will prepare a staff training schedule ("Training Schedule") with custom objectives and timelines, and provide education, materials, services and reports as follows.

I. Education

- A. FSS's food safety and sanitation education program includes district in-service education, site-based education, and educational materials for the Participating Schools. The goal of the FSS education program is to provide education for managers and employees of the School District, and standardize sanitation and safety procedures in each Participating School's kitchen facility.
- B. Education will be provided during each service cycle at each of the Participating Schools. Each educational session is approved for a minimum of .25 Continuing Education Credits (CEU) for School Nutrition Association (SNA) and/or a minimum of .25 CE units towards USDA mandated Professional Standards Curriculum. The education provided will address each school's specific needs, and will include an ongoing curriculum of sanitation and workplace topics.
- C. As required by California State Mandate, CalCode Article 2, Sections 113947 and 113947.1-3, FSS will make available the N.R.A. (National Restaurant Association Foundation) ServSafe® training to School District employees on a scheduled training date to be determined for a maximum of 35 employees, per training date.
 - 1. FSS will offer the course for eligible employees at an additional cost of \$75.00 per person, if requested by the School District.
 - 2. The education provided through ServSafe® courses will complement the services provided by FSS, and fulfill the 10-hour Sanitation and Safety component of SNA Certification, as well as CalCode requirements above.
 - 3. Testing materials will also be included in the total cost of \$75.00 per person. Textbooks are not included in this cost, and may be ordered at the current prevailing rate at time of order.

II. Materials

- A. Sufficient cleaning products and OSHA approved dispensing systems will be provided and replenished as needed at each Participating School.
- B. SDS, posters, binders, procedure guides, and ancillary items (e.g., pac cutters, sanitizer test strips) will be provided and replenished as needed at each Participating School.
- C. Each of the Participating Schools is granted a non-exclusive license to use the program and the program materials. FSS will take steps to safeguard use of the program content by entities operating without an agreement from FSS or a related entity.
- D. Providing chemical service application and delivery.

III. **Service**

- A. FSS service technicians will visit each of the Participating schools nine (9) times per full school year in accordance with the Training Schedule. FSS service technicians are certified in the administration, instruction and recognition of HACCP program integrity and verification.
- B. FSS service technicians will survey and audit each Participating School's kitchen, and provide immediate corrective action, staff training, action documentation, and supervisor notifications for follow ups. The survey and audit is intended to measure due-diligence and verify system execution and staff motivation.

IV. **Reports / Review**

- A. FSS will provide documentation of the education received for School District due diligence files.
- B. All materials required for OSHA compliance will be placed in and kept current in each of the Participating Schools.
- C. After completion of each survey and audit, FSS will generate a service report that documents program compliance and areas where further management action is required. These reports can serve as critical due-diligence confirmation, and provide the School District with an electronic record of program compliance.
- D. After each full school year, FSS's general manager will meet with district administrators to review the year's accomplishments and make recommendations for program improvement.

Board Item - P.-1.

Issue:

Revised Board Policy.

Superintendent's Recommendation:

Approve revised Board Policy 3513.1, Cellular Phones.

Analysis:

It is the goal of the superintendent and staff to review the district's board policies and bring new or revised policies to the board of trustees for approval.

This policy has been revised to eliminate Cellular Phone Stipends.

For questions regarding this board item, please contact Karen Michel at (619) 691-5550 or karen.michel@sweetwaterschools.org.

Fiscal Impact:

Business and Noninstructional Operations

BP 3513.1

CELLULAR PHONES

Purpose

The Board of Trustees recognizes the importance of providing adequate communication among district staff, parents/guardians, schools and suppliers of support materials.

District/Site Funded Cell Phones (Nextel)

School district cellular phones may be provided for official district business use. The district shall limit provision of cellular phones to individuals who, in the conduct of the district business, must regularly and frequently, while away from a desk phone, need communication with schools, staff or other agencies as a business necessity, or who have emergency and urgent response duties. The Board has established that certain staff members, on a limited basis, in the department of information technology, maintenance, food services and transportation automatically qualify for such phones.

Cellular phone users are responsible for reviewing their cell phone invoices and reimbursing the district for all charges associated with personal calls.

~~Cellular Phone Stipends~~

~~The Board has authorized the Superintendent or his/her designee to establish a \$40 cellular phone stipend for designated district/site management personnel.~~

~~Exceptions to the designated employees must complete applications for such phones annually and will be reviewed on a case by case basis.~~

Board Item - Q.-1.

Issue:

Annual Resolution No. 2487.

Superintendent's Recommendation:

Adopt annual Resolution No. 2487, Authorizing Temporary Transfer of Funds for Maintenance Purposes.

Analysis:

This resolution requests the temporary transfer of funds by the Board of Supervisors of the County of San Diego. The California Constitution, Article XVI, Section 6, and Education Code Section 42620 or 85220, provide that the Treasurer of the County of San Diego shall have the power and it shall be his duty to make such temporary transfer from the funds in his custody as may be necessary to provide funds for meeting the obligations incurred for maintenance purposes by any district whose funds are in his custody and are paid out solely through his office; such temporary transfer of funds shall be made only upon resolution adopted by the governing board of the county to make such temporary transfer; and such temporary transfer of funds shall not exceed 85 percent of anticipated revenue accruing to the district, shall not be made prior to the first day of the fiscal year nor after the last Monday in April of the current fiscal year, and shall be replaced from the revenues accruing to such district before any other obligation of the district.

SWEETWATER UNION HIGH SCHOOL DISTRICT

RESOLUTION NO. 2487

**REQUESTING TEMPORARY)
TRANSFER OF FUNDS)**

ON THE MOTION OF Member _____, seconded by Member _____, the following resolution is adopted:

WHEREAS, the California Constitution, Article XVI, Section 6, and Education Code Section 42620 or 85220, provide that the Treasurer of the County of San Diego (Treasurer) shall have the power and it shall be his duty to make such temporary transfer from the funds in his custody as may be necessary to provide funds for meeting the obligations incurred for maintenance purposes by any district whose funds are in his custody and are paid out solely through his office; such temporary transfer of funds shall be made only upon resolution adopted by the governing board of the county to make such temporary transfer; such temporary transfer of funds shall not exceed 85 percent of anticipated revenue accruing to the district, shall not be made prior to the first day of the fiscal year nor after the last Monday in April of the current fiscal year, and shall be replaced from the revenues accruing to such district before any other obligation of the district; and

WHEREAS, on June 26, 2017, the governing board will/has:

- _____ Adopt a tentative budget (community college only)
- _____ Adopt a final budget (community college only)
- _____ X Adopt an original budget (K-12 school district only)
- _____ Adopt a revised budget (community college or K-12 school district)

for this district for fiscal year 2017-2018 pursuant to the provisions of Education Code Section 42127 or 70901, and the revenue type(s) accruing to the district for said fiscal year are estimated to be as follows:

<u>Revenue Type(s)</u>	<u>Estimated Amount(s)</u>	
<u>X</u> Property Taxes	\$ 79,169,513	
<u>X</u> Principal Apportionment(s)	\$ 235,979,127	
<u>X</u> Education Protection Acct	\$ 53,556,425	
	<u>\$ 368,705,065</u>	Total

WHEREAS, the revenue type(s) and amount(s) accrued to this district during the 2016-2017 fiscal year were as follows:

<u>Revenue Type(s)</u>	<u>Amount(s)</u>
<u> X </u> Property Taxes	\$ 79,167,681
<u> X </u> Principal Apportionment(s)	\$ 222,173,637
<u> X </u> Education Protection Acct	\$ 58,157,026
	<u>\$ 359,498,344</u> Total

WHEREAS, it is necessary to provide funds for meeting obligations incurred for maintenance purposes by this district.

NOW, THEREFORE, IT IS RESOLVED AND ORDERED, pursuant to the provisions of the California Constitution, Article XVI, Section 6, and Education Code Section 42620 or 85220 as follows: The Board of Supervisors of the County of San Diego is requested to direct the Treasurer to make a temporary transfer from the funds in his custody on or before the last Monday in April 2017-2018, to this district to meet obligations incurred for maintenance purposes in the amount of \$313,399,305, which does not exceed a total of 85 percent of remaining:

<u>Revenue Type(s)</u>
<u> X </u> Property Taxes
<u> X </u> Principal Apportionment(s)
<u> X </u> Education Protection Account

accruing to the district by June 30, 2017, as certified by the district superintendent and verified by the County Auditor and Controller.

1. Funds will be transferred to this district by the Treasurer in sums as requested by the district superintendent and certified by him to be necessary to provide funds for meeting the obligations incurred for maintenance purposes by the district not to exceed the maximum amount herein specified, provided the Treasurer determines that funds in his custody are available for such transfers.

2. Repayment of the funds is anticipated to be made from the:

Revenue Type(s)

 X Property Taxes
 X Principal Apportionment(s)
 X Education Protection Account

accruing to the district, however, the district recognizes that the source of repayment may be from other revenues accruing to the district before any other obligation. Interest on any transferred funds will accrue and be payable by the district, at the greater of the same interest rate the County of San Diego Investment Pool is earning or a proxy TRAN cost as determined by the market until the entire amount transferred is repaid. Each month, the appropriate interest rate to be used will be identified, and the resulting calculated interest will be charged.

3. The clerk of this board is directed to file a copy of this resolution with the Board of Supervisors, the County Superintendent of Schools, the County Auditor and Controller, and the County Treasurer-Tax Collector.
4. Authorize the district superintendent or designee to sign a Temporary Transfer Agreement consistent with the terms of this Resolution.

PASSED AND ADOPTED by the Board of Trustees of the Sweetwater Union High School District, County of San Diego, State of California, this 26th day of June 2017, by the following vote:

June 26, 2017
Date

June 26, 2017

Board Item - Q.-2.

Issue:

Annual Resolution No. 4231.

Superintendent's Recommendation:

Adopt annual Resolution No. 4231, Authorizing the Transfer of Revenues from Incremental Increases in Tax Rates into the Education Protection Account During the 2017-2018 Fiscal Year.

Analysis:

Proposition 30 added Article XIII, Section 36 to the California Constitution effective November 7, 2012. The provisions of Article XIII, Section 36(e) create in the state General Fund an Education Protection Account to receive and disburse the revenues derived from the incremental increases in taxes imposed by Article XIII, Section 36(f).

Before June 30 of each year, the director of finance shall estimate the total amount of additional revenues, less refunds that will be derived from the incremental increases in tax rates made pursuant to Article XIII, Section 36(f) that will be available for transfer into the Education Protection Account during the next fiscal year. As a requisite, the district must annually post on its website an accounting of how much money was received from EPA and how that money was spent. Due to the annual requirement for board action and the fact that EPA apportionments will not be certified until late in the 2017-2018 fiscal year, the district must estimate EPA revenue.

For questions regarding this board item, please contact Karen Michel at (619) 691-5550 or karen.michel@sweetwaterschools.org.

PROTECTION ACCOUNT DURING
THE 2017-2018 FISCAL YEAR**)
)
)
)
)
)

ON THE MOTION OF Member _____, seconded by Member _____, the following Resolution is adopted:

WHEREAS, the voters approved Proposition 30 on November 6, 2012; and

WHEREAS, Proposition 30 added Article XIII, Section 36 to the California Constitution effective November 7, 2012; and

WHEREAS, the provisions of Article XIII, Section 36(e) create in the state General Fund an Education Protection Account to receive and disburse the revenues derived from the incremental increases in taxes imposed by Article XIII, Section 36(f); and

WHEREAS, before June 30th of each year, the director of finance shall estimate the total amount of additional revenues, less refunds that will be derived from the incremental increases in tax rates made pursuant to Article XIII, Section 36(f) that will be available for transfer into the Education Protection Account during the next fiscal year; and

WHEREAS, if the sum determined by the State Controller is positive, the State Controller shall transfer the amount calculated into the Education Protection Account within ten (10) days preceding the end of the fiscal year; and

WHEREAS, all monies in the Education Protection Account are hereby continuously appropriated for the support of school districts, county offices of education, charter schools and community college districts; and

WHEREAS, monies deposited in the Education Protection Account shall not be used to pay any costs incurred by the Legislature, the Governor or any agency of state government; and

WHEREAS, a community college district, county office of education, school district, or charter school shall have the sole authority to determine how the monies received from the Education Protection Account are spent in the school or schools within its jurisdiction; and

WHEREAS, the governing board of the district shall make the spending determinations with respect to monies received from the Education Protection Account in open session of a public meeting of the governing board; and

WHEREAS, the monies received from the Education Protection Account shall not be used for salaries or benefits for administrators or any other administrative cost; and

WHEREAS, each community college district, county office of education, school district and charter school shall annually publish on its internet website an accounting of how much money was received from the Education Protection Account and how that money was spent; and

WHEREAS, the annual independent financial and compliance audit required of community college districts, county offices of education, school districts and charter schools shall ascertain and verify whether the funds provided from the Education Protection Account have been properly disbursed and expended as required by Article XIII, Section 36 of the California Constitution; and

WHEREAS, expenses incurred by community college districts, county offices of education, school districts and charter schools to comply with the additional audit requirements of Article XIII, Section 36, may be paid with funding from the Education Protection Act and shall not be considered administrative costs for purposes of Article XIII, Section 36.

NOW, THEREFORE, BE IT RESOLVED:

1. The monies received from the Education Protection Account shall be spent as required by Article XIII, Section 36 and the spending determinations on how the money will be spent shall be made in open session of a public meeting of the Governing Board of the Sweetwater Union High School District; and
2. In compliance with Article XIII, Section 36(e), with the California Constitution, the Governing Board of the Sweetwater Union High School District has determined to spend the monies received from the Education Protection Act as attached.

Board Item - Q.-3.

Issue:

Resolution No. 4510.

Superintendent's Recommendation:

* Adopt Resolution No. 4510, for Board Member Compensation for Nonattendance at a Regular Board Meeting.

Analysis:

Per Education Code Section 35120 and Board Bylaw 9250, a board member may be paid for any meeting from which he or she is absent if the board, by resolution, finds that at the time of the meeting, he or she was performing services outside the meeting on behalf of the board, he or she was ill or on jury duty, or the absence was due to a hardship deemed acceptable by the board.

Member Pike was unable to attend the Regular Board Meeting of June 12, 2017, due to an illness. Adoption of this Resolution will allow Mr. Pike to be compensated for that meeting.

For questions regarding this board item, please contact Deanne Vicedo at 619/585-4405 or deanne.vicedo@sweetwaterschools.org.

Fiscal Impact:

None.

RESOLUTION NO. 4510

**RESOLUTION FOR BOARD
MEMBER COMPENSATION FOR
NONATTENDANCE AT A
REGULAR BOARD MEETING**

ON THE MOTION OF Member _____, seconded by Member _____,
the following resolution is adopted.

WHEREAS, Education Code Section 35120 authorizes members of a school district board of education to receive remuneration; and

WHEREAS, the amount of such remuneration is specified in Education Code Section 35120; and

WHEREAS, Education Code Section 35120 and Board Bylaw No. 9250 provide that a board member may be paid for any meeting from which he or she is absent if the board, by resolution duly adopted and included in its minutes, finds that at the time of the meeting, he or she was performing services outside the meeting on behalf of the board, he or she was ill or on jury duty, or the absence was due to a hardship deemed acceptable by the board; and

WHEREAS, Board Member Kevin J. Pike was unable to attend the Regular Board Meeting of June 12, 2017; and

WHEREAS, Member Pike's absence was due to an illness.

NOW, THEREFORE, BE IT RESOLVED, that Kevin J. Pike be compensated for the June 12, 2017, Regular Board Meeting that he was unable to attend.

PASSED AND ADOPTED by the Board of Trustees of the Sweetwater Union High School District, County of San Diego, State of California, the 26th day of June, 2017, by the following vote:

Board Item - R.-1.

Issue:

Ordinance No. 22.

Superintendent's Recommendation:

Mello-Roos

Acting as the legislative body for Community Facilities District Nos. 1, 2, 3, 4, 5, 6, 8, 9A, 9B, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, and 20.

* Conduct second reading (motion to conduct reading by title only) and adopt Ordinance No. 22, Ordinance of Community Facilities District No. 19 of the Sweetwater Union High School District Authorizing the Levy of a Special Tax Within Improvement Area Nos. 1 and 2 of Community Facilities District No. 19.

Analysis:

The Board of Trustees ("Board") of the Sweetwater Union High School District ("District"), acting as the Legislative Body of Community Facilities District No. 19 of the Sweetwater Union High School District ("CFD No. 19") has previously undertaken proceedings to form CFD No. 19 pursuant to the terms of agreements entered into with certain property owners and the Mello-Roos Community Facilities Act of 1982, as amended ("Mello-Roos Act"). In accordance with the Mello-Roos Act, following the adoption and authorization resolutions and the conducting of special tax elections (which were completed on June 12, 2017) relative to the formation of CFD No. 19 and the Improvement Areas thereof, the legislative body of the public agency forming the community facilities district must adopt an ordinance authorizing the levy of the special tax. Pursuant to the provisions of the Mello-Roos Act, the Board, acting as the Legislative Body of CFD No. 19, is granted the same authority to adopt ordinances for this purpose as are held by California cities. The ordinance procedure prescribed by law requires a two-step (first reading/second reading) process before the ordinance may be adopted. The Board completed the first reading at the Board meeting held on June 12, 2017.

This item is to conduct the "second reading" of Ordinance No. 22.

As part of conducting this second reading, the Board may, by motion passed by the Board, have only the title of the Ordinance read by the Clerk and then have the Ordinance made available for any member of the public who desires to review it. Such a motion could be in the following form:

“Motion - I move that Ordinance No. 22 be presented by reading of the title only and that the Clerk foregoes the reading of the entire Ordinance.”

If the foregoing motion, or an equivalent, is not passed, then Ordinance No. 22 must be read in its entirety at the Board meeting. Following the second reading of the Ordinance, Ordinance No. 22 would be adopted by the Board.

For questions regarding this board item, please contact Karen Michel at 619/691-5550 or karen.michel@sweetwaterschools.org.

Fiscal Impact:

There is no fiscal impact as the Developer is funding the costs to form CFD No. 19, subject to reimbursement without interest from proceeds of Bonds of CFD No. 19, consistent with applicable law when issued.

SWEETWATER UNION HIGH SCHOOL DISTRICT

ORDINANCE NO. 22

**ORDINANCE OF COMMUNITY FACILITIES)
DISTRICT NO. 19 OF THE SWEETWATER)
UNION HIGH SCHOOL DISTRICT)
AUTHORIZING THE LEVY OF A SPECIAL TAX)
WITHIN IMPROVEMENT AREA NOS. 1 AND 2)
OF COMMUNITY FACILITIES DISTRICT NO. 19)**

ON THE MOTION of Member _____, seconded by Member _____, the following ordinance is hereby adopted:

WHEREAS, on May 8, 2017, the Board of Trustees ("Board") of the Sweetwater Union High School District ("District") adopted Resolution No. 4500 stating its intention to form Community Facilities District No. 19 of the Sweetwater Union High School District ("CFD No. 19") and the Improvement Areas thereof ("Improvement Areas") pursuant to the Mello-Roos Community Facilities Act of 1982, as amended ("Act"); and

WHEREAS, on June 12, 2017, the Board completed a noticed public hearing, as required by law, relative to the determination to form CFD No. 19, to form the Improvement Areas, the Rate and Method of Apportionment of Special Taxes for each Improvement Area (each an "RMA"), which are attached as Exhibits "A-1" and "A-2" hereto and incorporated herein by this reference, the public facilities to be paid for and/or financed by CFD No. 19 and the Improvement Areas ("Facilities"), the authorization to incur bonded indebtedness within the Improvement Areas, and related matters; and

WHEREAS, the Board, subsequent to said hearing, adopted Resolution No. 4506, which formed CFD No. 19 and the Improvement Areas thereof, authorized the levy of special taxes within each Improvement Area of CFD No. 19 pursuant to the RMA for the respective Improvement Area, and called a special election within each Improvement Area of CFD No. 19 to be held on June 12, 2017, on the proposition to incur bonded indebtedness, levy special taxes, and set an appropriations limit; and

WHEREAS, on June 12, 2017, a special election was held within each Improvement Area of CFD No. 19 in which the eligible voters approved by more than two-thirds (2/3) vote the proposition of levying special taxes and setting an appropriations limit for that respective Improvement Area of CFD No. 19.

NOW, THEREFORE, THE BOARD OF TRUSTEES OF THE SWEETWATER UNION HIGH SCHOOL DISTRICT, ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 19, DOES HEREBY ORDAIN AS FOLLOWS:

Section 1. The foregoing recitals are all true and correct.

Section 2. By passage of this Ordinance, the Board authorizes the levy of the special taxes on property within Improvement Area No. 1 of Community Facilities District No. 19 pursuant to the formula set forth in the Rate and Method of Apportionment of Special Taxes for Improvement Area No. 1, attached hereto as Exhibit "A-1" and incorporated herein by this reference, in an amount necessary to pay all amounts payable with respect to financing and/or otherwise

paying for the Facilities and other obligations within the boundaries of CFD No. 19.

- Section 3. By passage of this Ordinance, the Board authorizes the levy of the special taxes on property within Improvement Area No. 2 of Community Facilities District No. 19 pursuant to the formula set forth in the Rate and Method of Apportionment of Special Taxes for Improvement Area No. 2, attached hereto as Exhibit "A-2" and incorporated herein by this reference, in an amount necessary to pay all amounts payable with respect to financing and/or otherwise paying for the Facilities and other obligations within the boundaries of CFD No. 19.
- Section 4. The Board is hereby authorized each year, by resolution, to determine the rate of such special taxes and amount to be levied for the next following fiscal year, except that the special taxes to be levied shall not exceed the rates determined in accordance with the RMAs.
- Section 5. To the extent provided in each RMA, properties or entities of the state, federal, or other local governments shall be exempt from the above-authorized special taxes within the corresponding Improvement Area of CFD No. 19, except that, notwithstanding this Ordinance, when property not otherwise exempt from such special taxes is acquired by a public entity through a negotiated transaction, or by gift or devise, the special taxes shall continue to be levied on such property and shall be enforceable against the public entity that acquired the property. Any property within an Improvement Area of CFD No. 19 that is conveyed to a public school district for use as a public school site will be subjected to the applicable provisions of state law, the Act, and the corresponding RMA.
- Section 6. No other properties or entities shall be exempt from the above-authorized special taxes unless the properties or entities are expressly exempted by applicable law, Resolution No. 4506, adopted by the Board on June 12, 2017, and the RMAs.
- Section 7. All of the collections of the above-authorized special taxes shall be used as provided for in the Act and in Resolution No. 4506.
- Section 8. The above-authorized special taxes may be collected in the same manner as ordinary *ad valorem* taxes are collected and may be subject to the same penalties and the same procedure, sale, and lien priority in cases of delinquency as provided for *ad valorem* taxes, or another procedure of levy and collection of such special taxes as may be adopted or designated by the Board.
- Section 9. The San Diego County Treasurer-Tax Collector may deduct reasonable administration costs incurred in collecting the above-authorized special taxes.
- Section 10. As a cumulative remedy, if any amount levied pursuant to this Ordinance as special taxes for the purposes of paying interest and/or principal on any bonds or other securities, together with any penalties

or other charges accruing under this Ordinance, are not paid when due, then, not later than four (4) years after the due date of the last installment of principal, the Board may order that such amounts be collected by an action brought in the superior court to foreclose any lien securing such amount.

Section 11. This Ordinance relating to the levy of the special taxes within CFD No. 19 and the Improvement Areas thereof shall take effect thirty (30) days after adoption by the Board.

ORDAINED, ENACTED AND ADOPTED by the Board of Trustees of the Sweetwater Union High School District, acting as the Legislative Body of Community Facilities District No. 19, County of San Diego, State of California, this 26th day of June, 2017, by the following vote:
